A peculiarity of the clove-tree is that every part of it is aromatic, though the greatest strength is in the bud. Beside the buds the stems are gathered, and form an article of commerce, commanding one-fifth the price of cloves and having about the same percentage of strength. To this is due the fact that ground cloves can be purchased in the home market at a lower price than whole cloves.

ITS REDEEMING FEATURE.

Elder Goodman's dislike of tobacco amounted to a positive aversion. He detested it in every form; but most of all he hated the cigarette. He would have no one in his employ, and as far as he could, he would have no one in his presence who ever smoked one.

In season and out of season,—if such a thing is possible,—he inveighed against the cigarette, and dilated on its deadly work. His repugnance to the thing itself grew in time to include those who used it, until he came to look upon every cigarette-smoker with more or less suspicion.

He was present at an anti-tobacco meeting one night, when the speaker in due turn took up the cigarette. "Friends," he exclaimed, "this innocent-looking little roll of tobacco is worse than war or pestilence. It is carrying thousands and thousands of our young men every year to the grave."

"Well," exclaimed the elder from the rear of the house, to the great surprise of every one present, "it has one good feature."

"Pray what is that, brother?" asked the astonished speaker.

"It takes only those that we can spare the best."

N. B.

The following bill, posted conspicuously in a country town, excited much interest:

"N. B. A lecture on total abstinence will be delivered to-morrow night in the open air.

"A collection to defray expenses will be taken at the door.

"Come one, come all!"

UNLESS a Christian lives as high as he shouts the less noise he makes the better.—*Rowe's Horn.*

Burnett's Cocoaine.—A PERFECT DRESSING FOR THE HAIR.—The Cocoaine holds in a liquid form a large proportion of deodorized COCOA-NUT OIL, prepared expressly for this purpose. *No other Compound* possesses the peculiar properties which so exactly suit the various conditions of the human hair. It is conceded by all who have used it to be the *best and cheapest Hair Dressing in the World.* [*Adv.*

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

HELPFUL AILMENTS.

The value of cow-pox, voluntarily induced, as a protection against small-pox, is generally recognized. The same principle has been successfully extended to some of the worst diseases among animals, and it is expected that it may yet be applied in the case of some virulent human diseases.

In England gout is a very prevalent and painful disease. In this country it is less common. Our climate inclines us to excessive mental activity. As a result of this the brain appropriates nervous force at the expense of the digestive system, and so disposes us to dyspepsia; but dyspepsia compels its victims, in spite of themselves, to indulge somewhat sparingly in rich food, in the too free eating of which gout originates.

Of the two diseases, dyspepsia is to be preferred. It seldom interferes with the day's work, and, except in very obstinate cases, is almost certain to be relieved by proper diet and exercise.

Sick headache may often be counted in the class of helpful ailments, though it is a "bitter pill." There are two forms of it: one has its primary source in the brain, the other in the stomach. In both cases there is commonly some hereditary tendency to the disease, but the exciting cause is overwork; of the brain in one case, of the stomach in the other.

The headaches necessitate occasional rest, while the dread of them acts as a constant check upon tendencies which might otherwise result in grave harm. Indeed, attention to diet, with a little letting down of the average cerebral activity, professional, business or domestic, will generally insure a comparative immunity from attack.

Acute rheumatism often gives rise to permanent heart trouble. Chronic rheumatism, on the contrary, may be healthful in cases of heart disease.

For instance, enlargement of the heart tends to increase until it reaches the dangerous limit. The patient's safety depends largely on his training himself to such habits as reduce strain on the heart, and rheumatic joints in the lower limbs are an admirable aid in this respect. The former rapid movements cease. A fatal running to meet the cars or the ferryboat is out of the question.

The rheumatism is an uncomfortable companion, no doubt, but it may help to a long life—a decade or more, perhaps, beyond the three score and ten.

THE LABRADOR DUCK.

It will surprise many readers to be told that a large and strikingly marked duck, which within fifty years was moderately common upon the Northern Atlantic coast, is believed now to have become extinct. A lad shot one in New York on the Chemung River December 12, 1878, and none have been seen since.

The last one known to have been seen before that time was killed at Grand Manan in April, 1871. The one killed in 1878 was eaten before any naturalist heard of its capture—a costly meal, as, according to Doctor Coues, two hundred dollars has been vainly offered for a pair of skins. The head and a portion of the neck were preserved.

The history of the duck in question, the Labrador Duck or the Pied Duck, is made the subject of an article by Mr. William Dutcher in a recent number of the *Auk*. Only thirty-eight specimens are known to be extant in all the museums of the world—twenty-seven in America and eleven in Europe. Yet it is only a short time since specimens might have been secured with comparative ease.

One of our older ornithologists, Mr. George N. Lawrence, of New York, writing in January, 1891, says: "About forty or more years ago it was not uncommon to see them in Fulton Market. At one time I remember seeing six fine males, which hung there till they spoiled for want of a purchaser. They were not considered desirable for the table, and collectors had a sufficient number, a pair being at that time considered enough to represent a species."

Another ornithologist, Mr. G. A. Boardman, of Calais, Maine, says that fifty years ago, when he began to collect birds, he had no difficulty in getting a pair of Labrador Ducks, which was all he wanted, but that thirty years afterward, when he tried to procure specimens for some New York friends, his collectors all along the coast reported that the birds were gone.

Unlike the Great Auk, the Labrador Duck was a good flier, and was never especially persecuted by gunners. One fact of popular interest connected with the bird is that Daniel Webster shot a pair on the Vineyard Islands, and presented them to Audubon, who in turn presented them to Professor Baird.

It is not improbable, as suggested by Mr. Dutcher, that other mounted specimens may yet be discovered in out-of-the-way places. It would not be very wonderful if some reader of this article should have the good fortune to turn an honest penny for himself, and at the same time serve the cause of science by finding in some seashore cottage or elsewhere a skin of this now famous bird.

MAN AND TIGER.

Bidel, the famous lion-tamer, passed most of his childhood in a menagerie. Before he was twenty years old, he had become so accustomed to the presence of wild beasts, and had learned so well how to treat them, that he entered their cages as calmly as he would have entered his own room, and seemed to consider their threatening jaws and snarling lips as a smile of welcome.

Early in his career he was at Bayonne with a menagerie. The afternoon entertainment was about to begin, when a terrible cry was raised, "Athir has escaped."

Athir was a young royal tiger, notorious for his savage disposition. It was easy enough to manage him in the menagerie; but at large, tempted by easy prey, the danger was terrible. Every one fled, rushing into houses and climbing trees.

"I set out to hunt for him," says Bidel. "For a long time I traced him walking from place to place under the burning sun. Some one whispered to me from a window, fearing apparently that the tiger would overhear, 'He is there.' The finger of this hero pointed cautiously to an iron-worker's shop, the door of which stood open. I rushed in.

"It was black as night; for ten seconds I could see nothing. Then in a corner, crouched ready to spring, his jaws open, his eyes on fire, I saw the runaway. A second more, and he would have bounded forward, seized and torn me. I was ahead of him; it was I who sprung. Then what roaring, what foaming at the mouth, what anger! That hand to hand struggle in the twilight, I breathless, he mad with rage, was short. If it had not been, I should have been lost.

"I seized him with both hands by the skin of his back, raised him on my back, and under this enormous weight, without stumbling or flagging, I walked with a firm and equal step toward the menagerie. You may imagine how I was congratulated!"

COMMAS.

The London *Journal of Education* says that a Prussian school inspector appeared at the office of the burgomaster of a little town to ask him to accompany him on a tour of inspection through the schools.

The burgomaster was out of sorts, and was heard to mutter to himself, "What is this donkey here again for?"

The inspector said nothing, but waited his time, and with the unwilling burgomaster set out on his tour. At the first school he announced his wish to see how well punctuation was taught.

"Oh, never mind that," said the burgomaster. "We don't care for commas and such trifles."

But the inspector sent a boy to the blackboard, and ordered him to write, "The burgomaster of R—— says, the inspector is a donkey."

Then he ordered him to transpose the comma, placing it after R——, and to insert another one after inspector, and the boy wrote, "The burgomaster of R——, says the inspector, is a donkey."

It is probable that the refractory official gained a new idea of the value of "commas and such trifles."

OLD AND YOUNG.

There is no surer antidote for the effect which time has over us all, in making our age evident, than a young heart.

"I should like to live to be as old as you are, grandmamma," said little Helen, "but I don't want to be as old as Aunt Susan, *ever!*"

"Why, why," said grandmamma, looking over her spectacles, "what do you mean, my dear child? Your Aunt Susan is a great many years younger than I am!"

"I don't see how that can be," said Helen, much perplexed. "You always remember the plays you had when you were a little girl; but when I asked Aunt Susan one day, she said, 'For pity's sake, child, you don't expect me to remember any of the games I had as a little girl. It's so long ago I've forgotten whether I ever played any!'"

SAD PREDICAMENT.

Ten-year-old William is a chronic grumbler; nothing has ever been known to meet with his unqualified approval.

Not long ago a new suit came from the tailor's. The cutter, knowing how fastidious was his young customer, had exercised the utmost care.

William donned the new clothes, and walked up and down the room several times. He was strangely silent, but his face soon assumed a serious aspect.

"Why, Willie," finally asked his mother, "what is the matter?"

"Well," he replied, almost ready to cry from disappointment and vexation, "these clothes are either too loose or too tight, and I can't tell which."

HIS DISCHARGE.

A touching instance of the humor which never deserts a true Irishman, even in his worst troubles, is recorded in an exchange.

A soldier was seen in the trenches holding his hand above the earthwork. His captain asked:

"What are you doing that for, Pat?"

He replied with a grin as he worked his fingers:

"I'm feelin' for a furlough, sure!"

Just then a rifle-ball struck his arm below the wrist. He drew it down quickly, and grasped it with the other hand to check the blood. Then a queer expression of pain and humor passed over his face, and he exclaimed:

"An' faith it's a discharge!"

ZULEIKA.

In Three Chapters. — Chapter II.

Claude and His Mare in Germany.

Neither Claude nor Zuleika suffered any injury from their experience in the Bosphorus, but both had to keep out of sight for a week, until the excitement caused by the wild ride through the city had subsided.

There was at one time a certain danger of a riot, for Mudir Pasha, the Master of the Horse, who was a fanatical Turk, did not lose this opportunity to inflame the people against the hated "Giaours," who had already, as he believed, too much influence in the City of the Faithful.

The Sultan, he said, was completely in their power; and now he had ventured to insult his people by presenting the most precious horse in the Turkish Empire to a dog of a Christian!

Moreover, there was a law, always rigidly enforced, which forbade the exportation of Arabian mares. As long as this foreign youth, Claude Ring, remained in Stamboul, his possession of Zuleika might, perhaps, be tolerated; but if he attempted to take her beyond the borders of the Empire, he must discover that he was engaged in a dangerous business.

Colonel Ring, when the rumors of the people's indignation reached his ears, made haste to communicate to the Sultan the true story of the affair; and the Sultan, being satisfied that it was Mudir, and not Claude, who was at fault, sternly commanded the pasha to refrain from exciting the people. He refused to take Zuleika back, or to force Claude to exchange her for another horse. He had given his royal word, which he would not break.

Colonel Ring, who found it hard to comprehend why all this excitement should have arisen about a horse, now took pains to inquire into the history and pedigree of Zuleika. He learned that she had been procured with infinite trouble as a colt from the Goumussa tribe of Arabs, who cherish their horses with especial pride, and that she came of the very choicest strain of the desert. Her pedigree had been scrupulously kept for more than a century, and there was a tradition that she was descended from the renowned stallion ridden by that scourge of nations, Genghis Khan, in all his battles.

The Goumussa tribe had never before been willing to part with horses of this strain, because they believed that the sale of a single colt would bring bad luck. They had a superstitious faith in the virtue and excellence of these beautiful animals, and imagined that their own star would be eclipsed when they lost exclusive possession of them.

Claude knew the Turk well enough to be aware that it was only a question of time when he should lose his treasure, if he remained in Stamboul. Mudir Pasha, his declared enemy, was as unscrupulous as he was powerful.

Claude begged his father to give up his commission in the Turkish army, and return to the lands of Christians; but the Colonel had much at heart certain reforms in the infantry drill which he was trying to introduce, and would not listen to his son's entreaties.

A year, therefore, passed, during which Claude devoted himself chiefly to guarding Zuleika and keeping her from harm. He spent, to be sure, three hours with his tutor every morning, and rode with Prince Ishmael three or four times a week; but Zuleika was his first thought when he awoke, and his last when he closed his eyes in sleep.

He wisely hesitated to show off the mare before the Prince. Strictly speaking, it was not proper for him to be better mounted than the heir to the throne of the Moslems. As long as Ishmael had all he could do to keep in the saddle it did not matter much; but now, thanks to Claude's example and teaching, he had not only acquired fair skill in riding, but there was a certain military swing in his bearing, and he conversed with perfect ease while cantering over the smooth roads at a rattling pace.

The Prince's mother and head tutor were delighted with the improvement in him, and his mother sent Claude costly presents, which he was obliged to accept. What to do with all the jewelry he accumulated became, after a while, a problem. He could not sell the gifts of a Sultana, nor could he, according to European notions, wear them upon his person without making himself ridiculous. One day Prince Ishmael met

In Zuleika's Stall.

Claude as he was riding Zuleika on a retired road outside the capital.

"That's a fine raking mare you have got," said the Prince.

He had never before appeared to be aware of Zuleika's existence, and as he was not very observing, this had not surprised his friend.

"I am glad you think so, Prince," was Claude's careless reply. "I think myself she is a fine beast. She has a good, light pace and easy action."

"She is a trifle ragged-hipped," said Ishmael, scanning the mare curiously.

"I beg your pardon, Prince!" cried the hot-headed Claude, forgetting all his prudence. "She is as smooth as satin, and there isn't a flaw in her whole beautiful body."

The words had scarcely escaped from his mouth before he felt how foolish they were; but then he could not bear to have any one find fault with Zuleika, and the incautious praise sprang to his lips before he could weigh its consequences.

"How much will you take for her?" inquired the Prince, who was more impressed by the ardor of Claude's speech than by the fine points of the mare.

"If your Highness will pardon me," answered Claude, "I should not willingly consent to sell her, because I am very fond of her."

Ishmael's face darkened, and he looked away with a cloudy brow. He was not accustomed to being crossed in his wishes. Claude rode in silent apprehension at his side.

"It is not fair!" began the Prince, moodily, turning his worthy face to his companion. "It is not proper that you should have a better mount than I. I will pay you any reasonable price you may ask for your mare, but I want you to make no difficulty about it. Do you understand?"

"I understand, Prince," murmured Claude.

He was about to add something more, but happily restrained himself in time.

But the world looked no longer the same to him. The brightness had gone out of the sunshine, and the song of the birds beat upon his ears with a weary and stale monotony. To oppose the Prince, if he had really made up his mind to possess Zuleika, was simply madness; but to part with Zuleika in order to gratify an idle whim of a pampered favorite of fortune was more than he could bear. Claude rode home in bad humor, and told his father what had occurred.

"My dear boy," said Colonel Ring, "you'll have to give up your mare or leave the Turkish Empire. The Prince will be sure to get the better of you."

"I would rather lose my life than lose Zuleika!" cried Claude, hotly.

"That is foolish talk, Claude," said his father, with grave kindliness. "I can well understand your feelings for Zuleika, but you are old enough now to consult your reason rather than a blind impulse. You know I cannot leave the Sultan's service at the present time, and you have always refused to go without me, although I have urged you again and again to enter the military academy at Lichterfelde."

"I'll go now, if you'll let me take Zuleika with me!" ejaculated the boy, eagerly.

"Am I to understand that you care more for your horse than you do for your father?" asked the Colonel.

"No, father," answered Claude, warmly. "But it is not a question of losing you, as it is with Zuleika. You'll join me soon, and then we shall both be happier than we ever could be here, where all foreigners are hated and despised."

Claude obtained his father's permission to start that very night for Athens. The Colonel knew well the captain of a Greek steamer which sailed early the next morning, and he agreed to assist his son in getting Zuleika aboard before daylight.

Claude packed his trunk in haste, and roused his German groom, accompanied him to the stable.

Zuleika, when she heard her master's voice, greeted him with a friendly neigh. She was standing quietly in her roomy box-stall, and her beautiful head was lifted over the railing, while her dark eyes peered with eager surprise through the dusk which the light of the lantern dimly penetrated.

Claude found a lump of sugar in his pocket, and in order not to excite the mare by his unwonted visit, stood by her and patted her on the neck while she ate the sugar.

"We are going travelling, you and I, Zuleika dear," he said, after a while, "and now I want you to get on your hooded overcoat and your whole travelling costume."

He ordered the groom to draw the hood over her head, and the blanket, which was of one piece with the hood, covered all the rest of her body except her legs below the knees. She was so completely disguised that her own master would not have recognized her if he had met her elsewhere. Only her black eyes were visible, gazing through the eye-holes bordered with red.

"Now," said Claude to the groom, "you may prepare a carriage, and as soon as my father and I start, you will ride Zuleika slowly behind us."

The groom obeyed promptly. Within an hour all the preparations for the journey were completed.

It was about eleven o'clock in the evening, and the weather was fair. There was still a little traffic in the streets, and the inconspicuous carriage and the hooded horse, therefore, attracted no attention. It was a common thing for people to drive in the evening, and for grooms to exercise their horses in the cool night air.

In half an hour they had reached the quays, and drove out on a pier to which the Greek steamer was moored. A Turkish custom-house officer who sat cross-legged, with a long pipe in his mouth, close to the gangway, proved to be fast asleep; and Zuleika was led aboard without so much as being challenged.

Luck had attended him so far, and Claude was in high spirits. His father spent the night in the saloon of the steamer, giving his son good advice, and writing letters of introduction to some of his best friends in Germany.

At six o'clock in the morning, as the whistle was blowing for the last time, the Colonel took leave of his son. Claude and Zuleika reached Athens in safety, and made their way thence by steamer to Palermo and Marseilles, and thence by rail to Paris.

No sooner had he appeared in the Bois de Boulogne with Zuleika than he found himself a personage of importance, and was approached with a dozen offers of the most extravagant kind for the mare.

Much embarrassed by the attention he attracted, and fearful that the Turkish embassy would hear of the mare, Claude hastened across the Rhine into Germany, and to Lichterfelde. There he passed his entrance examination to the military academy.

He was now obliged to appear in the costume of a Prussian cadet, and to submit himself to discipline; and to a boy of Claude's disposition who had had his own way in most things, the inflexible rules and the harsh tone of command which prevailed in this school of Spartan simplicity and sternness were doubly hard to bear.

He was thoroughly homesick, and in moments of loneliness often wished that he had not so rashly given up the companionship of his dear and affectionate father.

The only consolation he had in his solitude was Zuleika. Nearly all the time he could spare from his duties he spent with her. Though he was not a noble, like so many of his comrades, he was by special permission granted leave to keep a horse.

It was entirely owing to Zuleika that Claude found himself again a person of distinction, the moment he appeared on horseback. People stopped all along the sidewalks to gaze at him, as he made Zuleika dance away over the ground with a pace so light and dainty that it seemed the very spirit of airy speed and grace.

Digitized by Google

"What a beautiful creature!" exclaimed the ladies, enthusiastically.

"And how superbly the fellow rides," ejaculated others; "he sits in the saddle as if he were born in it."

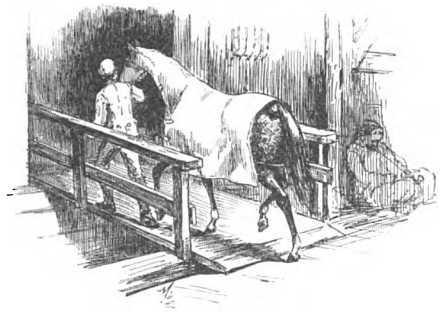
"The young man is an Arab," an officious person explained. "That is the reason he rides so well. His father is an Arab sheik, and this mare is his chief treasure; and so to speak, a friend of the family. For you know the Arabs associate with their horses as we do with our friends; call upon them, invite them to tea, and drink a glass with them."

Claude heard only part of this explanation, and it amused him exceedingly. He did not object particularly to being taken for an Arab; and that Zuleika was his friend he never would have thought of denying.

Early in the morning, before eating his breakfast, he went to the stable to pet her, talk to her, and inquire for her health. No sooner did Zuleika hear his footsteps without, than she whinnied toward him her joyous greeting. Long before he spoke, she felt by instinct his approach, and it was touching to see the eagerness with which she lifted her lovely head to catch the first glimpse of him when he opened the stable door.

She sulked if she was neglected, and she was extremely jealous. Once, when Claude, instead of going straight toward her, as was his wont, stopped to speak to the groom and incidentally patted another horse, she turned impulsively about in her box stall, and made no response to his advances, except an angry whisking of her tail. Two days passed before he regained her favor.

Claude attached himself with his whole heart to this beautiful and intelligent creature. His fellow-cadets called him "the Arab," because of his devotion to Zuleika.



The story was told by some wag that he kissed her good morning and good night, and had his breakfast served in the stable with her. The latter was, to be sure, a pure invention, but the former had some slight foundation in fact. For Zuleika had learned, whenever Claude said, "Kiss me," to touch his face with her soft nose, and when he said, "Pat me," gently to rub her head against his cheeks.

A year passed rapidly. Claude made many friends in the military academy. He took good-naturedly all the banter of his comrades. All the extravagant offers he received for Zuleika he refused, declaring freely that no money could buy her.

A year after Claude's departure, Colonel Ring resigned his commission in the Turkish Army, receiving at the same time the honors due to his services. He had taken good care not to divulge Claude's place of residence, and had even had his letters addressed to Galbraith Effendi.

He had found the separation very hard, and was eager to see his son. As soon, therefore, as he had made his farewell visit to the Sultan, he started by rail for Vienna, and thence to Berlin, where Claude had leave to meet him.

It seemed to him that, at a station where the train stopped for dinner, he caught sight of the squat figure and dark beard and features of Mudir Pasha, the Sultan's Master of the Horse. He wondered what this surly Turk was doing in Germany, and concluded that he had been sent abroad to buy horses for the army. The Colonel

had no desire to renew his acquaintance with him, and therefore appeared not to see him.

After the train was well under way, it occurred to him as a curious thing that Mudir was dressed in European costume, even dispensing with the fez—which in an orthodox, old-fashioned Turk was rather extraordinary.

The Colonel soon fell into a pleasanter train of thought, as he rolled northward toward Berlin.

There is no need of describing the happy meeting between father and son. It was late when they thought of retiring, and late when they had finished breakfast the next morning.

Claude rose with a sudden pang, before he had finished his meal. It was the first time in his life that he had forgotten Zuleika.

"Excuse me, father," he said, hurriedly; "I'll be back in five minutes."

He rushed, with a nameless oppression, to the stable of the hotel.

Ah! to be sure, there stood Zuleika, as usual. But she was in a pet, of course, at having been forgotten. She gave him no greeting, nor did she even turn her head to look at him. Claude did not wonder.

"Don't sulk now, Zuleika," he said, in his most cajoling tones, "come here and let me talk to you. You know father has come —"

The mare stood as stolid as a post, munching her oats, and betrayed not even by a look or a pricking up of her ears, or an extra whisking of her tail, that she heard Claude's voice.

Claude's heart sank within him. He felt as if a great calamity had overtaken him. He seized a hay-fork, and thrust open the two shutters which covered the windows. The light poured in.

Then with a slow, deliberate motion, the mare turned her head; but what was that? Surely that was not Zuleika's head!

Claude leaped over the railing, unhooked the door, and pulled the mare out into the full glare of the daylight. He felt chilly and half-benumbed.

He tied the mare to the stable door, and stared straight into her face. She made no response. Could he trust his eyes? It was not Zuleika! Some one had stolen his treasure in the night and substituted this dull beast, which was outwardly not unlike her, but lacked her airy grace, her fiery spirit, and her perfect beauty.

Claude had still a vague hope that he might be dreaming, and that he would presently wake and find that it was all a horrible mistake.

But he was indeed awake. The dapple-gray mare did not become Zuleika. His mare was gone.

For the Companion.

THE LOTTERY TICKET.

Celia Bonner, coming over the hill from Gatesborough to West Gatesborough in the teeth of a keen November storm, wondered why this particular storm affected her so disagreeably. Generally in such weather she beguiled the way with cheerful thoughts and calculations, all overspread by calm complacency that she had at last gained this position as teacher, so long coveted; but to-night she found herself wishing that the school were at West Gatesborough instead of Gatesborough, or else that her mother and the small house and farm which was their sole estate could be moved nearer to the school.

This wishing was all so unlike Celia's matter-of-fact reasonableness in general that she sought hard for the reason why she should be taken with such a desire. She soon found it in the fact that she was undeniably hungry.

She was wet, cold and bedraggled, but most of all she was hungry, with the keen, uncompromising hunger of healthy young girlhood. Surely this of itself was enough to induce gloomy thoughts and futile wishes.

"I was silly not to think of it sooner," she half-laughed to herself. "I had begun to forget that I had such a very meagre lunch this noon. But never mind; mother will have a hot supper waiting for me."

Then she turned the last bend in the road, and seeing the light in her mother's kitchen, stumbled along more quickly than ever. A feeble light it was, and typical in a measure of everything within the house, from the mother down, except when Celia was there. Even the fires Mrs. Bonner kindled had a trick of burning weakly and uncertainly.

When, a few moments after she saw the light, Celia burst into the kitchen, with her cloak and umbrella held out before her, the savory supper she had so keenly anticipated was in no way apparent to her senses. The table was provided with no other edibles than cold Graham gems, a very few slices of cold corned beef, and the inevitable dish of apple-sauce.

Heedless now of the drip which bespattered the home-made carpet, Celia stood still.

"Mother! You don't mean to say this is all you have for supper!"

Affecting intense preoccupation with the tea-kettle, her mother responded, "I don't see but it's pretty good, Celia."

"But, mother! We've had nothing else for the last week, and I told you I was starving for something hearty and warm. I gave you money this morning to buy a steak."

"Well, you see, there's so many other things to get," Mrs. Bonner pleaded, weakly. There was something so furtive and insincere in her manner that Celia, without difficulty, jumped to a conclusion.

"Mother, I believe you've spent that money for another lottery ticket!"

This abrupt statement revealed the skeleton which had stood in the closet of this poor little household for more than a year. It was a subject so repulsive to Celia that she hated to speak of it, but so dear to the mother that she loved to enlarge upon it.

"And supposing I did, Celia?" she said, more confidently. "Fortune's going to turn sometime, and I'll be bound you'd be glad enough if we came into fifteen thousand dollars all at once, as that young man did up in Massachusetts."

The lines of the argument were all wearily familiar to Celia, but hunger gave an added vigor to her protest.

"I might be demoralized by it," she said, "but I'd never be glad! Whether you gain or lose, the principle is the same. It's nothing but gambling, and though you'd feel pretty badly to hear that our Joe out in Colorado had become a gambler, you think it no harm to be one yourself, though you are a church-member."

Mrs. Bonner remained silent a little while, and then began to cry softly.

"It's too bad for you to scold in that way, Celia," she said, "when all I'm thinking of is your good and Joe's. And even if I am a church-member, I don't see that I'm committing any sin. Aint lotteries as old as the days of Moses, and didn't he consent to them? And didn't the early settlers in Maine and New Hampshire make use of them to build churches as well as schools?"

This was again familiar ground to Celia, but she took it up as if it were quite new.

"Yes, mother, but we don't live under the Mosaic law now, and our forefathers did many things which we don't imitate. Because they hanged innocent women as witches, we should not consider it right to do it. Lotteries began in corruption, and they corrupt wherever they go. I'm sure every Christian must condemn them at heart, and to win in them is more dangerous than to lose.

"You've never been the same, mother, since you bought that first ticket two years ago. It's like dram-drinking; you want to keep on at it. I don't mean to be unkind, but I can't make it seem anything less than wicked."

The stern young preacher softened a little here, and a plaintive sniffle by way of acknowledgment prefaced Mrs. Bonner's reply:

"I don't believe I'll ever need to go into them again, Celia. I feel it that I'm going to get something this time. I had a dream last night, and in it I was counting out fifteen bags of gold!"

It was useless to argue further. Celia moodily set about clearing away the dishes, and said no more.

A few weeks later, coming over the hill in a snow-storm, Celia found the little light absent from her mother's window. Filled at once with a vague alarm, she hurried over the remaining part of the road and into the house, calling as she went, "Mother! Where are you, mother?"

No answering voice greeted her, but groping to the mantel, she lighted a lamp. Then turning to examine the room, she saw her mother sitting in her accustomed chair by the window.

"Why!" Celia began, half-relieved, half-provoked; and then the question which was to follow died on her lips, for it became apparent that, though death did not yet confront her, she was looking upon its strange similitude, paralysis.

Her mother's whole body was rigid and motionless. The poor hands, quieted forever, hung down beside it. The tongue, whose irrelevancy had so often wearied poor practical Celia, was now forever stilled.

For what seemed an hour, though in reality it was hardly more than a moment, Celia stood almost as motionless; then, running down the road to their nearest neighbor, she brought her back, pitying and exclaiming as she came.

Together they lifted the limp figure to the lounge, upon which they wheeled Mrs. Bonner to the bed in the room off the sitting-room.

Only when they laid her there did Celia, bending above her in agonized appeal, discover that the eyes alone were instinct with life. They looked up to Celia with pitiful intelligence, seeming to respond to her cry.

Then wandering through the door in their gaze, they fixed themselves on Mrs. Denny with a total change of expression.

Celia turned around in startled surprise, to discover that the kindly neighbor, with the instincts of a housekeeper, was "tidying up" the sitting-room, and, as part of the effort, was now examining an envelope. Celia remembered that she had seen this lying on the floor beside her mother's chair, but she had been too sadly lacking in curiosity to examine it.

"What is it, Mrs. Denny?" she now asked. Then she covered her face with her hands, as Mrs. Denny replied:

"For mercy's sake! The poor thing! If it isn't one of those lottery lists! Now that's what's given her this stroke, I suppose. She's been disappointed again, and she set so much store by it. Shall I burn it, Celia?"

"Yes," Celia answered, with sorrowful energy; and then corrected herself, as the haunting eyes on the pillow caught hers with a sudden fierce protest.

"No, Mrs. Denny. She doesn't want it burned, I think. Put it in the top left-hand drawer of the secretary, please."

Soon after, and all through the days which intervened before the end came, that mournful gaze concentrated itself most of all on the old family Bible which rested on a stand in the corner of the room where she lay, and this, too, Celia interpreted.

"She wants me to read the Bible to her. Oh, poor mother! you know now, don't you, that your truest riches are in that?"

So hour after hour during the few short weeks in which her mother lingered on, the daughter read and reread the promises which relate to eternal life. Sometimes peace fell like a veil upon the dim windows of that fast darkening tabernacle, and again such restless entreaty looked out from them that Mrs. Denny interrupted the reading:

"Celia, she's got something on her mind that we don't know of yet. It seems sometimes as though her eyes would pierce through that Bible as you sit there reading, and when you aint at it, she's still staring at it."

But always Celia's reply was the same:

"It's only that she's growing more eager for it all the time. It seems the greatest comfort I have that she loves it so. Yes, mother, I'll read more!"

The final summons came very quietly at the last. Celia, going away for a much-needed nap, had smiled down upon her, saying:

"Good-by, mother! I'm going to lie down just for a little while. God bless you, mother dear!"

The poor, pathetic eyes had seemed almost to smile in return, but when Celia woke from her nap, they were closed in their last long slumber. Whatever was the secret they had yearned to disclose, all opportunity was now forever gone by.

Two days later they laid Mrs. Bonner in the family burying-ground at the back of the little farm, and Celia returned to her teaching with a new tombstone as the immediate object of her ambition.

The blinds were closed in the old house, and the doors locked up, and for the present Celia engaged board in Gatesborough.

The weeks wore on until the winter term was nearly over. Then Celia's brother, Joe wrote from Colorado, begging her to join him there. He was well, and was lonely. Why should not Celia let or sell the old place, and come out to this new country, which was so much fairer than that bleak little corner of Maine?

Celia loved Maine with the deep-rooted attachment often noticeable in plants which flourish on rocky soil. It was home to her, and she was essentially home-loving; but it had been a very dreary home of late, and she missed the poor weak mother, sorely grieving for her with that admixture of remorse to which all strong natures are subject.

The little house under the hill could never be the same to her again. Whether there or in Gatesborough, her living was but scanty at best, and most of all she longed to be with dear old Joe.

Almost as soon as the wish was expressed, a tenant was found for the house, whereupon Celia with Mrs. Denny's help began the task of clearing away and putting things in order.

Mrs. Denny offered to take care of any such relics as Celia chose to keep.

"If I have room in my trunk," Celia said, "I shall certainly take the old Bible. I can't bear to leave that behind."

Then, being alone and somewhat tired, she began to turn over the pages of the sacred book, stopping to read here and there.

She opened, all unaware, at two pages where she was not accustomed to read; and there, between them, lay a lottery ticket bearing the number—68,498.

Celia looked down upon it for a moment with the half-fascinated and yet wholly disgusted gaze which she might have bestowed upon an intruding snake. Then, suddenly a thought which she found almost equally venomous darted into her mind.

"Was this the reason mother used to look so longingly at the Bible?" she thought. "Oh, surely not!"

Then, leaving the book open on the stand, she rushed in a tumult of fear and apprehension to the secretary, and opened the top left-hand drawer.

There, where Mrs. Denny had placed it, still lay the well-remembered fatal envelope. Opening it, Celia scanned the list of numbers which had won the principal prizes at the December drawing.

32,413, 59,162, 44,122, 58,227—and then, dancing before her eyes—68,498!

The poor futile dream had come true. The fifteen thousand dollars, represented by the fifteen bags of gold, had for one moment flashed before the dreamer's eyes; and then, before her feet could carry her from one room into the next, before her eager hand could grasp the small blue slip, the hand of death had arrested her.

Just in the first painful shock of her discovery, Celia wondered if her conscience could stand the strain. It seemed as if fate, not Providence, had been at work, and had wrought this bitterly cruel piece of irony.

For a long hour she groped amid darkened thoughts. Then, material darkness having also come upon her, she rose; and again, as on that fatal night, groped her way to the mantel. She lighted the lamp, and stood looking down into the smouldering logs upon the hearth. While she looked, a new thought came to trouble her—a new though very feeble temptation assailed her.

"Your mother wanted it most of all for Joe and you," the tempter whispered. "She would have been happier dying if she had thought you would have had it."

But, with some of the old-time fire in voice and eyes, Celia answered aloud, as though to a visible

Digitized by Google

opponent: "I will not do it! It was like one of those poisonous marsh damps which lure people on to death. It led her there; she would have been alive now if this weakness had not taken hold of her. And I would rather die than profit by it now. I will burn the thing, so that the mean temptation may not come to me again!"

In another moment the small blue slip of paper curled and shrivelled over the dying logs, then burst into a mocking flame, and in a moment more was a thin little sheet of ashes.

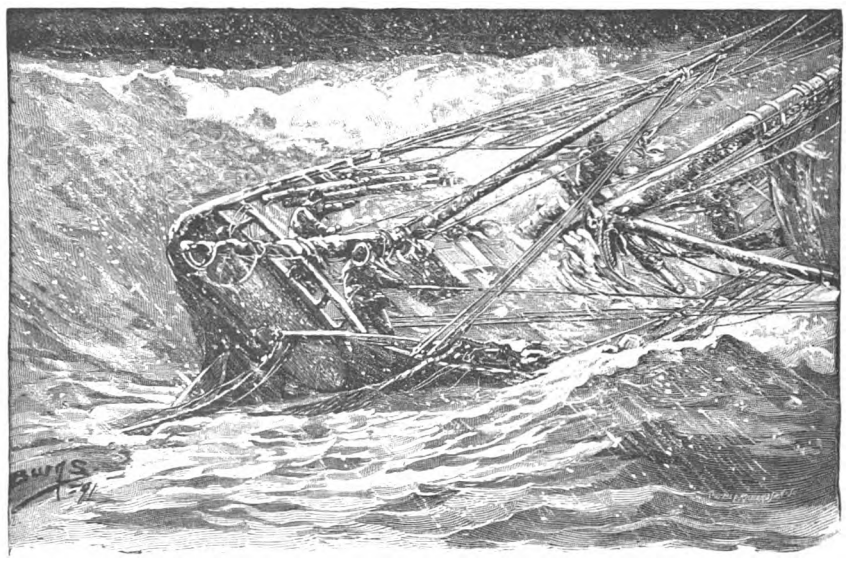
ON THE NORTH SEA BANKS.

I. — The Great Snow-Storm.

The weather grew very cold toward the end of the first week in January, 1881, and the fishermen on board the smack *Maria* were a good deal pinched by the frost. They had been out a long time, and their stores were running short.

The sea had been bad for a month, and every man had worked, on an average, twenty hours a day.

People may stare at that, but it is the fisher's usual day's work in winter time, and the men do not know what an outcry would be made on shore if it were known that about twelve thousand human beings are forced to work twenty hours out of the twenty-four.



If the kindly landsmen were also told that these men never go to bed during the four hours which they have for sleep, there would be still more astonishment; and if it were proved that the good fellows never take their clothes off and never wash in fresh water for eight weeks on a stretch, I fancy there would be signs of something more than amazement.

There is rarely a calm winter's day on the Banks, and the water is so shallow that the seas dance up into sharp hillocks, like those which one may make in a basin by jerking it. The seamen are aware that they cannot remain on the shelf of their poor bunks, and they will tell you:

"We all turns in on the cabin floor, sir, because then she don't pitch us about quite so dangerous. If you was to get off hard asleep, and she rolled her rail right on under, you might get a smash out of your bunk as 'ud break your bones."

Then I must point out that men cannot very well use fresh water for washing when there is only the stock of water for drink which such small vessels can carry. They are washed with salt water many times a day, and that has to content them.

Well, and now as to the twenty hours' work. All the hands do not have so much to do every day, but to make up the balance they are often kept awake for forty or fifty hours at a stretch.

A Fearful Snow-Storm.

At five in the afternoon the fleet begins to sail, and then the signal comes to let go the trawl. It sounds easy to say, "Let go," but then that monstrous beam has to be so secured and balanced by a multitude of ropes and gearings that the piece of work is anything but easy.

Supposing that you had to run along a parapet for thirty feet, and pass a rope round a beam ten feet below you; and suppose that you had only a telegraph wire to cling to with one hand until you reached a post. Suppose, if you possibly can, that the parapet reared like a restive horse all the time you were making your journey.

Then you have a very nice idea of the job that a smacksman undertakes four times a day.

When the dead drag of the monster net is felt, and the vessel begins to rear into the waves as if she were wild at being held back, the fishers cannot go down to turn in at once, for there are many little things to do, and if anything important has been smashed, it is very likely that the men may just have time to eat their dinner like famished dogs, and rush back to business again.

Things are always getting smashed on board the trawlers in that swift sea, and any carelessness as to repairs might send a crew to their deaths. So that is why no sleep must be thought of if a block or reef-earing has to be put right.

If a man can get below by nine o'clock, he may count himself rather fortunate. Then he squats on the floor, and devours his huge tinful of yellow cabbage, stiff pudding and fat beef,—all of which have been boiled together in salt water,—and then he sinks back, his clasp-knife is put away, and he is like a log.

How they sleep! I have seen a fellow stretch himself out before he had removed his oil-stains. His hair was drenched and streaming, his sea-boots were streaming, and his clothes were sodden; but he went off like a little infant.

At midnight the terrible work of fetching in the trawl must be done.

A man may be over the side, perched like a seagull on the beam, while the vast swoop of the ship sends him under again and again; he may be hanging by one hand to the falls, and tearing at a fouled rope with the other; he may be dashed down at one moment as though he had been shot from a catapult, and he jumps up and flies at his work again—unless he is maimed, which mishap happens pretty often.

Still the work is not done, for the fish must be cleaned, the vessel must be set away on her fresh course, and it may be that an hour or two must be spent in reefing down. Dawn soon comes at that rate, and the tiny boat must travel away over the rushing mountains to the steamer that bears the fish to market.

I am not morbidly in love with life, but I should not accept fifty pounds per journey all the winter through if I had to take an oar in one of those small boats, for seven men out of each hundred are drowned in the year, so the odds in favor of survival are none too large.

The bold fellows laugh when they return after that cruel trip, even if they have seen some of their comrades go under, for they have no time to think about death, and they are more bent on their mounds of fish than on mourning. Their nets have to be mended and gear repaired, and at last there comes a little time for rest once more.

It is easy to see how twenty hours run away, and you may now understand that the crew of the *Maria* were in a pretty plight, after their long exposure in the bitter cold winter weather. Skipper Burley looked like a sweep; the mate was worse; the first hand was frost-bitten, and all his fingers were split across by deep cuts at the joints.

The second hand had worn out all his stockings, and his feet were wrapped in sacking, while poor little Billy, the boy, was raw from his neck to his waist, because he had no flannels, and the frost cut him so badly at night.

All the fellows craved sugar more than anything; the fishers hunger after sweet things as an Eskimo does after fat, and for the same reason. Dirty, bruised, tired and cold as they were, you may imagine how the poor souls longed for the last day of their spell at sea.

On January Eighteenth the glass fell, and the Admiral signalled to the men that something bad was coming. Nothing could be seen distinctly even at a few yards' distance, for an ugly yellow haze seemed to choke up all the space between the vault of the low sky and the sea.

The gulls screamed and babbled, and seemed to hold a sort of parliament; they swooped round the smacks, and yelled as if they were making mock of their best friends—for the seamen love the gulls. Then, like a flight of spectres, the stanch birds departed, no one knew whither; and little Billy was grieved, because he liked chatting with gulls when they swept round his head and begged for scraps.

Night fell, and silence fell also; a wicked Something was in the air, and men's hearts went chill.

Skipper Burley said, "Lads, I've seen this once before. All on us must lay out, and I'm going to put her under storm canvas."

So the vessel was left with a scrap of sail; and it was very well that she carried next to nothing, for at midnight there came a moan from all round, and then the wind dashed on the fleet, while the moan rose to a hoarse scream. The water was plucked up in lumps that flew at first with the consistency of solids, and scattered at last in a sweeping, iron kind of rain, that felled men to the decks when they had failed to lay hold of some rope.

Many vessels which had continued to show some sail had their canvas torn clean away, or were hove down and rose no more.

Within the lifetime of all those on that dreadful Bank no such breeze had ever been known. The wind gave neither warning nor quarter; it seemed to say, "I have flowed round the earth; I have wandered over fields of flowers, and I have kissed them tenderly; a little while ago, and I sang the Arabs of the desert to sleep, and I was so quiet that no one could think I had madness in me. And now I have come to murder you."

Little Billy had his back against the mizzen rigging when the first crash of the blast came, and he was carried like a feather to the lee side as the vessel lay over under the push of the wind. The boy was driven against the rail, and he must have gone with the next lurch had he not piped, "O Ned! Ned! I can't get back!"

Ned, the second hand, lay down and hauled the little fellow back upon the deck, but it was like pulling against a strong man, and Billy was nearly drowned amid the water that rushed along the channel.

Burley said, "Lash that tiller, Ned, and see if she'll lie to it. Come all below. Ned, you'll look out if anything comes down on us."

When the men were below, the skipper made his way to the cabin, and then he said, "Now, chaps, this is goin' to be a breeze—a breeze, I tell you, as has never been. We'll have a sea in an hour enough to smother her; the boy must keep the fire and the kettle goin', and you stand by, for there aint no sleep for forty-eight hours and the rest.

"If it's as I expect, and the water's too heavy for her, you've got to help me to get her away afore it, and I'm going to run for home. Mind *you* that; I'll run and chance it."

The volleys of wind bellowed on; the sea sprang up like magic, and soon the *Maria* appeared to be dodging a succession of mountains which came at her as though they knew what they wanted—as though they meant murder indeed.

It is most weird to see how a blind wave seems to acquire malignant intelligence as it curls down toward you; it is your personal enemy.

When the dawn came, a few vessels could be dimly seen, but the drift was so thick that each ship only loomed in spectral fashion through it; the *Maria* was being twisted and wrenched badly, and the gaff of the mizzen finally fell.

Burley called all hands to secure the broken spar, and Billy peeped up to see what was the matter. The boy gave a look over the plunging bow, screening his eyes the while, and he screeched, "Skipper, look ahead! O Lor', she's boomin'!"

A man's voice could not have been heard, but the shrill treble pierced through the crash of the storm. Burley's face grew stern; he left the unruly wreck of the spar, and sprang to the tiller. A collier brig came on under bare poles, and as the wind drove her forward until a continuous pile of white water surged over her, she cleared the smack by two yards.

Bare as the ugly bulk was, she travelled like a railway train, and she would have gone over the smack had she hit her.

By six o'clock there was a strange trouble above, and then, like a river, came the snow. The fishermen dread snow more than anything, because their lives depend on a lottery when it comes.

"We must take half an hour at a time for'a'd, chaps. Tom, you go first."

So Tom dodged up till he had hold of the boat's stern, and tried to look out; but he might as well have tried to look through a wall. The galloping hurricane brought the masses of snow down without giving time for gaps to be made, and Tom could have looked out quite as well from the cabin.

Only the rush of the seas on board prevented the drifts from forming a solid mass on the deck level with the rail; and those seas were more and more like big hammers as the hours went by. They raised their huge bulk; the topmost folds crumbled over; there was a dreadful silence, and then the liquid thunder of the fall.

"I never heerd water like that afore, skipper," said Billy, timidly.

"No, boy, and you never will again," said Burley, grimly; and Billy trembled, for the skipper's tone was queer.

At eleven o'clock the skipper came below to thaw himself after his spell at the lookout, and Ned went up.

"My God! What's this?" he growled, starting up as a silence that could be felt seemed to still the very pulses of the storm.

He had reason for wonder; when he got on deck, he saw something that men can only picture in frantic dreams.

The wave was coming; it was far, far above the smack, and he could tell that it was a giant despite the snow, for even the snow lost velocity under the lee of the terrific hill.

All passed in a second; Burley prayed a little; he heard a confused crashing, then a ripping sound, and then he knew he was under black water.

When the *Maria* miraculously came up, the skipper was half drowned, but he had a grip of the winch; the mate was knee-deep in water in the cabin, the boat was smashed to matchwood—and Ned was far away astern, and dead. They die very easily, poor lads, for the cold of the water stuns them, and a man will put his arms out stiffly and lie as if he were asleep, as you catch sight of him on the bulge of the felon wave that slew him. Poor Ned!

Little Billy tried not to cry when the skipper came for Tom and the mate.

"It's bad for you, boy; still, you'll miss a lot of trouble," said Burley, by way of comfort to Billy, and the game little man faltered, "I don't want for to die, skipper, I don't; but I go with Tom and the mate and you."

"Now, chaps, we're goin' to run, and if we're done as I take her round, we're done, and there's an end."

So the three surviving men went on their forlorn errand. Once the *Maria* lay long on her broadside as she fell off, and the level of the water crept up and up. Poor Billy thought all was over, but the smack got round, and then came the race for life between her and the sea.

I wish I had the space of a book in which to tell you about that dreadful race. A lookout was impossible. Once the tearing smack hit something that made her reel, and the men saw that she had run into a floating mast.

As the second night deepened, the snow fell thicker; but before the inky blackness mixed finally with the pall of the snow, the *Maria* swept past some object that loomed grayly within ten yards of her starboard side, and a yell rose in the murk.

It was a vessel, bottom up, with one man still clinging, and Burley felt heart-broken when he rushed by, for he could no more have picked up that man by beating back than he could have picked up a stray bottle.

"Poor chap; to drown, and us within biscuit's throw!" That was the sailor's funeral oration.

By two in the morning Burley knew he was near his port, and he was half-mad with mingled joy and suspense, but he and the rest kept cool. The *Maria* tore on still till the mate cried suddenly, "Listen! There's a steamer's whistle! She's going in, and we're just home."

Sure enough, the enormous discord of a steam-whistle was heard, and they could tell the ship was making signals for the people at her wharf. Then Burley went below and knelt down.

I must tell you next week what was the result of his stay of half a minute in the cabin.

JAMES RUNCIMAN.

For the Companion.

THE SUGAR BEET.

Among the things which Napoleon Bonaparte is not remembered for is the establishment of the beet-sugar industry in Europe. It was his encouragement, given while he was the almost absolute ruler of the French Empire, which raised the making of sugar from beets from the field of struggling experiment, fitfully engaged in by men of science who were regarded as visionaries, to the practical position which has finally made it a larger and more important business, taking the world through, than the making of cane sugar.

Although the great Napoleon was not the sort of man whom it was ordinarily safe to laugh at, he was ridiculed and caricatured on account of his faith that sugar could be made profitably from beets.

In 1811 the Emperor promised the French people that they should have sugar from beets if he excluded from France the commerce of England, including the sugars of the British West Indies. This promise led to the publication of a caricature, in which the Emperor and his little son, the King of Rome, were represented.

The Emperor was shown sitting in his boy's nursery, squeezing a beet-root into a cup of coffee. The baby Prince sat near him, hard at work sucking a beet-root, while the nurse, standing close by, was represented as exclaiming, "Suck it, dear, suck it; your papa *says* it is sugar!"

This biting sarcasm did not prevent Napoleon from spending several million francs, at a time when his Empire was under a tremendous strain of expenditure, in bounties for sugar made from beets, and his sagacity has been vindicated at last by the fact that, within the past five years, the world's yearly production of beet sugar has risen above its production of cane sugar by more than a million tons.

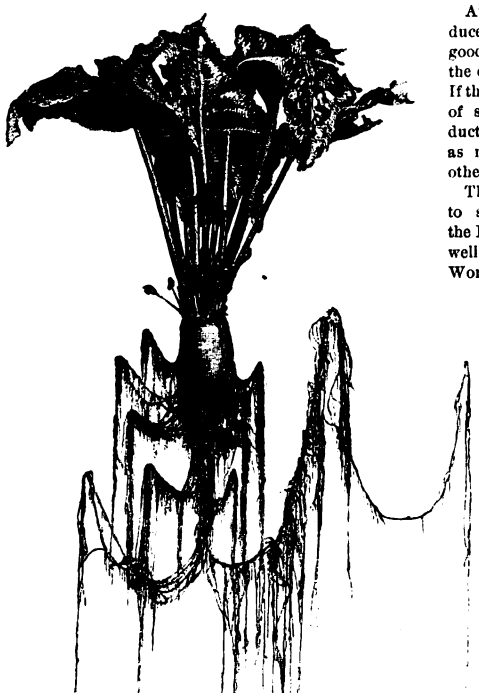
By far the greater part of this beet sugar is raised and consumed in Europe. It is now the sugar ordinarily used there, just as cane sugar is the sort almost universally used in America.

Beet sugar may be bought in certain stores in our Eastern cities. To the taste, it cannot be distinguished from the best cane sugar, except by experts, who say it is richer in sweets than most cane sugar.

It is not made from the common red garden beet, but from a white beet—in some varieties verging upon a pink color—which has been developed by cultivation and selection until its juices yield a proportion of from ten to sixteen per cent. of sugar.

Almost a hundred years of experiment and hard work were needed before the cultivation of the beet for sugar became profitable in Europe. No crop in the world requires more painstaking and scientific cultivation to make it a success; and none rebukes easy-going methods more promptly.

The sugar-beet-raising, indeed, as practised in Europe, seems almost a science rather than an industry.



The chemist's work comes in at every turn. He must test the sweetness of the beet, the elements of the soil and the fertilizers used, and watch the successive processes of manufacture. The meteorologist must be consulted regarding conditions of climate as to heat and cold in the growing and ripening season, and the proportion of moisture in the air.

Satisfactory conditions of soil and air and seed being obtained, money must not be spared in the cultivation of the root. The soil should be deep and good to begin with, and fertilizers—not raw, but well and carefully rotted—must be generously

Digitized by Google

applied. Then there should be subsoil cultivation, and a great deal of careful working.

The raising of the seed is a little science in itself. Five years of cultivation of "mother beets," as the beets chosen to furnish seed are called, are required before the seeds are fit to plant. That is to say, successive beets are selected

and planted for that length of time, progressing from sweet to sweetest, until the sort of seed is obtained from which will grow a profitable crop of sugar beets.

The first seed-beet in the series is called the "grandmother beet." She is chosen, to begin with, because her juice is found by a chemical test to be the sweetest of the field. Then from among her sweetest progeny is chosen a "mother beet;" from that another, and so on down.

One-fourth of the area of soil given to the raising of beets is often devoted to the production of seed; and upwards of thirty-five hundred mother beets are planted to the acre.

French farmers have in many cases succeeded in raising from twenty to thirty tons of sugar beets to the acre, which yield three and even four tons of sugar. At this rate of production, the farmer can afford, as is often done in France and Germany, to put fifty dollars' worth of fertilizer upon a single acre of land in a single year.

Unlike some other expensive crops, the cultivation of beet sugar is very good for the land. A good deal of other produce is raised at the same time; and the quality and quantity of every other crop is greatly raised by the cultivation of the sugar beet. Its benefits are twofold.

The harvesting of the beets is done just at the height of their ripeness, and often after the first frosts have fallen. They are sometimes pulled from the ground by hand labor, but oftener by means of a sort of digging machine drawn by horses, not unlike an ordinary corn cultivator. Then the beets are carefully housed in cellars or silos constructed for the purpose, preparatory to being sent to the manufactory.

At the manufactory they are sliced by machinery, and the juice, in the best factories, is extracted from the slices not by crushing them, but by a process called "diffusion," in which the sugar is drawn out by soaking them again and again in liquids. This leaves the beets, deprived of their sugar, in a condition to be fed to cattle which are being fattened. The syrup obtained by the diffusion process is boiled down to sugar.

The cultivation of sugar beets has not been generally successful in this country up to the present time for several reasons. One of these is that we have almost at our very doors the cheaply made cane sugars of tropical countries. Another reason is that our farmers, as a rule, have not the time or patience to give to a crop the thorough and scientific treatment that the cultivation of sugar beets demands.

But a more important reason still is the fact that the necessary conditions of soil and climate have not been observed. According to the statements published by the Department of Agriculture, the sugar beet is at home, and able to do its best, only in a region which has a mean temperature of seventy degrees Fahrenheit for the three months of summer.

Such a summer temperature is found in a belt of country lying one hundred miles on each side of a line beginning at New York City, running up the Hudson to Albany, then striking westward through Cleveland, Chicago and St. Paul; then southward and westward through Colorado and New Mexico to the Pacific coast, and along that coast northward to Oregon and Washington. There is an immense and fruitful region in this belt, but not all the territory within it is suited to raising the sugar beet, because the rainfall is in much of it either insufficient or not even enough; but there is, too, a good deal of country outside the belt where, owing to local differences in the climate, the right conditions for the sugar beet will be found.

American farmers, when they introduce the cultivation of the sugar beet in good earnest, will have the benefit of all the costly experience of the Old World. If they avail themselves of the assistance of science, they may surpass the products of the Old World in this respect as much as they have done in many other respects.

They will have, however, a hard task to surpass the thorough methods of the European cultivator. A single fact well illustrates the methods of the Old World farmer, who looks for his profits to his own efforts more than to nature's friendly aid.

The French Government, being in need of added revenue, and having already taxed the process of manufacturing sugar from beets, placed a tax upon the beet itself. The farmers, finding that to raise more beets meant more taxation, set about getting more sugar without increasing the number of beets.

By heightening their cultivation, they succeeded in greatly increasing the richness of the Brabant beet, which was their favorite variety, thus turning an oppressive government edict into an advantage.

In the operations of the French farmer and gardener, indeed, nature seems to play a small part compared with man's efforts. The tenant gardener of the region about Paris generally brings with him, when he hires a piece of ground, all the soil that he uses, and when he gives up his land, he takes the soil away with him. J. E. CHAMBERLIN.

NOISELESS USEFULNESS.

In silence, like the fruitful vine,
Bring forth what is in thee;
It is thy duty to be good,
And man's to honor thee.

A CHANGED SITUATION.

The face of political affairs in Great Britain has undergone a marked change in the past few weeks. This is mainly the result of the deaths of several personages of high political influence and position.

Almost at the same time three men passed away, two of whom, at least, had long played a notable part in the sharp struggle which has been going on between the two great English parties; while the position of the other in that struggle, though a minor one, made his death also significant.

These three were William Henry Smith, the First Lord of the Treasury, and leader of the House of Commons; Charles Stewart Parnell, for ten years the unquestioned chief of the Irish Nationalists; and Sir John Pope Hennessy.

The death of Mr. Parnell was sudden, and came upon the world with a shock. He was apparently engaged in a vigorous campaign to retain the leadership of the Irish cause and people, against heavy odds and with but a poor prospect of success, when he was stricken down.

As long as Mr. Parnell lived, indeed, it seemed as if the Irish Nationalists must continue to be divided into two hostile factions, a fact which must necessarily operate to weaken the strength of their cause, and to postpone, at least, the achievement of Home Rule.

Mr. Parnell had been deposed from his leadership as a consequence of misconduct in private life; but a minority of Irish Nationalist members had still adhered to him, and he had resolved to fight on against the majority who had deposed him to the last.

His death put an entirely new aspect on Irish politics. At first, it seemed probable that its result would be to reunite the discordant Irish factions. Then it appeared that Mr. Parnell's followers were resolved to continue the fight and keep up the division, though they had no chief left who was Mr. Parnell's equal.

The remote consequence of his death, however, must probably be gradually to unite the Irish party again. Already several Irish constituencies had, after a fair contest, pronounced against Mr. Parnell; among them North Kilkenny, which was won against his candidate by Sir John Pope Hennessy, who died, strangely enough, the very day after Mr. Parnell died.

Without Mr. Parnell's brilliant and resolute leadership, his followers can hardly hope to make a winning fight, and when this is apparent, a union of the two factions is very probable.

The death of William Henry Smith, on the other hand, caused a notable change in the Tory situation in the House of Commons. Mr. Smith had been a popular and able leader of the House, and it became necessary to supply that very important place with an efficient successor.

Two men were named for it, Mr. George J. Goschen, the Chancellor of the Exchequer, and Mr. Arthur J. Balfour, the Irish Secretary.

The embarrassment of the Tories arose from the peculiar relations between the two parties which support the Tory government. For, acting with the regular Tories, are the "Liberal Unionists," that is, those Liberals who seceded from Mr. Gladstone five years ago because of his adoption of Irish Home Rule.

Mr. Goschen is a Liberal Unionist, the only member of that party in the Cabinet, where he sits especially as its representative. As Chancellor of the Exchequer, he held the office of highest rank next to that of First Lord of the Treasury, vacated by the death of Mr. Smith. It seemed natural, both on this account and because he was the only Liberal Unionist Cabinet officer, that he should be promoted to the leadership of the House.

But this was not agreeable, for several reasons, to the regular Tories. Mr. Goschen's peculiar qualities did not seem to fit him for successful leadership, and it was insisted that a Tory, and not a Liberal Unionist, should take the place.

The choice of Lord Salisbury, therefore, finally fell upon his nephew, Mr. A. J. Balfour, who for some years has made a brilliant record as Irish Secretary. No young man in the House of Commons has risen more rapidly to a position of commanding influence than Mr. Balfour. He has certainly shown signal qualities of leadership which justify his selection as the chief of his party on the floor of the Commons.

The results of these important changes cannot as yet be definitely estimated. A new general election will take place in Great Britain within a few months, and then their effect will become apparent.

MY CHOICE.

Take the palace all ashine,
With its lofty halls and towers;
Let the little house be mine,
With its door-yard, grass and flowers.

Ah, for once, be kindly, Fate,
To my harmless plan agree:
Take whatever things are great,
Leave the little things to me.

Selected. —*Alice Cary.*

IMMIGRATION.

The Fifty-second Congress, the lower house of which was chosen in the very active political campaign of 1890, will assemble at Washington on the first Monday of the coming month. Many surprising political changes were effected in last year's election, and these will tend to bring about an active legislative session.

One subject which was much agitated, and not in a partisan way, during the year in which the new House of Representatives was elected, and which by no means has been lost sight of since, is likely to come forward for a more thorough consideration than it has yet received in Congress.

This subject is the further regulation and restriction of immigration from foreign countries.

Several State political conventions, not alone of one party, have pronounced in favor of legislation by Congress having this end in view. Several national conventions of important bodies outside of politics have demanded laws which shall discourage undesirable and hurtful immigration. The new Congress, chosen in the midst of such an agitation, and aware that it has become much more widespread since, may reasonably be expected to discuss the subject in a serious and dispassionate way.

The laws already adopted, intended to regulate immigration, have been enforced, and have resulted in the exclusion of a considerable number of actual paupers and criminals who have been brought to these shores. They have, no doubt, rendered steamboat companies and emigration agents much more cautious than they would otherwise have been in accepting intending passengers.

To this extent the immigration laws now in force have been beneficial; but they have not diminished the tide of immigration from foreign countries, nor have they prevented the character of that immigration from becoming, on the whole, more and more undesirable.

Indeed, it has been maintained, whether with justice or not we shall not undertake to consider, that the prohibition of the coming of individual workingmen under contracts to labor here has had a tendency to discourage immigration from comparatively intelligent and prosperous countries and districts, whence it might be desirable, and to attract it from undesirable regions—such as Southern Italy, Slavonia, and the poorest and most benighted regions of Russia.

Such questions as this it will be the function of the new Congress to consider. The facts necessary to a full understanding of the subject are not wanting. Statistics show that immigration increases rather than diminishes. The proportion of Northern Europeans and English-speaking people decreases, and that of the most ignorant and debased persons from Southern and Eastern Europe increases. Special reports to Congress have already brought out these facts. The failure of existing laws to check the flood is also plain.

The new Congress will have several proposed remedies for the evil to choose from or combine. One of these is the plan to require strict inquiry on the part of American consuls and commercial agents abroad into the character and condition of intending emigrants to this country, and to admit such only as possess consular certificates going to show that they are fit persons to become American citizens.

Another plan is to require a test of reading and writing in the country of departure, in the intending emigrants' own language; and still another to admit only such immigrants as can read and write the English language.

Another plan proposes that no immigrant shall be admitted unless he possesses a sufficient amount of resources to render him secure against becoming a public charge, and afford a degree of assurance that he will become an active, productive and law-abiding member of the community.

Meantime, the demand for some sort of restriction is almost unanimous. It is certainly grounded upon good reason; for only national deterioration, demoralization and corruption can result from unrestricted and unlimited immigration.

"GETTING HELP."

Margaret Paget was a young girl of no especial mental force, nor, on the other hand, of any decided stupidity, who was blessed, if one may so regard it in this case, with a mother of exceptional ability. The mother had written many brilliant literary papers.

Margaret's father was dead. When the child went to school, her mother began to perform her tasks for her. As the time went by, therefore, the girl became more and more dependent upon her mother. Through the failure to develop her own powers, she seemed to be able to do nothing on her own account.

All this, of course, left Margaret very ill grounded in all her studies, and reflected upon her standing in her examinations, so that she made slow progress. At last the mother, ashamed to see her lag behind, took her out of school, and made a weak pretence of instructing her at home.

Margaret was pretty and amiable, and when she had become eighteen years old, her hand was asked in marriage by a worthy young man.

The mother gave a conditional consent; and as the young man lived at some distance, a correspondence was begun, of course under the eye of the mother.

It was then that the mother realized how defective her daughter's education had been. She was unable to write a creditable letter. Her messages, as she showed them to her mother, were ill-thought, ill-expressed, even ill-spelled.

"This will never do," said the mother. She began to write her daughter's responses to the letters of the young man to whom she was betrothed. Her own wit and felicity of expression characterized them, and the young man was charmed. Once embarked upon such a course of deceit, the mother dared not make a confession. The young man himself was an excellent writer, and his letters spurred the mother to her most brilliant efforts as a correspondent.

After this charming correspondence, the young people were married. Neither the mother nor the daughter dared confess the fraud. Neither had "meant much" at the beginning, but both had gone very deep into a course of deception.

The young husband was soon astonished to find that his wife was an ignorant person, incapable of writing even a sensible letter. He questioned her sharply, and she confessed her fault.

"Mamma always does things for me," she said, helplessly.

The husband found his wife also incapable of caring for a household. She presently sent for her mother to come and live with her; though the husband, having had so forcible a lesson as to her deceitfulness, could only regard her with suspicion and dislike.

The marriage was an unhappy one. The whole lives of two young people had been utterly spoiled by this tendency on the part of a mother to spare her child unpleasant tasks and deprive her of the nourishing, inspiring wear and tear of self-help.

BETTING.

There is still a good deal of conversation in many countries upon the subject of gambling, particularly in Great Britain, where betting is a serious danger to the happiness and stability of families.

In that country there is not only an incredible amount of betting upon races, but in many households it is a custom to play cards for money. The stakes indeed are small, but it is now contended that even such trifling stakes impart to a game of whist a kind of interest and excitement that is not harmless.

An anecdote in point was related the other day by the *Times*. Lord Falmouth, a noted breeder of race-horses, made a bet of sixpence with his trainer that a certain horse would win a certain race.

He was opposed to betting on principle, but did not consider that sixpence amounted to a bet. But having lost his wager, he did not like to hand over to the winner a sum that seemed ridiculous. So he had the sixpence set as the base of a breastpin, which consisted of a large carbuncle cut into the form of a jockey cap, the button of which was a diamond. This setting raised the humble sixpence to the importance of a large bet.

Again he lost sixpence to the same trainer. This time he caused the coin to be set inside the lid of a silver snuff-box, with the monogram of the trainer handsomely carved on the outside.

Thus can a man of principle cheat himself into a gross departure from it. In the same spirit ladies who sit in the grand stand persuade themselves that pairs of kid gloves do not amount to a bet.

To many Americans, who do not feel the need

Digitized by Google

of heightening the interest of innocent games in this way, and do not want to get other people's money for nothing, the mania for this kind of gambling seems strange and unaccountable. Accepting money under such conditions may be less disgraceful than picking a pocket, but not much less.

DEVOTED.

Napoleon Bonaparte had no more devoted and disinterested friend than Gaspard Monge, the illustrious academician and founder of L'Ecole Polytechnique. On one occasion he demonstrated his regard by giving the great general some unwelcome advice.

Napoleon announced his intention of reading a paper to the French Institute. Monge frankly expressed his disapproval of the plan.

"You have not time to write a good paper, and you cannot afford to write a poor one. The eyes of the world are upon you. Whatever you write will be severely criticised."

Napoleon was astounded and indignant at this plain speaking, but he never wrote the paper.

On the voyage in a frigate from Alexandria to France, Napoleon said to those who were in his confidence.

"I am taking two very different chances. If this vessel is captured by the English and I am thrown into an English prison, I shall be in the eyes of France a common deserter, a general who left his army without authority to do so.

"But if I reach France in safety, subdue the factions, take command of the army, and carry out my plans for the nation's good, I shall win the blessings of our fellow-countrymen.

"I will not be taken by an English vessel. If we encounter one, we will fight as long as possible, and when the enemy begins to board us, we must sink the ship."

This desperate plan was received in silence, and with evident disapproval, except by Monge, who said, when it appeared that no one else was going to speak:

"Yes, general, you have stated the situation exactly. If what you suggest happens we must sink the ship."

"I was waiting for this proof of friendship, and I charge you with executing the plan," replied Napoleon.

Not long afterward an alarm was given, and every one hastened to his post to defend the frigate against an approaching English vessel. It was soon discovered, however, that the vessel was not English nor unfriendly.

"Where is Monge?" inquired Napoleon. "Find him and tell him that the danger is past."

Monge was found at his post by the powder-magazine with a lighted lantern in his hand.

HER DISAPPOINTMENT.

A lady who was a great admirer of Horace Greeley went one evening to hear him lecture. She had never seen her hero, but was a constant reader of his paper, and had her own ideas as to how he would look and act.

The chairman of the meeting desired to air his Latin, and introduced the speaker in the following rather vague and indefinite manner:

"Ladies and gentlemen, you came very near being disappointed this evening, as Mr. Greeley has been very ill, and I trust that a slight change of programme will be excused on this account.

"As I know that you are all anxious for the lecture to begin, I will only detain you to say that I have the pleasure and honor of introducing to you the *facile princeps* of journalism."

The lady waited to hear no more, but went home in disgust.

"Well, my dear," asked the husband, who was taking care of the baby during his wife's absence, "how did you like the lecture?"

"I didn't stop to hear it," was the reply. "Greeley was sick, and they got another man to take his place who was such a queer-looking old guy that I wouldn't waste my time listening to him, so I came back."

"Who was the man?"

"I don't know," she answered, still indignant at her disappointment. "Somebody I never heard of before. His name was Facily Princes."

The lady was still more disappointed the next day when she discovered in the paper a long account of Greeley's lecture, which the great editor, although feeling quite ill, had delivered in a forcible and impressive manner.

The paper remarked that the chairman stated the truth when he called Greeley easily the first of journalists. It then dawned upon the lady that her "Facily Princes" was really the editor of the *Tribune*.

VACATION EXPEDITIONS.

A student's vacation season should be spent in such a way as to give him the best possible quality of recreation, if he is a real student, and works hard during his regular season of study; but if he can get his recreation, without impairing it, in such a way as incidentally to give him instruction, and even to add to the world's store of knowledge, just so much will have been gained.

It is not a new thing for students in vacation to make scientific expeditions on their own account, combining camping and "roughing it" with congenial study; but an expedition of the kind which was successfully carried out during the vacation season of the present year deserves to be noted as of especial importance and significance.

A party consisting of a professor and several students of Bowdoin College, in Maine, organized an expedition to Labrador, to study the vegetable and animal growths, and otherwise to gain a scientific knowledge of the country.

It was also planned, incidentally, to ascend the Grand River to the great cataract. The Grand River flows from the high plateau of northern Labrador, and the falls by which it reaches the lower level to flow into the Atlantic Ocean are among the grandest on the continent.

The Bowdoin College expedition was fitted out at the expense of alumni and friends of the college.

The Grand River was ascended, the great cataract viewed and photographed, and its height ascertained. The students who succeeded in pushing as far up as the falls suffered many privations, but won deserved honor in the successful prosecution of their enterprise.

Their achievement is a good example for other American colleges and students. Much important information remains to be gathered about the less known portions of our continent; and geological, botanical and zoölogical researches, faithfully carried on, may always be made scientifically profitable and valuable, even upon ground which has been covered before.

Large Prizes for Serial Stories.

The Publishers of "The Companion" offer four magnificent prizes for the Best Serial Stories, to be written expressly for "The Companion."

TWO THOUSAND DOLLARS for the Best Serial;

ONE THOUSAND DOLLARS for the Second Best;

ONE THOUSAND DOLLARS for the Third Best; and

ONE THOUSAND DOLLARS for the Fourth Best.

The competition will be governed by rules, to which all who enter it must conform.

For the terms of the competition send your name and address and a two-cent stamp, to

ASSISTANT EDITORS,
YOUTH'S COMPANION OFFICE, Boston, Mass.

COURTESIES OF THE ROAD.

A street "block" of traffic wears, near Nazareth of Galilee, a somewhat more dramatic face than among us of the West. Enter the city on a feast day and you will find the mountain track crowded with donkeys, mules and camels laden with all sorts of produce. It is all picturesque, says the author of the descriptive "In Scripture Lands," but it is not uniformly peaceable.

If a luckless donkey grazes the ribs of a camel, the respective owners of the beasts begin at once a duel of words. Watching his opportunity, the donkey lies down for a roll in the dust, and the camel, drawing up his great joints to his body, squats regardlessly in the way of all comers.

A crowd then gathers, and the track is soon barricaded. The scene grows interesting, and some fine specimens of modern Arabic are scattered to the winds.

"Fellow there!" screams Yousef to El Wafi. "We wish to reach the mosque before the evening muezzin. You will enable us to praise God the more if you will start your camels a little out of our way, and allow us to pass by."

"Hold your peace!" screams El Wafi. "Do you not see that the street is crowded?"

"I see a lot of dull and stupid idlers before me. Lend me your camel-goad, and I will soon give you a lift toward Nazareth."

"Take my advice," cries El Wafi, "and go back to Shunem or Nain, wherever you came from, and take my curse with you, for there is no room for such as you in the crowded city!"

All such converse goes on amid much gesticulation and the fierce snapping of eyes, but it is not often that any one is hurt.

RECOGNIZED.

Canadians never tire of descanting on the genial ways of the late Sir John Macdonald, his jocularity, his tact, his popular manners, and his astonishing memory for faces and names. A Manitoba correspondent tells this anecdote of The Old Man, as Sir John was more or less affectionately called by friends and opponents during the latter ten or fifteen years of his life.

In the winter of '89 Mr. Burkholder, an Ontario man who had migrated to Manitoba in '82, went to Ottawa on business. Few of his old friends recognized him, because he had grown stout, very stout, in fact, on the prairie.

At the Rideau Club "Burk," as he is popularly called, had spent several hours re-introducing himself to intimate friends of old, when Sir John entered. Burkholder had been the Old Man's host in a distant part of Ontario for two hours twelve years before, and had no other personal acquaintance with the Premier.

Sir John's eye roved round the room, and stopped at the Ontario man, to whom he instantly went with outstretched hand and:

"Why, Burk! Had you forgotten me? Glad to hear of your great luck in Manitoba. I needn't ask how you are. Plain enough you've gone West to grow with the country!"

A HUGE MAGNET.

According to the recent investigations of Prof. Frank H. Bigelow, the vast field of sunlight through which the earth careers in its annual motion around the centre of the solar system is also a field of magnetic force radiated from the sun, and the effects arising from the motion of the earth through it suffice to account not only for the variations of the magnetic needle, but also for the permanent magnetic condition of the globe.

This discovery—for it seems most probable that further investigations will confirm it as a genuine discovery—is in accordance with the recent conclusions of Professor Hertz as to the intimate relations of light and electricity.

It is a very impressive picture which science is thus beginning to present to us of the solar system—the sun and its family of planets—acting as a great magnetic system, wherein the impulses arising at the centre are communicated outward in every direction to bodies hundreds of millions of miles away.

EASY OR IMPOSSIBLE.

A remark imputed to Victor Hugo in reply to a young man, who asked him if it was difficult to write poetry, is both witty and true, but it is more witty than true.

"My dear sir," the poet is said to have replied, "it is either easy or impossible!"

But it is not always easy for true poets to write poetry. Homer nodded occasionally, and some other great poets have put forth most prosy poetry.

A sure test of greatness is to be used as a standard, and when the country doctor or cheap city grocer tells the consumer that this or that Flavoring Extract is better than Burnett's, we consider it a victory for Burnett's. [*Adv.*

A TERRIBLE VEGETARIAN.

One of the most vivid recollections of my boyhood is that of a tall, long-haired man, with high, narrow forehead, deep-sunken eyes and strongly-marked features, who appeared in our rural town one autumn, and lectured at all the country schoolhouses upon the subject of a purely vegetable diet.

His name was Jeremias Lovewell; and he was what may be well described as a typical Yankee with a single grand idea in his head, for his lecture was something more than an ordinary discourse. It was a most extraordinary appeal; a wild, tempestuous sermon, in which a homely native eloquence and impassioned earnestness were strangely and even comically intermixed with the drollest and dryest of humor.

Moreover, the man was a born actor; although he was, no doubt, wholly unaware of the fact himself. He would undoubtedly have scorned the thought of acting; for he was far too much in earnest with his subject.

He was profoundly convinced that mankind ought to subsist wholly on vegetables, nuts and fruit. He ate nothing but bread and molasses himself, even refusing butter.

Vegetarianism, he insisted, was the original mode of life in Eden, and the only proper mode. Wars, murders, crimes of every degree, and all human sin and misery arose, in his view, from the use of flesh as food. He declared that all animals were our fellow-creatures, and the slaughter and eating of their flesh was cannibalism. No animal could be butchered and eaten without doing violence to our moral natures; and from this injury to human morals he traced all the crime and misery in the world.

His strongest points were made in his description and portraiture of the vegetarian or herbivorous animals, as contrasted with the carnivorous. It was while he depicted the mildness, meekness and inoffensiveness of the lamb, the deer, the ox, the llama, as compared with the ferocity of tigers, panthers and hyenas, which live wholly by "cannibalism" in this sense, that his qualities as an actor came out.

In confirmation of his doctrine, he showed that creatures like the bear, or the crow, or man, which live on a mixed diet of vegetable food and flesh, exhibit a "mixed" disposition, half-ferocious, half-mild. He declared that the peoples or nations who eat the most meat are the most prone to war, murder and bloodshed. With true Yankee Anglophobia, he held up the overbearing, aggressive, tyrannous Englishman, in contrast with his suffering victim, the mild, rice-eating Hindoo.

Abating none of his earnestness of purpose, he imitated the snarls of the cat tribe, contrasted with the mild cries of the graminivorous creatures; also the gruff, surly tones of the Briton, and the gentle accents of the "vegetarian peoples." He imitated the mien and bearing of Englishmen; and his representations, from the peculiar physiognomy of the lecturer and the awkwardness of his form, and his odd garb and long hair,—which he "bristled up" to an extraordinary aspect of fierceness,—were at times exceedingly striking, I had almost said terrific.

This was twenty years ago. I have heard many public lectures since from eminent speakers, but have never heard one that could compare in graphic delineation and impressiveness with this lone, unpaid effort of Jeremias Lovewell.

As may be supposed, he did not come to us from any lecture bureau. More than this, he charged no entrance fee. If the school district would not give the fuel to warm the schoolhouse for the lecture, he paid for it out of his own pocket. All he asked was an opportunity to lecture to people; and he had no book to sell.

He was a man wholly absorbed in one great idea.

It was said that he worked as a laborer during the spring and summer months, to earn the means to go about and lecture in the autumn and winter. He fully believed that mankind had fallen into sin and misery from eating flesh, and that the reign of universal peace, the scriptural millennium, would not dawn till the whole world had become a vegetarian world.

His lecture attracted so much attention in our district that a kind of lyceum, or public debate, was instituted after he was gone. It lasted three evenings. The question, as mooted, ran as follows:

"*Resolved*, That the true interests of mankind, in this world and the next, would be best promoted by a strictly vegetable diet."

I do not remember that Lovewell had said much about the next world; but our good people wished to omit nothing essential. The debate waxed hot. Such was the impression created by the recent lecture that nearly every one favored a vegetable diet, in theory, at least.

But I, then a youth in my eighteenth year, and another young man, named Winthrop Allen, took the negative view.

"Wint" and I had attended a neighboring academy for several terms; and as usual with lads of our age, we considered ourselves a pair of unusually talented persons—an opinion which we have had occasion to modify not a little since then.

We advocated the negative with great zeal, bringing forward every fact that we could find in all the histories and other books to which we had access. Undoubtedly we appeared much too bumptious and self-conceited to win popular favor, for the audience voted us down at the end of the third evening's debate, with considerable spirit, and by a large majority.

Nevertheless, we had made a good fight. We were convinced that Lovewell's vegetable diet idea was a delusion, and proved, in the case of sheep, deer and cattle, that the bucks, rams and bulls fight as savagely as carnivorous animals.

We also emphasized the fact that a South Sea savage, subsisting wholly on breadfruit and *poi*, is as disagreeable a person to fall in with as any Englishman.

But it was not till two days after the debate closed that Winthrop and I hit on what we felt sure would have been our crowning and utterly irrefutable argument. A friend in the village where we had attended school, who knew the part we had taken in the debate, sent us a copy of Du Chaillu's book of African travels, then recently published, wherein the gorilla was described at length.

This was a windfall, indeed! Du Chaillu's account of the gorilla was questioned then, by many critics, although it has since been shown to be correct in the main. Winthrop and I pounced upon it with great glee, and only lamented that it had come to us too late to be available in the long debate.

Not quite satisfied to let the subject drop, in our aggressive enthusiasm we went from house to house through the district, reading the descriptions and showing the fearful pictures of the gorilla.

Then we conceived the bold purpose of going in pursuit of Lovewell, holding a debate with him and, figuratively, setting the gorilla upon him.

The worthy lecturer was then in a town not far away. We procured some large sheets of white paper at a newspaper office, and with black, blue and red crayons drew two terrific pictures from the book, representing the gorilla, rampant; also another, showing with what ease the simian monster could overcome a man, and bend a gun-barrel double.

These were for evening illustrations, by lamplight. We rolled them on a short pole, and then, having mastered the principal points of our proposed argument, hired a horse and sleigh and drove to the town where the vegetarian champion was holding forth.

Arriving there a little before the lecture hour, we ascertained that Lovewell was to speak in the meeting-house, instead of a schoolhouse. A rather large audience had collected, and the lecturer was already in the house. We walked in with our pole, and going forward, asked Lovewell for permission to make a few remarks at the close of his lecture.

He regarded us searchingly from out his deep-sunken eyes a moment, and said:

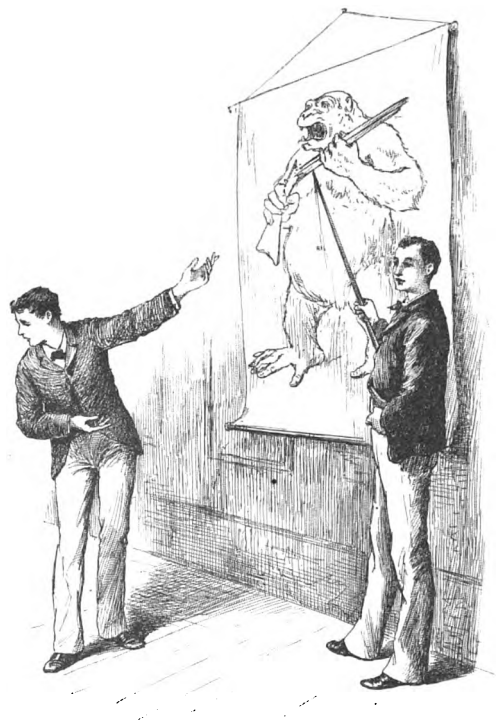
"Sartin, sartin, my boys. This is a country of free speech; and ef you've got any truth to tell, or any new facts to bring out, you shall have the best chance I can give ye."

He then proceeded with his lecture, which, as usual, was a unique and strong performance in its way. It seemed to me that Lovewell looked even taller, more lank and long-haired than when he had been with us.

The audience listened with attention, and many applauded heartily. He spoke for more than an hour; and when he had finished, he asked the people to remain a little longer.

"For," said he, "these two young friends come along to-night, and they want to make a few remarks. They may not agree with mine; I calculate they don't. But truth is what we are all arter in this world, and I for one want to hear what they've got to say to us."

Neither Winthrop nor I was lacking in assurance in those days. Now I am quite sure it might have been better if we had had a little less. Promptly taking possession of the platform, I proceeded to unroll our drawings, and to place them in a good light. Winthrop opened fire, argumentatively speaking, on the audience. Without wasting a moment in generalities, he at once brought out the gorilla. The ferocious aspect of the pictures promptly riveted the attention of every person present, and some of the worst boys began to whistle.



"Ladies and gentlemen," said Winthrop, "we have not a word to say against our friend, the eloquent lecturer who has just addressed you; not a word. He is a sincere man. Everybody can see that. A good deal that he has told you is true.

"We deem it our duty, however, to make you acquainted with certain recent discoveries in Africa, before which this whole vegetarian delusion goes down like a ship at sea with a hole ten feet square knocked in her bottom."

There was a sensation in the audience, and one impertinent youth exclaimed, "You don't say!"

"Fasten your eyes for a moment upon this picture of a creature which may be briefly described as one of our distant relatives," continued Winthrop. "He inhabits tropical Africa. A traveller who has just returned from there gives us a full account of him in this book which I hold in my hand. Tells all about him.

"This great traveller, whose name is Du Chaillu, hunted him, saw him in his native wilds for years, and knows all about him. The creature's name is the *Gorilla*.

"The most savage creature in the world."

"He is the most savage creature in the world. He can shake the life out of a man with one hand. Twenty men are no match for him in a rough-and-tumble fight. Even the lion gives him a wide berth. The leopard skulks away; the hyena goes yelling into the jungle. When he thumps on his chest and gives a roar, they all skedaddle.

"With those hands of his he can bend a rifle-barrel double, or snap a man's thigh-bone in two like a withered reed. Fighting is his forte. He has the most dreadful temper of any creature on the whole broad earth. He is the regular British tyrant of the woods. There is always blood in his eye.

"And look at those teeth of his! If there's two pounds of meat on a man, he will get it at one mouthful! But does he swallow it? Never. It disgusts him. It would probably poison him. In the way of eating, he never puts a particle of meat into his mouth.

"Do you ask what he does live on, ladies and gentlemen? I'll tell you. Du Chaillu was careful to find out about that. One might suppose he lived on pure gore; but he don't. Oh no, not at all!

"This most savage creature in the whole world, this fighting, scowling, raging old man-mauler of the African forests, this violent gun-barrel-bender and bone-breaker, this universal terror of the torrid zone, lives on—mark my words, ladies and gentlemen—lives on little juicy sprouts of green cane and fruit; just plain, simple green truck, and nothing stronger! Never a mouthful of meat in all his days.

"How's that for a vegetarian?

"See what a purely vegetable diet has done for him! Look at him! Do you see anything *mild* about him? Does a gentle disposition beam forth from that eye, or that hideously wrinkled brow? Does he look like the kind of fellow that would fetch on the millennium in a hurry?"

Winthrop's voice was up near to shouting pitch by this time, and he paused an instant for breath.

"Whar d'ye say that animile hails from? Did ye say Afriky?" asked a gaunt lumberman in a knit frock, who sat in one of the front pews. "An' I didn't jus'ly ketch what you called him; was it a gorry-lilly?"

"No; the gorilla," explained Winthrop. "Yes, he lives in Africa. Africa's full of them."

"Wal, but what's that ye said 'bout a distant relative?" queried the lumberman, sinking his voice. "Did I understan' ye to say 'twas some distant connection o' yourn?"

I think the fellow was actually serious; but a burst of laughter came from the audience.

"No, no," retorted Winthrop. "I said a relative of yours. Anybody can see the family resemblance."

With that the laughter changed to a shout. But before Winthrop could follow up his advantage, a snowball from far back at the door struck him in the face; and I with difficulty dodged another.

I did not obtain a chance to deliver my part of the argument, at all. There were shouts of "Lovewell! What's Lovewell got to say?"

If Lovewell had been an adroit man he could easily have turned the tables on us. A flippant or an insincere person would have done so promptly. For, truth to say, although we had made our point after a manner, we had not created a good impression. We had not inspired confidence.

After a vain effort to restore order and continue, we gave it up, and expected that Lovewell would come forward and finish us.

But the vegetarian champion sat stock-still in one of the front pews, with his thumbs under his chin and his elbows on the rail before him, and made no sign. He seemed to be in a deep study. Strange as it may seem, he of all others was the only person upon whom we had made a real impression. It must have been because of his complete sincerity.

He sat in grim silence until the people had dispersed, and we had rolled up our drawings and prepared to leave the house.

"Can ye lend me that 'ere book o' travels for a day or so?" Lovewell asked. "I want to read it quite keerful."

We told him that it was a borrowed book, but that we would take the risk of letting him have it for a time.

He was moving about, extinguishing his lecture-lamps and looking to the stove.

"I'm much obleeged to you for comin' over here to-night," he called to us, as we went out. We might have deemed this ironical, but for the kind tone of voice in which it was spoken.

I remember that, as we drove homeward, Winthrop and I were in much perplexity how to estimate the result of our effort. Not that we had any doubt as to the soundness of our gorilla argument; but the manner in which it had been received by the people, and particularly by Lovewell, staggered us. We could not wholly understand it; and we had little to say about it afterwards.

Lovewell returned the book by a special messenger a week later, and nothing further was heard from him by us for several months. Then we learned that he had died in an adjoining State, after a long illness. We heard also that he had been in a very despondent state of mind for many weeks.

It is possible that his death was promoted by the monotony of his daily bread and molasses. But Winthrop always insisted that Du Chaillu's gorilla killed him.

If that be indeed true, I should consider our anti-vegetarian crusade one of the most regrettable incidents of my life. For even truth may be too rudely spoken. C. A. STEPHENS.

For the Companion.

"FIVE GRAINS OF CORN."

Anniversary customs have no real reason for being if they do not bring to mind some event of importance or interest in the history of a people. Gog and Magog, the fabulous giants who defended England against the Romans, still figure on the Lord Mayor's day in London; the Cherry Feast of barbarous times is still observed on the banks of the Saale in Germany; and when parties of women in Boston drink "Revolutionary Tea" together, they recall the summary protest of their ancestors against British tyranny.

A very pretty custom has to some extent grown up, which is well worthy to become universal. It recalls the sufferings and sacrifices of the Pilgrim Fathers, and associates itself with our most festal holiday. It is the custom of placing on the plate of each guest five grains of corn, at the beginning of the Thanksgiving dinner.

In the winter of 1623, when Bradford was governor, and the Pilgrims shared their crops in common, the people of the Plymouth Colony were threatened with famine, and were reduced to such straits that for a time each person was allowed a cereal ration of five grains of corn a day.

Put to this test, the faith of the Forefathers in their great enterprise did not falter nor fail. The elders counselled resignation, and no one of the leaders proposed an abandonment of their purpose or a return to England or other change to more promising shores. Every one in the colony was willing to undergo every possible privation for the sake of the principle which it represented.

Digitized by Google

In the prosperous years that followed, this event was recalled at the Thanksgiving festival by a provincial dish called *succotash*, which consisted of a palatable mixture of beans and corn. After the lapse of some two hundred years, Mrs. Hemans's "Hymn of the Pilgrim Fathers" began to be used at Thanksgiving festivals. The dish called *pandowdy*—a kind of apple pudding of colonial reputation—was similarly employed for like historical reasons at the dessert.

Recently, the placing of five grains of corn on the Thanksgiving plate before the meal has been made to recall the hardships and heroism of the founders of New England and the American commonwealths.

These things are all appropriate to Thanksgiving, the succotash, the pandowdy, the song, "The breaking waves dashed high," and the five grains of corn. The Hebrews built the green booths of the Feast of the Tabernacles for a thousand years.

For the Companion.

PRINCESSES I HAVE KNOWN.

Second Paper.

As I was driving one fine morning in Savoy, I met two ladies, who were walking. Their hands were full of wild flowers. They were plainly dressed, and wore good stout boots. I saw that one of them was young and pretty, and very

PRINCESS BEATRICE.

much entertained with a group of little peasants, who, in their long black or red woollen frocks and closely-fitting white caps, seemed to have stepped from a picture by Albrecht Dürer.

I met this group in a little village in the mountains, which was built, pavement and all, of gray stone. Very likely this village was five hundred years old, and had not been changed since the first stone was laid.

I stopped to buy some cream from an old peasant who was milking her cow, and who saved me a pitcher of cream every day for an invalid friend. As I did so I looked back and saw the children—Clemence and Charlotte, Jeanne and Pierre—all friends of mine, scampering back for wooden cups, which later on their mother filled with good, fresh milk from the cow. Then they carried the cups of milk back to the two ladies.

When I drove the next day to get my cream, I found Clemence and Charlotte, Jeanne and Pierre very happy as well as pretty.

The peasants are a handsome people in Savoy, with red cheeks, black eyes, and very white teeth. My little friends were all decorated with new crosses and hearts, a favorite ornament in that Catholic country, and Pierre had a new, sharp penknife, with which he had already cut his finger. The cup—one of the wooden cups—was thus engraved:

"Beatrice, April 11, 1885."

Then I knew what I had already surmised, that I had seen with these children, the day before, the Princess Beatrice of England, youngest and favorite daughter of Queen Victoria. I was destined to see her and the Queen every day for three weeks, driving about, making sketches, and enjoying the fine mountain air of Savoy.

PRINCESS LOUISE.

The Princess Beatrice has much artistic ability, and made many sketches of the straight and beautiful peasant women who carry their bundles on their heads. They all look comfortable and happy, with none of that pathetic misery which one sees in starving Swiss faces.

The Princess Beatrice was not then married. She was a blonde young woman, with blue eyes and very fine teeth. She looked, as we say, "very English," and it is not a bad epithet, for many English people look like the royal family, and they may be said to have established a type.

> The Ethiop gods have Ethiop lips,
> Brown cheeks and woolly hair;
> The Grecian gods were like the Greeks,
> As keen-eyed, cold and fair.

I saw the pretty Princess down by a tumultuous waterfall, looking at the monument of the Baroness Bloc, a poor young creature who was drowned there. The Baroness was a friend of Hortense, the daughter of Josephine, who had come to take the baths. The two young girls were stepping from stone to stone, when the Baroness Bloc made a false step and was swept away to instant death.

Now, in the midst of the swirling waters, as madly rushing on as those of the rapids at Niagara, stands a marble monument with this inscription:

"Here was drowned, under the eyes of her friend Hortense, who loved her, the Baroness Bloc, in her 25th year. Oh, you who visit this wonderful place, tread carefully—think of those who love you."

I have noticed one thing about princesses, and indeed all royalties. They study to say these things in an epigrammatic and neat manner. This epitaph, full of heart and feeling, has a studied French grace about it which we blunt Anglo-Saxons sometimes miss. I never could read it without tears, and I noticed that there were tears in the blue eyes of Beatrice.

Perhaps Hortense had caught the trick of being epigrammatic from Napoleon, her great stepfather, who was the master of this sort of comprehensive eloquence. He could say more in five words than most of us say in twenty. Once I entered a church in Florence, and visited the grave of "Charlotte Napoleon Bonaparte," one of the nieces of the great emperor. They had wisely let that name tell her story, and underneath was only engraved in golden letters:

"She was *worthy* of her name."

The Princess Beatrice, although she made no pretensions, had evidently a "soul touched to fine issues," for she lingered long by the monument of the drowned Baroness.

Nothing could have been simpler or more healthful than the life led by the Queen and her daughter at Aix les Bains. Very plainly dressed, even what we should call "shabby, or dowdy," the two royal ladies walked or drove in a donkey-cart about the park, or through the beautiful scenery of the sweetest spot in Europe.

The royal carriages, preceded by a pad groom, would await them to take them up when they were tired.

The Princess is very fond of painting wild flowers. She has published a volume of her studies. I saw her receive a deputation of the ladies of Aix, who brought her some flowers. She was dressed in a little black and white checked silken gown, rather the worse for wear, and looked very much frightened.

One of the great characters at Aix was Charlotte, the masseuse, a very handsome Savoyard woman. She was employed by the Princess Beatrice and became a great favorite. When the royal party arrived at Aix, Charlotte could be seen in her clean white apron and cap, walking down from her mountain home, her fine black eyes all aglow with excitement, going to the Villa Mottel, where the Queen stayed. She had many stories of the graciousness of the Princess, and told how she made a cloak for Charlotte's grandchild with her own hands, beside writing her many letters.

The next time I saw the Princess Beatrice was at the English Court. She was now married and the mother of a pretty baby. She was now the Princess Henry of Battenberg, dressed magnificently, and with five orders hanging at her neck she was a queen's daughter indeed. But I did not find her half so pretty as she was in the sweet, sequestered, enchanting lanes about Aix, with the Dauphinoise Alps covered with snow behind her, cutting her name on a wooden cup for some poor little peasants, who will ever treasure her cup as an heirloom.

On the day when I saw her at court she stood by the side of her lovely sister-in-law, the Princess of Wales, who was receiving for the Queen. The Princess of Wales is perhaps the most beautiful princess in Europe, and I afterwards saw much of her.

Particularly do I remember her at the Queen's Jubilee, at a parade of volunteers, when she stood leaning on the arm of her father, the King of Denmark, who cannot conceal his pride and delight in his royal brood,—the Empress of Russia, the King of Greece, the future Queen of England,—a very good family to lean on in one's old age!

But of all of these the Danish king looks at Alexandra of England with fondest eyes. She looked so happy and pretty at the Queen's garden-party, with all her children, and the Scotch pipers playing before her.

There I saw a little brown princess from Hindustan, the Maharanee of Kuch Behar—the first woman of her race to be introduced by her husband into society as his equal, and as a woman of high rank. She was about the color of a chocolate caramel. She is very small, very pretty, dressed in white and yellow gauze, with a turban of the same, which is becoming to her. When the Queen passed her she kissed her as a reigning monarch and her equal. It was considered a great honor. These Indian princes and princesses made everything else look poor, their dresses were so superb and so covered with jewels. The Holkar of Indore, a great "swell," wore a green turban with a network of rubies; and indeed their servants, in white turbans and black faces, were as handsome as they could be.

DUCHESS OF CONNAUGHT.

I afterwards met the Princess Louise, Marchioness of Lorne, at a watering-place. She is very different from her quiet sister Beatrice, but she is charming.

Full of spirits and love of fun, full of talent, she can hardly tame herself down to be a quiet, pompous royalty.

I saw her paint a portrait of a young girl in an afternoon. Her conversation is very sprightly and witty, and when she chooses, very agreeable.

Another gracious princess was the Duchess of Connaught, who, with her two pretty children, was in a summer hotel where I was staying. Her lady-in-waiting, Lady Adela Larking, caused herself to be introduced to me, and said, pleasantly, "Her Royal Highness would like to have you presented." She took me up to her; I made a courtesy, and a very pleasant talk of an hour followed, with many questions about America.

This lady is the daughter of the late "Red Prince," Frederic Charles of Prussia, who was a famous soldier, and who distinguished himself in the war of 1870 between Germany and France.

She is a very sweet, happy, accomplished and simple-mannered woman, the wife of the Queen's third son.

But I had soon a more romantic and unexpected interview with another princess.

One of my friends in London is a noble lady, who had been for years in the household at Windsor Castle. She now lives in a retired way in London.

One day I said to her, "I am to be presented at court on Thursday, and I am nervous about my courtesy. I fear I shall not make it properly."

"Ah!" said she, "come and take tea with me to-morrow. One of my gossips is coming in, and I will try and help you through."

PRINCESS CHRISTIAN.

So I went, and found a pretty, quiet lady taking tea with my friend. It was the Princess Christian, the Queen's third and very good daughter Helena. She was most amused at my uneasiness about the courtesy.

"It is only the 'charity bob,' with a respectful intent," she said.

Indeed that is all it is. The charity children in England bend one knee and drop a little,—"duck their heads," we should say,—as they pass their superiors. All English people do the same when they pass royalty. It is very quiet, very simple—not the grandiose courtesy of the minuet, which is a sweeping, graceful thing.

Once I went into an artist's studio in Paris, and was shown a lovely picture of two fair girls, of whom I saw something later on. These were real princesses, again. They were the daughters of the Count of Paris, the head of the French Bourbons, and the man who would to-day be King of France if either the old monarchy or the throne of the Citizen King Louis Philippe had not been overthrown.

The Princess Marie d'Orleans, their cousin, was married while I was in Paris to Prince Waldemar of Denmark, whom the foreigners call "the little pig" of that royal house. That simply means that he is the baby!

This pretty, fair girl had the luxury of three wedding dresses—one for the civil marriage, one for the signing of the contract, and one for the religious ceremony.

The Duchess de Chartres, mother of the bride, is famous for her taste, and she did not allow her delicate blonde daughter to be overloaded by her clothes.

I admired most her travelling dress of soft Nile green, with a mantle of gray, and a soft, pretty felt hat, which became her. She wore a spray of white lilac at her breast which looked exactly like her; and white is, moreover, the emblematic color of the royal family of France.

She was followed by a small bull-terrier. Around the dog's neck was a collar of alligator-skin with plates of silver, on which was engraved his name and hers, and a royal crown. He is her inseparable companion, and she seemed devoted to him.

The Orleans princesses are excellent girls, and are thoroughly educated. They have to work very hard in their study, and it is not often that they are as happy or as free as other girls, but they are almost universally religious, full of a sense of duty, thoroughly well-bred, most amiable in manner.

"WE MUST HAVE A FAIR."

When your church society or your temperance band or your "King's Daughters" feel obliged to get up a fair to raise money for the organ, or the library, or for some pet charity, you know of course how busy you must be for a long time beforehand, making fancy articles; and as the day approaches, how hard you must work preparing refreshments and decorating tables. Sometimes under such circumstances one resolves that one will never have anything to do with a fair again.

But while the fancy-work and the useful articles and the refreshments must always be at the basis of the whole thing, there are so many ways of presenting the fair itself to the public, that the spice of variety is not lacking once more to stimulate your zeal and to attract outsiders.

Last winter a "Rainbow Fair" proved to be a successful venture. Seven long tables displayed the seven colors of the rainbow—red, orange, yellow, green, blue, indigo and violet. For instance, the first table was festooned above with drapings of red cambric, and three or four of those great tissue-paper balls, which look like bunches of double poppies tied up close together, were hung over the centre. Over the red table were red ones; blue ones over the blue table, and so on.

There were red flowers on the first table, and among the fancy articles those in which red was predominant were made most conspicuous. The attendants at this table wore white aprons trimmed lavishly with red ribbons.

It was not hard to carry out the same idea with each color; and then, to crown all, there was one grand table at which all the colors were rampant together, and the girls' aprons were trimmed with seven different hues on each.

At this table were sold dolls and all kinds of things used in dressing dolls, together with many sorts of toys. Here, also, tickets were sold for the "Dolls' Show" at five cents apiece.

The "Dolls' Show" was curtained off at the end of the hall. There was a door at each end of it, so that people could go in at one and out at the other.

This show was a "loan exhibition." Each little girl in the Sunday school had loaned her dearest doll, dressed in its prettiest clothes, with a card attached bearing both the doll's name and the owner's name. It might be "Helen Clara, loaned by Kitty Jones," or "Baby May, loaned by Alice Smith."

Older people, too, loaned curious and rare dolls. One was over a hundred years old, with a delicate wax face, a long, narrow waist, and a quilted petticoat.

There was an Eskimo doll, an Indian doll, a Sandwich Islands doll, and two funny old Dutch dolls with smooth, painted wooden faces.

The "Rainbow Fair" was a great success.

A smaller fair was given in the Sunday-school room of a suburban church. This was a "Fair of Days," and there were seven tables besides the flower and lemonade stands. Over each table was stretched a banner of white cotton cloth, with the name of the day upon it in large gilt-paper letters.

At Monday's table were sold clothespins and laundry soap, washboards and tubs, coils of line, packages of borax, pound-packages of starch, and bottles of blueing. There were also toy tubs, washboards and pins for the children. Gingham aprons, suitable for a laundress to wear, decorated bags for soiled clothes, and a nest of clothes-baskets, also appeared here.

Tuesday's table bore flatirons, cakes of wax, iron-stands, numberless holders, ironing aprons, bosom-boards, sprinklers, water-basins, toy irons, fluting irons, and an order for coal.

Wednesday's table held all the conveniences for mending, needle-books, work-baskets, emerys, darning-cotton, thread-cases, housewives' scissors, sewing-aprons with pockets, pin-balls, button-cards, tape-measures, shoe-bags, thimbles and bodkins.

Thursday represented leisure, with calls and fancy-work. Here were card-cases, card-receivers, crocheted laces, and every sort of fancy article that did not suit any other table; because there was nothing that might not have been made on Thursday.

Friday's table held brooms and broom-brushes with cases, feather dusters, cloth dusters, pretty bags to hold dusters, decorated dustpans, sweeping-aprons, and a lot of jaunty sweeping-caps, all colors.

Saturday's table was luscious to behold; for on it were the results of cooking and baking. Such tempting loaves of cake, such flaky jelly tarts, and such delicious home-made candy! Baked beans and brown bread dared to be there, and there were sandwiches and canned fruits.

Then the Sunday table,—what was on that? Good reading, of course; books and booklets; text-cards, bookmarks, and photographs of the pastor. This fair, too, was a great success and lasted three days, afternoon and evening.

SHEPHERD LULLABY.

The silver moon high in the sky
A-through the clouds is creeping;
The soft winds sigh a lullaby
While bonnie bairn is sleeping.
Hush, baby,—hush, my darling!
Heigho; Hi—laddie!
Out in the night wee jasper-stars
Above thy cot are peeping,
And at thy side sweet angels bide,
Their silent watches keeping—
Sleep, baby, sleep!—so weary,
Thy mother loves her dearie!

Hush, little one, and take thy rest
With peaceful dreams beguiling
Upon thy breast the fairies nest,
Their dewy lips a-smiling.
Hush, baby,—hush, my darling!
Heigho; Hi—laddie!
So close thy drowsy blue-bell eyes
With never a thought of sighing!
On misty wing, while elfins sing,
Old witches are a-flying.
Sleep, baby, sleep!—nor fear thee,
Thy mother loves her dearie!

Sleep, little lambkin, softly sleep,
I hear thy father calling,
While he doth keep the gentle sheep
Ghost shadows are a-failing;
Hush, baby,—hush, my darling!
Heigho; Hi—laddie!
Up in the sky a golden web
The dream-gods are a-weaving,
With tinkling song they flit along;
Beware! They are deceiving!
Sleep, baby, sleep!—so weary,
Thy mother loves her dearie!

NO WORD FROM HOME.

A pathetic story is told of a Russian state prisoner, who for fourteen years had been kept at hard labor in a mine in Siberia, without hearing a word from his family and home. His political offence had been great, and unusual rigor was exercised in his confinement. He was ignorant whether the cause for which he suffered had been stamped out, or was making its way in Russia; he was ignorant, too, whether his wife and children and his old mother were dead or alive.

At last his brother, after great risk and suffering, succeeded in making his way into the mine. The prisoner recognized him, but such was his terror of discovery that he feared to speak to him except as a stranger.

The two men were alone together for half an hour, but, with longing eyes fixed on each other, talked only of their work, or the trifling things about them, fearing lest the guard should overhear even a whisper. The brother was discovered, and dragged away for punishment. He finally made his escape, but the prisoner died in the mines, still uncheered by a word from home.

One reads the story almost with indignation at their cowardice. Why did they not speak? What comfort his brother might have given the prisoner in that half-hour; what loving messages from home; what high, helpful thoughts for the lonely years to follow!

Yet are we not all in somewhat the same position as these men? Exiles from a higher country, hourly needing help from it, remembrances and proofs of its love, its comfort—of the fact that, after all, it *is* our home. We meet each other day by day, our hearts full of these things, of sympathy, of comfort, of noble longings; but we rarely speak a word of them to each other. We talk instead of the weather, the news, the trifles which pass and die with the day.

It is not wise, if indeed it is not wicked, to keep our hearts and minds too closely shut against each other.

An open window has often thrown a beam out into an otherwise unlighted night, and guided some hopeless traveller back to safety and peace.

HER PRAYER.

This was how it happened. The last two sleeping-cars were thrown down the embankment. I was in one of those cars. And a perfect wreck they were, a mass of broken timbers. Truly, it was kindling-wood, and it kindled.

Then arose an appalling wail of souls in agony. Human prayers and human curses; prayers to be taken, prayers to be spared; while straight into the air rose the pillar of steam and smoke.

Staggering and amazed, filled with wonder at my escape, I heard a pitiful little moan amidst a tangled mass of splintered timbers, bell-cords and velvet cushions.

Poor little girl! I remembered she had sat in the seat in front of me. Her golden curls had seemed an aureole, that enhanced the sweetness of her pure face. With the help of others, I succeeded in extricating her bruised and broken form.

She was horribly lacerated, but her face, by some rare chance, remained untouched. We laid her gently down, beyond the heat of the burning cars.

The moisture of agony was on her cold white forehead, her eyes were contracted with unutterable pain. The scarlet thread of her pure little lips was parted, her mouth was parched and dry and drawn. She did not see us—she was looking far beyond. Though she wished for death to end her agony, yet she feared to suffer greater pain. With all the sweet simplicity of a child's faith she closed her eyes and said, "Oh, take me, God, but please be easy!"

He took her. The rigor of her face relaxed, and the smile that illumined it was evidence enough to us who remained, that He had answered her prayer.

C. H. M.

JIM.

It was the first night after the Johnstown flood—the first night and the worst. "A few of us," reports one who passed through that terrible experience, "were standing on the bank overlooking the plain and the smoldering debris at the bridge, seeing nothing, and trying not to think. It was dark, and darkness then was horrible. Presently some one pulled a few pieces of the wreck together, and built a fire. We could at least see each other then. The man who had made the fire hunted around, found a battered can, and made some coffee, which he passed to the rest of us.

"'I suppose you've lost a good deal here?' I said, as he came to me. It seemed natural then to make some such remark to a stranger.

"'No,' he replied, 'I didn't lose anything.'

"'Do you live here?' was my next query.

"'No,' he answered; and then, with an odd laugh, he added, 'I'm a tramp, I s'pose. I happened to come along here, and this thing jest broke me all up. I haint been workin' for four year, but when I seen all these folks with nothin' left, an' nobody to help 'em, I jest pitched in afore I knew it, an' here I stay 's long's I can be of any help to anybody.'

"I somehow felt an interest in the fellow from that moment, and I told him to come round to headquarters the next day, and we would tell him what to do. He was on hand, and said he was willing to do anything; so we tied a white piece of cotton about his hat, with the word 'MORGUE' on it in big letters, and sent him to help handle the dead.

"It was awful work. After a day or two we noticed that he was one of the best men we had. He was patient, industrious and kindly, never shirking a task, no matter how hideous, and never wanting to stop so long as there was work to do. He gave his name simply as 'Jim,' and that was the only name we ever knew him by.

"For forty-five days there was no more faithful, honest and hard-working man than Jim among all the thousands that were there. He did his part so intelligently and uncomplainingly that we came to think a good deal of him at headquarters. One day the last of the men were paid off, and Jim received his money with the rest.

"'What are you going to do now?' I asked him.

"'Well, I'll tell you,' he said. 'I haint always been a tramp. I used to have a nice home in Massachusetts, and a wife and children; but five year ago I had some trouble with my wife, and I went away, and—well, I haint been good for much since; but I'm goin' home now. Seein' all these people so miserable, an' workin', you know, an' helpin' 'em what I could, it's kind o' changed me somehow, an' I want to see if I can't be somebody myself.'

"Later in the day I saw Jim again. You wouldn't have known him. He wore a new suit of clothes, and had had his hair cut and a clean shave. He was a big, stalwart fellow, with a waving moustache, and he really looked handsome; but there was something wrong with him, and I knew in a minute what had spoiled Jim's life.

"'Jim,' I said, 'you've been drinking.'

"'A little,' he answered. 'You see, I'm through work now, an' I haint drunk a drop since I've been here, so I thought I'd just get a taste.'

"'Now, see here, Jim,' I said, 'that isn't right. You'll spoil everything if you keep on. Quit it now for good.'

"He half-promised, and went on down the road to join some friends.

"Some time afterward one of the aides came in, looking very queer, and said, 'There's an accident happened to Jim!'

"I followed the aide, and we went up the railway track to a little group of men; in the midst of them was poor Jim, lying on the ground. He had got in the way of a freight train somehow, and both his legs were cut off above the knee.

"He was taken up gently, and carried to the hospital. We did what we could for him, but it wasn't much. Two or three of us watched by his bedside, but at dawn he was dead. In the cemetery at Johnstown the poor fellow lies buried. At the head of the grave there is a board bearing the simple inscription, 'Jim.'"

EVAPORATING METALS.

Some experiments, made recently by the celebrated Prof. William Crookes, give a very clear view of the wonderful activity that prevails among the invisible molecules of which all matter is composed. With the aid of electricity Professor Crookes undertook to evaporate a large number of different metals. It does not surprise anybody to see water turned into vapor by the application of heat, or by the rays of the sun, because the phenomenon occurs before our eyes every day, but it is different when we talk of evaporating iron, gold or platinum.

Such evaporation is carried on upon a large scale only close to the surface of the sun, where the unimaginable heat turns the hardest metals into clouds of glowing vapor. On a very small scale, however, metals can be evaporated in a most beautiful manner. A current of electricity passing between electrodes, through a vacuum tube, supplies the means.

If a piece of platinum is used for the negative electrical pole, the passage of the current drives off some of the molecules of the platinum, which afterwards condense on the inside of the glass tube, forming a beautiful mirror-like deposit.

The manner in which this action takes place is very interesting. To understand it we must recollect that the change of any substance from the solid to the liquid, and from the liquid to the vaporous condition, is accomplished by giving greater and greater velocity to the molecules of which it is composed. If the molecules of a liquid fly too far they will get beyond the molecular attraction of the liquid mass and escape into the atmosphere, or the free space around them, in which case they are said to have evaporated.

The ordinary way to increase the motion of molecules, or in other words, to produce evaporation, such as changing water into steam or vapor, is by the application of heat. Heat, as modern science teaches, is simply a form of molecular motion. But the electric current, streaming from one metal pole to the other, also affects the molecules of which the pole is composed, and by stimulating their motion, drives them beyond the sphere of attraction of the metal, whereupon they fly off until they come into contact with the surrounding glass.

In this way Professor Crookes has evaporated a dozen different metals, including that very hard substance, iridium, of which the nibs of gold pens are made. Gold and silver are very easily evaporated in this manner, while aluminium can hardly be evaporated at all, although it is so much lighter.

For the Companion.

UNDER THE BEECHES.

Below the beeches in the forest old
The golden leaves are strewn, and overhead
From sunny boughs a mellow light is shed,
And we together walk the streets of gold.
Across the blue the sunset clouds, unrolled,
Pour down pure color till the paths we tread
Are glorified, and eye and soul are fed
With mystic light and splendors manifold.
O friend, is Heaven fairer? Could we see
Into the soul of This that wraps us here,
Were it not one with Heaven's mystery?
O Earth divine! If we with spirit ear
Could catch the key-note of thy harmony,
Would not the Meaning of the Whole be clear?

ANNA BOYNTON AVERILL.

DISOBLIGING.

In Miss French's sketch of "Plantation Life in Arkansas" in the *Atlantic Monthly* she remarks upon the exalted position still occupied by the planter. He is expected to direct all undertakings of pleasure or profit. In most cases he is postmaster, justice of the peace, free doctor, and matrimonial adviser for the neighborhood. Such a scene as this is common: Scene, the store. *Dramatis personæ*, the planter and Jeff Laughlin, whose wife has been dead for the long period of two months.

Laughlin: Well, no, sir, I aint come for tradin' to-day; I aimed to ask you' advice.

Polite but inarticulate murmur from planter, who goes on posting up his ledger.

Laughlin (whittling abstractedly on the rim of the desk): Well, you see, my mother-in-law, she's a mighty nice old lady, and she gits a pension of eight dollars a month, and spends ever' cent on it fur the children; but fact is, she's so old and so nigh-sighted she jest natchelly *cayn't* keep things up, and it's too hard fur her, and it's jest breaking her down. And I jest 'lowed I'd ask you' advice.

Planter: Well, Laughlin, I don't see anything for it but for you to marry again!

Laughlin (brightening considerably): Well, I don't see anything else I kin do. I hate to terribly; but looks like I jest natchelly ben obleeged to.

Planter: Had you anybody in your mind, Laughlin?

Laughlin: I reckon Phonetta Rose wouldn't have me?

Planter (with truthful frankness): No, I don't reckon she would.

Laughlin: I 'lowed she'd think I'd got too many children.

Planter: Yes, I dare say.

Laughlin: They're mighty nice, still children, and make a strong force for the cotton field.

Planter: They seem nice children.

Laughlin (much agitated): I—I—say, Mist' Planter, don't you guess you could write a letter to Miss Phonetta, and ask her for me?

Planter: Well, no, Mr. Laughlin, I don't think she would take kindly to having any other man do her sweetheart's courting. You speak up for yourself.

Laughlin (despondently): Yes, sir, I'll turn it over in my mind; but you see, I'd hate terribly fur to have her say no to me right to my face, and 'twudn't be nigh so bad in a letter. So I didn't know but you—

Unlucky Laughlin! He has reached the boundary line of the planter's amiability.

"I won't write love letters, and I won't pull teeth!" declares the planter, and Laughlin goes his way to propose to Phonetta in form on their way home from "playing games" at a neighbor's, to be rejected, and to feel ever afterward that if "Mist' Planter'd named it to her instead, she'd of talked different."

ATTACKED BY SAVAGES.

In dealing with the natives of the South Sea Islands one must be considerate, kindly and cautious, but at the same time quick to resent dishonesty, as otherwise these wild people will make themselves most unpleasant, to say the least. An Australian, who was cruising about these islands in a small yacht, found it necessary to make some repairs to his boat, and took advantage of a friendly harbor for that purpose. He purchased a bit of land with a small house upon it from the chief, and work was immediately begun.

Everything went well for a time, as the chief professed himself to be entirely satisfied and friendly. Soon, however, the workmen began to miss one small thing after another, and finally an irreparable loss was sustained, by the natives entering the house at night, and cutting the bellows of the forge through at the nozzle.

Hearing of this from the workmen, the gentleman decided to go ashore and demand satisfaction from the chief. The only result of the interview seemed to be a loss of temper on one side, and a display of insolence upon the other, the chief showing an offensive indifference.

"After delivering my ultimatum," says the yachtsman, "I turned round, and found about fifty armed men coming out of the bush behind me. Hallo! thought I, this looks like fighting; so I began to back down to the beach, at the same time preparing a small revolver I had in my pocket.

"The old chief, meanwhile, had taken a tomahawk and spear from behind a tree, and made a rush for me, and as he lifted his tomahawk to strike, I fired full at his breast, but the revolver missed fire, and I only saved my skull by catching his arm as it fell, and giving him a trip at the same time, which enabled me to back away faster than he could follow me.

"It was not safe to turn and run, as then I could not see to ward off any spears they might throw; but as the chief was making for me the second time, one of the others threw a spear, which I avoided by knocking it off with my hand; however, it pierced it below the first finger.

Then the chief made another rush for me, and as he struck I fell backward over the root of a tree. Again I tried to fire the revolver, but it would not work.

"At that moment I heard a rushing noise in the leaves, and a howl from the chief. My old dog Rover had him by the leg, in which he made his teeth meet; but he did not stop long enough to let the man get a blow at him, and though the natives threw many spears, they failed to hit him.

"The dog's timely assistance enabled me to get down to the beach and call H——, who jumped ashore with the muskets, when the natives cleared off. I sent for Torrootooroo, the chief, who came over with his canoes, and when he saw I meant business, he came to terms and paid the fine which I had demanded. Then I made the chief a present, he made me one, and we were good friends again, and there was no further trouble."

BONES.

The following composition on bones was actually written for a school exercise by a boy, and was thought so amusing and original by the teacher that she gave it to the editor of the *Popular Science News* for publication, from which journal we extract it.

Bones are the framework of the body. If I had no bones in me, I should not have so much motion, and grandmother would be glad, but I like to have motion. Bones give me motion, because they are something hard for motion to cling to. If I had no bones, my brains, lungs, heart and large blood-vessels would be lying around in me and might get hurted, but now the bones get hurted, but not much unless it is a hard hit.

If my bones were burned I should be brittle, because it would take the animal out of me. If I were soaked in a acid I should be limber. Teacher showed us a bone that had been soaked. I could bend it easily. I would rather be soaked than burned. Some of my bones don't grow close to my body, snug, like the branches of a tree, and I am glad they don't, for if they did I could not play leap-frog and other nice games I know.

The reason they don't grow snug to my body is because they have joints. Joints is good things to have in bones. There are two kinds. The ball and socket, like my shoulder, is best. Teacher showed it to me, only it was the thigh bone of an ox. One end was round, smooth, and whitish. That is the ball end. The other end was hollowed in deep. That is the socket, and it oils itself. It is the only machine that oils itself.

Another joint is the hinge joint, like my elbow. It swings back and forth and oils itself. It never creaks like the schoolroom door. There is another joint that don't seem like a joint. That is in the skull. It don't have no motion.

All my bones put together in their right places make a skeleton. If I leave any out, or put any in their wrong places, it aint no skeleton. Cripples and deformed people don't have no skeletons. Some animals have their skeletons on their outside. I am glad I aint them animals; for my skeleton, like it is on the chart, would not look well on my outside.

SERVED HIM RIGHT.

In the early days of the Civil War, the Maine volunteer regiments were quartered at Augusta for several weeks after their organization, to be drilled and trained before going to the front. Many of the soldiers were young men from the country, in whose pockets the bounty money burned as long as it lasted, to the great advantage of Augusta store- and stable-keepers.

Two soldiers came into a livery-stable one morning, and asked the proprietor how much he would charge for a team to go to Waterville.

"Six dollars," was the reply.

The bargain was closed, and the soldiers drove off. Toward night they returned, and one of them stepped into the office and tendered the proprietor six dollars.

"Oh no!" he exclaimed. "Your bill is twelve dollars."

"How is that?"

"Why, you asked me how much for a team to take you to Waterville, and I said six dollars; but you came back, didn't you? I meant six dollars each way."

The two friends, after a little conference, paid the swindler the twelve dollars, and went away without a word.

About a week later a soldier again appeared at the stable office and inquired, "How much for a team to Waterville?"

"Six dollars," replied the proprietor, not recognizing the man upon whom he had played so mean a trick the week before.

The soldier took the team and started off. About five o'clock in the afternoon he appeared, on foot, and walking into the office, said:

"Here's your six dollars for that team I hired this morning."

"But where's the team?" was the astonished rejoinder.

"Oh, I only hired it to *go* to Waterville, you know. I left it at the hotel stable down there. It cost me six dollars to bring it back last week, so I thought I'd return by cars this time. It's so much cheaper, you see," and he left the proprietor to his meditations about the comparative smartness of civilians and soldiers.

LOG-ROLLING IN EARNEST.

An old farmer in Morgan County, Indiana, was busy in his clearing some years ago, writes a correspondent of *The Companion*, rolling logs together, stacking brush, pulling stumps and the like, when two hunters emerged unexpectedly from the bushes.

They "passed the time of day" with the farmer, and the younger of them said to his companion:

"Did you ever do any work of this sort, judge?"

"Yes, indeed," answered the second man.

"Well," said the first speaker, "so did I, a good many years ago. Let's try our hands at it now."

"Agreed," said the judge, and the two men laid aside their guns, took off their coats, and went to work upon the logs with a will. At the end of an hour they had finished their stint, and the farmer offered to pay them.

"Oh no," the strangers said; "you are welcome to what we have done."

"Well, I don't know your names, gentlemen, nor whom I have to thank, but—"

"My name is Elliot," the judge broke in, "and my friend here is Senator Harrison."

"You don't mean it!" exclaimed the farmer, and as the United States Senator and the judge of the Supreme Court started into the woods, he said to himself:

"Well, now, I've read a good deal in the papers about these politicians a-log-rollin', but I'm blest if I thought they ever really did it!"

VACATIONS WANTED.

The ways and sayings of the Baboos, or educated natives of India in the employ of the government, are a source of continual amusement to the English in that country. They frequently misuse the big words of which they are fond in a laughable way.

There was no misuse of English, however, in a plea for a holiday recently put forward by the Baboos employed in the Government Geological Department at Calcutta. They asked the supreme authorities to close the office because "they were suffering from perspiration and a want of enthusiasm for their work!"

It is no surprise to learn that the hard-hearted authorities denied the modest request. What long vacations some Americans would be entitled to if a plea of this kind were accounted valid!

For the Companion.

A HOLIDAY COOK.

There was a girl in our town,
And she was wondrous wise,
For she could make a cranberry-tart
As big as two mince-pies;
And when the children ate it up,
They counted twenty-four,
And then she made another tart,
As big as two pies more.

Tommy kissed grandma very soberly, and walked slowly off to bed.

"Dear me!" sighed grandma to herself. "Whatever can I do to pacify the dear child?"

Jonas was reading a newspaper at the kitchen table. The door was open.

"Don't you worry, ma'am," said he. "I reckon I can find some nutting for him."

"O Jonas, if you only could!" said grandma, eagerly. "I wouldn't mind your leaving the work or anything. I don't feel as if I could bear to have Tommy's visit spoiled."

Jonas chuckled softly, but grandma did not hear.

He got up very early next morning. Grandma heard him go carefully down the back stairs in his stockings.

"It's real kind of Jonas," she thought. "He wants to get the chores all done, so as to have time for Tommy."

When Tommy woke he found his oldest clothes ready for him.

"Grandma, grandma! of course you thought there weren't any nut-trees," he cried, chivalrously, "but you were 'staken. There is—lots! Look here!"

He threw off the basket-cover triumphantly. Grandma gave one look, and actually turned pale.

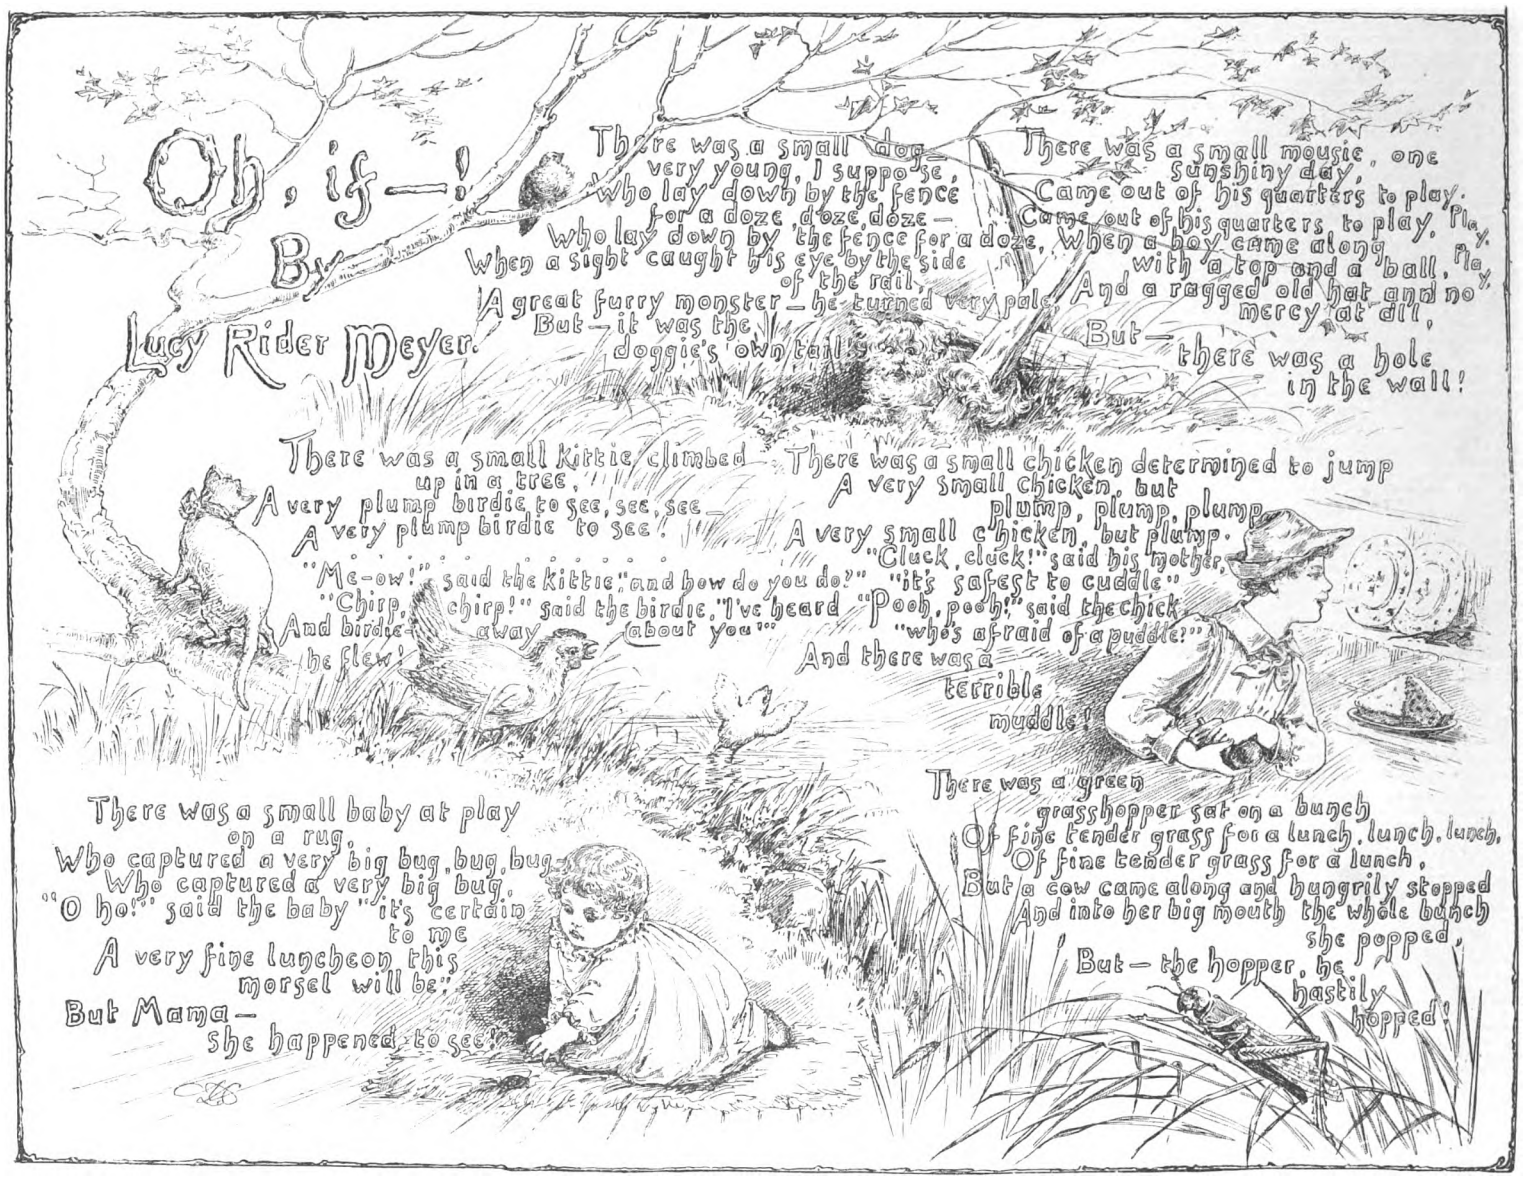
Brazil nuts, pecans, chestnuts, almonds, English walnuts—the basket was more than half-full!

"We had to put all the kinds together," said Tommy, "'cause we didn't have baskets enough. And wasn't it funny, grandma? Lots of them were under other kinds of trees. But I saw some sweet apples once growing on a sour apple-tree—papa said it had been grafted. I guess those elms and maples must have been grafted."

Grandma looked at Jonas. He had been going to laugh, but he changed his mind and sneezed instead.

"Dinner's all ready," said grandma. "Tommy, let Susan wash your face and hands."

But when he was out of hearing, she said:



Enigmas, Charades, Puzzles, etc.

1.

ANAGRAM FOR BOYS.

In *Bromrene*, once in *our frayes* a *not quite rages* comes before the *rosvet* of the *Tested Tusani* for their *codesini*. Who shall be the next *streedpin?* Let every boy study carefully the *throisy* as well as the *untoslintoic* of our *rutnoyc* and prepare *flimshe* to act *till tyneg tine* and *ratio clapylil* when his turn shall come to take part in the *cleenoit*. Many who in 1888 were but *skoolorne*, in 1892 will find it their *givelerip* as well as their *uiyd* to *veto*.

For the Companion.

NUTTING AT GRANDMA'S.

Tommy stood at grandma's knee in his little white nightgown.

"Grandma," he said, looking wistfully into her face, "to-morrow will be Saturday, and the next day Sunday, and the next *Monday morning!*"

"Yes, dearie, I know," answered grandma, sadly.

Tommy's papa had written that Tommy was to be sent home on Monday morning.

"If I don't go nutting to-morrow, I can't go at all."

Tommy spoke so solemnly that grandma gave a little start.

"Why, dearie, grandma'd *love* to have you go! I told you so all the time, but there isn't a single nut-tree anywhere about here that I know of."

"But papa always went when *he* was your little boy."

"That was such a long time ago, Tommy! The country isn't the same now. Some of the trees have been cut down, and some have died. You'd only have your tramp and get all tired out for nothing."

"Well, I've 'xpected and 'xpected, and if I can't go, I sha'n't feel as if I'd been at your house."

To be sure, they had been quite new when he came to grandma's, but everybody knows that clothes—especially trousers—age very fast in the country.

By nine o'clock Jonas was ready. Susan had found two baskets—one much larger than the other.

"The little one is to pick up the nuts in," explained Tommy, "and the big one to turn them into."

Jonas drove Dolly and the democrat-wagon up to the side gate.

"Jump in, Tommy!" he called.

Tommy gave grandma a hug that almost knocked off her spectacles. Then he climbed up beside Jonas, and they rattled merrily away.

Grandma watched the wagon as far as the turn of the road, and then went in to finish the pair of spotted mittens she was knitting for Tommy.

It was nearly noon when she looked out of the window, and saw Dolly's white nose coming around the corner.

"Oh dear, I *hope* the precious child hasn't been disappointed!" she said, anxiously.

Five minutes later, she was sure he had not. His face was bright with smiles, his brown eyes were dancing under his yellow curls.

He sprang to the ground, and Jonas pulled the large basket from under the seat. It seemed heavy—Tommy tugged with both hands.

"Jonas, you meant well. But you must never deceive my little boy again—not even to make him happy! Remember, Jonas."

MARY A. P. STANSBURY.

For the Companion.

A LITTLE PREACHER.

It was a very stormy Sunday, and mamma and the children did not go to church.

Harold, who was not yet five, and his younger brother Dorry liked to go to church and Sunday-school, and to-day they hardly knew what to do with themselves. Just before noon Harold came into mamma's room, saying:

"Mamma, Dorry is going to play store!"

"But it is Sunday," said mamma, gently; "he must not play store to-day."

"I know it," said Harold, "and please give me the preach-book, mamma; I'm going to preach to him!"

DUNIE was a little boy who was fond of climbing. "Dunie, come down," somebody was constantly saying. "What is your name, little boy?" asked a lady one day. "Dunie Come-down," he replied.

"POOR old horsey!" said Harry, when he saw blind Dobbin. "Why, he's lame in bofe eyes!"

2.

RIDDLE.

Chinamen own me and prize me dearly;
Gentlemen play with me long and late;
Without me a quarrel would run but queerly:
To be Number Seventeen seems my fate;
I am given to actors, and other folk, too,
And always you'll find me ahead of you.

3.

SQUARE WORD.

FARMING APHORISMS.

"You can never put too much water in milk if you always put it through the cow's mouth." This is one of many analogous aphorisms by Professor Robertson, the Canadian Dairy Commissioner. Among his duties is that of delivering lectures to farmers throughout the country. Of late years the Dominion Government has adopted many wise measures for improving Canadian agriculture. Experimental farms have been established in widely-separated provinces, and placed under men who are at once practical and scientific farmers. They conduct and report on attempts to acclimatize new varieties of grain and fruits. They experiment on methods of feeding stock, and carefully note the results for government publication.

It is believed that a well-planned system for improving the breeds of cattle, horses and hogs throughout all Canada, will be soon taken in hand by the administration. This would add greatly to the value of the permanent "living plant" of the people, and to "practical politics" in the best sense.

Meantime the wide circulation by that government of the Dairy Commissioner's admirable lectures will go far to impress farmers with the folly of continuing some old practices. Here are a few more of his telling aphorisms.

"Some farmers are wont to think that what they call sentiment belongs to literary people alone, people who wear long hair and use a good deal of hair-oil. But if you can put right sentiment into a farmer's life and make him feel proud of his business, he will do that business the better for it, and such sentiment to him will prove a paying acquisition."

"The hog is not such an undesirable citizen if he is well fed and well kept. He is the one citizen of the American Republic that has helped most to make it wealthy. Of course I mean the kind of hog that is fed in pens. Even little pigs have a right to be well born, but they cannot be if their mother lacks a clean home and clean, sweet food."

"A man who knows well enough that unless his dairy cow be a good one he can expect no profit from her, often acts as though he believed that anything which grunts and squeals would make money for him out of its food; but the squealing and grunting are the main part of it with some hogs."

"Many of the troughs I see around the country seem to have been constructed to afford baths to the pigs, so deep and wide are they."

"There is only one way whereby a man can raise, with certainty and equity, the price of his butter. No single farmer and no combination of farmers can force the butter market up or down. But any man can raise himself from being a ten-cent-a-pound man to being a twenty-five-cent-a-pound man, by making and marketing the quality of butter for which people will pay twenty-five cents."

HOW TO "SAW BY."

Some boys do only what they have seen done by somebody else; other boys, the boys who make a mark in the world, look at things with their own eyes, and if a thing needs to be done, set about doing it. Without brag or bluster they act as if their motto were, "What man has not done, man can do." Of one such boy the Washington *Post* prints a characteristic anecdote.

A few years ago a green country boy applied to the superintendent of a Western railway for work, and, somewhat against the superintendent's wish, on account of the danger to life and limb attendant upon such occupation, was given a place as brakeman of a freight train.

On one of his first trips it happened that his train met another freight train at a station where the side track was not long enough to accommodate either of them. The conductors were debating which train should back up to a point where they could pass, when the new hand ventured to suggest that neither should back; that they could pass each other by means of the short side track if the thing was managed right.

The idea excited a good deal of laughter on the part of the old trainmen, but the boy stood his ground.

"Well, how would you go about it?" asked one of the conductors, confident that the lad would soon find himself against a stump.

The boy took up a stick and traced in the sand a diagram to illustrate his plan.

"Good gracious!" said the conductor, "I believe that will do it!"

And it did do it. To-day every trainman in America probably knows how to "saw by" two long trains on a short side track, but it is not so generally known that the thing was never done until an inexperienced country boy, who is now the manager of a great railway line, worked out the problem for himself.

GOOD AUTHORITY.

Congressmen "before the war" were somewhat accustomed to the exchange of unparliamentary language; but perhaps no American legislators were ever so practised in vituperation as the members of the much-lamented, vanished Irish Parliament on College Green. Somehow they contrived to keep on friendly private terms while treating one another to most picturesque abuse.

On one occasion a member, pointing a quivering finger across the house at his opponent, one Thaddy Burke, concluded with these words:

"And every mimber of the honorable gintleman's familee is benayth contimpt — from the white-livered hound that is shivering on the flure to the painted hag that is grinning in the gallery."

"How did you know his sister was in the gallery?" whispered a comrade as the orator sat down.

"Sure, didn't Thaddy himself tell me she was going to be prisint when we were coming down to the House afther dinner?"

NORMAL.

From an incident reported in the *Pharmaceutical Era*, it is plain that some doctors are not sufficiently on their guard against frightening their patients without good reason.

Old Lady—Doctor, do you think there is anything the matter with my lungs?

Physician (after a careful examination)—I find, madam, that your lungs are in a normal condition.

Old Lady (with a sigh of resignation)—And about how long can I expect to live with them in that condition?

Such an opportunity to buy music cheap as is offered on page 563 of THE COMPANION may never occur again. Look it up. *Just right for Christmas.* [*Adv.*

THE SECKEL PEAR.

"He who discovers a new dish confers a greater benefit on mankind than he who discovers a new star," says a famous writer, and the majority of persons would be willing to accept the statement without dissent. Five miles from Philadelphia, at the confluence of the Delaware and Schuylkill Rivers, there is a fine old place, once known as the Lawrence Seckel estate, afterwards the property of Stephen Girard. In the time of the Seckels the abundance and variety of its fruit, especially its fine pears, made the place famous.

Not many years ago there was still standing in a corner of the grounds an old pear-tree—a very patriarch among the trees, and the most celebrated of them all. For more than a half-century the fruit of this tree was not tasted. No one thought of eating the insignificant pears, not much larger than marbles, and the tree was contemned as worthless, while its fruit rotted on the ground or was eaten by cows or goats.

Mr. Seckel, Lawrence's father, threatened many times to cut down the tree, but years passed and it stood, biding its time. How it came there or who planted it, no one knew.

Lawrence Seckel came into possession of the estate, and the pear-tree, being in a sense an ancient landmark, was allowed to stand, although the owner had it in mind to cut it down some time.

One afternoon in early fall, Mr. Seckel was returning from a long walk and chanced to pass beneath the worthless tree. He stood for a minute resting in its shade.

Suddenly a pear dropped, struck him upon the head, from which he had removed his hat, and rolled into his open palm. Half-automatically he fumbled the fruit between his fingers, and was in the act of throwing it away when it occurred to him to bite it.

"Ah, the flavor of that pear!" Mr. Seckel used to say, in telling the incident. "I had thought myself a connoisseur in pears, but I had never tasted the equal of that aforetime despised little fruit."

Thus was the Seckel pear discovered. That year the pears were not left to rot on the ground, or to feed cows and goats. They became the favorite on Mr. Seckel's table. Scions from the tree were soon in demand, and the Seckel pear has now become a favorite.

A SOUTHERN HOLIDAY.

In some parts of Tennessee the people celebrate a monthly holiday, the name of which is apt to puzzle strangers until they find that its spelling is not what they imagine from the pronunciation given it almost universally, by "whites" as well as colored people. This holiday is called "Fuss Monday," that is, First Monday, and it is celebrated on the first Monday of every month.

It is a great day for marketing, shopping, trading and racing horses, and gossiping among all the suburban population of a large town or city.

Early in the morning the procession of men, women, children and babies, on horseback, on foot, or in wagons and vehicles of every description, begins to stream along the "pike," toward the centre where the "Fuss Monday" festivities are to be held, and late in the day the same procession wends its way back again.

The people, though many of them are undoubtedly weary from the day's excitement, almost invariably look good-natured, and well satisfied with the success of their purchases, sales, and exchanges of news.

The children, particularly the boys, learn to "sit a horse" well at an early age, and a lady who has lately spent some time in southern Tennessee says that it is by no means an uncommon sight to see a sturdy boy of eight or nine years, sitting so firmly, yet gracefully, on his horse, that it almost seems as if he had grown fast to the handsome creature's back, riding rapidly along the dusty pike, with an umbrella held easily over his head to protect him from the broiling sun.

Such a boy, if he belongs to one of the old and aristocratic families of the place, is probably riding to school, or on some errand to a neighbor's; but if it happens that, in company with some discreet older person, he is allowed to see some of the "Fuss Monday" fun, he is sure to enjoy it, and ride home when the day is over with a good stock of adventures to relate to his less-travelled brothers and sisters.

PAID HIMSELF OFF.

"When I would do good," said the apostle, "evil is present with me;" and what was true in St. Paul's day is true now. Every man has two men in him, and the question is which shall get the upper hand.

A man who was in what are called "pretty good circumstances," but who was not by nature of a generous turn, met a poor old woman while out for his afternoon ride on horseback. She stepped in front of him, and, in Scripture language, "asked an alms."

It was easier to give something than to refuse altogether, and he dropped a quarter into her hand and rode on. Presently he began to soliloquize:

"After all, now, shouldn't I have done better if I had kept that quarter and bought myself something? How do I know that the old beggar wasn't a humbug?"

When his meditations had gone thus far he wheeled his horse round and rode back quickly to where the old woman was standing.

"Give me back that money," he said.

She handed it to him without a word, wondering what sort of a customer she had fallen in with. He put the coin into his wallet, and at the same time took out of it a five-dollar bill, which he passed to the beggar.

"There, self," said he, "I guess you'll wish you'd kept still."

"BUSTED," NOT BROKEN.

Doubtless our unlettered friends have fine distinctions in the use of words, for which we do not give them sufficient credit. A new pupil in a colored school took a shattered lamp-chimney to show her teacher.

"Ah!" said he, "your chimney is broken, is it?"

"No, sir," she answered, "it's busted."

In her distinction of terms lay all the difference between a confession of guilt and an assertion of innocence. The word "broken" she understood to mean that the mishap had occurred by her own fault; and in correcting to "busted" she meant to imply that some unknown agency, a current of cold air, perhaps, had caused the break.

Here is a distinction as clear and real as we make in more scholarly terms.

For Coughs, Sore Throat, Asthma, Catarrh, and diseases of the Bronchial Tubes, no better remedy can be found than *"Brown's Bronchial Troches."* [*Adv.*

They are easily applied, give immediate relief, afford absolute comfort, and are the best, surest, cleanest and cheapest remedy for corns and bunions ever produced.
The Corn Shields are made large and small. In ordering, state size wanted.
POROUS PLASTER CO., 274 Canal Street, New York.

It is an old-fashion notion that medicine has to taste bad to do any good.

Scott's Emulsion is cod-liver oil with its fish-fat taste lost—nothing is lost but the taste.

This is more than a matter of comfort. Agreeable taste is always a help to digestion. A sickening taste is always a hindrance. There is only harm in taking cod-liver oil unless you digest it. Avoid the taste.

SCOTT & BOWNE, Chemists, 132 South 5th Avenue, New York.
Your druggist keeps Scott's Emulsion of cod-liver oil—all druggists everywhere do. $1.

"WORTH A GUINEA A BOX."

Sleepy.
If a man is drowsy in the day time after a good night's sleep, there's indigestion and stomach disorder.
BEECHAM'S PILLS by removing the waste matter which is clogging the system, **will cure all Bilious and Nervous disorders,** and will quickly relieve **Sick Headache.**
Of all druggists. Price **25** cents a box.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

CHOROIDITIS.

The retina, the fine network of nerves on which vision depends, lines about one-third of the interior surface of the eye. The necessary access of light to the retina may be more or less fully cut off by a cataract that destroys the transparency of the crystalline lens; by a clouding of the vitreous humor, that fills the globe behind the crystalline lens; by the enlargement and hardening of the globe, destroying by pressure the sensibility of the retina and optic nerve; and by the many serious affections to which the iris and the cornea are exposed.

Behind the retina, between it and the tough, white membrane that covers the eye outwardly—the "white of the eye"—is the choroid membrane. This secretes a black pigment, which is both a background for the absorption of excessive light, and a source of supply of "visual purple," somehow essential to the act of vision. This membrane is liable to inflammation. Hence the term choroid*itis*—the termination "itis" always denotes inflammation of that to which it is applied.

There are many different forms of this disease; the most common is "diffused" choroiditis. It is essentially chronic. What the ophthalmoscope reveals is either small, round, white spots, or larger, irregular ones scattered over more or less of the membrane, generally with accumulated masses of pigment elsewhere, the whole resembling the skin of a leopard.

These spots may be confined to the outer portion of the eye, and have little conscious effect on vision.

If they are near the centre, as they are most apt to be, they affect the vision seriously, even if they are quite small; for the "visual purple" is no longer secreted, and the nerves of the retina over the spots are wasted or destroyed.

The disease may often be arrested in time to save a large portion of the eye. It may continue for months with intervals of improvement and relapse. It should be remembered that there is always danger of its extending to the sound eye. Says Sir Erasmus Wilson:

"Cobalt blue or neutral-tinted glasses should be worn when the eye is exposed to strong light. The eyes must be used but sparingly, and such physical exertion as might increase the ocular congestion should also be avoided. The digestive functions must be kept in good condition."

An oculist should be consulted.

WATERSPOUTS.

It has frequently been asserted that a waterspout can be broken and destroyed by firing a cannon-ball through it, but this is not the opinion of Professor Cleveland Abbe, who saw many waterspouts during the United States scientific expedition to West Africa in 1889.

He did not try to shoot one, but from his study of their manner of formation and appearance, he concluded that a cannon-shot would not be likely to have much effect upon them.

Waterspouts appear to take their rise at the edge of a rain-squall where there is an ascending current of air. They are essentially small tornadoes, and it has been observed that a tornado in passing across a lake assumes the characteristic appearance of a waterspout.

There are two principal phenomena in a waterspout, the cup and the spout. The cup is a saucer-shaped mass of spray and water on the surface of the ocean, just under the place where the spout appears to be let down from above. Sometimes the spray rises to a height of a hundred feet or more.

The spout is the most singular part of the spectacle. According to Professor Abbe's recently published observations, it assumes the appearance of a rapidly whirling "axial cloud" stretching downward "by spasmodic efforts" from the lower surface of the general cloud above it. It increases its length gradually until it reaches the spray, and then begins retreating, forming and re-forming several times. Sometimes a swirling and bending tube is formed, reaching from the clouds to the sea and remaining for several minutes, and at other times the effort to form a spout proves a failure.

The most striking thing in Professor Abbe's reports is his description of "an exceedingly fine axial line" which generally preceded the shooting downward of the tubular cloud in the waterspouts that he saw, and the appearance of which "was very similar to that of the sting of a bee protruding from its sheath."

The downward stretching of the waterspout is probably to be ascribed, like the similar appearance of the funnel of a tornado, to the rapid condensation of moisture in a swiftly ascending current of air.

There is not much danger to be feared from an encounter with a waterspout except by small vessels. In fact, there is at least one instance on record in which a waterspout passed over a ship, the only damage done being the deluging of the deck with water. The spouts are only a few yards—often only a few feet—in diameter, although their height may be a quarter of a mile or more.

CHARGED BY A BUFFALO.

Every farmer's boy has seen two angry rams rush at each other, with heads almost down to the ground. It is thus that a mad African buffalo charges upon the object of his rage, be it man or lion. Such a charge is described by Mr. Herbert Ward in *Scribner's Magazine.*

While his comrade, Mr. E. J. Glave, was stalking a large herd of buffaloes, he fired at a bull, but only wounded it in the shoulder. The herd stampeded, but the wounded bull trotted into a neighboring patch of scrub, whence, as Glave approached, he rushed into the open, and for an instant stood there dazed.

Recovering himself, the infuriated animal extended his neck, stuck back his ears, stamped with his foot, sniffed the air, and with an ominous twitch of his tail charged straight for the man, who stood waiting him, fifty yards off.

Glave saw from the pace of the charging buffalo that his life depended upon the one shot. He waited, therefore, until the brute, with head close to the ground and bellowing with rage, was within a few feet. Then he fired and shot it through the heart. So sudden was the shock and so great the impulse, that the brute turned a somersault, and Glave had only time to jump aside to avoid being crushed.

While stalking the herd Glave had given a native his helmet to carry. When the man saw the infuriated buffalo about to charge he climbed up a high tree. So scared was he that even after the buffalo had been killed, he could not be persuaded to come down with the helmet, and another native had to go up and get it.

The exposure of the hunter's head to the sun gave him a severe fever, and that night he was so delirious as to require several men to control him.

AID TO MEMORY.

"Tod" Walters is a ten-year-old boy in whom the spirit of mischief and the spirit of investigation are developed to an unusual degree; at least, his suffering grandparents entertain that opinion. Tod made them a short visit a few months ago, and although they are fond and proud of their grandson, it cannot be denied that their principal feeling when they said good-by to him was one of relief.

Neither of the old people had very sharp eyesight, and they seldom used their spectacles except for reading, so it was not surprising that they failed to discover some peculiar indentations which marked the top rail of the polished balusters on the first morning after Tod's arrival, and which grew deeper with each succeeding morning.

To all appearance Tod did not notice them, either, until the last day of his visit. Then he announced in confidence to his grandmother:

"I'm *afraid*, grandma, that I've made some marks on the baluster-rails with my Waterbury, but you see I've always run down so fast that I never noticed them till this morning!"

"With your Waterbury, Tod!" echoed his grandmother in amazement.

"Why, yes'm. I've wound it by pressing the winder on the rail, you know, every morning since I came. It was such a splendid place, and saved such a lot of time, because I could do it as I ran down to breakfast. And always doing it that way, of course it kept me from forgetting to wind it, you see!"

FOLLOWING INSTRUCTIONS.

The spirit of implicit obedience is always to be commended in a child, even though the too literal interpretation of instructions may occasionally have an unexpected and amusing result.

Mabel, a very circumspect and conscientious young maiden of four, was sent into the parlor to entertain a caller for a few minutes until her mother could appear.

The conversation drifted to Mabel's intellectual acquirements, and the visitor asked, "And do you know the alphabet, Mabel?"

"Yes, ma'am."

"Well, will you say it for me?"

Mabel began very glibly; but after three or four letters she stopped abruptly and said, "If you please, ma'am, I guess I'd better not."

"Why," asked the other in surprise. "What makes you think you had better not?"

"'Cause," replied this exceptionally discreet young woman, "that's about all I know, and mamma says I mustn't tell all I know."

NARROW ESCAPE.

"An' sure," said Patrick to his friend Dennis, "I was near indade the day to bein' made a prisint of a most byootiful harse, wid the coat of a duck, the grace of a dancing-masther, and the spade of an antilawpe."

"Arrah!" said Dennis. "The loikes o' you bein' near made a prisint of a harse!"

"Sure, an' that I was, Dinnis, dear. 'Twas by a grain that I missed him. It was in a chaise he was, and dhruv by a foine gintleman of me acqua'ntance. He stopped ferninst the house of me impl'yer the day.

"'It's a fine harse ye hev thayre,' says I.

"'I belave ye're roight,' says he.

"'Wud ye give him to me?' says I.

"'Naw!' says he.

"An' begorra, if he'd said 'Yis,' I'd 'a' had him!"

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. ZULEIKA.

In Three Chapters.—Chapter III.

Claude Recovers His Own.

It was plain to any one who knew Zuleika well that the mare which stood before Claude was not the splendid animal which he had brought from Constantinople with so much trouble. In his agitation he could form no idea how the substitution had taken place.

Without stopping to thrust the gray mare back into her box, Claude ran out into the stable yard, and in a hoarse and unsteady voice, called his groom.

In a moment the man came running out of the hotel, his absence even at that moment indicating that he had not been very diligent in his attendance.

"Where is Zuleika?" cried Claude.

The man stared stupidly at the mare, who had not stirred from the spot where Claude left her.

"Surely, this is Zuleika, sir," answered the groom.

"Don't dare to tell me that! Have you no eyes? Who has been here since last night?"

"No one has been here that I know of."

"Do you mean to say that Zuleika has walked off and left this substitute in her place without your knowing it?"

"I know nothing, sir, about it."

Claude could not make out from the man's manner whether he was telling the truth or not. He had a suspicion that he had been bribed to allow the exchange; but if so, he was feigning innocence very cleverly.

There were grooms in the stable during the entire night; there was no evidence that the lock had been forced or picked. A skilful burglar might, however, have picked so simple a lock without leaving any sign that it had been tampered with.

Dismayed and heartsick, Claude walked back to the dining-room and told his father of Zuleika's disappearance. The Colonel listened for a while in silence; then a ray of light suddenly broke across his face. He jumped up with a vehement gesture, and cried:

"That scoundrel, Mudir, has done it!"

"Mudir Pasha?"

"Yes. He followed me northward. I saw him on the train, but it did not occur to me then that he was tracking me in order to find you. I supposed he had gone north to buy horses. It is Prince Ishmael who has sent him. You know he was terribly angry when you left, and he swore to get Zuleika, no matter where she was."

"Then Zuleika is now on the road to Constantinople?"

"Undoubtedly."

"And I am going to Constantinople after her, unless I can catch her on the way."

"Well, I am going with you. A fraud, a theft like this, is more than I can stand. Such villany must be punished."

It was a gratification to Claude to find his father scarcely less incensed than he was himself, for when the Colonel started to do a thing, he seldom allowed any obstacle to defeat him.

Both packed their hand-trunks in haste, and drove to the Anhalt station. An express train was to leave at ten o'clock, and Claude employed the fifteen minutes he had to spare before the departure of this train in asking questions relative to Zuleika of brakemen, conductors and freight agents.

He ascertained, beyond a doubt, that Mudir Pasha had started with the Arabian mare by a freight train which left at six o'clock, and which would be overtaken by the express at Dresden in the afternoon. Unless he had taken the precaution to get off at a way-station, or unless some accident happened, they would therefore be certain to catch him; and they had no doubt that they might rely upon German justice to do its work surely, if slowly.

Both Claude and the Colonel, while speeding southward, gathered all the information they could from train-hands and station-masters, in order not to lose track of the Turk. They became convinced before they reached Dresden that Mudir had regarded extra precautions as unnecessary, and was taking the straight road southward to the Ottoman dominions.

At the great station in Dresden, where they arrived at two o'clock, Colonel Ring and his son, having obtained a permit, made their way with difficulty among the network of tracks and the puffing engines.

After five minutes' search they found a box-car with an open grating for ventilation at the top, and stopping to listen, they heard distinctly the stamping of a horse's hoofs.

"Zuleika, my beauty!" Claude cried, in a cajoling and tender tone. Instantly there came a wild whinny from within the car, followed by plunging and stamping.

"Zuleika! Zuleika, my beauty!" he called again, whereupon there was a fresh tattoo of excited hoof-beats, and Zuleika's head appeared at the grating.

A piercing whinny, which was rather a scream of pain and impatience, echoed under the wide rotunda of the station.

Claude felt as if his heart would break. With a tremendous wrench he tried to pull the sliding door aside; but it was locked.

"Patience, my son, patience!" said his father. "Do nothing rash, or you'll spoil everything."

A surprised exclamation and a slam as of a bench that was upset were heard from an adjoining car, and in another moment Mudir Pasha burst through the door and tumbled down the steps, followed by two railroad employees.

"Thieves!" he yelled, in broken German, as soon as he saw Claude and the Colonel. "Thieves! Robbers! I demand their arrest instantly!"

His coarse face was scarlet with anger and alarm. Two or three of the officers at the station came hastening up.

"It is I who demand this man's arrest," said Colonel Ring, calmly. "He has stolen my son's horse. And I tell you," he exclaimed, turning to Mudir, "that you shall not escape from this place until you have given up Zuleika!"

"You think to bully me," Mudir muttered in Turkish, glowering at the Colonel, "but if you dare interfere with me, I warn you it will go ill with you!"

Colonel Ring turned to the officials, and said, frankly and calmly, in German:

"I demand of you, gentlemen, that you keep this man in your custody until I can procure a warrant for his arrest. He has stolen the dapple-gray Arabian mare which is locked up in this car, and I shall hold you responsible for the safety both of the horse and the man until I return—which will be in an hour."

He spoke politely, but as one who was accustomed to command. He wore now the uniform of an officer in the Norwegian army—for he had been allowed to retain his rank in the army of his own country. This uniform, with the ribbons of many orders on his breast, did not fail of its effect upon the railroad officials.

Mudir, it was evident, was a coarse fellow, who might be capable of anything, while his accuser's appearance showed that he was a man of authority and rank.

They promised to keep Mudir for an hour, and not to allow him to take the horse away. To make assurance doubly sure, Claude remained at the station, now and then speaking to Zuleika through the grating, while his father went in search of the police.

It occurred to Colonel Ring, when he had sworn out a warrant for Mudir's arrest, that his former acquaintance with the King of Saxony, whose cicerone he had been during a visit to Constantinople, might now stand him in good stead. He therefore wrote a letter to the court marshal, asking for an audience on the following day.

Mudir, after fuming and storming in vain for half an hour, telegraphed to the Turkish ambassador in Berlin, and then sat down to wait. He was not treated as a common prisoner, but forcibly detained, and kept under guard in a hotel.

Zuleika was taken from the railroad car, and lodged in a stable under the custody of the police. Claude, though he longed to pet her, was not allowed to approach her, and he walked about in a state of feverish impatience and misery, knocking the scabbard of his sword against the furniture, tracing faces and animals in the pattern of the wall-paper, and drinking soda-water which he did not want from sheer desperation.

The matter was taken before a magistrate, and the examination of Mudir was set for the next day. Knowing how slow and thorough German justice is in its operations, Claude was prepared to spend a week, if not a month, in Dresden before Zuleika was restored to him. In the meanwhile, in order to leave nothing to chance, he telegraphed to his groom to come on with the false Zuleika by the next train, and called upon one of his classmates, Cadet Schwerin, who knew Zuleika well, and might be valuable as a witness.

The next day, as he was preparing to attend the trial, the Colonel received a message from the court marshal, stating that the King would grant him an audience that very morning at eleven o'clock. He hastened to the court, and asked that the trial be postponed until the afternoon; but the Turkish ambassador had already arrived from Berlin, and could not stay long. Mudir insisted upon an immediate trial of his case, and the magistrate denied the request for delay.

Zuleika Decides a Difficult Matter.

The Colonel wished heartily that he had been in less haste to renew his acquaintance with the King, for now he was obliged to be absent from the trial, where his presence was greatly needed. However, he could not break an engagement with the King without damaging his case, and cutting off his chance of appeal in case of an unfavorable decision.

With a heavy heart he arrayed himself in his gala uniform, and went to the royal palace, where the sentinels presented arms to him.

He waited a full hour in an anteroom, and was not a little startled when the Turkish ambassador was bowed out from the royal presence by two gold-laced chamberlains. It was now his turn; but he felt, for the moment, that the Turk had been too clever for him, and that his chances of setting his case right were not promising.

The King received him kindly, and after the usual polite formalities, gave him the desired opportunity to mention his errand.

The Colonel described his son's affection for Zuleika, and Zuleika's love for him; he referred to Prince Ishmael's offer to buy the mare, and his anger when Claude refused to sell her, and finally expressed his conviction that Mudir had been sent on by the Prince to steal the mare, or what amounted to the same thing, exchange for her an inferior animal, not pure Arabian.

The Colonel warmed up, as he proceeded in his narrative, and the King became intensely interested. He asked some questions about Zuleika and her false double, and finally begged the Colonel to accompany him on horseback, and let him see the two mares.

"I have a good mind to play Haroun al Raschid on a small scale," he said, laughing. "If the decision of the court goes against you, you must appeal, and I'll deliver myself of a Solomonian judgment."

Meanwhile, things had taken a bad turn in the court-room. The judge reasoned with great acuteness "in the air;" but it did not occur to him to look at the two mares, and compare their merits. Very likely the testimony of the ambassador, who swore to Mudir's high rank and excellent character, outweighed with him all the evidence on Claude's side. Moreover the groom, when he was put on the stand, greatly damaged his master's case by refusing to swear that any exchange had taken place. He was in doubt, he said; he did not think any one could take a horse out of the stable without his knowing it.

This settled the matter, as far as the judge was concerned; and neither Claude's nor Cadet Schwerin's testimony, which was equally positive on the other side, could change his conviction. It was a case of hallucination, he thought, or of mistaken identity.

He therefore determined to order the release of Zuleika, give Mudir full liberty to proceed on

Digitized by Google

Edward D Duffield Jan92

his way, and apologize for having detained him. He was about to pronounce this judgment, when a messenger arrived from the King, bearing a large envelope. The magistrate hastily broke the seal and read the contents.

The letter commanded him to adjourn his court, and irrespective of his decision, to proceed, with the parties to the case and the witnesses, to the parade grounds outside the city.

With a solemn voice the judge read this message in the court-room, and expressed his astonishment to Mudir and the ambassador. But he said immediate obedience to the King's wishes was necessary.

Accordingly, the court, the officers and the witnesses proceeded in carriages to the parade grounds, where they found Claude and Cadet Schwerin, and a battalion of soldiers drilling.

At about three o'clock a royal carriage, preceded by outriders, was seen approaching, and the magistrate, Mudir and the ambassador hastened to pay their respects.

They were not a little surprised to see Colonel Ring seated in the King's carriage, in conversation with him.

"Your Excellency," said the King, turning to the ambassador, "I think in a case of this kind the horse is the better judge who is its master. Let Mudir Pasha and Cadet Ring place themselves about fifty yards apart, at the upper end of the parade grounds.

"Then the two horses, the ownership of which is in dispute, shall be led up to within a distance of two hundred yards of both, and loosed. I shall be much astonished if Cadet Ring's does not seek its master."

The Turk did not dare to object to this plan, though he disliked it exceedingly. Claude accepted it eagerly. After the dreadful depression and sense of outrage which had possessed him in the court-room, his spirits suddenly revived. Zuleika would not fail to greet him!

Zuleika came forward, led by a royal groom. What spring there was in her step, what grace in her motion, what nobility in the slight curve of her neck, and the shape of her head! And what a commonplace-looking animal the other dapple-gray mare was, in spite of the outward resemblance. She stepped well, to be sure, and was handsomely shaped; but all the finer points which distinguished Zuleika her rival lacked.

An officer of the royal guard received the two horses from the groom, and for a while he had very hard work to hold them. They pranced and reared, and lifted him off the ground again and again.

He managed at last to make a sign to Claude, who stationed himself at the place which the King had designated. Mudir Pasha also dragged himself forward with visible reluctance, and came to a stop about fifty yards from where the young cadet was standing.

The King gave a sign to the officer, and the two horses trotted away over the parade ground, with a proud, elastic step. Presently both came to a standstill; the false Zuleika kicked up her heels and lay down to roll; but the true Zuleika lifted her head, gazed to the right and to the left, and then with her wild, joyous whinny ran straight toward Claude.

She rubbed her nose against his face; she whisked her tail excitedly, and whinnied again, and then, with a low and friendly neighing, laid her head upon his shoulder.

The proof was absolute and unmistakable. The spectators broke into a loud hurrah; and Claude, with tears in his eyes, patted Zuleika's neck, and then swung himself lightly up on her back.

She stood still like a lamb, until he had got his seat; whereupon, with a snort and a shake of her head, she dashed across the wide parade grounds, while the soldiers and officers cheered, and the spectators waved their hats and clapped their hands.

Mudir Pasha knew that he was utterly beaten; but he still had left one means of preventing this pride of the Ottoman stables from falling into the hands of the Christians.

He walked slowly to where the ambassador stood talking with Colonel Ring and Cadet Schwerin, and paused a few steps from them.

Just then Claude came dashing at full speed toward the group, followed by the plaudits of the crowd. Mudir, with an oath, pulled a pistol from his pocket, and taking aim at Zuleika's head, fired.

But Cadet Schwerin, who saw the quick motion, struck his arm upward, so that the bullet, whistling past Claude's ear, spent itself in the air.

The King, startled at the report, ordered Mudir to be disarmed and brought to him.

"How do you dare," he asked, sternly, "to shoot in my presence?"

"Your Majesty," answered Mudir, sullenly, "I promised my Prince to bring this horse back, dead or alive. I have failed. Allah is great! His will be done!"

Then, bowing low, he begged for permission to depart, and seating himself in a carriage, drove off under the protection of the ambassador.

Claude was now introduced to the King, to whom he expressed his gratitude for his wise judgment. Under the escort of His Majesty he rode Zuleika back to the city; and it was difficult to tell which was the more admired, the handsome, high-spirited youth, who sat so well in the saddle, or the noble, proudly-stepping mare.

From that time forth no attempt was made to separate Claude and Zuleika, and she is yet Lieutenant Ring's dearest friend and companion.

HJALMAR HJORTH BOYESEN.

The End.

MORNING.

Rejoice! sweet messenger of light!
Rejoice! and send to all below
The sweetness of thy heavenly glow,
Dispel the darkness, scatter night,
Till we thy fuller glory know!

For the Companion.

A LOST MISER.

"Buy some toys, gen'leman? Pretty things, all made out o' beads; blind girl made 'em."

A shaking, wrinkled old hand fumbled in the basket, lifting up tiny chairs, boxes and the like, made of cheap beads strung on wire. "Only a nickel apiece. Buy one, gen'lemen?"

We declined—curtly, perhaps, for the man had interrupted a pleasant bit of talk at a street corner. He passed on, the white hair under his old cap fluttering in the wind, his shoulders bent, and his basket swinging on his arm.

"That's a queer old man," said Knox. "He goes tramping about all day, trying to sell his miserable little trinkets, and picking up any stray job that he can do. Yet folks say that he has money hoarded up—enough to keep him comfortable, probably, if he weren't too stingy to use it."

Nelson and I were late additions to the staffs of reporters of the *Budget* and *Advocate* respectively, and we felt that it was our duty to be always on the lookout for something interesting.

"A miser, eh?" said I.

"Where does he live?" Nelson asked.

Knox laughed. "Oh, you fellows can't hear anything without scenting an item," he said. "I can't be 'interviewed' in this case, for I really know nothing about the old man except what I've heard the boys tell. I suppose it is all guesswork. But I'm told he lives away over on the East Side in the edge of the country, in a queer little cabin standing off by itself, and that he has a cave under it where he hides his treasure."

Nelson and I were very much interested. Knox went on:

"When he goes home at night, they say, he often creeps around as if he were afraid of being seen, and then dives into his den, carrying his basket with him, before he even goes into the house. Sometimes late at night he will slip out with a light, fumble about for a minute or two as if removing a board, and then he and his light disappear in what the members of your profession would call 'the darksome recesses of the gloomy cavern.'"

I was determined to look this old man up; but Nelson must be thrown off the track.

"A place like this has a great many odd characters. We come across them every day," I said, carelessly, and turned the conversation with an air of indifference.

I fancy that this air was rather overdone; but I noted with satisfaction that Nelson manifested no special interest in the topic, but dropped easily into a discussion of coming elections.

I was in a fever of impatience to investigate the case of the old miser, but I chatted on for a few minutes until I thought the stranger had been forgotten, and then I sauntered away in the direction opposite from that which he had taken.

But once out of sight of my two companions, I turned a corner and quickened my steps. Up one street and down another I hastened, looking everywhere for the old cap and fluttering white hair.

I had wandered as far as the river, and had really given up the search, when I suddenly caught a glimpse of a bent form with a wicker basket trudging down toward the ferry.

There he was! I forgot my vexation and weariness, and ran to get the boat. I managed to rush on board just as it pushed off.

I resolved not to attract the old peddler's attention until I had seen his house, and gained what information I might by observation. As I drew back out of his sight, I jostled a fellow-passenger by my quick movement, and looking up to apologize, I saw Nelson. Neither of us looked as if he were in the least glad to see the other.

"Hello! Where are you bound?" I asked.

"Oh, just over to the East Side."

"Indeed! I might have inferred as much, since the boat doesn't happen to be going the other way."

"Well, where are you going?" inquired Nelson.

"Oh, I'm going to the East Side, too."

We glanced at each other for a minute, and then Nelson laughed.

"We might as well own up that we are both on a miser-hunt, my boy."

"What put you on the track?" I demanded, unamiably.

"You did. You were a little too anxious to switch the conversation to another track. I saw that you were off after the old peddler, but I don't mind admitting that I hoped you had lost the trail, until you ran into me just now. Well, shall we go shares on the discovery?"

There was nothing else to be done, except to give up the whole matter. That settled, it was pleasant to have company.

Together we watched the old man leave the boat as it touched the farther wharf, and together, at a cautious distance, we followed him.

Despite the story of age told by his gray hair and bent shoulders, he trudged forward sturdily, and led us a long walk through the outskirts of the town before he reached a poor little house standing apart from its neighbors in a narrow, unfenced lot.

Thus far he had done nothing in the least remarkable, but as soon as he entered that little lot his movements really grew peculiar. He slackened his steps, and instead of entering his house, tiptoed cautiously around it, as if he feared being overheard.

It was growing dusk, and that fact, with the proximity of a tumble-down shed, enabled us to draw near enough to watch him.

He placed his basket on the ground, stooped, and carefully pushing aside one of the boards that formed the slender support of the little cabin, crawled with evident difficulty through the aperture, drawing his basket after him.

"It must be a very vivid imagination that could call that place a cave! It isn't even a decent cellar," whispered Nelson. "Now's your time to whip around and discover what the rest of the shanty is like, while I watch proceedings here!"

I left the shed and hurried noiselessly around the house, intent upon peeping through the windows; but I found the door ajar, and in my eagerness, stepped into a dark, narrow entry. This, with the room beyond and a low loft above, constituted the dwelling, as I could see at a glance, and flattering myself that this part of my task would be brief, I pushed open the inner door.

"Grandpa?" cried a voice, startled and questioning. "Grandpa, is that you?"

I had not supposed for a moment but that my miser lived alone, as all misers should, and I drew back in dismay. At the same moment a step sounded at the outer door, and I had barely time to crouch in a dark corner of the entry before the old man entered.

"Is that you, grandpa?" asked the voice again, with a note of alarm in it that the old man caught at once, for he answered, soothingly:

"Yes, child, it's me. Course it's me! Nobody else."

"I thought it didn't sound like you first. I thought there was two steps," said the girl's voice—it was a girl's voice, I decided, though thin and somewhat tremulous.

"Nobody but me," repeated the grandfather. "An' nobody else won't come in, neither, for I'll lock the door."

He locked the outer door, and then, to my alarm, drew out the key. It served me right, for in my eagerness to get material for an article, I was committing an act very like burglary.

"You're always hearin' steps in that old hallway when the wind blows, aint you, Annie?" said the old man.

Annie laughed a faint little laugh. She seemed to find his presence and the locked door reassuring, but they were quite the reverse to me.

The old man threw a few sticks upon the coals smouldering in the uneven old fireplace, and as the flames leaped up, the light streamed out upon me through numerous cracks and crevices in the rickety boarded partition. Through these cracks I could see into the pitifully poor, bare room beyond.

"Did you have good luck to-day, grandpa? Did you have to bring many home?"

"Well, now you jus' see for yourself, Annie; that's the way to find out, little gal! Feel in the basket."

He held it toward her. Nelson and I had noticed that the basket seemed to be nearly full of the trinkets as he moved along the street outside the house, but now there were hardly any in it. The girl put out her hand with a peculiar groping motion. Then I remembered what he had said about his trinkets being made by a blind girl. The child was certainly blind; but the delicate, sensitive fingers learned what the basket held almost as quickly as sight could have done.

The plain face brightened.

"Only these? All gone but these? O grandpa, I'm so glad I can do it! so glad!"

The old man laughed—a laugh that was of the voice only, and was contradicted by the anxious look with which he watched the pale face opposite him.

Perhaps, with the keen perception which often belongs to the blind, she detected something out of harmony, for she questioned at once:

"Did you get very tired, grandpa?"

"Some—some tired, natur'ly; but then I rested a bit comin' over on the ferry, 'stead of walkin' way up to the bridge. The ferryman took one of them bead baskets for pay."

The girl's face brightened again.

"That's right, grandpa. You needn't work so hard, seein' we're doin' so well. Oh, I'm so glad I can help! Folks won't have to pity you for havin' a poor blind girl to take care of, will they?"

"No, indeed, Annie! Nobody needn't do that, child." He hesitated a little, and added slowly, "An' I'd be glad to have you, even s'posin' you couldn't help none."

"But I wouldn't be glad to stay. Seems 'sif I couldn't bear it!" she cried, with a quick look of pain and dread. "O grandpa, you don't think folks 'll get so they'll buy less by and by?"

"No, no, little gal! I was jest a-s'posin'—only jest a-s'posin'," the old man answered, soothingly. "'Taint likely, at all likely, that they'll get to buyin'—less."

My knowledge of his day's experience, and my view of his face as he answered, gave his words a meaning that they did not bear for the blind girl. Meantime, I was thoroughly ashamed of my eavesdropping. When I started on my quest in the afternoon, I had thought of the old man merely as material for an interesting article. But my experience had already greatly modified my views of a reporter's duty.

However, despite all twinges of conscience and perplexed questionings how I was to escape from my position without betraying myself or alarming the little household, I was deeply interested.

The girl, reassured by the old man's words, drew a long sigh of relief.

"But I can't hardly bear even to s'pose it," she said. "How could I ever sit here all day in the darkness, with nothin' to do—for there wouldn't be if I didn't make these—and think how I was just a burden to you, grandpa? I'm so glad I can help!"

"Course, Annie; we're both goin' to be glad. Why shouldn't we?" replied the grandfather, brightly.

Carefully avoiding all further "s'posin's," he began to recount little incidents of the day that had evidently been treasured for Annie's benefit. "An' think what I've got for your supper?" he added. "Rolls, an' a bit of butter!"

"For *our* supper, grandpa! There's two of us," interposed Annie.

"To be sure there's two of us, child! An' I hope there won't be no less in one while," declared the old man, emphatically. "Certainly there's rolls for supper, an' butter, an' a pinch o' tea."

A "pinch" was the proper word. When the poor little table was spread, the few delicacies were carefully placed at one side, near Annie's plate, while the old man sat opposite, munching a piece of dry bread and a raw onion.

"Aint these rolls good, grandpa? An' the tea?"

"Tiptop!"

He had not touched either one.

The bare old room with its stained and broken walls, the scantily spread table in the uncertain firelight, and the two who sat beside it—the girl whose worn white face told that the shadowed life would be brief, and the old man watching her so tenderly, stinting himself and hiding all anxiety while he kept up his loving little farce of prosperity and plenty—made a picture not to be forgotten.

It was the one luxury of the room, the fire, that finally released me from my captivity. The supper was out of the way, and Annie had returned to her chair, when the dying blaze suddenly reminded the old man that he had neglected to bring in fuel for the morning.

"I had a nice lot of pieces gathered up out there, an' I clean forgot 'em," he explained to Annie.

I waited only long enough for him to open the door and pass around the house before I quietly followed him. Daylight had given place to a dim moonlight, and I concluded that Nelson, who must have wondered not a little at my mysterious disappearance, had returned to the city alone.

At the risk of missing the last ferryboat, I lingered until the old man returned with his wood, and met him a little away from the house.

"May I ask," I said, "if you have on hand any of those little bead toys you sometimes sell? I am just going home, and though it is rather a late hour to trouble you, I would like to take some with me."

He was too much overjoyed at the request itself to consider the strangeness of the hour and circumstances. But even then he did not forget his caution.

"Yes, sir, yes—if you'll just please to speak soft like, so's the little girl won't hear ye," he answered, in a low tone. "They're back here."

Leading the way to the opening under the house, he drew out the store of trinkets he had concealed on his return.

"Rather an odd place to keep such things, isn't it?" I suggested.

"Oh, I've put a board in there so they'll keep dry. It's on account of Annie, ye see," he whispered. "She's blind, an' she worries so when things don't seem to be a-sellin'—seems as if it most breaks her heart when she don't feel she's helpin'. So I slip 'em under here, what I can't sell; an' findin' the basket most empty pleases her greatly. Then I take 'em to pieces after she's gone to bed—that does seem a powerful pity when they're so pretty, don't it? But I can't noways else keep her in beads, an' she takes a sight of comfort makin' 'em, an' don't ever know."

It was pretty nearly a "clearing out sale" that night, not only for the bead work, but for my pocket as well. Laden with toys, I was glad that the hour was late, and that there were few people abroad to look wonderingly at me.

Nelson, more faithful or more anxious than I had imagined, was waiting for me at the ferry; and though there was no "remarkable miser" story to grace the columns of either the *Budget* or the *Advocate*, the story of the old bead peddler was told in both offices.

There were warm hearts among these hurried

Digitized by Google

editors, chaffing reporters and all the busy crew; and the old man gained many friends. We found for him odds and ends of light work which paid him far better than peddling, and enabled him to take home "comforts for both ends of the table," as Nelson expressed it.

But even when most steadily employed, he always brought his basket of toys in the morning, and carried home what he could not readily sell by the way, hiding them as of old away from Annie's knowledge.

"'Cause she takes such a sight of comfort in thinkin' she helps, an' it don't hurt nobody," he said, with his cheery, quavering laugh. "When times was the hardest, I used to pinch an' twist, an' say to myself, 'If I can only keep Annie from knowin'!' An' she never knowed."

She never knew. The frail life went out soon; and Annie was happy, in her last days, in the belief—so sweet to all of us—that she had done some useful work, and that her little world was the better for her having lived in it.

The old man's spirit and energy drooped with her. Not that he was despondent or broken-hearted; it was simply the relaxed effort of one whose object was attained. He was indeed altogether content when I saw him last in his comfortable bed in the hospital, which friends had provided for him. It was "a prime place to rest in," he said.

He bade me good-by with the remark that he was "likely to have moved on" before I came again. And then, with his eyes watching the spot of sunlight that danced on his coverlet, he added:

"I've been thinkin' how strong an' well Annie must be now, an' not worried no more. An' mebby, I don't s'pose there's no harm to think it? mebby when I get up yonder we'll have a good laugh together 'bout—how she never knowed!"

KATE W. HAMILTON.

For the Companion.

ON THE NORTH SEA BANKS.

II. — The Great Snow-Storm.

Burley fancied he knew where he was from the direction of the sound from the steamboat's whistle, and he took his bearings in imagination. He had to work off the shore a little, if possible, and then wait for a chance rift which might give him the glimmer of a light through the flying mass of the snow.

He was sorely tired, and the men could scarcely lift a hand, for the tiller had needed a terrible expenditure of strength to keep the *Maria* from broaching to, and at times it seemed that one of the two who hung on by the steering ropes must have his arms jerked from the sockets.

They were a weary crew but joyful, as their hearts might be, now that relief seemed near.

By the way, many stories, some of them strangely amusing, might be told about the way fishermen endure excessive fatigue. On one black night a vessel's company were having a dreadful time while hauling in their trawl; they marched round and round the capstan until they fairly ached, and the work seemed endless.

One of the crew noticed that his shipmate had been turning in the circle with mechanical precision for an hour, and stepping neatly over the warp each time he reached it; yet this man was putting on no power whatever.

The suspicious observer said, "Skipper, I believe old Ned's sound asleep!"

The skipper stepped up, and held his knotted fist right in front of the lazy man's face. Sure enough, the poor fellow marched straight against the knuckles. He was fast asleep. I am sorry to say that the knuckles were presently applied to him with much severity, for his mates considered it unfair that he should have the power of stealing a nap and keeping his feet all the time.

Men will sometimes fall sound asleep on deck on nights when the vessel is sheathed in ice, and when sleeping is dangerous to the last degree. The mortal fatigue overpowers body and soul.

The mate of the *Maria* and poor Tom could only labor very weakly when the order came to haul off from the coast; but they stood to it like men, and the *Maria* plunged slowly into the crushing seas at the rate of a quarter of a mile an hour at the most.

The gale still roared through its iron trumpet; the waves had attained their greatest height, and Death was abroad. Still Burley kept up hope.

The *Maria* was now under water all the time, and a sonorous flood poured aft as if the hull were not there. It was a question of how long her worn rigging would stand the relentless onset of wave after wave, and, indeed, an unlucky sea might burst in her decks.

During that gale a great many of the smacks were simply beaten to pieces, and one fine steam-carrier received such a blow from a dropping wave that she was shivered in a single second like a match-box.

Our three heroes watched with eager breath the coming and going of each sea, and Burley showed fine seamanship in judging by guesswork the exact direction and height of every monster that loomed through the pall of snow.

The bad moment came; the one sea that no work of human hands could resist clashed at the *Maria*, and the mainmast went like a carrot. Burley's arms almost gave way, and he was obliged to swallow much salt water before the flood swept over the poor little vessel.

Tom had one arm broken above the elbow, and when the *Maria* at last lay in the trough of the cruel sea, she was a wreck.

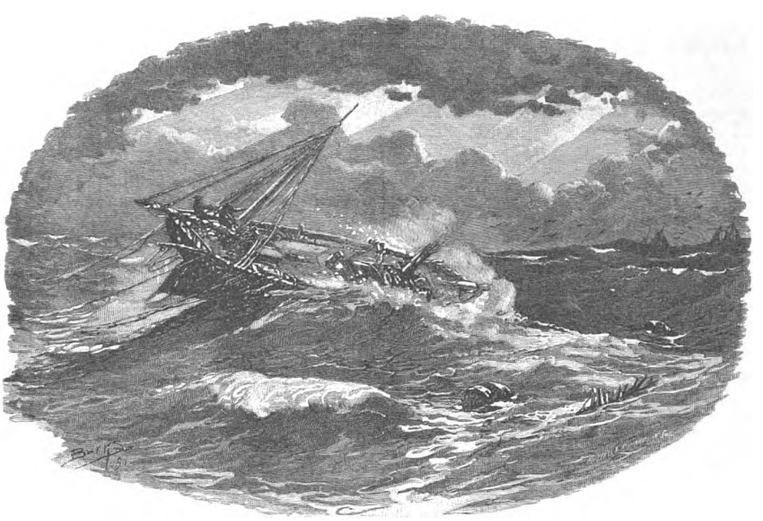
Inch by inch the shattered vessel drifted shoreward, while Burley and the mate toiled furiously to get rid of the mast, lest it should stab the hull and drown them all. Tom was brave enough, but he could not help, and his numb arm was full of shooting pains. He used eyes and ears with vigilance till the wreckage was cut adrift.

He heard an ominous sound from the leeward quarter. It was not a roar—it was rather like the rattle of myriads of small drums, with the booms of one large drum coming at intervals.

"There's broken water, skipper!"

Burley was gasping with exhaustion. He listened, and then a strange look of contentment came over his bleeding, battered face.

"Now I knows what the Lord meant, and I thought I was a-dreamin', chaps. We'll let go our anchor. Fetch the boy; he must risk it with us."



The mate was terror-stricken.

"Doan't ee go to do that, skipper!" he yelled above the clash of the wind's warfare. "She'll bury herself, and go down in two minutes. Doan't ee! There aint no wessel could anchor against that wind and sea!"

"I tell you we'll let go our anchor! When I was on my knees, the Lord says plain to me, 'Let go your anchor;' and I thought my head was wrong, but it's right."

These tarpaulins have queer notions among them. One whom I knew was persuaded that he heard the Lord say he should have a new mainsail, and we smiled at him; but he got his new mainsail by an odd chance, bent it on his vessel, and took her home safely.

Burley and the others cleared away the snow, chopped the ice from the anchor, and hove it over just in time. The *Maria* made one terrific dive; then came a strain that made every timber of her moan, and then she rode safely, while the dauntless four went below and fell down anyhow—careless of everything, and resigned to fate.

Setting a trysail under difficulties.

Little Billy came out grandly in the crisis; he had boiled a great quantity of coffee and a pinch of sugar into a kind of hot black soup, and he gave the stuff to his big mates. The warmth was comforting to them. They felt that they had done the last thing possible, and could but die at the worst. So they all went into the sombre sleep of worn-out men, while Billy clambered up and down, and listened to the snarling and booming of the broken water that was so perilously near the stern of the plunging smack.

Burley woke from his dark trance, and found his faithful mite of a boy standing on the ladder, and peering out under a mist of flying spray.

"What cheer, boy?"

"Snow's fined off, skipper; wind's round, and we aint two hundred yards off the broken water."

The three men looked at the weather. Unhappy Tom's arm was now so swollen that he was of no use, and nothing could be done; for in those days, when a man broke a limb he was obliged to wait until a carrier ran home, and then he was flung on board like a sack of coals. A man with a smashed thighbone might be a week in reaching the hospital; nay, one poor creature with the calf of his leg torn off, was delayed for three weeks owing to foul winds.

So our hapless Tom had to run his hand into the breast of his jacket, and that was all he could do.

"I see now where we are," said the skipper. "We must get this old mizzen on her, and I'll run her under the mizzen to the nor'ad of the Westerton ridge. Then we'll round and make a run straight in. There's two vessels on the Westerton, I see."

Now to sail a vessel in a strong sea with no jib, no foresail, no mainsail, and only the mizzen, needs very good seamanship; but Burley was a clever fellow, and he soon made his task easier by showing the men and Billy how to set a trysail on a stay rigged between the mizzenmast-head and the stump of the mainmast.

That helped him, and the *Maria* began to draw along quite prettily through the sullen foam, and past the manifold signs of ruin and wrath. Long afterward, the streets in the fishing towns looked on Sundays as if a great funeral had been held. Black was the only garb of the poor.

As the *Maria* drew near the fatal ridge, Burley saw that the remains of a smack and the dismasted hull of a large vessel were fixed on the deadly teeth of the rocks; so he tried hard to get near, and succeeded in spite of his unseaworthy vessel and a smooth, mountainous sea, that ran like the Sussex Downs.

Two figures appeared on the deck of the large ship, and Burley growled, "Here's a mess! We're wanted to save life, and we've got no boat."

The sight of hopeless and terrible things had grown so common to these fellows that they were callous, though no set of men in the world will risk more than the smacksmen if there is a chance of saving life.

Burley dare not go near the fatal ridge, but he said to his mates, "The Lord's pulled us out of our trouble. We shouldn't leave those poor bloods there; but what can we do, with no boat? By rights we should make for home, and save the owner's property."

"I believe he's a Norwegian, skipper," said the mate. "Very likely he has a boat on deck. Those chaps never will launch their boat, at any price."

It has often happened that, when English fishermen have pulled through a savage sea to rescue a crew of Scandinavians or Germans from a foundering vessel, they have discovered that the ship's boat was in perfectly good condition.

Burley was in a bad way. No other smack was in sight; he could not hail, and he would not desert the forlorn men. In desperation he said:

"Mate, get the lead! There's one channel between the Pits about thirty foot wide. I know how it bears, keep all on a-heaving, and tell me what's on the bottom."

Burley was bent on attempting a feat which his owner would have called criminal, and though it is possible to admire his daring, yet it is probable that he behaved like a heroic lunatic. The *Maria* would not steer well; the sea was ugly and might be worse, and this half-dead skipper meant to creep up a tortuous channel, wherein a swift change of wind might in a moment sink him and his crew.

He took his own way, and he got within hailing distance of the ridge. Then he told the men and Billy to yell "Boat," for he knew the wrecked sailors would understand that.

Sure enough, the mate's intuition was right; there was a boat, and the cowed Scandinavians got her out. Then Burley let the *Maria* drop to the leeward and out of the perilous Gut; the boat, though ill-handled, managed to live, and two long-haired sailors were hauled in safely. All the rest of the crew were gone.

When the *Maria* was put away before the wind she lunged slowly, until the skipper bethought him to rig out a boom and put a square sail on her. Then she moved well until a tug came rearing over the rounded crests of the gray hills. Then the gallant Burley thought he had done enough for his life, for his owner's property, and for humanity. So he shouted down:

"Billy, clear away the lumber from that tow-rope. I'll have that tug if she costs twenty pound."

The tug took hold of the smack, and the wrecked vessel went to take her place with the other wrecks which made the river look as if a terrific bombardment had been in progress.

The number of men and boys who succumbed to the sea and the cold in the great snow-storm was appalling; and yet such fellows as Burley went cheerfully back to the woful Banks without saying more about their escape from death than that "There was a funny old breeze."

That is the breed of men who supply English tables in the murderous months of winter.

JAMES RUNCIMAN.

(To be continued.)

THIRTY YEARS AGO.

In writing of Oliver Wendell Holmes, Francis H. Underwood speaks of the Atlantic Club of thirty years ago. He says, "The absolute loss of those conversations and encounters of wit, when Emerson, Longfellow, Holmes, Lowell and others sat about the board, is greatly to be regretted.

"Lowell probably uttered more elaborate sentences—glowing with new-born images; Holmes made the swiftest play, and scored most points serious and comic. Meanwhile, Emerson's wise face was lighted by a miraculous smile that would have been the delight and despair of a painter.

"The Atlantic Club once met at Zach Porter's in North Cambridge—not a hotel, but an old-fashioned tavern. The cooking was marvellous, and was done under the landlord's eye. The ducks were brought in and carved by Porter himself. The knife was keen and was wielded by a deft hand; the slices fell about the platter like a mower's swath, until the carcass was bare as a barrel.

"'What do you do with the bird after that?' Lowell asked of the landlord.

"'Wal,' said Porter, with a curious twinkle in his eyes, 'when I've sliced off the breast and the wings and legs like that' (pointing to the shell), 'I ginrally give the carkess to the poor.'

"There were no horse-cars then, or it might have been late; at all events the whole party, including Emerson, Longfellow and the other Olympians walked down to Harvard Square through nearly a foot of snow. The impression of this feast is ineffaceable, but it seems now as far away as the Trojan War."

NOVEMBER.

The robin, poised on russet wing,
Turns southward. All the woods are brown and sere;
The skies are coldly blue; and, piping clear,
Hear down the vale the North Wind heralding
King Winter, clad in trailing robes of white.

Weekly Wisconsin. —*Paul H. Lear.*

For the Companion.

COSSACKS AND THEIR STURGEON.

Of all the great Russian family, the Cossacks are undeniably the most warlike and independent. Their peculiar and isolated position, geographically and politically, has developed these traits in their character. The Czars have never attempted to subdue them; they have been and still are too useful in repelling the Turkomans, Kirghiz and other pillaging Mongolian nomads who periodically harass the dwellers on the borderland.

Left much to themselves, but subject to frequent forays, there grew up among them that spirit of self-respect and self-reliance which distinguishes the Cossack from other Russians.

Their constant warfare with their natural enemies tended, too, to bind them more closely together than is the case with more peaceful villagers; and their separation from the rest of Russia by the great deserts between the Ural and Volga, north of the Caspian Sea, also contributed to form their independence of character, as well as to strengthen their clannishness.

All the Cossacks inhabit towns and villages called stanitzas, some of which are populous as well as prosperous communities. The mayor of each stanitza is, at the same time, a military commander; but among the Cossacks superior rank is never recognized as in any way deserving a greater share of the profits from the land or fisheries, or of personal respect.

The people retain the Russian institution of the Artil, or coöperative principle, in all trades, but they give to that principle a much broader application than is found among the large western cities.

Among these people crime is almost unknown. They are too far from civilization to be tainted by the vices which mark its progress among the cities of the world.

Every male member of the Cossack family is required to serve three years in the regular army of Russia. A certain number leave yearly the Ural and other provinces for St. Petersburg and other military stations, to relieve those of the tribe who have served their terms.

While in actual service the Cossacks must furnish their own horses and everything but food, and must do this from the ridiculously small salary allowed them by the government. The pay of a Cossack is two roubles, or about one dollar, for three months. The Cossack soldiers, indeed, are supposed to be sufficiently remunerated by the government in the possession of their lands, for which they pay no taxes save those which go to pay for the management of the Cossack territory.

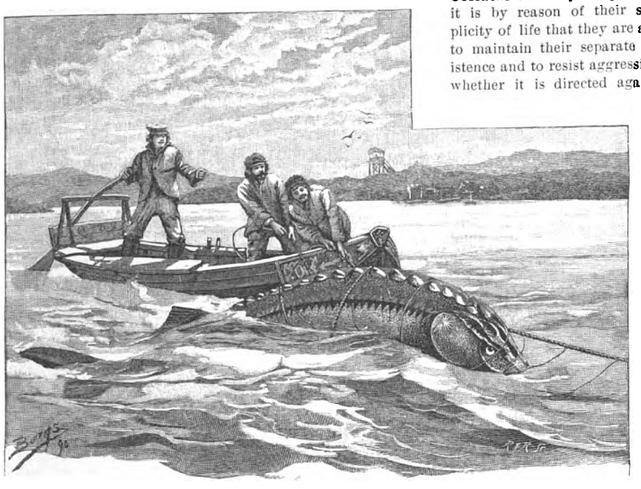
As a matter of fact they enjoy certain political liberties which cannot be found among the other tribes or peoples of Russia, and this freedom they enjoy only because of their determined independence and resistance to oppression.

They inherit the custom of ownership of land in common, and have equal access, as far as practicable, to all the productive wealth of the community. This system is well exemplified in their great sturgeon fisheries on the Don and Ural Rivers, which are their chief source of income.

The River Ural takes its rise in the Ural Mountains, and flows southward about eight hundred miles into the Caspian Sea. On the lower part of this river are the largest sturgeon fisheries in the world. There are such fisheries on the Don and Volga, but by far the greatest celebrity, as well as commercial importance, is attained by those of the Ural. They increase greatly the wealth of the Cossacks of the district; for the fisheries belong to them exclusively, and no trust or syndicate can interfere with their rights.

The Ural sturgeon is cartilaginous and almost boneless. The usual length of the fish is from five to six feet, but sometimes a *Huso* or *Bielaga*—of the same family—is captured which measures more than twenty feet in length.

The method of fishing is peculiar. Hooks and lines are used, but the hooks on the sturgeon line have no barbs, as have those used for the capture of other fishes. The Cossacks stretch across the river, or from the shore outward, a long line floated with corks. Ordinarily one end of the line is fastened to the shore and the other to a boat anchored in the stream.



From this line descend other shorter lines, often more than a thousand in number, carrying each

Digitized by Google

at its extremity an unbarbed hook. The hook is about four inches long and hangs in the water, about seven feet from the surface. No bait is used.

The sturgeon seek a spawning ground in the fresh water, and at the approach of the proper season, lest it disturb the up-coming spawning fish; and the people ride long distances on horseback in order to avoid agitating the waters with boats.

Men are stationed along the river banks to enforce this decree of the tribe.

Sturgeon Fishing.

The life and customs of the Cossacks are very simple, and it is by reason of their simplicity of life that they are able to maintain their separate existence and to resist aggression, whether it is directed against their communal customs and freedom of action, or against the prosperity of their fisheries.

ROB. F. WALSH.

season they swim up the river mouth, away from the salt and brackish water and toward the ground they have selected for breeding purposes.

It is during this journey that the fishing lines are set for them; and as the fish blindly make their way up the river, they strike against the hooked line, and are "gaffed"—first, perhaps, by a single hook. Upon being struck thus, they slash their powerful tails in their pain and anger so fiercely and wildly that other hooks are embedded in the infuriated fish, until at last, hopelessly hooked, it may be in a dozen places, the sturgeon is firmly held until the line is drawn in.

It often happens that nearly every one of the one thousand hooks is found embedded in some part of a fish.

In every commune or stanitza the fishing is carried on upon a coöperative basis. The fish caught are divided equally among the Cossacks of the districts. Sometimes the division of the spoils affects the direct welfare of forty or fifty stanitzas, each one of which forms in itself a separate community.

When the season opens, the great gun of the town of Uralsk is discharged as a signal for the commencement of the fishing. No one dares fish for sturgeon before this signal is given. Word is then passed from stanitza to stanitza; communal guns are discharged in all the villages, and all the male Cossacks repair to the river.

The fishery is continued about three weeks. Another gun announces its termination, and after this sturgeon-catching is an offence which is severely punished.

The most valuable products of the Cossack fisheries are the famous black caviare and the caviare made from the *sterlet*—a small species of sturgeon.

There is a common notion, even with some of our cyclopædia-makers, that caviare is simply the salted roe of the different species of sturgeon. This is a great error. The fresh roe, especially the black, is much more highly prized, more delicious, and consequently much more expensive than the salted. The price of either—black or sterlet fresh caviare—in St. Petersburg is five roubles, about two dollars and a half a pound, while a pound of the salted article costs only thirty kopecks, about twelve cents.

It is almost impossible to transport the fresh roe of the sterlet, for it is so tender that the slightest shaking will break the eggs. No perfectly prepared caviare, therefore, can be obtained except in the districts where the fish are taken.

Of course the flesh of the sturgeon itself forms a staple article of diet with the Cossacks; but the caviare, being the most valuable product, is looked after with true commercial keenness. Most of it is shipped to northern and central Russia salted, but only a small quantity reaches the great cities in a fresh state.

Usually, during the short period of the fisheries, post-horses are kept in readiness, and the tarantass, or rustic wagons, are loaded with the caviare, carefully packed in small barrels of five pounds each. It is carried with the utmost speed to the nearest railway station, generally about three or four hundred miles distant. Not an hour is lost in the transit, for the caviare would be spoiled in a very few days. Thus it finds its way to the markets of Russia.

At Astrachan a quantity of caviare is put up in small jars or bottles, hermetically sealed. In this shape the sturgeon roe reaches the epicures of western Europe and the world in general.

The Cossacks exercise the most extraordinary care to guard and foster the industry which forms so vital a part of their income. They do not allow any boats on the Ural River during or for some time previous to the three weeks' fishing

HOMELY DUTY.

If the garden you must till, then till it.
If the wood-box you should fill, then fill it.
Though the task be not so fine,
Do not fret or mope or whine.
Do your duty, line on line.

Golden Days. —*M. E. Sandford.*

FRENCH PILGRIMS AT ROME.

An occurrence took place on the Second of October at Rome which, though apparently not very grave in itself, threatened at one time to have serious results.

It seems that a number of pilgrimages, composed of various Catholic societies and organizations in France, had been arranged to go to Rome, and there pay their respects to the Pope at the Vatican. One of these societies was that of the "Catholic Youth" of France.

After the delegates from this society had had an audience with the Pope, several of them repaired to the Pantheon, the ancient edifice which stands on the other side of the Tiber from the Vatican, wherein repose the remains of the first King of United Italy, Victor Emmanuel.

Just what occurred while these young men were at the Pantheon is not yet very clear. It seems certain, however, that they committed some act of disrespect to the memory of Victor Emmanuel, and in some way manifested their friendship for the Pope, and their hostility to the Italian Kingdom.

At all events, their conduct at once gave rise to a high degree of excitement in Rome. Mobs of Italians paraded the streets with enraged exclamations, and the young Frenchmen barely escaped rough handling. They were arrested, and imprisoned to await their trial for the offence committed.

Crowds hastened to the Pantheon, and placed wreaths on Victor Emmanuel's tomb. Violent speeches were made in the streets, and the buildings of newspapers favorable to the Pope were threatened with destruction. It was only by determined effort that the authorities were able to quell the disturbance.

The serious nature of this incident lies, not in the rash and thoughtless act of these young enthusiasts in itself so much as in the sensitive relations which exist between France, Italy and the Papal court respectively.

It is well known that the Pope claims that the temporal kingdom so long held by his predecessors, and of which Pius the Ninth, whom the present Pope succeeded, was deprived, should be restored to him. This claim is strenuously opposed by the Kingdom of Italy, the capital of which has been established at Rome, and which insists that the Pope should confine himself to the Vatican and his spiritual functions over the church.

For a long time France was the protector and defender of the temporal power of the Pope. The Emperor Napoleon III. maintained French troops in Rome for that purpose, and it was only after the French Empire had fallen, and the French troops were withdrawn from the Castle St. Angelo, that the temporal dominions of the Pope were taken from him.

At the present time, the relations of France with the Italian Kingdom are not friendly. France resents the participation of Italy in the Triple Alliance with Germany and Austria, which is in part directed against French ambition; and there are rivalries between France and Italy in regard to the North African States which border upon the Mediterranean.

Any sympathy, therefore, shown by France or by Frenchmen for the Pope is at once and fiercely resented by the Italians who support the throne and rule of Humbert.

It is true that France is a republic, and as such has not shown great favor to the church, either within or beyond its borders. But the Italians fear that, not indeed from religious sympathy with the Pope, but because of the French hostility to Italy, France may be inclined to encourage the desire of the Pope that his temporal kingdom be restored to him.

Herein can be seen the reason why the conduct of the young French pilgrims at the tomb of Victor Emmanuel should give rise to so much excitement in Rome, and throughout Italy.

The attitude of the French government in regard to the matter, however, has been dignified and wise, for it has disapproved of the act of the pilgrims, and the Pope has declared that this course of France is justified. On the other hand, France has refused to withdraw its embassy from the Papal court at the Vatican.

This occurrence is, therefore, mainly significant as showing once more very clearly how sensitive and strained the relations between the European powers are, and as a consequence, what apparently trifling incidents are able to produce a "war cloud."

THE GOLDEN AGE.

It is coming! it is coming! and men's thoughts are growing deeper.
They are giving of their millions as they never gave before;
They are learning the new gospel: man must be his brother's keeper;
And right, not might, shall triumph, and the selfish rule no more.

Selected. —*Sarah K. Bolton.*

PERSONAL POLITICS.

In the political campaigns which closed with the State elections held on the third day of the present month, there was visible a very general tendency to choose State officers with reference to some principle or issue at stake in national or State affairs, rather than with regard to the personal popularity or "strength" of candidates, or the question of the distribution of patronage.

In several States the question of silver or other currency, which is admitted to affect the prosperity of great numbers of people, has been the pivot upon which the election turned, and in almost all the States the tariff question—chiefly in the form whether or not the "McKinley bill" has made the country more prosperous—has cut a very considerable figure.

State questions pure and simple have occupied a commanding place in other States. In Massachusetts a public debate was held between two leading orators, one Democratic and the other Republican, as to whether the administration of the Democratic governor who was nominated for reëlection had been a good one—not whether he was a good and well-meaning man, or whether his opponent was more honest and capable than he, but whether he had administered his office, all things considered, with the best possible advantage to the people.

In no State has the election been of the peculiarly personal sort which, in many elections of the past twenty years, has tended to make of politics a series of contests of personal criticism and disparagement.

The country has seen many elections of both sorts. During the years before the Civil War, the prevailing excitement over the great question of the abolition of slavery led people to make very little inquiry about a candidate beyond his attitude on the principle for which they wished to vote. Great public questions, for the time being, completely swamped "personal politics."

Since that period, and especially at certain times within the last ten or twelve years, State elections have occurred which were decided wholly upon personal grounds. An objectionable candidate—and objectionable not on the ground of bad moral character—has resulted in the loss of a State to a hitherto dominant party by a majority of many thousand.

This was notably the case in the election in New York State in 1882, in which, after a campaign in which public issues were scarcely discussed at all, the candidate of the Democrats for governor was chosen by nearly two hundred thousand majority; though both in the year before and the year after the Republicans were successful.

The people thus resented what they deemed an unjustifiable attempt on the part of the national administration to dictate in State affairs.

Elections which are decided on personal grounds indicate either that there is no great degree of interest on the part of the people in questions of high economic, social and political importance, or else that there are no such questions at stake. Undoubtedly it has often been the case that no such question has been involved.

At the time when this is written, we are not aware how the State elections of this year have been decided. But the result of any particular election does not affect the point which we are considering. The contesting of the elections largely upon the basis of public measures and questions of administration indicates that personal issues are giving way to public ones.

It seems to indicate that we have passed into an era when financial and economic questions have become of the first importance, and are so reckoned by the people.

Other signs to the same effect have not been lacking. The great movement among the farmers which has resulted in marked changes in the politics of several States is one such indication of a disposition to take up material questions to the exclusion, in a great degree, of merely personal considerations, or considerations of official patronage.

AT HAMPTON COURT.

Two American women last summer went one day from London to Hampton Court, and spent the morning in the gardens of the old palace there. At noon they repaired to a neighboring inn for their luncheon. The waiter apologized for some trifling delay by saying that a party of thirty shop-girls from Whiteley's, on their Saturday's outing, had unexpectedly just ordered luncheon.

The Americans, annoyed at the coming of what they supposed would be a noisy party, wished they had gone to some other house; but it was too late now, their luncheon had been ordered.

They were in a front room which overlooked the gardens of the palace. It was a sunny June morning, so still that they could hear the wind rustling through the branches of the great oaks in the avenues, and the bees buzzing in the roses which climbed up outside of the window. One or two old gentlemen were busied with their meal and newspaper in the room, but no one spoke. The quiet was almost profound.

"This is very restful and pleasant," said one of the Americans, "but we must hurry away. Think of thirty giggling, shrieking girls out on a holiday! When do the young women come?" she added, turning to the waiter.

"They are here, madam," he said. "They are in that room," pointing to an open door covered with a lace portière.

The strangers looked at each other with an expression almost of incredulity. They listened, and a moment later heard the hum of gentle voices, of which not a word could be distinguished.

The mystery was easily explained. The shop-girls were in the habit of dealing with English gentlewomen of the better class, and imitating them, had caught their low, controlled habit of speech.

"If our women would but learn it!" exclaimed one of the strangers. "Imagine thirty American girls out on a holiday! The clatter of voices! The shrill bursts of laughter; the shrieks and screams!"

This little incident is a literal fact which is worthy of the consideration of girl readers. Our climate gives to all of our voices certain high nasal tones. The training of the voice in speaking is unfortunately neglected in America, except among the most carefully educated people. Hence the American in Europe is known as soon as he opens his mouth by his shrill, strident tones.

Two American women in a salon or gallery will make more noise than a large group of their French or English sisters. Yet these last are probably not a whit more gentle or modest at heart than they are. But the possession of inward and spiritual graces does not atone for the lack of the outward and visible signs of good breeding.

It is true that a woman may have Cordelia's soft, low voice with the coarseness of Regan and malice of Goneril. But on the other hand, what girl will be credited with Cordelia's tender heart if she persists in shrieking and giggling her way through life?

EXPRESSIVE FEET.

Hands, next to faces, are considered most capable of expressing character. This is no doubt true; but feet also, to a person with sharp eyes and a brain quick at an inference, often afford indications of character not to be despised.

Look at the feet, for instance, of the row of schoolgirls on the front settee in a recitation-room, beginning, appropriately, at the foot of the class.

The feet of the last and lowest girl are short, clumsy, and crowded into French kid boots with painfully narrow toes—so narrow that their owner cannot keep her feet still, but shifts them uneasily from one position to another in a vain attempt to find one that will be comfortable. It is not difficult to imagine why their owner holds no better rank; dull and vain girls do not usually lead their classes.

Her next neighbor, too, wears shabby kid boots, with high heels trodden to one side, and she must have forgotten her overshoes this morning, for her boots are wet through.

A little further up the line a daintily formed and elegantly shod foot taps the floor so nervously one feels sure its possessor does not know her lesson as she ought, and is wondering what question she will presently have to answer. Her neighbor's feet, large, well-formed and comfortably clad, rest firmly and serenely on the floor and suggest no such mental anxiety.

Glancing further up the row the eye encounters an interesting variety: stout boots, thin boots, shabby boots, showy boots, high heels, low heels, no heels; stumpy feet, slender feet, trim feet, bunchy feet.

There is a girl with square-toed number sixes, and a girl with shiny patent-leather-tipped threes. There is a pair of purplish, worn bronze dancing-shoes—party finery being used up at school.

There is a pair of laced boots with trailing shoe-strings, and a pair of button boots with nearly half the buttons gone, and a goodly proportion of the remainder hanging by a thread.

There is a pair of elaborate tan-colored slippers with ribbon bows, whose owner must have worn rubber boots and brought her slippers in a parcel. There is a pair of conspicuously patched boots upon shapely feet which are placed well forward, with no mean attempt to hide the patches in the shadow of a skirt.

There is a pair of boots which are not mates, upon feet one of which lops feebly inward at the

Digitized by Google

ankle, while the other is crooked around the leg of the settee.

The feet which lead the class are arrayed in leather boots, stout, high, and laced up firmly and neatly. They have been blacked with men's blacking, which wears long and stands water, and their lower parts display an excellent polish, but above the line where arctics stop they are sadly muddy.

They stand well as their owner rises to recite, and she does not shift from one to the other, but rests her weight evenly and quietly on both.

She is a farmer's daughter, who has two miles to walk every morning over country roads to the train, and fifteen to ride afterward. She is a notable scholar, and there is little doubt that next summer those sturdy feet of hers will mount the platform steadily and gracefully when she delivers her valedictory.

INDEFINITELY POSTPONED.

Count von Beust, who was for a long time the Austrian chancellor under the present reign, was an accomplished diplomatist. He often circumvented his political enemies politely and amiably by some unexpected and surprisingly simple expedient. He once carried his point with Richard Wagner in a way which those interested must have characterized by a German equivalent for "neat."

When Wagner was at the height of his popularity he visited Vienna. Count von Beust was informed that the Prussian party intended to give him an immense serenade, a serenade which should have the air of German protest against the tendency of the ministry to make the union of Hungary and Austria more intimate. The demonstration promised to arouse strong feeling.

"Your excellency is warned," said the chancellor's advisers, "it is impossible to stop this manifestation unless Wagner goes away, and he loves ovations too well. Nothing will induce him to depart."

"You think so?" said Beust, with a smile.

An hour later Wagner was invited to dine with the chancellor. He was flattered by the invitation and accepted it. After dinner, at which Beust was delightfully affable and entertaining, the chancellor remarked, "Herr Wagner, are you interested in autographs? I have some very curious ones to show you," and he opened a portfolio where were letters of Palmerston, Bismarck, Napoleon III., Heine and others.

Suddenly turning to a paper dated 1848 he said, "Ah, look at this, it is very curious. What would your friend, His Highness, the King of Bavaria say if this paper, which would be significant in connection with the political serenade which the Germans are going to give you, should be published to-morrow in the Vienna papers?"

The composer examined the paper and recognized with surprise an old proclamation of one Richard Wagner, who, an ardent revolutionist in 1848, had proposed to the youth of that time to set fire to the palace of the King of Saxony. He saw his autograph, and that it might be a means of getting him into serious trouble.

"Very curious, is it not, Herr Wagner?" said the minister.

"Very curious, your excellency," replied his guest.

The next morning Richard Wagner left Vienna, recalled to Bayreuth by urgent business, and the German anti-Hungarian demonstration was indefinitely postponed.

JAMES PARTON.

The Companion rarely mentions personally those who have helped to make its columns attractive; but there is something to be said about the late James Parton which renders it necessary to transgress a rule to which heretofore we have adhered rigidly.

Mr. Parton was one of the most valued of our contributors, and hundreds of interesting articles published without his signature have been enjoyed by the readers of *The Companion*. He was one of the most fascinating and picturesque writers of his time.

But he was more than that. Although born in England of English parents, he was a most intense American. This does not mean that he disliked England, but that he looked on every question that arose with feelings and sympathies completely American, and with a preference for Republican institutions so strong that he could hardly have patience with anything like a monarchy.

Further than this, he was a most vigorous opponent of the popular vices, large and small. For years he waged war against the wine habit and the tobacco habit with great effect.

The Companion suffers a loss in his death, and so does the country of which he was a foster-child, and which he loved well.

NOT QUITE ACCURATE.

The daily newspapers are just now going through a fire of criticism for inaccuracy. Many of them deserve it. The slipshod way in which sometimes "news" is reported is a disgrace to the noble profession of journalism. A ludicrous illustration of this occurred in a Western journal, and it might be duplicated in a hundred other papers.

The evening edition of this journal printed this item of local news under the heading, "Serious Accident:"

"Yesterday afternoon the little son of John B. Harris, while playing in the street, was run over by a heavy load of hay. His right arm and ankle were broken, and he was otherwise seriously injured. The Rev. John McGuffy saw the accident, and carried the boy to his home. Doctors Smith and Jones were summoned, and set the broken arm and leg, but fears are entertained that the poor boy will not recover."

The next day the editor of this journal received the following letter, which, however, he did not publish in his paper:

"I was much interested in reading in yesterday's paper the account of a serious accident. It was a good description of a heavy load of hay, but permit me to make a few little corrections as to the rest of the account.

"I presume I am the gentleman referred to as the Rev. John McGuffy. My name is Henry McGrath, and I am a minister, and I picked up a boy who was hurt by a hay-wagon yesterday.

"So far the newspaper account is pretty close to the facts. But you will allow me to say that the boy's ankle was not broken, nor his right arm, neither did he sustain any serious injuries. His little toe was run over, and the flesh taken from the bone, and that was all.

"Allow me also to suggest that the boy's name was not Harris, but Hurst, and his father's name is not John B., but William H. I would also like to say that neither Doctor Smith nor Doctor Jones was summoned. Doctor Robinson, who lives near by, was called, and successfully bound up the injured toe, and the boy is doing well, and will be playing in the street in a day or two."

A Yard of Roses.

Many of our subscribers have written us asking for duplicate copies of the "Yard of Roses." While we can afford to give but one copy to each yearly subscriber, we will send additional copies, while the edition lasts, on receipt of ten cents each. It may interest our readers to know that the production of this beautiful picture has cost twenty thousand dollars, and that if it had been made in a small edition only, it could not have been sold at less than one dollar a copy.

RELIC OF ROYALTY.

A writer in the *Critic* tells a true story, illustrating that species of coincidence which is always happening in this prosaic world. A lady bought in Germany a ring bearing the inscription, "*A quelle heure?*" *At what hour?* Some time afterward, at a curio shop in another German capital, she found another ring closely resembling the first. On it was engraved the face of a clock, whose hands indicated five minutes before twelve. With this was the legend, "*L'heure est venue.*" *The hour has come.* This incident was told *a propos* of another story which has really an historical interest.

One day, as we were sitting on the piazza, the conversation turned by chance upon curios and relics.

"This is rather an interesting souvenir," said a young lady, displaying a charm attached to her watch chain. It was a dark blue stone, oval in shape, about an inch and a half long, and covered with hieroglyphics. It was a handsome thing, and would have delighted an antiquarian as much for its beauty as its apparent age.

"What do you suppose it is?" inquired the owner.

We rubbed our foreheads and thought.

"Pharaoh's signet-ring," suggested one.

"A charm from Washington's fob," said another.

"You would never guess," replied the young lady, "and I will tell you. It is," and she dangled it before our inquiring eyes, "it is the stone on which Napoleon Bonaparte cut his first teeth."

Before most of us had time to recover from the shock of this announcement, a practical-minded member of the party pointed to the hieroglyphics, and asked:

"Are those the prints of his teeth?"

On closer inspection, however, they appeared to be Arabic characters.

"Are you sure that the stone is really what you say?" asked a doubter.

"Perfectly," was the assured answer. "It was given to my mother by Joseph Bonaparte when he lived at Bordentown, and he told her that the baby Napoleon, when he was just beginning to take notice, clutched at the stone which his mother wore on a chain about her neck, and was so determined to have it, that she took it from her own neck, and put it round his. After that, he used to bite on it until all his little teeth had come through."

THE INSTINCTS OF TREES.

Every one has observed how certain kinds of trees in a forest reach upward and outward for the sunlight. They cannot exist without it, and amid the crowd of competitors by which they are surrounded, they have a hard struggle to obtain the life-giving beams.

Some kinds of trees which do not require much sunshine often envelop and half-smother those which require more, and which are compelled to run up their trunks to a great height in order that their crown of leaves may be exposed to the light.

Frequently such trees resemble tall columns, as no branches appear upon their trunks until they have attained the top of the surrounding foliage.

But if one would use his eyes to the best advantage, it is not enough to observe merely that some trees reach after the light more eagerly than others do. The differences in the kinds of trees that behave thus should be noticed.

Poplars, walnuts, hickories, willows, beeches, pines and locusts thirst for the sunlight, and cannot thrive unless they have plenty of it. Yews, beeches and spruces thrive in the shade.

The reader would find a most interesting study in noting the preferences shown by different trees in this respect. Their instinct in following the dictates which nature has given them sometimes appears almost as surprising as that exhibited by animals.

DRIVING ON MUDDY ROADS.

A writer in the Providence *Telegram* undertakes to show how a wagon may be kept comparatively clean when driving over a muddy road. According to him this result depends upon maintaining just the right speed, the golden mean, as it were.

If the horse is driven at a walk, say about three miles an hour, the mud which adheres to the rim of the wheel will be carried up by it as it revolves. As it gets to the top its weight will cause it to fall, spattering the spokes and the hub.

If the horse is going six or seven miles an hour, the rapid revolution of the wheels will send the mud flying, and all parts of the vehicle will receive a copious plastering.

But now, if a gait of four and a half or five miles an hour be taken, the mud carried up from the ground will neither drop nor be thrown off, and the consequence will be that with the exception of the rims of the wheels the carriage will come to the end of the journey comparatively clean.

Everything depends upon striking just the right gait and maintaining it.

The Human Hair.—How many persons abuse this delicate and beautiful ornament by burning it with *alcoholic washes*, and plastering it with grease, which has no affinity for the skin and is not absorbed. Burnett's Cocoaine, a compound of Cocoa-nut Oil, etc., is unrivalled as a dressing for the hair—is readily absorbed, and is peculiarly adapted to its various conditions, preventing its falling off and promoting its healthy growth. THE TENTH EDITION OF THE
INTERNATIONAL POSTAGE STAMP ALBUM
is now ready. Much better and finer than ever before. 52d Edition of Postage Stamp Catalogue will be ready between December 1st and 10th. Send for free 40 page illustrated price-list containing full particulars of the above.
SCOTT STAMP AND COIN CO., L'd.,
12 East 23d Street, New York.

How Much Will It Cost to Learn
TELEGRAPHY?
That depends upon how hard you work, but it ought not to cost you over **$125.00,** which you can earn back in three months. Then you have a trade. Every man should have a trade. Do we put our graduates at work? Certainly we do. **Write for our Circulars, which tell all about it.**
VALENTINE'S SCHOOL OF TELEGRAPHY, JANESVILLE, WIS.

COMBINATION FOR BOYS, Ages 4 to 14 years.
Suit, extra Pants and Hat, all for **$5.00.**
LATEST STYLES. All-Wool, Great Variety.
Send postal for samples and rules for measuring. We send them C. O. D. to your nearest express office, where you can examine them before paying.
32 page finely *Illustrated Catalogue* of Men's and Boys' Clothing, Hats and Furnishings sent FREE to any address.
PUTNAM CLOTHING HOUSE, Chicago, Ill.

Agreeable soap for the hands is one that dissolves quickly, washes quickly, rinses quickly, and leaves the skin soft and comfortable. It is Pears'.

Wholesome soap is one that attacks the dirt but not the living skin. It is Pears'.

Economical soap is one that a touch of cleanses. And this is Pears'.

All sorts of stores sell it, especially druggists; all sorts of people use it.

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a **practical business education** at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

The Robt. Mitchell Furniture Co., Cincinnati, O., will pack and ship this thoroughly seasoned, 5-foot Oak, Cherry or Walnut Wood Mantel and top, with brass frame; nickel basket and ash screen; ash pan; fire brick, clay and top tile; enameled tile facing and hearth; complete as shown, ready, and with printed directions, for setting up, to any railroad station east of the Rocky Mountains, **Freight prepaid** for **$60.00.** Cash with order. When ordering ask for Mantel E, and state style of finish desired, either Black Walnut, Cherry (natural or mahogany color) or Oak (antique or natural).
THE ROBT. MITCHELL FURNITURE CO.,
Established, 1836. CINCINNATI, OHIO.
Our Catalogue of many styles of Wood Mantels will be sent free to any address on receipt of 8 cts. for postage.

VAN HOUTEN'S COCOA
"Best & Goes Farthest."

"*I said to Mrs. Harris, Mrs. Harris says I, Try* VAN HOUTEN'S COCOA."
MRS. GAMP
Perfectly Pure.
Rich, yet Digestible, Stimulating yet Sustaining, Saving what Other Processes Waste —and Developing the Delicious Flavor and Aroma.
"Once tried, used always."
A Substitute for Tea & Coffee.
Better for the Nerves and Stomach.
☞ If not obtainable enclose 25 cents to either VAN HOUTEN & ZOON, 106 Reade Street, New York, or 45 Wabash Ave., Chicago, and a sample can, containing enough for 35 to 40 cups, will be mailed. *Mention this publication.* Prepared only by *the inventors,* VAN HOUTEN & ZOON, Weesp, Holland. a6.

For the Companion.

ABOUT BOOKS AND READING.

By Rev. Lyman Abbott, D. D.

First Paper.—How to Read.

The editor of *The Youth's Companion* has asked me to write two or three articles on Books and Reading. I have hesitated about accepting this invitation; not because the subject is unimportant, but because of some doubt whether the young people read what is written on this subject, or whether, if they do, it makes much difference in their reading.

Example has a great deal more influence with all of us than preaching; and the example which the older people set the children is none of the best. We read newspapers continually, magazines habitually, books very little; much gossip, many stories, selecting little of the best literature. Neither the mother nor the father is often seen with a book in hand; and yet they will wonder that Tom and Mary do not read useful works in history, biography, and science.

Perhaps I am mistaken; I hope so; but it seems to me that there are not so many families as formerly there were who gather about the lamp in winter and read together the best and noblest literature. I know one family who last summer used to gather regularly on the porch after dinner while the mother, who is a beautiful reader, read aloud and the rest sewed or crocheted; but I do not think at this writing of another such family in the circle of my acquaintance.

If, therefore, the young people do not follow the advice of these articles, or even do not read them through, it will not be strange. We can hardly expect the boys and girls to be wiser than their fathers and mothers, or to set examples for their elders to follow, or to disregard the example which those about them set, in order to follow the advice which now and then some teacher or preacher gives to them.

Nevertheless the editor of *The Companion* is wise; for if the habits of reading are ever to be better than they are now, they must be changed, and there is most hope of changing the habit when it is least firmly fastened upon us.

Many people seem to think that reading is in itself a good thing, and the printing-press a great blessing. But reading may be a bad thing, and the printing-press a great curse. Too much is printed and too much read. The printing-presses would be twice as useful if they printed half as much, our newspapers twice as good if they were half as big, and our reading twice as valuable if there was half as much of it, and that half more intelligent and purposeful.

Reading is of four kinds; that is, it is done for four different purposes.

We may read, first, to pass away the time. A great deal of newspaper reading, some magazine reading, and much novel reading is of this description.

Reading is a great time-killer. Men and women, and probably boys and girls, read without attending to what they read, without thinking about what they read, without caring for it, without trying to remember it. Ten minutes after they have read, they cannot tell you what they have been reading.

Such reading is worse than useless. Gossip of types is no better than gossip of tongue; and to read the one in the paragraphs of the newspaper is no better than to listen to the other in the chatter of the parlor.

Sometimes, it is true, a very busy and a very tired man or woman may read at night for no other purpose than to get the overstrung mind away from the cares of the day, and prepare for sleep. But no healthful boy or girl ever ought to read except for a purpose.

Reading what is not worth remembering is worse than not reading at all.

We may read for mere entertainment. We may find in the mere act of reading, rather than in anything read which we remember and subsequently recall, all or nearly all the pleasure it gives us.

Most story-book reading is of this description; and it is an entirely legitimate kind of reading, if one does not do too much of it. The mind as well as the body needs to frolic, and some reading for frolic, for rest, for amusement, for entertainment, is quite right. But it is not useful reading, except as play is useful.

Sometimes one hears a mother say, with a mother's pride, that her boy is a great reader; she imagines that is a very good sign. But whether it is a good sign or not depends altogether upon what he reads, and why. Reading for fun is no better than doing any other innocent thing for fun. An entertaining book is no better than an entertaining game; and for most boys and girls not nearly so good as an entertaining out-of-door game.

For most of you an hour with tennis is better than an hour with a story-book. The best way to rest your mind is to exercise your body. Too much reading for entertainment sends you back to your school-books the next morning with a lazy brain and no appetite for work with books.

The third kind of reading is for useful information; the interest being not in the reading itself, but in what the reader gets from it.

A simple illustration may make this difference clear to you.

You have a garden; you spade it up, plant your seeds, watch the growth, pull out the weeds, water it in dry weather, and are interested in it for the sake of the fruits or the flowers it will give you in the summer or the fall. If you knew that you would get no fruits or flowers you would not go on with your garden. For your interest in the garden is not in the digging and the weeding, but in what the digging and the weeding will give you by and by.

You go out and play tennis all the afternoon; knock the balls back and forth over the netting; by and by pick up the balls and come in. You play more or less all summer; and at the end of the summer you have nothing to show for it, except that the tennis ground is not in quite so good a condition as at the beginning, and some of the balls are lost.

But that makes no difference; you did not play tennis for anything you expected to get out of it, but for the play itself. You toss the balls back and forth for the fun of the tossing.

But you do not toss the earth back and forth for the fun of the digging. Your interest in tennis is in the exercise; your interest in the garden is in what the exercise will give you.

Stopped by a Python.

Both are right and healthful kinds of interest. The best life has both some tennis and some garden in it. But they are different.

Now a great many persons do not find instructive reading entertaining, and so they discontinue it. They take up a history or a biography and expect to be entertained by it as if the book were a story.

Because they are not entertained, they soon abandon it, saying, "I am not interested in history."

It is as if a boy should give up his garden in May because he does not find any fun in digging and weeding. The fun does not come till July, when he picks his strawberries.

The fun of reading a story is in the reading; the fun of reading a history is in the knowledge obtained. And when you sit down to read a history, if it is to be interesting to you, it will be because you want the knowledge and are willing to do a little reading that is work in order to get the knowledge.

My wife and I are going to England next month and hope to visit the Lake country, where Wordsworth and Coleridge and De Quincey and Southey lived; and we have begun to read about that country and about those people. We shall not be as much entertained as we would be in reading one of Walter Scott's novels; but next month, when we visit Grasmere and Easdale and Borrowdale and Ullswater, we shall get a great deal more enjoyment from the visit if we have read about these places and about the men who lived there.

We are digging in our garden for the sake of the green peas and the strawberries—next month; and on the whole we enjoy digging in the garden more than playing tennis,—that is, we enjoy reading for a purpose more than reading for entertainment.

Each is good in its way, but they are different; if you read with a purpose, you must not expect the kind of pleasure which you receive when you read for entertainment. The pleasure in the one case is in the reading, in the other case in what you get from the reading.

There is still one other kind of reading: reading for power; not for entertainment at the time, nor for instruction; but reading that inspires us with better motives, and makes us wish to be better and to do better.

Most reading of poetry is of this kind; so is most devotional reading, and reading of sermons and of the Bible; but this kind of reading is mostly for older people; and there is no room left to speak of it here.

In a second paper I shall try to give you some counsel about what not to read.

For the Companion.

STRENGTH OF A PYTHON.

The elderly proprietor of a coast steamship line who, in his younger days, saw not a little of the rough side of a sailor's life, recently told a story which illustrates the great strength of certain large serpents of the East Indies.

We had been speaking of the force of elephants, whales, lions and other large vertebrata, and estimating the power which it is possible to concentrate in muscular tissue. It was this which called out my friend's story.

The Dutch, he said, who control Sumatra, Java and several smaller islands to the eastward of Java, have been accustomed to set free certain cattle in favorable localities of their possessions, in order that they may by their increase furnish a cheap beef supply, both for the natives and for government use.

When the narrator was about eighteen years old he was supercargo on board a brig which made annual voyages into the East Indian waters after sandalwood. The vessel was lying in a bay on the coast of an island to the north of Timor; and the logs, or sections of the precious wood, were drawn down to the beach from a table-land two or three miles in the interior by a Dutch proprietor who had in his service six natives and as many bullocks.

These animals were driven tandem—in single file—on account of the narrowness of the trail, which led for some distance across a marsh amongst huge trees, and then ascended through rocks and crags to the dryer plateau where the *santalum* grows. The logs were transported on a narrow boat-shaped "drag," without wheels or rollers.

The young supercargo, who was fond of hunting and adventure, often accompanied this odd team in its trips from the shore to the plateau.

On the way up he often rode upon the drag with the old Dutchman, who was stout and disinclined to pedestrian exercise.

Upon one of these occasions, when the team had passed nearly through the swampy forest tract and was near the foot of the craggy ascent, the supercargo was amazed and startled by a singular sight.

In the obscurity of the dense foliage above his head, he saw something which he could compare to nothing save a huge, animated barber's pole drop like a flash from the branches of the great trees which overhung the path, and enfold the ox next in front of the rude vehicle in which he and Mynheer Huydecoper were sitting.

It was a python of large size, superbly marked.

From a large limb, ten or fifteen feet above the ox, the snake had dropped or swung down, and had thrown a fold of its supple body about the neck of the poor animal, swift as a tiger's spring.

The natives took to their heels. The ox thus fearfully beset, bellowed with affright and, plunging headlong, jerked the drag so violently that the fat Dutchman was sent rolling over its side.

Meantime the alarm was communicated to the bullocks in advance. Erecting their tails, they bounded forward along the trail; and the drag, catching against a tree-trunk or some other obstruction, was detached and left behind the cattle in their mad flight.

For some distance they dragged their hapless mate after them. The python had kept its fold around the ox's neck, and was carried along with them. The screaming of the natives, the bellowing of the oxen, the hoarse shouts of the fleshy Dutchman, and the snapping of tackle, made the spectacle an exciting one.

The reptile, infuriated by the rough usage it was receiving, lashed right and left with the ten or twelve feet of its body that trailed after the ox.

Then was exhibited an example of its tremendous strength. Its tail came in contact with a tree beside the path. It threw a turn around the trunk, and instantly the fleeing bullocks were brought to a stand. In vain they leaped and surged irregularly forward.

Like a stiff iron hook, the tail of the python held its turn around the tree, while its shining body was stretched taut as a ship's cable. Its fold around the ox's neck tightened till the choked animal's tongue protruded and its eyes bulged; still it held fast both to ox and tree, nor could the terrified and plunging team tear it away.

The young supercargo, dashing forward, discharged his fowling-piece, loaded with shot, at the reptile's body, without producing any perceptible effect. But Mynheer Huydecoper, who by this time had gathered himself up, now ran forward with a more efficacious weapon.

He had taken from the drag a long saw which was used by the workmen for sawing the tree-trunks into logs. Raising this in both hands, he brought it down across the serpent as he would have done upon a log.

The effect was instantaneous. The python's tense body separated in two parts, and the oxen plunged forward, leaving the sundered halves of the monster writhing in the path. The two men beat the reptile's head into quietude with levers. It was found that this portion of its body measured nearly thirteen feet in length, while the tail was not quite ten feet long; and near the place where the saw had divided it, the snake was twenty-one inches in circumference.

Of course the frantic bullocks did not exert their strength in concert. They were too crazy with fright for that. Had they pulled together, and in a straight line, undoubtedly the serpent would have been torn either from the tree, or from his hold upon the bullock's neck.

For the Companion.

INDIAN FAITH IN THE FUTURE.

By Right Rev. H. B. Whipple, Bishop of Minnesota.

There are no wild men who have a more certain belief in a future life than the North American Indians.

An Indian burial is impressive. The chief or warrior is clad in his war dress, his blanket wrapped around him, by his side his bow and arrows, tomahawk and spear.

Friends gather around him, the village orator or friend addresses the dead spirit briefly, speaking of his virtues, and telling him that he has left them for "the land afar off," the happy hunting-grounds of the red men; that his trail lies straight on over a narrow way; that he is not to turn to the right nor to the left; that he must listen to no evil spirit who would tempt him to turn aside, but press straight on as a true man until he reaches the land of the blest, where he shall not suffer from hunger, cold, sickness or sorrow.

If it is the burial of a child, the poor mother places the baby's toys in the grave, that it may have them in its new home; and often wild flowers are strewn in the grave.

Over Ojibway graves the Indians erect a little rude shelter, with an opening in the end for the spirit to pass in and out; they believe that the spirit lingers by the body until decomposition has done its work.

The friends bring offerings of choicest food, berries and game, and lay them on the grave. The Indian's world is peopled with spirits and spiritual influences; and while the dead cannot eat, there is in food as in everything a spiritual essence, and this the spirit receives, and feels joy that he or she is not forgotten.

I have often seen a mother sitting for hours by the grave of her child, or an old man beside the grave of his wife.

Once I asked an old man to go with me on my journey, and offered him a good reward. He said, "My old wife is sleeping here, and I cannot leave her, for she would be lonesome without me."

The Indian believes in the identity of person in the future life, in a material form. When Little Crow, the leader in the massacre of 1862, was a young man, a rival attempted to kill him. Little Crow saw his enemy when he was ready to fire his gun, and quickly folded his arms across his breast. Both hands were badly shattered by the ball.

He was taken to the surgeon of the fort. The surgeon said his hands must be cut off. "No," said the Indians, "he better die; how can he hunt in that world if he has no hands?"

They have rare skill in dressing wounds with slippery-elm and the sumach root, and Little Crow recovered, but with deformed hands.

It is this belief in the continuity of our personal existence which makes the Indian certain of the recognition of friends in a future life.

One of the noblest specimens of the Indian race that I have known is Mah-dwa-go-no-nint, the head chief of Red Lake. Nearly thirty years ago we met in a wigwam. He had walked one hundred and fifty miles in the winter to see me. He said:

"I hear you are the Indians' friend. I am a wild man. White men say they have bought my land, but I have signed no treaty. There were no cattle, no plows, no schools, no houses in the

Digitized by Google

paper they brought me. There was money for the trader and houses for white men. In a little while the deer, the elk, the bear, the moose will be gone, and then there will be graves for my people. Will you help me?"

I have tried to be his friend. He asked for a missionary, and we sent him an Indian clergyman. He has become a Christian, and so have many of his band. They have a neat log church, and every Sunday it is filled with worshippers.

If you were present and listened to the beautiful words of that musical tongue, you would not understand one word—yes, you would know one word, for that is almost the same in every tongue—the name of Jesus. The Indians sing very sweetly, and while in their wild state their voices sound harsh, and you hear only guttural sounds, religion, which softens the heart, seems to bring out in all its beauty the sweet sounds of their language.

Our favorite hymns have been translated—"Nearer, my God, to Thee," "Lead, Kindly Light," "Abide with Me," and "Jesus, Lover of my Soul." I never hear them sing that my eyes are not full of tears.

At my last visit to Red Lake, old Mah-dwa-go-no-nint, who loves me as a brother, came to me and said, "My father, since you were here, my old wife has gone to lie in the grave. We lived together fifty years. I shall some day go and lie by her side. I have heard that Christian white men ask the Great Spirit to bless the place where His children sleep. Will you ask Him to bless the place where my wife is sleeping?"

"Yes," I said.

We formed a procession—first the Indian children, then Indian men and women, then the Indian clergy, and last the old chief and myself. We marched around God's acre, singing in Ojibway, "Jesus, Lover of my Soul."

I then delivered a short address on the certainty of another life, and that we should know each other over there. I told them how Jesus had consecrated these graves when He slept there, and by His rising from the dead made them as God's garden, the seed bed of the Resurrection. Then we repeated the Apostles' Creed and a few earnest prayers, with the benediction.

After the service the old chief said to me, "My friend, I thank you for telling me of the Saviour. I thank you for blessing the place where my wife sleeps, and where I shall lie. I have your face on my heart. Good-by. I have done."

In their wild state the Indians manifest their griefs by loud wailing, and by cutting themselves with knives as the heathen did four thousand years ago; and often they give away all their personal property.

My good friend Doctor Daniels was the agent at the Red Cloud agency twenty years ago. The son of Red Dog, a chief, was sick. Red Dog consulted the doctor. The doctor said, "There is no cure for your son's disease. I can relieve his pain, but he cannot live."

All that the doctor could do for the sick man's comfort was done.

One day a messenger came, saying that Red Dog's son was dead. The doctor had a coffin made and covered with black cloth. He said to his clerk, "Take these blankets and goods and coffin and go to Red Dog's camp. Wait until he has given away his things and cut himself with knives, and sits down beside the body the picture of despair. Then go to him and say that his friend has heard of his sorrow, that he has sent him a coffin in which to bury his son, and has sent him some things to begin life anew.

"Then wait—you may wait all day. If he takes the things, I shall know he will be my friend forever. If he does not take them, he will go on the war-path to-morrow, and we must look out."

The young man went to the camp. He waited until Red Dog had cut great gashes in his arms, his chest, his legs, and had given away his blankets and pony and gun. He then gave Red Dog the presents and the message.

He waited six hours in silence. Then Red Dog arose and said, "The white man has made my heart like the heart of a woman. Put my son in the coffin. I shall bury him beside the white man's door; and when I go to my son's grave I will not forget that it was a white man who was kind to me in the hour of my grief."

Just at evening the doctor saw a procession coming over the hills. There was a pony traverse bearing the body, and behind it the chief, covered with blood, and with bowed head—the chief mourner.

Red Dog had been one of the most fearful foes of the white man. From that day he was our friend, and once when the doctor was in peril, Red Dog came in hot haste to defend him. If it had been needed, he would have died for him.

An Indian's heart is like a white man's heart. With them as with us, God's law is true,—"Whatsoever a man soweth, that shall he reap." If we sow kindness, we reap kindness; if we sow thistles, we reap thistles.

Some years ago my dear wife, who is waiting for me in Paradise, and myself parted with some Christian Indians to whom we had been kind in very dark days. We had the Holy Communion together. When they came to say good-by, each Indian woman stooped down and kissed my wife, and, calling her "Ina" (Mother), said, "*Ma-pi-ya ekta wa chi ya ki wakin.*" (In heaven to meet you is my hope.)

As friend after friend leaves me, and I look on to the other home, there will come to me sweet hopes that I shall meet there many of these poor folk, the men of the trembling eye and wandering foot, in our Father's home.

For the Companion.

THE TWO WAYS OF DOING IT.

There are probably many, among the educated young men and women who read *The Companion* and are members of Christian churches, who are doing something to help the poor or criminal classes. This work is now more general than ever before, and is carried on in countless ways. Each church or community has its own methods, guilds, societies or individual effort. *The Companion* wishes to give one word of warning to its zealous readers, which probably will be most strongly expressed in the history of two events that are worth noting.

Three young men, anxious to help newsboys and messenger-boys, generously hired two or three rooms, furnished them with benches and a desk, and invited the boys to come to them in the evening.

The invitation was cordial and pressing, and on the first evening the benches were nearly full with curious lads gathered out of the streets.

The young men addressed them in turn. The boys were urged to wash their faces, to keep their clothes neat, to give up the use of tobacco, to take a pledge never to drink rum, and to refuse to read flash papers or novels, or to enter the doors of a variety theatre.

The advice was good and friendly, but it was given without tact or discretion. The boys were presented with tracts, and a personal appeal of a more direct nature made to each. After this not even the gift of apples and candy could fully win them back to good-humor.

"Candy's good. I don't like preachin'," grumbled one.

"I aint a-comin' here agin. I'm a big sinner—yes, I am!" laughingly sneered another.

On the next evening hardly a dozen returned, and on the third the benches were empty.

Then the young men who had begun their good work so zealously were discouraged and angry, and declared that the boys were ungrateful, and their condition hopeless.

In another city a small band of young men, some of whom had had long experience in the work, went about among the same class of boys, talking to them upon the expediency of forming a club of their own, and of providing rooms to which they could go when the day's work was done.

The project was well received. Each boy who joined the club paid twenty cents a year, which of course was a trifle compared with the actual cost, but enough to give him the feeling of independence and proprietorship. The rooms have bright carpets, growing plants in the windows, some cheap, good pictures on the walls, tables covered with suitable books, illustrated papers, backgammon, dominos, and other games. One room is furnished as a gymnasium, and in another room there are crayons and papers for the boys who think they can draw, and a parlor organ for the boys who think they can sing.

The secretary of the club is a motherly woman with a great deal of tact, a love of fun, and much knowledge of boys. She is always ready to listen to their troubles, to give advice and sympathy.

Twice each week there is a service in one of the rooms, when the life of Christ is read and explained in a simple, attractive way, and every-day, practical thoughts are given. Many hymns are sung. The boys crowd to these meetings and join in the hymns with tremendous noise and earnestness.

Over two hundred boys belong to "our club," as they call it, and many more are kept out for want of room.

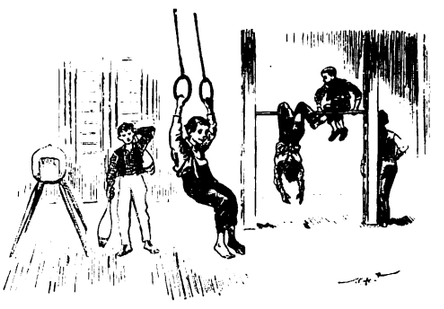
God has countless loving, tender ways in which each day He leads and wins men to be true to each other and faithful to Him. Boys are only smaller men, and are to be won to goodness in the same way.

For the Companion.

CHRISTMAS GIFTS.

"I wish there were more Uncle Johns in the world," said Anna Merrill as, for the fifth time last Christmas Day, she held up her silver watch and chatelaine to the admiring gaze of her mother.

"Now, mother," she went on, "just look at that generous array of homely, useful gifts. They are all nice, and no doubt a marvellous amount of good judgment was used in their selection; but truly, I would rather have this little luxury than all of them, even though you do sometimes imagine that the wolf is prowling around our door."



Mrs. Merrill's face assumed a shocked and grieved expression.

"Oh," the laughing girl broke in again, "I know it sounds like ingratitude and vanity, but you see I can manage somehow to buy mackintoshes, flannel skirts and handkerchiefs for myself; and at Christmas time I want something that it would be extravagance for me to think of buying with the money which I earn."

It is possible that we are often over-practical in giving.

To the struggling, needy servant or dependent it is certainly proper to give something that shall add to daily comfort; but with others a little "uncommon sense," which bestows less practically, may be very welcome.

It is not best always to consider the homely, commonplace needs of life at such a festive time as Christmas. The made or purchased luxury, which from lack of time to make it or means to buy it a friend would not otherwise possess, may be the most appropriate gift then.

Good materials for fancy-work are always costly, and before expending considerable sums upon such articles, it is well to study whether a like sum of money may not be more wisely invested in something less flimsy and fading—something that will for years be a reminder of the love that prompted the gift.

Silver is more generally favored than ever for jewelry. There are bangles of all styles, beads, ear-rings, hair ornaments and wonderfully pretty brooches; especially the enamelled ones fashioned in the form of some dainty leaf or flower.

There are few women of the present day who do not paint or embroider; and with one who has acquired either or both of these accomplishments, there is almost no limit to the beautiful gifts which can be made. Nor need she who can do neither despair; for such beautiful designs and exquisite combinations of color are now found in even inexpensive material, that really elaborate articles can be made with no other ornamentation than lace and ribbons.

Solid embroidery is now seldom attempted; but the scarcely less effective and much more quickly done long and short stitch, outline and darning, has taken its place.

Dainty tea and carving cloths may be made from fine linen stamped in a design to suit the maker; or they may be of damask, with the design outlined and touched up with long-and-short stem stitch.

If the design is stamped upon linen, clusters of red clover or buttercup branches with the petals nearly all fallen off and scattered across the lower part of the cloth are very pretty, as are also clover leaves and pansy blossoms.

Instead of being hemstitched or fringed, the edge is often finished with a narrow button-hole stitch in white linen floss, and a narrow linen, one and one-half inch, lace added.

Round and oval doilies are no longer fashionable. Either square or fancifully shaped ones are preferred. Things novel and unique in design lend dainty effects and pretty bits of color to the table.

Long and short button-hole stitch is used for the outside of flowers, and outlining and French knots for the tips of the stamens. When the embroidery is done, the doily is cut out in the shape of the design.

A handsome photograph pocket was made of two oblong sections of cardboard covered with one thickness of cotton wadding, well sprinkled with sachet powder, and then with dull olive-green plush on one side, silesia on the back of one and chamois of the other. The upper right-hand corner of the chamois section was reversed, and a spray of wild rosebuds painted carelessly on it. The bottoms of the two sections were fastened together and the proper slope given to the ends by a lacing of narrow ribbon through button-holed loops at the alternate sides.

It was suspended by two pieces and a many-looped bow of the same kind of ribbon.

A still prettier wall-pocket had a square of vellum mounted on cardboard for the foundation. A crescent-shaped pocket of the cream vellum, which, as well as the back, has ragged edges, was attached to the back by many-looped bows of narrow yellow crape ribbon drawn through holes burned at each corner of the pocket, at equal distances apart around the bottom and near them through the foundation.

Two holes were also burned at the upper corners of the back, by which it was suspended by the same kind of ribbon and many-looped bows. A holly branch with berries was painted in water-colors across the crescent, and three birds in flight across the foundation above.

Mail-cloth, which resembles bird's-eye linen, and comes in both silken and cotton texture, and fine qualities of huckaback lend themselves excellently to darning, and may be utilized for many purposes. The silken texture of mail-cloth must be worked with the fine qualities of silk, such as India and filo flosses.

Combing towels are very handsome made of huckaback, darned. They are made by folding a fine towel so that the front shall be one-third the length of the back. Cut the front at the centre lengthwise, and shape a place for the neck. Darn a border across each end, and trim the neck front and ends with torchon or hand-made lace. Close with buttons and button-holes at the centre.

Many handsome articles for the dressing-table are made of glass, which may be cut to order or purchased in sections, for baskets, trays, jewelry caskets, and so forth.

A beautiful casket is made oblong; the sides and top of glass are bound with narrow blue velvet ribbon, pasted on. The sides are then fastened to position with invisible stitches, and the cover, which has a spray of forget-me-nots painted on it, is attached at the back with two ribbon bows. Two others are placed at corresponding points of the front edge.

A pasteboard bottom four inches wider on all sides is then glued to the bottom of the casket, and a tufted blue silk pad placed inside. A blue silk puff is shirred and sewed to the edge of the pasteboard; a piece of hat elastic is run in at the upper edge; a soft roll of cotton wadding is placed on the pasteboard, and the silk puff brought over it and held close to the casket by the elastic.

A four-inch-wide piece of Oriental lace is also shirred on elastic and slipped over the casket, the gathers arranged evenly and the scallops tacked to position around the outer edge.

TWO SCHOOL-BOYS.

They were two playmates, sturdy boys,
Who quarrel'd sometimes in their play,
And sometimes with unseemly noise
Drove elder folks away;
Close partners in the cares and joys
Of many a summer's day.

If one were made to linger late
When school was out, in sore disgrace,
The other faithfully would wait
With sad despondingface,
And share his comrade's hapless fate
And murmur at his case.

Whatever learning either had,
In truth it was a slender store,
At lessons they were always glad
To share the scanty lore,
And seldom fretted or were sad
Because it was no more.

One tattered book was good for both,
Their pencils owned a mutual sway.
They were companions in their sloth,
And fellows in their play;
And spite of quarrels they were loth
To part a single day.

One golden summer noon it chanced
That both were truant from the school.
They rambled where the sunshine glanced
Upon a lonely pool;
Along the sloping marge they danced,
And laughed at learning's rule.

And one has launched a wooden ship
Upon the placid silver tide,
When suddenly his footsteps slip
From off the moistened side,
A stifled cry upon his lip;
The pool is deep and wide.

With frightened gaze the other stands
A moment on the shelving bank,
Then plunges in with outstretched hands
To where his playmate sank,—
His playmate pinioned by the bands
Of weed and herbage rank.

O mothers!—Neither boy can swim,
And he who plunged into the wave
Is held with frantic grasp by him
Whom he had tried to save.
They struggle in the waters dim,—
The pool becomes a grave.

Across the tide the wooden boat
Swims gaily, and the sunny air
Is cheerful with the thrush's note,
That knows not any care.
Two boyish caps, a crumpled coat—
How sad a tale is there!

And far away each mother says
Her boy is safe at school;
And far away the master sways
His kingdom from his stool,
And schemes of birchen vengeance lays—
For those beneath the pool.

ARTHUR L. SALMON.

For the Companion.

SAW THEM IN A NEW LIGHT.

Jane Rogers was a good girl, devout and positive in her religious beliefs. She had always lived in a village where nearly every one belonged to the same denomination, and she had grown into the belief that every one who was outside of its pale must be wrong.

It was a subject of regret, almost of distress, to her to know that none of her cousins in New York—whom she had never seen—belonged to this church which was so dear to her. John Rogers's family were Presbyterians, James Rogers's were Methodists, and her Aunt Catharine's children differed widely from her on the subject of baptism.

When it was arranged that Jane should go to New York and spend the winter among her kinsfolk, she felt as if she were a missionary venturing among those who were almost heathen. She read books on the different creeds, and resolved to be unflinching in her defence of what she believed to be the truth.

The day came, and she started. There was a frightful railway accident. Jane, badly injured, was carried with others of the wounded to a hospital in the city.

Her friends hastened there to meet her. They would have each of them taken her to their homes, but she was too seriously injured to be moved. She saw their pale, anxious faces, and caught loving glances on every side. As days passed and she approached convalescence, these strange faces became inexpressibly dear to her.

She learned to call them by name. The kind, grave old man was Cousin Ben; the two merry girls were his nieces; the sweet-faced old lady was Aunt Mary. They all brought flowers to her, and to the poor, friendless patients in the same hospital. They went from bed to bed, comforting and cheering the wounded and the dying. Sometimes they repeated hymns, read the Bible, or prayed with some wretched sufferer.

Day after day her kinsfolk came, honest, friendly men and gentle women, each bent on doing God's work for His hurt, sick children, among whom she lay.

When Jane's mother reached the city and hurried to her, the girl told her with glad tears of their kindness.

"They have kept me hopeful. They have kept me near to God," she said.

Her mother was bewildered. "Which of these were the Baptists, and which the Methodists, and which the Presbyterians?" she asked.

Jane was silent for a moment.

"I do not know," she said in a low voice. "I did not ask what doctrines they believed. But I saw that when they came to the sick and dying God was in their hearts."

Jane learned in the hospital that the foundation of Christ's church is broader than sectarian walls when it means faith in Him and love to our brother.

WANDERERS ON THE SEA.

The discoveries of modern science have revealed monsters of the deep as terrific as any that ancient fancy created, and have shown that oceans are not mere wastes of water, but the homes of an astounding variety of living things. More than this, it has been discovered that the seas themselves have each a sort of law of existence which they obey. The Hydrographic Bureau at Washington for two years has been trying to learn something of the characteristics of the Atlantic Ocean as a great moving body of water by means of bottles, containing papers, which have been dropped overboard from vessels in many places, to drift at the mercy of the winds and waves.

Many of these bottles have been found and picked up again either in the open sea, or on shores where they had stranded.

Knowing from its records where the bottles had been thrown overboard, the Bureau has been able to trace, in a general way, the path they must have followed in order to reach the places where they were found. In a report published on the First of July this year, and accompanied by a map of the Atlantic, the adventures of a hundred and thirteen bottles are recorded.

Being partially filled with air and then securely corked, the bottles float on the surface of the water, and go wherever the wind and the currents of the sea carry them. Each bottle contains a record of the place and the date of its starting. Some of those found have floated for many months on the bosom of the Atlantic, and travelled thousands of miles.

It has been found that bottles dropped overboard between the shores of the United States and England or France generally travel toward the northeast, following the course of that great river in the ocean called the Gulf Stream. Bottles started off the coasts of Spain or Africa travel westward until they arrive among the West India Islands. Along the European side of the ocean the bottles take a southerly course, and along the American side a northerly course.

Thus, as a result of winds and currents, the whole Atlantic is shown to be slowly circulating round and round, like an enormous pool. This accounts for the stories that were current in Europe, hundreds of years ago, of strange objects of human manufacture having floated from the New to the Old World, thus giving a clue to the existence of undiscovered lands beyond the sea.

IN A BALLOON.

Gambetta, with his friend M. Spuller and M. Triquet the aëronaut, left Paris, then besieged by the Germans, in the balloon, Armand Barbes, on the Seventh of October, 1870. Gambetta had been commissioned by a public decree to go to the provinces, to inspire the people of France generally with something of the ardent patriotism that existed in Paris. The aërial journey was accomplished in the face of many dangers. A French writer describes it as *Un Souvenir de 1870.*

Hardly had the balloon passed the French lines, when the three men heard the whistling of Prussian bullets. To escape them, M. Triquet threw out ballast, and the balloon rose high in the air. But a balloon cannot rise, or even sustain itself at the height attained, unless ballast be thrown out.

The Armand Barbes began descending over a field which the Prussians had occupied but a few hours before, and not far from a German post.

More bags of sand were thrown out, however, and the balloon again took flight, amidst a shower of projectiles from the enemy.

The next time it descended Triquet kept it about two hundred feet from the ground. The country here was occupied by Wurtembergers, who began a lively firing at the balloon as soon as they could get their arms, which, fortunately for the French men, were stacked when first they saw the balloon detaching itself from a cloud. Triquet succeeded in raising it before they had received any more serious injury than a bullet in Gambetta's hand; but in accomplishing this escape much ballast was sacrificed.

When the balloon began to descend again, Triquet had nearly exhausted his supply of sand-bags. Happily for the voyagers, the Germans, who were on the outskirts of a wood, did not dare to enter it for fear of coming on a French ambuscade, and were obliged, therefore, to content themselves with following the Armand Barbes with a well-directed fire.

One more rise was produced by throwing out the last of the ballast. This took the balloon over the forest, and it descended into the upper branches of an oak. Gambetta and his companions touched solid earth again at Montdidier, and at once set out for Amiens.

NEPIGON DOGS.

"While we waited at the head of the Long Portage on the Nepigon River for our half-breeds to carry up the canoe," writes a contributor, "a wretched yellow dog crawled out of some alder bushes and looked at us. His Ojibway masters, descending with their winter's take of furs, had abandoned him to starve. Poor creature! His ribs were almost through his mangy coat, his face shrunken to a mere skull, his piteous eyes dreary with sorrow and suffering.

"'Ah, why did they leave me?' said that sad old dog as plainly as it is here written. 'Why, after I had served them so long, been kicked so much, and loved them so dearly?'

"He crawled from the thicket just to know whether there was any mercy in the two white men. My friend said, 'Poor old dog—poor fellow!' and tossed him a piece of bread. The dog slunk back, hesitated, turned, crouched low, crawled back toward the bread.

"'Poor fellow! poor old fellow!' we said.

"Perhaps the tones encouraged him. He ate, not ravenously, for he was too far gone. All the while he looked his gratitude, yet fearfully. At last he lay down by our packs, saying clearly enough, 'Let me be your dog and watch for you.' He blinked his aged thanks because we did not refuse.

"Now when Antoine arrived, he put down his end of the canoe, seized a paddle, and walloped that woebegone dog before we could hinder. Afterward we tempted the creature back out of the bushes to lick up grease poured from a frying-pan upon a flat rock. Antoine and Louis were much disgusted by this.

"At portage after portage we found one or more such forsaken dogs. Antoine invariably pelted or kicked the crouching creatures, while Louis looked on with approval.

"'Oh, dey's no good; dey's too hol',' said the old man in reply to our rebukes.

"At the Island Portage we found a fine old dog whose joy at seeing Louis was great. That stoic looked on unmoved, while Antoine kicked the poor brute away. In spite of this treatment, he followed along the eastern shore as we paddled up the river. When we camped on the western side he stood howling dismally.

"The sun was far toward evening. As the deserted dog thought of a night of starvation alone, he resolved to try the desperate passage. Away the icy current swept him. At a hundred feet out his courage faltered, and he turned back. He had been ashore but a few minutes when his longing for Louis sent him in again.

"Down, down he went, and the rapids half a mile below yelled for his life. It seemed impossible he could escape; but his chin was borne up bravely by Father Nepigon, and he managed to win the point above the Island Portage. Louis looked on with perfect indifference.

"'He's a brave dog, Louis. Why don't you keep him?' I asked.

"'He wass a good dog,' said Louis, without concern. 'He wass my brudder Narcisse dog dat's dead. Den my brudder François took him.'

"'It's a shame to leave him to starve.'

"'Oh, hee's hol' now!' said Louis, with surprise.

"Late that evening the wretched dog skulked into camp. We kept him in trout during our stay. After that? Well, one fancies him running his strength away trying to catch Nepigon hares, and at last lying his tired old bones down to molder and bleach far away on the hills."

THE ABBOT BESARION.

Saintly Besarion in the burning day
Walked by the sea in a lone land accursed;
His worn disciple followed till he fell,
Crying: "Help, master, for I die of thirst!"

The holy abbot turned, some heavenly thought,
As he made answer, lighting his wan face.
"Drink here, my son," he said. "God doth not fail
Those who have trusted Him in any place."

The fainting pilgrim drank, and lo! the wave
Was sweet as mountain stream to his parched lip.
Again he drank; then praising God, he bent
Into the sparkling brine his flask to dip.

"Why dost thou this?" the watching abbot asked;
And the disciple answered: "Lest again,
Dear master, in this dreary waste we thirst,
And in the desert seek for wells in vain."

"Ah, God forgive thy stubborn unbelief!
Could not this miracle," Besarion cried,
"Teach thee that wheresoe'er He calleth us,
The Lord we serve sweet water can provide?"

ARLO BATES.

PILLS FOR TOOTHACHE.

When Captain Burnaby was travelling in Asia Minor he acquired almost before he knew it a great reputation as a hakim or doctor. He was tarrying in a Kurdish village when the owner of the house came into his room accompanied by his three sons. Presently the father pointed to one of his teeth, which was aching. "I have heard of your great skill as a hakim," he said; "perhaps you could cure my tooth." The Englishman was no dentist, and said so; but the Kurd refused to believe him.

A thought occurred to me. Three years before my servant Radford had extracted the tooth of a maid-servant in a country house in Norfolk. Why should he not extract the Kurd's tooth?

"I am not a hakim for teeth," I remarked to the patient. "I am a hakim for the stomach, which is the nobler and more important part of a man's body."

The Imaum and the Kurd's children made a sign of assent to this; the Kurd himself did not seem to see the point.

"You are in my house," he said. "You have accepted my hospitality—cure my tooth."

"Well," I continued, "I have a servant with me; he is a hakim for teeth. If you like he shall look in your mouth."

"By all means!" said the Kurd.

Radford was called in, and without moving a muscle of his countenance seized the patient by the nose with one hand; then thrusting a finger of the other into the sufferer's mouth, he looked well down the gaping orifice.

"It had better come out; but it is very tight in his 'ead," he remarked. "If I only had a pair of champagne nippers, I would have it out in a trice."

"What does he say?" said the sufferer.

"He says that the tooth had better be extracted."

"Will it hurt much?"

"Yes, a good deal."

This answer appeared to give great satisfaction to the Imaum and the Kurd's children.

"Have it out!" they all cried.

But the patient did not see the matter from their point of view. He cried in an indignant tone:

"Silence!"

Then, turning to me, he inquired if I could not give him some medicine for his stomach. What a sameness there is in human nature!

"But your tooth hurts you, not your stomach," I observed.

"Yes; but for all that, I should like some medicine."

I gave him some pills from my medicine-chest. He put three of them into his mouth, and commenced chewing them with great gusto.

"My tooth is better already," he remarked; and in a few minutes he prepared to leave the room, accompanied by his sons and the Imaum. The latter was greatly disappointed that the tooth had not been operated upon.

"If it had been my tooth, I should have had it out," he observed to me *sotto voce*, "but he is afraid."

"You would have done nothing of the kind," said the Kurd. "You would have swallowed the medicine like me!" and a whelping cry from a dog outside the door announced that the old gentleman had vented his bile on the animal in question.

NOT IN BOSTON.

It is often said that the world is a small place, and in a sense this is true; but even a city of only half a million inhabitants is hardly as small as Jim Rockel seemed to think. Jim was a hard-working but bad-tempered farmer, who lived in the western part of Maine. He frequently quarrelled with his wife, Sarah, until at last she disappeared from home.

Jim waited for her return, but in vain; then he applied to her relatives for information, but got nothing save uncomplimentary remarks concerning himself. At last he somehow got the idea that his wife had gone to Boston. So to Boston he decided to go and find her, never supposing that any difficulty would attend this operation. Accordingly he arrayed himself for travel, and set out on his journey.

A few days later he reached home, but alone. A sympathizing neighbor at once inquired in regard to the success of his mission.

"Wal, I didn't find Sarah," replied Jim, gloomily. "Fact is," he continued, "she aint in Boston at all."

"How do you know that?" asked the neighbor.

"Why, 'cause I looked for 'er, 'n' didn't see 'er. Ye see, I got there Saturday night, 'n' Sunday I started out ter find Sarah. I knew if I could find the Orthodox meetin'-house, 'n' Sarah wuz in Boston, that I'd see 'er sure. So I hunted up the meetin'-house, 'n' stood 'n' watched the folks go in ter meetin'; but I didn't see no Sarah, 'cause she wasn't there.

"If she'd been in Boston she'd ha' been there, for she's great to go ter meetin', Sarah is—allers goes, rain or shine. So when they'd all gone in, 'n' no Sarah, I just started straight fur home, 'n' here I am."

SHE REMEMBERED THEM.

Old lady Moffat could never be persuaded to make a will, much to the distress of her numerous relatives, whose feelings were very well expressed by Mr. Jonathan Swett, her sister's husband's cousin, a man of legal mind and a fine flow of language. "Alvira Moffat is so mighty changeable," he said, "that you can't place no dependence on her. She's pleasant as pie one day, and the next, like as not, she'll act as if you was trying to steal from her. Even if she had things down in black and white she'd all the time be wanting to alter 'em, I presume.

"But Alvira has a frugal eye," he went on, "and the drawing up of wills can't be accomplished without no expense or laying out of funds where-withal; and the first instrument that was drawed up and *paid for* would have a fair chance to stand for a year or two!"

So Jonathan Swett, to use Mrs. Moffat's own words, "pestered the life nigh out'n her," till she one day informed him that she had "hed Lawyer Peters draw up the instrument" at last; and she added with her peculiar smile,—which was described by her relatives as "creepy,"—"I've looked nout fer *you*, Jonathan Swett, ye've allus been so 'tentive ter me!"

The old lady had a good many valuable books and pictures, which her husband's father, "a man of parts," had collected, and it was for these things, as well as for her money, that the numerous relatives had such anxious desires.

Within a year after making her will, Mrs. Moffat died, and in due course of time the family, with all its outlying branches, assembled to hear the "instrument" read.

It then transpired, through the dry tones of Lawyer Peters, that Mrs. Moffat had left all her property to the town in which she had lived so long, for the purpose of establishing a library; her books were to help fill the shelves, and her pictures to ornament the walls.

Nothing was to be reserved save a sum of money sufficient to provide "each and every one of my relatives who may apply for the same within three months of my decease, with the sum of ten dollars to be used by them in the purchase of pens and ink wherewith to make their last wills and testaments as often as they see fit. And I furthermore bequeath to Jonathan Swett the pen used in drawing up this instrument, in memory of the advice he has so liberally bestowed on me!"

As none of the relatives were needy, some of the least grasping among them were able to enjoy the joke, but Jonathan Swett was a "turrible high tempered man," and is said to have expressed himself mind on this occasion in a way that reduced his poor little wife to tears, and caused her to tremble for days lest some visitor should refer to old lady Moffat's "instrument" in her husband's presence.

ON TIME.

The parents of a young soldier who was a private in a Prussian cavalry regiment during the Franco-Prussian War became terribly anxious about him. Several battles had been fought, and they had received no news of their boy. After some hesitation, the father went to see General von Moltke, who was understood to receive visitors at a certain hour in the early morning.

Strange to say, the father was admitted to see the great field-marshal.

"What is your business?" said Moltke. "Use as few words as possible."

The visitor explained that he wished to know the fate of his son, a private in a certain regiment. Moltke smiled, but not unkindly, and drew from his pocket a square of cardboard covered with dots, lines and crosses of various colors.

"This line," he said, "indicates the line of march of your son's regiment. These dots mark the distances of each forced march. To-morrow morning at seven o'clock the regiment must be at this point here. Take note of the situation."

He said no more, and the interview ended. Long before the hour named the father was at the point indicated on the map. Just before seven o'clock the trumpets of the advance guard were heard in the distance, and precisely at the hour the father saw his son.

WHERE HE SLEPT.

An English resident of Russia describes the merchant of that country as knowing the pecuniary value of what is called "a good position in society." He has a fine house and gorgeous furniture, and gives sumptuous feasts; but he really sighs for the simple life which he formerly led as a peasant.

The corporation of a country town honored me with a dinner, and I slept at the house of a rich merchant of the place. The old gentleman took me, according to custom, into every room of his house, and showed me all the expensive property he had stuffed it with—pictures, furniture, ornaments, clocks, carpets, silver and gold. I was called on to exhaust my vocabulary of admiration.

Among the rest he showed me his own bedroom, furnished with a very fine bed, and he asked me the invariable question,—"What did I think of that?"

I admired it properly. I thought it magnificent! It was covered with blue silk and lace.

"Yes," he said, "that cost a deal of money, but"—with a wink such as nobody but a Russian knows how to give—"I don't sleep atop of that bed. I sleep under it!"

HIGH LAND.

An English woman, in the course of a journey round the world with her father, visited Chicago and was impressed with the mercantile spirit of the inhabitants.

My father was making inquiries as to the different routes which he might pursue on his way south, and something was said about the flatness of the surrounding country.

"Then there's not much high land to be seen, whichever road we take?" remarked my father.

"Oh, yes," answered the Chicago man, "there's some that lets for as much as one hundred or one hundred and fifty dollars an acre."

LITTLE JAKE'S BUMPS.

Come here, little Hop o' my Thumb,
Let me tell the bumps on your head.
We'll see if a president you'll become,
Or a lobster-man instead.

Heigho! Shall I ever find one,
Down here among the curls?
The curliest curls!—they remind one,
For all the world, of a girl's.

Yes, here's one peeping from under,
And there's another one yet.
The wee, *wee* bump is *Remember;*
The big one's the bump of *Forget.*

Oh, bless me! this head *is* a boy's,
Hide it in curls, if you will.
For I've found such a big bump of *Noise,*
But where *is* the bump of *Still?*

And I *think* he will be President—
At any rate, he'll be a *man.*
See! there's never a bit of bump *Cannot,*
But a generous bump of *Can.*

But look here, little Hop o' my Thumb,
Here's a bump as big as two;
And I'm all at sea to name it—
Bless me! it's black and blue!

"Oh, *that* one? *I* know it, gramma!"
Cried its little owner, Jake.
"I bumped it myself on the hammer;
I guess you can name it *Ache.*"

ANNIE HAMILTON DONNELL.

For the Companion.

ELSIE'S SURPRISE.

A True Story.

Elsie looked out of the window one morning, and laughed to see the bright sunshine.

It had rained for five days, and she was so tired of looking at the gray clouds and the muddy street that now she was ready to dance for joy at the sight of the clear blue sky.

"O mamma," she cried, "let's do something real nice to-day because it's so pleasant!"

Mamma smiled, and asked her what she wanted to do.

"I don't know," said Elsie, as she laughed again. "You think of something real nice, mamma, and s'prise me."

Mamma looked very wise as she said, "Well, put on your hat and coat, and we'll take a walk to begin with. Don't forget your rubbers."

As they started out Rover came bounding after them, and mamma told him he might go and be surprised, too. He splashed through the puddles till Elsie said:

"Look out, or you'll be sent home, and that will s'prise you the wrong way."

By and by they came to a little shop with pictures in the window, and mamma said, "We'll go in here. Yes, Rover may come, too," she added, as she looked back and saw him wagging his tail as if promising good behavior.

A man came forward, and Elsie heard her say, "Can you take a tintype of my little girl and the dog this morning?"

And then he replied, "Certainly, madam. Walk into the next room, and I'll attend to it at once."

"O mamma," she whispered, "how you *have* s'prised me, and it's awful nice!"

She took off her hat and coat, and called Rover to her side. The man moved her head this way, and her shoulders that way, and told her to drop her chin, and to wink as often as she wanted to, and I don't know how many other things.

Finally he said, "Now you have a good position, don't move."

But Rover didn't approve of all this, and thought it was time to express his opinion. He walked back and forth barking and growling, and making himself so disagreeable that he had to be scolded.

Even then he didn't behave well, and at last mamma went to the door with him and made him go out, saying as she did so, "You are a bad dog! You are spoiling Elsie's picture. Go home at once!"

After he was gone and it was quiet Elsie had her picture taken alone, but it was a disappointment not to have Rover's, too.

When they went home he was nowhere to be seen. Dinner-time came, but no Rover.

"Why, mamma, where do you suppose Rover can be?" Elsie kept saying.

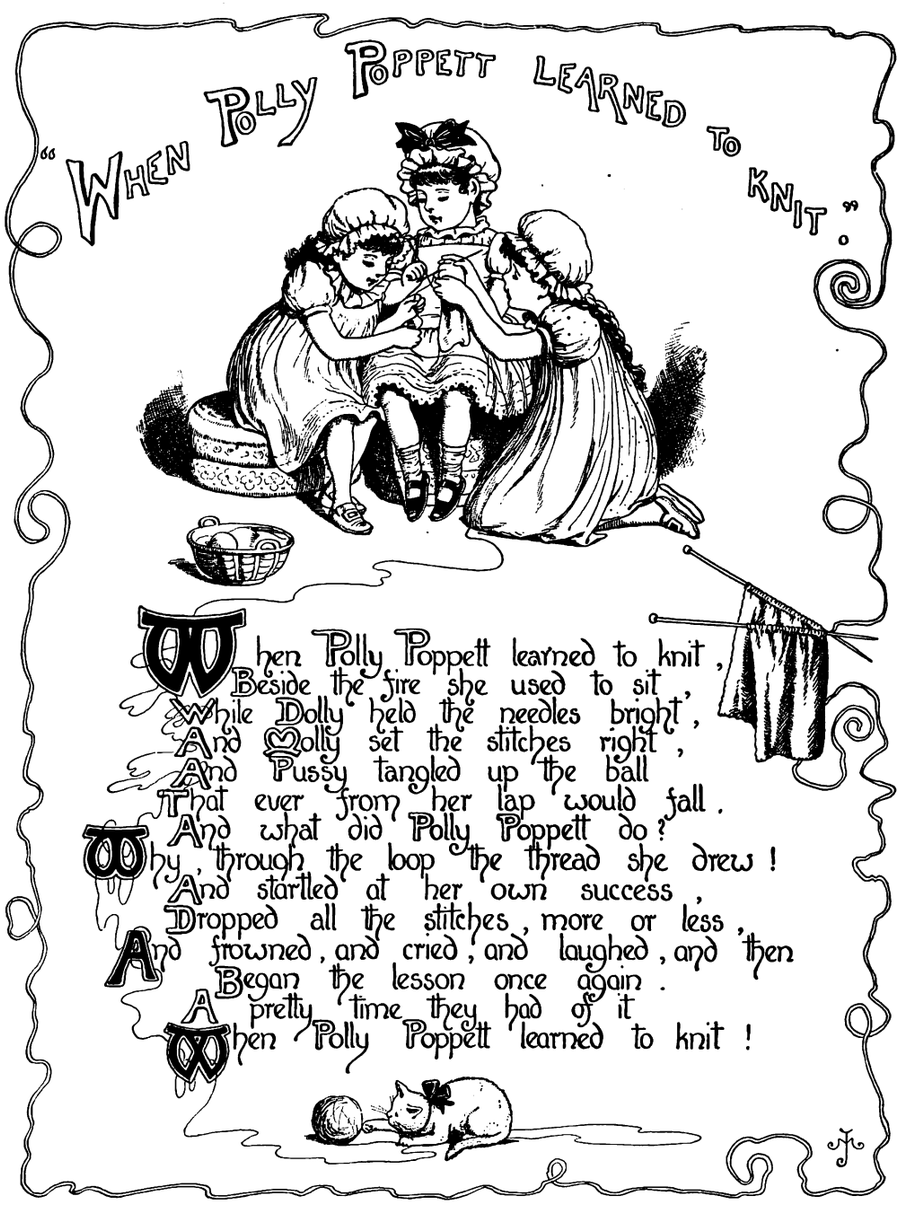
Just at dusk she saw him come trotting along with a package tied to his collar. She ran to the door and opened it, and in he came wagging his tail as if trying to say, "I am sorry I was naughty, I'll be good now."

Elsie undid the package, and her eyes grew big as she looked at it.

"O mamma!" she cried, "this is the s'prisingest of all."

And sure enough it was, for there was Rover's picture.

He had gone back, and teased the man (who must have understood dog language) till his picture was taken, and then he lay down, and waited till it was tied around his neck.



The man told mamma this the next day when she went to inquire about it, and he said as she paid him for his work:

"The dog knew he had done wrong, and wanted to make amends for it."

"Just as if he had been a little girl," said Elsie, thoughtfully, after mamma explained it to her. "That *is* s'prising I'm sure."

ANNA M. PRATT.

"MAMMA, I know what butterflies are for," cried a little boy, running into the house. "To lay butter," he added, emphatically.

For the Companion.

PAPER BAGS.

"Here's your tea!" cried Robin, rushing into the kitchen. "And—O mamma—"

"Here's your coffee!" cried Dakie, tumbling in at Robin's heels. "And—O mamma, can't we have the bags to bang off?"

"I suppose so," laughed mamma, and she brought out the tea and coffee canisters, and filled them, and gave the empty bags to the boys, who blew them as full as they could hold again of wind.

"Let me whack mine first, will you, 'cause I asked for 'em, you know!" said Dakie. "Who-op!"

"Hold on!" cried Caleb. Caleb was the chore-boy, and he had come in after a drink of water. "Mr. Willey, down to the Lower Village, gives half a cent apiece for paper bags."

"Poh! What's half a cent?" asked Robin, scornfully.

"It's half a cent," said Dakie, laughing, "and two halves make a whole one. I'm going to save mine, Caleb, all I get."

"Well, I aint," said Robin. "It's more fun to fire 'em off."

So he fired his off. It made a pretty loud noise, but that was the end of it; and Dakie put his away, and mamma smiled, and Caleb went back to his work.

Robin laughed a good deal at Dakie. He called him "Paper Bags." But Dakie didn't mind. "I'll pay him off, pretty quick," said he to Caleb.

But it was not until the morning of Robin's birthday that Dakie did "pay him off." The afternoon before, Caleb went to the Lower Village and Dakie went, too, while Robin was playing ball with Davy Gay. And in the morning when seven-year-old Robin came to his breakfast there was a little round object, wrapped in paper and tied with thread, beside his plate.

"Why, what's this?" he asked.

"Paper bags!" shouted Dakie.

But it wasn't, exactly. It was a nice morocco-covered ball.

"Why, it's ever so much prettier 'n Davy's!" cried Robin. "Where'd you get it, honest, Dakie?"

"Paper bags," laughed Dakie, again.

"Oh, you never!" said Robin.

"Yes, I did," nodded Dakie; "and there was enough to buy a treat of candy for us, beside. I saved all I got just the way I said, but I didn't know there'd be so many."

Mamma smiled. I suspect maybe she'd been helping Dakie save a little, slyly.

"Well, I'm going to, after this," said Robin. "And when your birthday comes, Dakie Thayer, you'll see!"

But Dakie hasn't seen yet, because his birthday hasn't come.

NUTS TO CRACK.

Enigmas, Charades, Puzzles, etc.

1.

DOUBLE ACROSTIC.

(Words of eight letters.)

1. Any preparation of opium, solid or liquid.
2. A folding shade or screen carried in the hand as a protection from the rain or the heat of the sun.
3. An almanac.
4. The firing of guns so as to cause balls to rebound from one point to another.
5. A Scripture proper name.
6. Reticent.
7. Time between events.
8. A sort of mineral lead ore.
9. A kind of small monkey.
10. One of a few in power.
11. An organ of touch, as of snails, etc.
12. The helmsman.

Primals—The name of an eminent American reformer (female), who died on Nov. 11, 1886.

Finals—The name of a celebrated German reformer, who was born on Nov. 10, 1483.

F. S. F.

2.

ENIGMA.

A lady lost 1, 2, 3 4, 5, 6, 7 overboard when crossing a ferry, and if 1 do not 2, 3, 4, it was found in a 1, 2, 3, 4, 5, 6, 7 the next morning.

3.

EASY UNIONS.

[Example—Join repose to a certain allowance of provisions by a vowel, and make recovery.—Rest-o-ration.]

1. Join a brewer's cistern to a tin vessel by a vowel, and make the Pope's palace.
2. Join twenty hundredweight to smaller by a vowel, and make having no tone.
3. Join a covering for the head to a large town by a vowel, and make ability.
4. Join a maxim to one united by friendship by a vowel, and form in a proverbial manner.
5. Join a harbor to an abbreviation signifying company by a vowel, and form a porch.

4.

CHARADE.

A market or your 'food may be my *first;*
My *second* sweet refreshment holds for thirst;
When friends are outward bound my *whole* is heard,
A benediction in a parting word.
Reverse my parts and easily you'll find
I mean the happiness of human kind.

A. M. P.

5.

COMMON TERMINATIONS.

The primal letters spell the name of a saint whose festival day is Nov. 25th. The last four letters of each word required are the same.

To impart; to contend in words; to cut off; the moon; to adjudge and determine; to reside in the country; complicated; to make a nest; to bring up, or instruct, as a child.

Conundrums.

How many pins will often make young people happy? Ten-pins.

When may a manufacturer be said to be conceited? When he praises the work of his own hands (employees).

What part of a schooner does a merchant like best? The sails (sales).

What reason have we for thinking that hats walk about the house alone? We often see hat-racks (hat tracks) in the hall.

Why is little four-year-old Johnny like an old man that has worked in the coal mines for fifty years? The man is a miner, and little Johnny is a minor, too.

When is a chicken kind? When it is tender.

Answers to Puzzles in Last Number.

1. November, four years, great question, voters, United States, decision, president, history, constitution, country, himself, intelligently, patriotically, election, lookers-on, privilege, duty, vote.

2. Queue, cue, Q—seventeenth letter of the alphabet, and never found excepting ahead of u.

THE CONTINENTS.

If some geologists are correct in their opinions, nature once accomplished the feat of making a Panama canal on a scale that would stagger the very imagination of M. de Lesseps. This great water-way between the oceans is supposed to have existed at the beginning of the Quaternary period, when the surface of the earth was just putting on the appearance that it yet retains. It was formed by the effects of some vast pressure which lifted North America high above the sea, while the West Indies and the isthmus were correspondingly depressed. North and South America were thus separated by a broad arm of the sea, through which the equatorial current of the Atlantic flowed into the Pacific.

This current of warm water being thus diverted from its present course, the Gulf Stream had no existence, and Europe lacked the warmth that it now derives from that source. A period of cold consequently prevailed in Northern Europe, and ice sheets were spread far over its surface.

At the same time the great elevation of the continent of North America caused a lowering of its temperature, and it, too, suffered from an invasion of the ice. Afterwards, according to the theory, a reversal of these effects occurred, the continent sinking, while the isthmus and the islands rose, and during this change of level the crust of the globe was fissured or cracked along a line extending from Cuba across the Caribbean Sea and Mexico far out into the Pacific.

The line of this break is believed to be indicated by certain volcanic islands in the Pacific, by the great chain of the Mexican volcanoes, Colima, Jorullo, Toluca, Ixtaccihuatl, Popocatepetl, Orizaba and Tuxtla, and by the celebrated Bartlett deep and other profound troughs in the bottom of the Caribbean Sea. Volcanoes naturally form along such fissures in the earth, where communication is most readily established with the interior of the globe.

Another scene of similar changes, also attended by a long break in the earth's crust, now marked by volcanoes, is the shallow sea which divides Alaska from Siberia.

It is no new idea that land once extended across the strait separating the northwestern extremity of America from Asia, but the subject has lately assumed fresh interest from the investigations of M. Emile Blancard, who asserts, with great confidence, that America and Asia were thus connected in quite recent times, recent, that is to say, according to the geological reckoning of time. He bases his conclusion on the striking resemblances between certain species of American animals and plants and those found in Asia. The likeness extends even to some remarkable flowers and insects.

One cannot sufficiently admire a science which thus traces back for us—with many errors in detail, no doubt, but upon the whole with substantial accuracy—the history of our wonderful planet, and shows us how the slowly changing levels of its crust have united and divided the four quarters of the earth; have created broad, safe land-ways by which the living creatures that adorn the globe could migrate from hemisphere to hemisphere, and then again, as by a stroke, have severed the connected halves of the world; have directed the course of ocean currents, and have established and reëstablished the climates of continents.

The mind is broadened and the imagination both chastened and refreshed by such studies as these.

CONSCIENCE-SMITTEN.

The talk of parrots is commonly amusing rather than instructive; but as there are "sermons in stones," so the chatter of a parrot may for once strike home to the conscience of the man who hears it. Says the New York *Tribune:*

There is a parrot in St. Louis, which exclaims, whenever a man enters the room, "You're drunk, sir, and had better go away. I don't want to see you till you're over it."

Some time ago a gentleman who had called, heard this speech, and thought it came from the lady of the house. Naturally enough he hastened out of the parlor.

The lady, discovering what had taken place, sat down at once to write him a note of explanation, but to her amazement before she could finish it the servant brought in a note from the man himself.

In it he acknowledged humbly that he had perhaps taken too much wine with his dinner, but protested that he had never once dreamed of being in such a condition as to make it possible for any one to detect the fact. As she had done so, however, he offered his most abject apologies and a prayer for forgiveness.

HISTORICAL SIGNS.

Most readers must have seen the common jeweller's sign, a big, wooden watch-face hanging over the door of the shop, and perhaps some of them have noticed that the position of the hands is always or almost always alike. How this happens to be the case is explained by the New York *World.*

At 8.18 on the evening of April 14, 1865, Abraham Lincoln was assassinated at Washington. Since that night every one of these watch signs that has gone from the shop of the only man who makes them, says the *World,* has indicated the hour of 8.18.

The maker says that he was then at work upon a sign for a Broadway jeweller, who came running in to tell him the news.

"Paint those hands at the hour Lincoln was shot," said the customer, "that the deed may never be forgotten."

The idea impressed the sign manufacturer, with the result above mentioned.

DON'T WAIT.

Monsieur Calino, the celebrated French simpleton, never wishes other people to be at all incommoded by his proceedings.

He had accepted a challenge to fight a duel, and was told that the hour had been fixed at nine o'clock for the next day.

"H'm!" said Monsieur Calino; "I'll try to be there on time, but if I'm a little late, tell the other man to begin without me."

"Who keeps the record of the games?" asked one of two young ladies who were making an afternoon's study of baseball. "Oh," returned the other, "that's done by the vampires."

A WONDERFUL PLANT.

Among the plants endowed with marvellous qualities, none is more wonderful than the Anastatica, or Resurrection Plant, commonly called the Rose of Jericho, which has been of much use to quacks and charlatans ever since its peculiarities were discovered. It is a wonderful sight to watch this plant, when apparently dead and dry, assuming again the color of life as soon as the root is plunged into water.

Its buds swell with new life, the leaves of its calyx open, the petals unfold, the flower-stalk grows, and the full-blown flowers appear as if by magic. It is not, properly speaking, a rose; the flowers are small, and resemble those of the white flowers, which change into round fruits; when these are ripe the leaves fall, the branches grow hard and dry, and fold inward so as to form a kind of ball.

In this state the plant is uprooted by the storms and carried toward the sea; there it is gathered and exported to Europe, where it is highly prized for its hygrometric qualities.

All that is necessary is to place the end of its root in water, when it immediately begins to show new life, develop its buds and unfold new roses. When the water is removed, the specimen sees the magical plant grow weak; its petals "lose, and the leaves pass through the last agonie of vegetable life, and die."

This plant grows in the sandy regions of Egypt, Syria and Arabia, and has long been connected in tradition with the wanderings of the Holy Family. The people of Jericho maintain that it is still believed that this marvellous rose blooms every year on the day and at the hour of the birth of our Saviour; and pious pilgrims still repair finding it in the desert, as Mary and Joseph rested on their flight into Egypt.

The natives of Mexico attached the same marvellous qualities to their Resurrection Plant, which is also found in California, on the coast. It has a more delicate leaf than the Jericho rose, and many other variety, and after drifting about for months, brown and shrivelled, it requires only a few moments in a cup of water to expand to its original form and recover its color.

SHOOTING FOR BEEF.

Some years ago a popular Western amusement was a shooting-match for beef, in which all the marksmen of the neighborhood participated. The homely sport is described by the eccentric Davy Crockett in his "Life and Adventures:"

A farmer, wishing to raise money, would advertise that on a certain day he would kill a fat ox, and would put up a first-rate beef to be shot for. After the marksmen had assembled, a subscription paper was handed round, with the following heading:

"A. B. offers a beef worth twenty dollars to be shot for at one hundred yards, for one dollar."

The paper was passed from hand to hand until the number of shots subscribed for made up the price of the beef. Two persons who had subscribed for shots were then selected to act as judges. They took their stand, and drew their own target—a board with a crown in the centre.

The shot that hit the centre, or came nearest to it, secured the hide and rump; the next nearest shot took the fore-quarter and shoulder; the third secured the other fore-quarter; the fourth took his choice of the four quarters; the fifth the remaining quarter; and the sixth got the hide and the tool in the tree to which the beef was suspended.

The judges stood near the tree, and when a man fired they shouted, "Who-dar!" and the closest gave his name. After all had shot, the judges would measure the distance of the shots, and the best each man had fired. Sometimes one man, being a good mark-man, and having subscribed for six or eight shots, would get nearly all the beef.

EXCESSIVE SHREWDNESS.

As some men are born merchants, so some women are born shoppers. They have a keen scent for a bargain, and by their shrewdness save their husbands vast sums of money every year, though the ungrateful men are often slow to exhibit the fact. Of such a woman the New York *Times* recently printed this story:

She had a look on her face that said plainly, "I am a deeper from Shoppersville, and the clerk is the biggest boob who ever yet abroad of me in a bargain."

"How much is that mosquito netting a yard?" she inquired.

"We don't sell it by the yard, but by the piece," said the clerk. "The piece is worth $1.50, and we will sell one that size."

"I will find out, madam," said the clerk. He went away, and presently returned. "You may have it for $1.25," he said.

"How many yards are there in it?" she asked.

"Fifteen yards, I think," answered the salesman.

"Will you be so good as to tell me how many yards I have measured, in her most frowning tone.

"Fifteen yards, madam," said the clerk, "and that it was a full piece, after all, and the women look it for thirty years, but the difference between thirty years and fifteen years did not by any means represent the change to her pride as a shopper.

PRACTICAL.

The present is not for age or romance, and it is well for people of an ardent, romantic and conversational spirit to remember this. It is related that a certain practical young man, who had resolved to propose marriage to a young woman, put the matter in this way:

"Eleanor, would you leave country and kindred, and go to the ends of the earth to be my wife?"

"Yes, William, I would," said Eleanor.

"Would you do evil rather and neither, and be willing to be disowned and disowned by them for my sake?"

"For your sake I would, William?"

"Then," said the young man, "I fear you are not the practical and sensible girl whom I took you for, and whom only I could take for a wife. Farewell, Leonora!"

A young fellow who had failed at one thing and another at last took up the profession of ship-marine painting. In due process he knew, but, as he expressed it, he "had to do something to keep his head above water."

TERMS

The Youth's Companion is an illustrated weekly paper, published in Boston. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given in any numbers in a single weekly issue of the paper. All the remaining issues of the year—fifty-two numbers are given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Draft, or Express Money Order, payable to the order of THE COMPANION. If neither of these can be procured, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is liable to cut through the envelope, and the money must be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money, for they are payable at the office where they are issued, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of a subscription before the first number will appear on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that no subscribers name is entered by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning paper will not enable us to discontinue it, as we cannot find your name on our books unless you tell us the name of your town.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

DIGESTION AND SLEEP.

It is a somewhat general opinion that sleep suspends gastric activity, much as it suspends the action of the intellectual faculties. Hence the common objection to meals at late hours. This opinion is adopted by some medical writers. Says one writer:

"During sleep the medullary centres relax their activity, digestive fluids are not secreted, and the movements of the stomach and intestines are slow, and almost if not entirely cease."

The Boston *Medical and Surgical Journal* takes the opposite view. It says that the stomach and intestines continue their functions during sleep, though with lessened activity; that the secretions are not suspended; that all the essential functions continue to be exercised; that while there is a diminished activity of the secreting glands, yet in healthful persons these organs are still adequate to their work, as is proved by the fact that many persons can eat a full meal on going to bed, sleep soundly, and be ready for another meal on waking.

It is true, at the same time, that many persons who take late meals suffer from restlessness and wakefulness.

This result, however, may not be due entirely to the eating of a late supper, but to the fact that the digestive system has already been overtaxed, perhaps habitually, by eating too much or too rapidly, by eating food naturally difficult of digestion, or food that has been made so by bad cooking, or by eating when harassed with care, or with overtaxed brains, that were drawing to themselves the nervous energy needed by the stomach. Persons who have offended against nature in such ways had better forego the supper entirely, and give brain, stomach and intestines a chance to recuperate their nervous energy.

So, too, if one cannot get the muscular exercise so essential to vigorous digestion, it might be well to take only a simple lunch at noon, and a full but not excessive meal at night.

As to men whose habits in life secure them a vigorous, normal digestion, they need take no particular care about their food. Some persons, in the above quoted journal says, need food that "stands by" one, such as baked beans and pork, boiled beef and cabbage, and mince-pie. Such persons sleep well despite their hearty fare.

MOUNTAIN-TOP OBSERVATORIES.

Of late the importance of getting high up in the air in order to study some phases of the weather has been specially recognized, and the number of mountain observatories constructed for that purpose is fast increasing.

There are four such observatories in France, one being on the celebrated Pic du Midi. There is a meteorological observatory on Ben Nevis in Scotland, from which full and regular reports are issued, and a very important one on the mountain called the Sonnblick in Austria.

In this country we have such an observatory on Pike's Peak, at an elevation of more than fourteen thousand feet, and another on Mount Washington, sixty-three hundred feet high. The latter has been closed during the winter for several years, but there is now a good prospect that it will soon be in operation once more the year round.

The loftiest of all observatories will be one that is to be constructed on Mont Blanc.

The great importance of these lofty weather stations arises from the fact that in lowlands and valleys the heavy, dust-laden air, while yielding to the impulses communicated to it from the freer currents above, is so much subjected to the local influences of the surface with which it is in contact, that only with exceeding difficulty can any conclusions be found as to the general causes of weather changes. On mountain-tops one stands immersed in the free atmosphere, and can study the aërial motions and currents to better advantage. One great difficulty to be overcome is the severity of the winter season at great elevations. The observers have to face winds of terrific force, to contend with enormous falls of snow, and to endure intense cold.

Electricity has partially solved the problem by enabling such instruments as the anemometer, which measures the velocity of the wind, to telegraph automatically their records to a station at the foot of the mountain. Mr. T. Proctor Hall has suggested an ingenious method by which the barometer on a mountain-top might also be made to telegraph down the changes in the pressure of the air, while a thermometer, in like manner, should transmit to the observer information as to the temperature prevailing thousands of feet above him.

But whether men have to live all winter on the mountains, or succeed in getting the required records by automatic electric signals flashed from the exposed instruments, it is evident that such observations will in future be obtained, in one way or another, with increasing regularity, because only with their aid can the science of the weather be perfected.

TOSSED BY A BUFFALO.

In Doctor Pruen's book, "The Arab and the African," he describes a nocturnal adventure of a friend of his who went out one evening in search of game, his people being in want of meat. After hunting for some time he came in sight of an antelope, and began stalking it. He was an expert hunter, and succeeded in getting well within range without attracting the antelope's attention; but in doing so he accomplished a feat which, Doctor Pruen thinks, must be almost unparalleled in the annals of hunting.

So cautiously did he approach through the long grass that he was unnoticed by a buffalo lying in the grass, an intent was he on his expected game, that, unknown to himself, he stalked right up to the buffalo, and stood, shot in front of its head, with his back to it.

In a second the astonished animal was on its feet, and, with a snort of rage, made a charge; but so close were the two, that although Cole's gun was at full-cock, the buffalo had caught him on the back before he could fire, and his gun flew from his hand as he was flying through the air.

Cole, who is a big, fine fellow, was thrown to a colossal pace and toss him before he could realize his position and restrain his shouts. Then he lay motionless and quiet, feigning death, but expecting every moment to be tossed again.

The buffalo, however, stood for a few minutes, and then, half satisfied that its work was done, trotted off and stood again to watch its victim at a short distance. Then it disappeared in the jungle, while Cole's native boy, a frightened spectator of what had happened, ran to the house two miles away, and brought assistance.

AN OBSTINATE DOG.

A Massachusetts gentleman has a large dog, a cross between an English mastiff and a St. Bernard, which is very fond of killing cats. Indeed, it is practically impossible to keep a cat at the stable, so fond is Karl of destroying them. He has been whipped and chained up, but though in general he is well behaved, he cannot in this respect be brought to reason.

Whenever Karl kills a cat, which happens every week or two, the groom is in the habit of digging a grave, and then making the dog bring the body to the spot. Karl will lead the way, and, when by his victim to the place, which has now become quite a populous cemetery, and while the grave is being dug he lies beside it, licking the cat all over, as if proud of his achievement.

When the grave is ready, he invariably gives it a vigorous nip on the spine, as if to make sure that she is really finished, and then taking her by the middle of the back, he gravely drops her into the hole prepared for her.

When all this is over, he follows the groom to the stable to be whipped. He knows what is coming, and evidently accepts it as a necessary part of the performance. It does not hurt him, and in the least prevent him from disposing of the next puny which is brought to the stables.

WHICH WAS IT?

One of the best compliments a preacher can ever have is this: "His preaches as if he meant every word he says." Nothing is quite so soon detected as insincerity in the pulpit.

A Western minister, who is not always as careful as he ought to be in making his preaching and his practice go together, was talking to a group of friends a story of adventure. It was a long story, and the minister's little ten-year-old girl was listening with deep interest. When he finished, she fastened her wide open eyes upon her father's face and said, very gravely:

"Is that true, or are you preaching now, papa?"

"IGN'ANCE."

A Georgia paper, the *Quitman Free Press*, tells a story of the odd result of an old negro's attempt to use a "big word." The old man was up before Judge Gerry of Dawson, charged with some small offence.

"Have you a lawyer?" the court asked.

"No, sah."

"Can't you get one?"

"No, sah."

"Don't you want me to appoint one to defend you?"

"No, sah; I 'fer t'o I'd leabe my case to de ign'ance ob de co't."

CITIZENS ONLY.

The desirability of care in expression can hardly be too forcibly impressed upon those who write advertisements, circulars and public announcements of all sorts.

A very peculiar effect was produced by the following announcement, contained in the advertisement of a county fair:

"Among other attractive features of this great Fair there will be highly amusing donkey races and pig races.

"No competition in these two contests open to citizens of the county only."

The Washington *Post*, following the lead of some schoolboy, as we imagine, suggests that it is perhaps because history repeats itself that it gets to be so very dry.

Use "Brown's Camphorated Saponaceous Dentifrice" for the teeth. Its superiority is everywhere acknowledged. Price, 25 cents. [Adv.

CHIP AND WAG.

By Katherine Lee Bates.

"COME here, Wag! Here! Here, sir, I say!" But off dashed Wag across the fields after that foolish, irresistible black hen, as if he had been seized with sudden deafness, as indeed he had—in his conscience.

"Here, Wag! Here!"

A clear whistle, with a keen edge of command upon it, followed the ringing call.

Wag faltered, paused, drooped his golden-brown ears very sadly, cast one longing, wistful glance toward the hen, and then came careering back at neck-break speed, the most zealously obedient dog that ever gnawed bone, to his master's bare feet, which he lapped eagerly with his little red tongue. He leaped upon the ragged gray trousers, too, and higher, up to the coarse blue blouse; but a little higher still was his master's face—a boy's tanned, hazel-eyed face, so stern and reproachful in its look as to strike penitence to Wag's doggish soul.

"Aint I told you, time an' time an' time agin, not to chase people's chickens?" asked the boy, severely.

Wag grovelled in the dust for a season; then he started up in unbearable anguish, and capered wildly about his master, uttering a succession of distressed, expostulatory barks, and exercising his tail to such a degree that no one could have questioned the fitness of his name.

"He's a pretty dog," said a laughing voice; and the boy became aware of a young lady leaning over the fence that surrounded the stately country mansion. She was not exactly young, either, the boy concluded, on a further survey, but she wore a white dress of some fleecy texture, set off by pale-blue ribbons, and she swung a lawn-tennis racket in her hand, so it was evident that she was not exactly old.

Boy and dog were both won by her sunny, breezy presence. The dog sniffed at her dainty slippers critically but approvingly, and the boy, pulling off his torn straw hat, replied with a composening frankness of manner.

"Wag's pretty enough, ma'am, as far as looks go, but he's a bird-spaniel, an' it's awful hard to teach him not to chase chickens. He's after anything that wears feathers—that dog is. I'm sorry he scared your hen."

"Oh, it's good for her!" returned the lady, still laughing. "She needs nervous discipline. All hens do, I think. They're fluttery creatures. But you look tired. Have you had lunch yet?"

"Not yet, ma'am," responded the boy, flushing through the tan.

The lady's bright eyes scanned him from uncovered head to dust-stained feet.

"Come in and lunch with me," she said, impulsively. "See! the table is being spread now out under the cherry-trees. Such a little round table! Just large enough for two."

The boy's flush burned redder yet.

"I aint fit," he murmured, casting a quick glance down over the coarse blue blouse and ragged gray trousers.

The lady laughed again, but her laugh was all sweetness, without the merest hint of bitter in it.

"But I'm so lonesome," she said, entreatingly. "I've been playing lawn-tennis all by myself to keep up my spirits. My father and my brother are both away, and I don't like to lunch alone. Strawberries, too—the first of the season, with ice-cream. And the nicest chicken-bones for—what is it you call him? Wag? He lives up to his name, doesn't he? Come; the ice-cream will get cold!"

She held the gate wide open, as she spoke, and smiled with merry eyes. Altogether the invitation was too pressing to be refused, especially by a boy who had had no breakfast.

Wag thought so, at any rate. He sat up on his hind-legs before his master, and begged with uplifted little paws trembling with eagerness. The boy scraped the sidewalk a moment with his bare foot, and yielded.

"Thanky, ma'am," he said, heartily. "You're awful good. And Wag's so hungry."

In the course of a few moments the lady privately decided that, judging from the quantity of chicken, rolls, strawberries, cream and cake which vanished into the boy's red mouth, Wag was not the only hungry guest who honored her table. But, enjoying the appetites of the young wanderers, she signed to the maid who was waiting upon the table to keep the little fellow's plate well filled, while she herself, stroking Wag's silky ears, fed him liberally with the most delicious morsels that had ever passed that happy spaniel's lips.

"Wag! Wag! What a funny name!" she said.

"But we are not introduced," she added, suddenly, turning to the boy. "I'm Miss Winterborn, and you are—"

"Chip," replied the lad, with a twinkle in his hazel eyes. Then, seeing the lady's look of bewilderment, with a gentlemanly instinct he hastened to explain. "My name's Alfred Block, ma'am, but the men always called me Chip."

"Do you mind telling me what men?" asked the lady, with puzzled brows.

"The lumbermen, ma'am," said Chip. "They're rough, you know, an' they called father Old Block. He was steady-goin', you see—not like the most. An' he trained me to keep out o' bad company. So the men they took to callin' me Chip o' the Old Block, an' Chip for short. It began when I was a little shaver, an' some way the name got rubbed in."

"Why, that was very bright in those men!" commented Miss Winterborn, brushing away an azure-winged moth with her delicate hand. "I didn't suppose lumbermen were so witty. In fact, I never thought about lumbermen before. It must be very interesting to live as they do there in the great forests, something like pirates or camping-out."

"It's a sight more like good hard work," responded Chip, laughing. Then he added, soberly, "Father was a lumberman."

"And what is he now?" asked Miss Winterborn, lightly, her attention for the moment being diverted by Wag, who had seated himself on his haunches beside her, and condescendingly offered her his paw to hold.

"Oh, forgive me!" she continued, hastily, for as her glance returned to the boy's face, she saw at once by the look upon it that his father was dead.

Before Chip could swallow the lump in his throat sufficiently to speak again, a young man who looked to Chip as if he were a man of all work crossed the lawn toward them with agitated strides. He held a crumpled bit of yellow paper in his large fingers, and his heavy face was working piteously.

"A telegram?" exclaimed Miss Winterborn. She caught it from his hand and read aloud:

"*Ellen took with the fever. Twins got the measles. Come.*"

"Why, Dennis," she exclaimed, "how unfortunate! I'm so sorry. It's from your brother-in-law, isn't it?"

"Yis, miss, and it's Ellen as has the faver,

Digitized by Google

Ellen, miss, the darlint of me heart, and me the owenly brither at all she's got!" He began to whimper as he spoke.

"Oh, cheer up, Dennis!" said Miss Winterhorn, sympathetically. "It is probably a light case, you know. And you need not be anxious about your little nephews. The measles almost always goes easily with children."

"Sure, miss," groaned Dennis, wiping his eyes on his shirtsleeve, "it's owenly last year Lizt as they had the measles, the two of thim, and if they'd been meant to die now—the swate babbies—sure they'd have died thin. But was there iver back afther the bilses of thim, with the owld master and the young master both away the night? It's not Dennis McCarty as will lave ye here defineless—no, miss, though his heart breaks in the bosom of him."

"What nonsense, Dennis!" cried the lady, springing to her feet. "As if Biddy and Jane couldn't take care of me for ever a single night! Of course you must go, and by the very next train. I'll explain to my father that I insisted upon it. He and Mr. Neil will be back to-morrow.

"Come! Cheer up! You will be by Ellen's bedside before midnight. It's strange about the children, though. I never knew before that people could have the measles more than once."

Chip thought it would be well, since such a domestic exigency had arisen, for guests to take their leave. He whistled to Wag, and as Miss Winterhorn, forgetting boy and dog, turned to accompany the sobbing Dennis to the house, Chip called after her:

"Good-by, ma'am! Wag and I have had a first-class lunch. Thanky."

Miss Winterhorn glanced back over her shoulder, smiling brightly.

"Good-by, Chip!" she said. "I hope we may meet again some day. Good-by, Wag!"

Then Miss Winterhorn hurried on with Dennis; and Chip and Wag, half-aware of a sudden slacking of the spirits, found themselves once more out on the dusty highway.

They strolled on a mile or two further, but at a languid pace. They had eaten much more heartily than was their custom; the afternoon sun beat hot upon them, and both were thoroughly tired from the three weeks of tramping just accomplished.

Wag's drooping tail and hanging head showed plainly that he thought a nap would be in order; and his young master was inclined to agree with him. Except on the burning question of barnyard fowls, Chip and Wag usually agreed remarkably well.

The matter was settled by Chip's cutting his foot on a sharp pebble, as they were passing the village cemetery. It was not a deep cut, but enough to make walking painful. So the boy swung himself lightly up the stone wall of the cemetery, lifted Wag after him, and looked about for a resting-place in the shaded, garden-like enclosure.

Near the point where Chip entered, two small girls were playing about a tomb, which was evidently but little used for more solemn purposes, since the half-opened iron door, which swung from one rusty hinge, revealed a bare interior.

Chip quieted Wag's barking, and sat down on a flat gravestone near the tomb to bind green leaves upon his cut. Meanwhile he watched the little girls at their sport. With the innocent thoughtlessness of childhood they were using the deserted old tomb for a playhouse.

The smaller maiden, who wore a green calico frock, was the "lady of the house." She installed herself within the door, and, partly closing it, appeared to be busy about some domestic duty.

Then the other, a black-eyed little girl in brown, came walking in a stately, mincing way from behind the tomb, and rapped on the door.

"Why, how do you do, Mrs. Brown?" said the lady of the house.

Then the usual "calling talk" was gone through with; but the girl in green did not care to continue the sport.

"Somebody's been in our playhouse," she said, "and put horrid iron things under the bench where we were going to keep our broken china. That's not nice, and I'm tired of this old play, anyhow. Let's go house and base Mary for gingersnaps."

The children joined hands and trotted away. Wag, until recalled by Chip's whistle, frisked sympathetically at their heels.

At one side of the vault grew a weeping willow. Chip stretched himself beneath it, drew the torn straw hat down over his eyes, clasped his brown hands under his head, and fell to thinking.

The white marbles, gleaming in the sunlight, and the quiet graves, with the soft grass blowing over them, and sometimes a rosebush blooming at the foot, or a tall white lily at the head, made him recall, more by contrast than resemblance, a lonely mound under the forest trees far off in northern Maine. There his father slept—the best father a boy ever had, Chip murmured to himself. Hot tears, in the obscurity of the old straw hat, dimmed his hazel eyes.

Yet Block, the lumberman, had been able to do little enough for his motherless boy, as the world counts doing, and when the father was crushed under a fallen pine the son inherited nothing but a gold eagle, Wag and a noble memory.

That was a year ago, and the gold eagle had months since spread its shining wings and taken lingering flight. Wag had been more constant, proving a faithful, frolicsome companion on the boy's toilsome progress from the lumber-camp toward Boston, where he hoped, with the buoyancy of his disposition, to find work for the days and schooling for the nights.

It had been a slow journey, largely made on foot, and interrupted by long halts at wayside farms, where the boy, who was bright and active, had found odd jobs to help him along; but Wag's devotion had never once faltered. Yet the memory was the best of all; and in the centre of that memory shone a single sentence, like a guiding star. Under the straw hat Chip's misty eyes could see his father's bronzed, bearded face, lighted by the cheery smile, just as he had looked when he had said it.

"No luck that ever was, or will be, can put a man in so bad a fix, Chip, my boy, that there ain't a best thing for him to do; and that's our only consarn in life, when one comes to think on't a spell—to do the best thing."

Chip had never forgotten those words. On trifling occasions as on great, they sounded in his ears. Only that very noon at lunch he had dropped the knife, already half-way to his mouth, and taken, somewhat awkwardly, to eating his chicken with a fork, because, observing that this was Miss Winterhorn's way, he sagely judged that to use the fork must be the best thing to do in eating chicken.

But a tired boy, stretched on fragrant grass in the shade, does not think long; and in ten minutes Chip, with Wag's nose nestled beneath his chin, was fast

"What Do You Want with Me?"

asleep under the willow. A few hours after nightfall three men, having come one by one from different directions, were lounging together in the shadow of the tomb, waiting until all lights were out in the village before executing a well-planned burglary upon Judge Winterhorn's mansion.

One of them, in the disguise of a peddler, had pumped simple-minded Dennis until he had discovered, with other more valuable information, enough of the poor fellow's personal affairs to enable him to write the spurious telegram which had drawn him away from the house. Thus the last protector was gone on the night when, as the local newspaper had obligingly informed the burglars, the judge and his son would be the guests of the Forum Club in Lowell.

It was all cleverly planned, except for Wag. The burglars had not calculated on Wag.

Chip was awakened by a long, low, rising growl from the spaniel, which lay with his head upon the boy's breast. Even in the darkness Chip could see the dog's eyes gleaming.

Before Chip's confused senses had half grasped the tall figure of her brother, a newly-fledged attorney at law, came swinging easily up the gravel walk.

"News for your honor," the young man remarked, seating himself down upon the steps under an arching vine of clematis. "There's a fellow nabbed for horse-stealing over at the county-seat—will be up for trial before you next week—who is believed to be a member of that precious burglar gang. Meanwhile, sweet sister, your paragon, young Chip, is gone—fled, vanished."

"Where has he gone?" exclaimed Miss Winterhorn. "And when? Oh, why didn't he wait till to-morrow? Dear! dear! I fully meant to see the boy and tell him that one Winterhorn, at any rate, believed his word."

"The little rascal went off like a shot when the doctor told him that he would be able to trudge to-morrow. Not another morsel of food could he be persuaded to eat under that roof after that."

"Exactly what I should have expected of him," said Miss Winterhorn, with tears in her eyes.

"The little anacondas wouldn't even touch the shoes you sent him, father, but shook the dust of this ungrateful hamlet off his bare feet."

"The little hero!" insisted Miss Winterhorn.

"But you must admit," said her brother, "that this haughty departure puts the boy under no suspicion. He must have got wind of the capture of his pal."

"But how?"

Her brother shrugged his shoulders. "Those slippery customers have tricks to compass even harder matters. The chain of circumstantial evidence against him is very strong. His appearance at our gate just when the bogus telegram was about to be presented, so as to see whether it did its work, his evidently assumed name, his extraction that night to be allowed to follow the burglars, wounded as he was —"

"But he wanted to recover his dog," broke in Miss Winterhorn.

"A likely story that!" commented her brother, contemptuously. "As if a pack of housebreakers, who had dropped in their flight tools and lantern and even a plan of our ground-floor, would hang on to a yelping cur!"

"I'm tired of your heartless ingenuity, Ned," said Miss Winterhorn. "That boy is an honest boy; I know it by something truer and deeper than all your lawyer's logic, and the day is coming when you will see that I am right, and be desperately ashamed of yourself."

This day came sooner than even the prophetess had expected. Precisely one week afterward, Judge Winterhorn, returning from holding court at the county-seat, arrived at his house purple and breathless from the unwonted exercise to which he had been subjected by a very lively, very dirty little spaniel that he was leading by a cord.

"Wag!" exclaimed Miss Winterhorn, after a moment of astonished scrutiny. The spaniel, hearing the name, bounded upon her with joyful barks.

Then the judge related how the convicted horse-thief had begged, at the breaking up of court, for a private word with him, and the favor being granted, had commended to his kind offices this spaniel, silently admiring his own connection with the baffled gang of burglars, but giving no clue to his associates.

In every detail his story confirmed Chip's. The fellow stated, moreover, that he had the dog in his arms when the pursuit began, having been tweaking those golden-brown ears in the hope that poor Wag's yelps might stay the boy's progress.

"For I knowed," continued the jail-bird, "that a chap as 'ud rask his life by whistlin' to a dog when the whistle kep' drawin' the bullets on him, must keer a heap for that dog. But he legged it too lively for us; an' when it come our turn to skip, I jammed the dog under my coat to stop his noise, an' made off with him, more to spite the boy than anything else.

"But it's a decent little brute enough,—best company I've kep' for ten year back,—an' since ye've hooked me for a hotel wher dogs ain't allowed, maybe yer honor'll not mind, seein' as how the boy saved yer silver spoons from the meltin'-pot, takin' him back his dog."

The judge confessed to his daughter that he had felt positive embarrassment in explaining to the criminal why it was that he had no knowledge of the boy's whereabouts. The fellow had stared stupidly at first, and then broken out into a coarse laugh, saying gruffly:

" Es rogues 'ud 'ave give him a better show; an' it wouldn't be surprisin' if he come to ut arter this taste of honest folks. But it aint the boy I'm mindin', yer honor. It's the dog. Ye'll see that the dog aint left to starve!"

The gentle-hearted judge had faithfully promised to give Wag a home until he could be restored to his rightful master.

But how was that rightful master to be found? Ned, after his hour of humiliation, was zealous in the search. He inquired, he advertised, he talked of employing a detective; but November came, and still no news of Chip.

It was Thanksgiving Day, and Mr. Edward Winterhorn, warm and elegant in a new fur-lined ulster, was strolling across Boston Common with a college chum, who was also engaged in sharpening his wits on the legal grindstone.

"I know it's unprofessional," Ned was saying, with a laugh, "but since that unlucky business of Molly's ragamuffin, I go on the theory that a fellow is telling me the truth, till I have evidence to the contrary. A lawyer may as well cultivate his scent for the good in human nature as the bad. It's fairer to human nature and—"

"More wholesome for the lawyer," added his friend, pausing at a diverging path. "I turn off here. Sorry you won't come up to dinner. Mother would be delighted."

"Thanks. 'Twould be very jolly, but positively I can't. His honor would feel very badly indeed if his promising son and heir should fail to grace the Thanksgiving banquet. Good-by."

Ned swung jauntily along toward the Providence station.

"Black your boots, sir?" called a clear, boyish voice, as the young lawyer neared the station.

Digitized by Google

"Perhaps you had better," assented Ned, gazing down critically at a mud-stain on the toe of one shoe.

The bootblack promptly dropped upon his knee and polished away at the shining leather with the zest of one who gilds refined gold or paints the lily, not breaking silence until a passer-by carelessly struck the boy's left shoulder with a valise, when he drew in his breath with a low whistle of pain.

"What's amiss with your shoulder?" asked Ned, in his good-natured fashion.

"I had it hurt a while ago," replied the bootblack, briefly, with an upward glance.

Ned Winterhorn recognized those hazel eyes, and his own face brightened with triumphant pleasure.

"You're the very boy I've been looking for," he exclaimed, clapping the kneeling figure on the sound shoulder.

The recognition was mutual. Chip had only too much reason to remember the dapper young gentleman who had come so often to his bedside and confused his aching head with all sorts of curious questions, repeating his answers after him, and twisting them into such strange and varied forms that Chip himself grew puzzled as to what they had originally meant.

Through it all the feverish boy had realized with bitter resentment that the clever gentleman neither believed him nor desired to believe him, and that what was cruel earnest to the victim seemed only merry sport to the tormentor.

So Chip sprang erect, grasping his brush in tighter hold as he turned a defiant front upon the young lawyer, asking suspiciously, "What do you want with me now?"

"To beg your pardon, first of all," replied Ned, manfully holding out his hand, "and next to thank you for saving my father's property, and then to invite you home to our Thanksgiving dinner."

Chip stood for a moment petrified with astonishment—a very grimy and ragged little statue, it must be confessed, for the world had all gone wrong with Chip since that sudden awakening beneath the willow. He had known hunger and cold before, hardship and disappointment and grief, but never injustice, and the iron had entered into his soul.

The hazel eyes had not carried out of that memorable village the frank, trustful look they had brought into it, and his shaken faith in human kindness had put Chip at odds with all the world.

As he pursued his barefoot journey, he would sleep out of doors rather than ask at wayside farmhouses, as before, for a bed of hay in the barn, in return for milking the cows or putting hand for an hour or so to hoe or axe or scythe; and this exposure to the chill night dews, which earlier in his pilgrimage he had often undergone without injury, now that his vitality was reduced by illness, resulted in colds and stiff joints and shooting, rheumatic pains.

In the city, too, the ailing, moping, solitary boy had encountered difficulties which would have vanished like smoke before the cheery whistle of the brisk, friendly, resolute Chip whom Wag had known as master.

Ah, poor Wag! If only the loving little spaniel had been left to nestle against Chip's heart, it would not have grown so cold even under that thin jacket; but as it was, Ned's cordial words were met by a dark, sullen look and the rough reply: "Keep your own Thanksgiving. I've nothin' to be thankful for."

But Ned was not made of the stuff that is easily rebuffed.

"Won't you shake hands?" he pleaded.

Chip looked at the tan kid glove stretched out to him and then at his own blackened palm, and laughed; but the laugh was not a merry one.

"Well!" said Ned, biting his lip, "I've done my best."

The bootblack started. Suddenly it flashed across his mind that he had not done his. Wronged, harmed, insulted, there was still one best thing to do—to forgive. His father's look, his father's tones, his father's words, all pressed upon him.

Ned's quick eye saw the struggle in the boy's face.

"Do shake hands with me," the young man entreated. "What more can a man do than say he was wrong and is sorry for it?"

Ned's smile was winning, his tones earnest. Chip was conquered, but not by the visible face nor the audible voice. For his dead father's sake the bootblack, wiping his hand on his jacket, yielded it to Ned's strong grasp.

Two hours later Chip, washed and brushed, but still in his rags, sat an honored guest at Judge Winterhorn's table, even his bashfulness forgotten in his joy. For the reluctant, awkward tatterdemalion had met with a welcome of which he little dreamed.

It was not the judge's stately kindness, which only brought the nervous flush to his pale cheeks, nor Miss Winterhorn's gentle cordiality, which filled his downcast eyes with boyish shyness. It was the precipitate rush upon every point of his body at once,—the battery of a curling, twisting, capering, silken ball of dog, a dog hoarse with barking, giddy with spinning, dislocated with wagging, wild with rapture,—the one thing that Chip loved best in all the living world, his own lost spaniel, Wag.

Could Chip have stolen a peep behind the dark veil of the future, he would have seen many a happy reason why he should keep the good old feast that day with a devoutly grateful spirit.

As it was, the boy, gladdened, humbled, purified, thanked God in his simple bedtime

prayer, not for the new home and new friends and new outlook into life,—gifts which were still but dimly apprehended by him,—but for the recovery of three old blessings—a clean name, a light heart, and Wag.

For the Companion.

FIFFIN'S THANKSGIVING.

"Come, Fiffin! Step lively, little gal, if you want to go down to the foot o' the lake with me, this fine fall day!"

The hint was enough. The little girl did "step lively," washing up the dishes with a vigor which, if they had been made of earthenware instead of tin, would have left few whole ones among them. After the comfortable cabin had been tidied up, and her shabby straw hat and still shabbier jacket put on, there was nothing for her to do but wait, with all the patience she could muster, while her father gathered together all the moccasins that he had on hand and half a dozen fox-skins, and loaded them into his sailboat.

The cargo left plenty of room for himself and Fiffin, though the boat was small. They settled beneath the shadow of the patched sail, and were borne by the fresh, bracing morning breeze, as lightly and gracefully as the gulls that dipped, and rose, and fluttered so near, sometimes, that Fiffin thought she could almost stroke their shining backs with her hand if they would only keep still long enough.

It was a rude, solitary life that Tom Morris and his motherless child lived, in that log-built cabin upon the shore of the great lake. Tom had lived in the woods all his life, and it was only in their familiar shadow that he felt himself at home, and the peer of any, rich or poor.

By no means an idle or thriftless man, he found employment during the summers as a guide to tourists who frequented the region; while the remainder of the year was spent in hunting, trapping and fishing. With good health and steady habits, he had little difficulty in keeping the wolf from the door of his woodland cabin; nor had he failed, since his little daughter was old enough to go to school, to send her for one term at least every year, to the school kept in the little village at the foot of the lake.

These few weeks spent at school were, to Fiffin, a season of intense delight. She picked up in that time a surprising amount of knowledge of books and of the ways of civilized life.

Her nickname, Fiffin, was a tender diminutive of Josephine. Tom was very proud of her, and at her solicitation he subscribed for a weekly paper, every word of which she read aloud to him, advertisements included. By and by, as a great concession on his part, and after a great deal of persuasion on hers, he took her down the lake on an occasional Sunday morning, to attend church and Sunday School.

These rare occasions were the pride and delight of the child's heart. To see her father clean-shaven, and with his yet ungrizzled hair carefully brushed, and shining with a generous supply of bear's-oil; his flannel shirt replaced by a white one and surmounted by an immaculate paper collar and gorgeous red and blue necktie, filled her heart with pride and joy.

"We were just like other folks to-day, daddy!" she would declare, triumphantly, as they paddled leisurely home, under the glowing sunset sky, their frail birch canoe dancing from wave to wave, as if, like a thing of life, it shared in her exultation.

At the village, the minister's gentle daughter had spared no pains to win the love and confidence of her little pupil, and to see that the new influences which she sought so eagerly were good.

On this particular autumn week-day morning, when her father took her down the lake in his sailboat, Fiffin gladly took the time to pay a visit to the parsonage while her father attended to his business at the store. She found the minister's daughter, Miss Lizzie, deep in her preparations for the approaching Thanksgiving festival, and, to her intense delight, Fiffin received an invitation to help along the pleasant work.

"You may stone the raisins for me, if you like, dear."

No one else had ever called her "dear," and Fiffin would have gone through fire and water for her sake. As it was, she had only to pick out the seeds from the raisins with the tip of a dainty little penknife, which was, in itself, a treat to handle.

Miss Lizzie spiced mince-meat, which Fiffin gravely tasted and pronounced judgment on. She sliced citron and beat eggs and sugar into a rich golden cream, all so deftly and daintily that her assistant was lost in a perfect maze of delighted wonderment.

"What a slick way you have of doing things!" she remarked, timidly. "Are you looking for company?"

Her friend laughed good-naturedly.

"Why, I'm getting ready for Thanksgiving, day after to-morrow, Fiffin, and my sister and her family will spend the day with us, as they always do." She glanced curiously at the bewildered little face staring at her across the table. "Don't you keep Thanksgiving at your house?"

Fiffin shook her head and flushed deeply.

"Haven't I told you that we don't ever have anything like other folks?" she asked, somewhat bitterly.

Miss Lizzie understood it all.

"Do you know," she asked, "why the governor of the State sets apart one day in the year for a Thanksgiving Day?"

"No, I don't."

"Because it is proper and right that, at this time of the year, when all the harvests are gathered in, and people are glad over well-filled barns and cellars, they should remember to thank God, who has sent the sun and rain to ripen their crops, and take one day for a day of feasting and giving of thanks to Him for His goodness."

Fiffin had dropped her knife and sat listening to her friend's words, with a look of intelligent comprehension in her big, black eyes.

"*Course* they ought to thank Him," she said. "'Tisn't any more than fair!"

Then, after a little longer thought, came the personal application:

"Our potato crop was bigger this year than it has been for a long spell."

"That's nice!" said Miss Lizzie.

"And there's the beans, too! Dad says we've got enough to last us through the winter. And squashes and pumpkins, and a dozen head of cabbage, and—why, I put up a dozen jars of strawberries, an' dried a lot of rosb'ries, and—land sakes, alive!" warming with her subject, "if we haven't got enough to be thankful for, I should like to know who has?"

"Well?"

Fiffin jerked her head to one side, like a reflective sparrow, while she tapped thoughtfully upon the table with the fingers of one little brown hand.

Then she said sharply, "I'll do it!"

Her friend nodded a smiling approval. Then followed an animated housewifely discussion, which ended in Fiffin's taking her departure, laden with a small pail of prepared mince-meat, a jar of Miss Lizzie's tomato pickles, and several carefully copied receipts for turkey stuffing, pumpkin pie, and plum-pudding.

When his little daughter entered the store where he was waiting for her, Tom Morris looked up with a knowing smile upon his rough face and a twinkle in his eyes, that Fiffin knew meant something uncommonly pleasant for her.

"Step this way, Dotty!" He nodded mysteriously as he led the way to a long counter, where were temptingly displayed several ready-made outside garments for women and girls.

"Now, Harry!" he said to the young man behind the counter, "you fly round lively, and see what you've got here that'll suit this young woman!"

He chuckled delightedly. Fiffin's face was a sight to see, as, one after another, the warm, pretty coats were tried on and discussed, until at last the wavering fancies of both father and daughter settled upon a modest, neatly-fitting Newmarket, made of a small russet plaid.

"Just the color of the dead leaves," Fiffin remarked, as she proudly buttoned the soft, thick garment about her figure.

But when the price was announced the warm color faded from her face, and she looked doubtfully at her father.

"*Ten dollars!* That's a good deal to pay out in a lump just for a cloak."

Tom only smiled, and nodded his head reassuringly.

"Peltry has riz," he explained, in an undertone, "and Jack Burns paid me that five dollars that he's been owin' me so long; besides, I sold my moccasins for the cash down. You've arned it, little gal," he added, fondly, as he saw the cloud upon her face, "and there aint no kind o' reason why you shouldn't have as good clo'es as other gals."

But Fiffin was already unbuttoning the garment. She refolded it and laid it deliberately upon the counter. Then she said resolutely, with a little tremor in her voice:

"No, daddy, I can get along well enough without the cloak, and I'm going to have a Thanksgiving dinner instead!"

Tom's countenance fell. He looked disappointed, surprised, almost angry.

"I didn't think," he said, gruffly, "that you was one of the kind that cares more for what they put into their insides than to look neat an' decent outside."

Fiffin prepares a Thanksgiving Dinner.

Fiffin laughed as she fastened her poor little jacket, and stole a mischievous glance at her father's frowning face.

"Don't I always look 'neat an' decent'?" she demanded, straightening her figure with womanly dignity. "My clo'es are clean an' whole if they are old, and—oh, father!" she lowered her voice coaxingly, "I do so want to keep Thanksgiving like other folks. I've just set my heart on it, and I'd rather do that than have the nicest cloak in the store."

Her father yielded to her wishes, but he was puzzled, and not a little disappointed. His child's craving for human companionship, for a share in the life of the great world outside; her intense desire to be "like other folks," was a problem that he had never yet been able to solve.

For himself, he loved the woods, and their solitudes were never solitary to him. His fellowmen were a help, sometimes, but he had little need of their companionship; nor had he the least desire to adopt any of their ways and habits that conflicted with his life.

But Fiffin was his idol, and if she wanted a Thanksgiving dinner she should have it. So he followed her to the market, helped her select her turkey, and bought fruit, spices and sugar—everything, in fact, that the proud little housekeeper ordered, without a word of protest.

Better still, he remained at home all the day of the preparation. He pared and cut up the

Digitized by Google

pumpkin, stoned the raisins, beat eggs, and chopped the pork for the stuffing with such zeal and heartiness that Fiffin was deceived into thinking that he had forgotten all about the coat.

It had been a hard, anxious day for her, but things had turned out remarkably well, and before going to bed that night, she could not forbear a parting look at the array of good things all ready for the morrow.

Lighting a candle, and followed by her father, she opened the door leading into a short, narrow entry that connected the main building with a small out-house, used as a storeroom in moderate weather, with shelves especially for Fiffin's milk-pans and cream-pot.

The one window opposite the door was open, and as the two entered, the strong draught almost blew out the candle.

"You'd better shet that winder, I guess, Fiffin," said Tom, as he sheltered the candle with his hand. "There's consid'rable of a breeze to-night, and —"

"Not enough to do any harm, I guess, daddy," said Fiffin, as she patted tenderly the turkey lying in state, all ready for the morrow's baking. "'Tisn't so very cold to-night, and there's nothing here that the night air 'll hurt. Besides, don't you remember how, when I was cleanin' in the spring, I stuck my foot right through that under sash hand it hasn't been mended yet."

"To be sure, so you did," said Tom. "Well, I must say you *have* done pretty well, for all." He looked about with pleased eyes.

"Why can't you let the 'for all' go?" retorted Fiffin, a little pettishly.

Then she laughed. Fiffin and her father understood each other perfectly.

Two hours later, when all was dark and still in the little cabin, and only the low whispering of the cold wind through the pines broke the stillness without, Fiffin awoke suddenly, with a cry and start, while her heart beat fast and hard, with a strange, frightened feeling, as if something dreadful were about to happen.

She sat up in bed and listened intently.

Everything was quiet, until an owl, perched upon the roof just over her head, sent forth his hoarse, familiar challenge. Reassured, Fiffin lay down contentedly.

"It must have been Hootie that woke me up," she thought, remembering that her pet always selected this spot from which to make his nightly observations. She had turned her face to the pillow, when all at once, loud, clear, and unmistakable, came a clash and clatter from the storehouse.

Fiffin was out of bed in an instant, and feeling her way down the dark stairway, with hasty, trembling steps.

"Daddy!" she called softly, and as Tom awoke with a sleepy growl, she hurriedly explained:

"Somebody has broken into the lean-to! I heard 'em knock some of the dishes off the shelf. It woke me up!"

Tom was wide awake now. He lighted his lantern, slipped on his moccasins, and examined the priming of his rifle as coolly as if he had been expecting this summons for a week.

"Now," he whispered, "I'll go ahead with the rifle, and you keep clost to my heels with the lantern. And the minute I open the door you pull up the slide, an' turn the light right into the shanty."

Fiffin nodded, and the two crept softly along the passage toward the building, from which now came sounds, tumblings and a strange series of thumpings, with the more or less heavy thud of falling boxes and buckets, accompanied by a low, surly growling that Tom was perfectly familiar with.

"It's sartainly a b'ar!" he whispered cautiously; "and if he don't git scairt, an' clear out too quick for me, I'll put a bullet through his thievin' carcass before he's two minutes older."

The door swung outward and with little noise, so that Fiffin had time to throw her light upon the scene, and her father to take careful aim before Bruin, who had his shaggy head deep in the molasses tank, awoke to a sense of his danger.

Encumbered as he was, the bear, with a clinging mixture of molasses, milk and Indian meal, tried desperately to make his escape through the window by which he had entered.

Tom fired.

Stung by the pain of the bullet, the clumsy brute paused an instant with open mouth and angry eyes, glaring upon his enemies as if uncertain whether to fight or run. But his natural cowardice prevailed.

With one desperate leap the intruder gained the window-sill and drew himself up with a growl, just as the hunter's second bullet struck a vital spot. Then with a groan, a groan that sounded frightfully human, he tumbled heavily upon the ground outside.

Tom caught the lantern from Fiffin's trembling hand and ran to the window. There lay the bear in a great heap, motionless except for a few spasmodic twitches of the huge limbs. The second bullet had done its work, and the four-footed burglar had met the just reward of his crime.

There was the exultation of the hunter in Tom's voice, as he exclaimed, "He's done for, the raskil!"

But poor Fiffin was gazing sadly at the wreck that the animal had left behind him, and as she looked, the big tears gathered in her eyes and rolled silently down her cheeks.

There lay portions of the turkey, the pies, the paper of raisins, sugar, butter, eggs and milk, all trampled and ground into the rough plank floor. The Thanksgiving dinner on which Fiffin had been counting so much had been completely ruined. Nothing could be rescued from the wreck.

Fiffin sobbed as if her heart would break.

"It's too bad! it's *too* bad!" was all that she could say; and finding himself unable to console her, Tom took her up in his strong, tender arms, just as he had done when she was a baby, and carried her up-stairs, where he tucked her into bed as tenderly as any mother could have done. There he left her, with an unwonted kiss upon her wet cheek.

"Mebbe 'taint so bad as it looks at first sight," he said. "Things aint ginrally, I've noticed, and—why, Fiffin, I'll bet there's a bar'l of ile in that critter's body, if there's a drop."

It was with a very sober face that Fiffin went about getting her breakfast the next morning, but there were no tears in her black eyes; she had had her cry out; and French Joe, who happened in on his way over from the village and was promptly engaged by Tom to help dress the slaughtered bear, rather wondered at her calmness after such an exciting night.

"But it ees a pitee—a great pitee!" he declared, sympathetically, as he sat down to the wholesome breakfast with Tom and watched Fiffin pour out the steaming coffee. "Ze T'anksgiving dinnare, too! It ees all despoiled—gone up, Tom tell me."

"Yes." Fiffin smiled faintly at Joe's well-meant expressions of sympathy. "I haven't had the heart even to *look* in there this morning, it was such a mess last night."

"It ees too bad!" echoed Joe; but her father interrupted cheerily:

"That b'ar is as fat as a pig, and we'll have a roast off of him for our Thanksgiving dinner that'll make your mouth water. Then there's the squash an' turnips that the b'ar didn't tech; and you must make an Injin puddin'. For *my* part, I don't want nothin' better'n a good, sweet, wheyey Injin puddin', baked till it's as red at the heart as a cherry. Land sakes! we sha'n't go hungry, I guess, if the b'ar did eat up the turkey an' step on the pies; and if I don't git enough out of his hide ter pay for all the mischief he's done, I'll miss my guess."

Both men laughed, and Fiffin brightened up hopefully. A new idea had suggested itself to her—a feature of the Thanksgiving feast that she had not thought of before.

"Joe," she said, kindly, "won't you eat your Thanksgiving dinner with us—you and your wife and little Joe?"

She was not prepared for the sudden brightness that overspread the poor fellow's swarthy face, as he accepted her invitation with a delight that betrayed how lonely and uncompanionable the little French-Canadian family had found themselves, in a foreign land.

"My wife—ah! she be too deelighted, happee, *so* glad, you call it. She haf no mate, no neighbor here, all strangers; and leetle Joe! Why, he laugh his head off, *pauvre garçon!* he so glad."

Fiffin proudly welcomed the shy little Frenchwoman and her black-eyed baby to the hospitalities of her neat cabin that afternoon. But there was something deeper than merriment or pride in her smile as Joe, with an air of delighted importance, presented her with a big basket from the kindly landlady of the hotel at the village, who sent it with her compliments and the hope that it would do something towards making up for the loss of her Thanksgiving dinner.

There was a noble turkey, all cooked and needing only to be warmed; pies, cakes, cranberry-sauce, nuts and raisins, and a box of grapes in sweet, purple clusters, with the summer's lost sunshine shut up in their glowing hearts.

It was a merry, never-to-be-forgotten dinner; and when it was all over, and the pleased and happy guests had taken their leave, Tom drew his little daughter to his knee.

"Look here, sis," said he. "This Thanksgiving has been something like. An' now do you know what I'm a-goin' to do? There's enough ile in that b'ar to pay your tuition at the school this winter, and buy that 'ar ten-dollar cloak, arter all!" MRS. H. G. ROWE.

For the Companion.

DELIA'S NOTION.

"Delia's notional. She kind o' 'minds me of Aunt Seliny back to Connecticut," said Charles Parker to his wife. "Aunt Seliny wa'n't easy satisfied. You remember her, ma?"

Delia.

"Yes, I guess I *do*," replied Mrs. Parker.

"Nothing would do Aunt Seliny but she must have a pianny, the first ever was in them parts, and her not over-able to play on the jewsharp. But she was smart for all that, Aunt Seliny was. So's Delia. Only she's notional."

"Delia aint just like the others, that's all," said the mother, indulgently.

"No, that's so. The rest of our girls is regular old-fashioned girls, just Parkers and Gorhams. Not but what Delia can step round as spry as any on 'em."

"Delia'll come out all right, pa."

"Oh, I guess I aint saying nothing against Delia," the father replied, and went off to his blacksmithing.

Meantime Delia sat with her sister Phœbe in the post-office waiting for the mail-stage. The girls attended to the duties of their father as postmaster of Higden. Forty-five years ago the rural blacksmith was usually a man of importance among his neighbors. Higden folks thought it eminently suitable that the blacksmith should be postmaster. Not only was he a responsible man, fit to be entrusted with everybody's letters, but to lounge awhile in his shop, watching clinking anvil and sparkling forge, was found consolatory by people who had not received the letter they always expected.

Delia sat on the high stool behind the railing, making up the outgoing package of Higden letters, which would cost their recipients five or ten cents apiece, according to the distance of transmission. She was "dressed up fit to kill," as had been remarked at breakfast by Barton Hobart, the "hired man," who was to drive her over to Robinson's Corners that day. The morrow would be Thanksgiving, and Delia hoped to find at the Corners some needed tableware that the Higden storekeeper could not supply.

Delia did not smile at Barton's observation. On the contrary, she threw back her head and looked at him with an air which was all the more superior because she felt dressed up indeed.

She wore a snuff-colored delaine, cut as economically as a gown could decently be, but it was "finery" then, with calico twenty-five cents a yard. Her hair circled her head, smoothly covered her ears, and held on each side one of her mother's two coral-topped combs. The lace collar she wore was Lydia's, for there were not in the Parker family enough gewgaws to go round. Lydia had cheerfully lent the collar, that Delia might be fashionably attired for the visit to Robinson's Corners.

Delia might have started with Barton Hobart just after breakfast, but she did not wish to miss the excitement of seeing the stage come in. The interest of the Parker girls in this daily event was ever fresh.

They were stirred by the blast of the driver's horn "up the road," and delighted by the whip-cracking salute with which he clattered before the post-office to throw down the mail-bag before crossing to the tavern nearly opposite their house.

When several passengers alighted to walk round while waiting for the change of horses, the Parker girls had the sensation that Higden was quite a bustling place. If there were ladies among the passengers, Delia commonly found some valid excuse for crossing the road to observe particularly the make of their hats, their coal-scuttle bonnets, or their gowns.

This day the stage did not stop at the post-office, but went straight to the tavern, and discharged there a spick-and-span young gentleman, who straightway crossed the road with the mail-bag in his hand.

"Young ladies, the driver asked me to give you this," he explained, with a smile and a bow that Delia mentally contrasted with the awkwardness of Barton Hobart. "Something's gone wrong with the stage, and the driver asked me to bring this to you while he fixes it."

The stranger was but a simple talkative youth under his manly spruceness; but he was a flitting meteor from the fashionable world to these girls sorting the mail deftly into alphabetical piles. Fourteen-year-old Phœbe scarcely breathed, and Delia thrilled with the newness of it. She was glad she had on her best, and suffered a pang of shame when Barton Hobart, coming up from the cellar trap-door outside, rolled a mammoth pumpkin in at the door, and followed it. The stranger looked surprised.

"Hello!" said Barton, meaning to impersonate the pumpkin. He was sixteen, as was Delia; awkwardly long-legged, with a face of a peculiar, girlish fairness, which blushed easily, though his hands were red and work-hardened. He flushed now to his hair at sight of the stranger. No one spoke; Delia frowned slightly, and Barton, after an abashed minute, rolled his burden on.

It had seemed to him of late that Delia was "mad" at him. Now he felt certain of it, though he was far from knowing what his offence had been; but Barton was a large-hearted boy, with a stock of patience and of what, had he been a girl, would have been called sweetness. He shut the door carefully, and made the least noise possible in rolling the pumpkin on to the kitchen.

"Our hired man," said Delia, airily, while Phœbe gaped at her.

"Thanksgiving preparations?" said the visitor.

"Yes. We are to have seventeen friends for dinner," Delia announced. "And my Uncle Daniel is coming clear from Chicago."

Now the town was drifting in for the mail. Squire Bissell and old Mr. Mullet and Mr. Billings, of the tavern. The stage-driver "tooted" for his passenger, who made his manners to the little postmistresses, crossed the road, and was soon out of sight.

Presently all the bustle of mail-time had ceased;

Digitized by Google

the only sounds the girls could hear were their father's hammer, their mother "shooing" the chickens, and horses stamping in the forge. The Parker girls returned slowly to their usual frame of mind.

"What made you act that way to Barton?" Phœbe demanded, wonderingly. She was a practical girl and unimaginative, but it had dawned upon her that Delia had "another notion in her head."

"I said he was the hired man," replied Delia. "He *is*."

Now Phœbe had never thought of Barton as the hired man, but as Barton.

"He isn't old enough. He's the hired boy, then," she observed.

"He's hired," said her sister, in a positive way she had. "Father hires him. He's not one of our family, Phœbe."

"Barton isn't?" said Phœbe, blankly.

"No servant is." Delia's chin was high.

"Servant?" gasped Phœbe.

"It's not right, Phœbe, nor proper, the way we treat Barton—the way Barton behaves. He don't know his place at all."

"Know his place!" Phœbe's astonishment could find no lengthy expression.

"No. Why, Phœbe, you know he don't! It's just as though he was one of us; we all act so, and he does. He isn't. He's the help. It's not proper. It's not doing right by Barton, either, to encourage him so," said this young aristocrat, firmly.

Whence, in that hard-working, common-sense day, whence, in that country settlement where sons and daughters of neighbors were "helps," whence had come Delia's new inspiration? In what corner of her capricious little head had the strange idea of social inequality taken root, and how been encouraged to growth? Phœbe, far from comprehending the notion, yet made several shrewd guesses at its origin.

"You've read it, Dely! Or it's the airs of that boy on the stage. Or it's because Uncle Daniel's coming. Why, he'll like Barton!" said Phœbe, warmly. Small appreciation could Delia get from Phœbe.

Soon Barton had driven the old rockaway to the door. Delia put on her cape and quilted brown hood, lying ready. Ordinarily she would have sat with Barton for company's sake, but now she stepped up to the back seat of the rockaway, and sat there in solitary dignity.

Simple-minded Phœbe viewed this with some indignation and amusement, but chiefly with bewilderment.

Turning to serve his mail to a new-comer, Phœbe soon forgot Delia. In sorting the letters they had dropped one on the floor, and that letter was for Barton Hobart. A letter for Barton was a hitherto unheard-of thing. Phœbe studied it inquisitively as she laid it by.

Barton had been brought up by an uncle in the next State. His boyhood had been a hard one. He had worked beyond his childish strength, and had little and poor schooling. When his uncle, a driving but not a conscienceless man, had advised him to try to find work where school advantages were better, Barton had gladly struck out, and had travelled afoot until he had found a place with the Parkers in Higden. He had lived with them two years, working for his board and going to school winters.

It would have been easy, looking into the Parkers' living-room any evening, to guess at Barton's ambition, if the vague desire he knew to be hopeless could be called such. He would sit, puzzling in advance of his class over the last sums in his arithmetic. He knew there were depths of mathematics beyond these, and he knew of other sciences concerning which the Higden school would never enlighten him.

Squire Bissell's boy was going to the Ridgeville seminary, a modest institution, but as far beyond Barton's reach as the moon. He found some comfort in telling himself what he would do if he could. Meantime he was not dissatisfied to work out problems in discount. For he was contented by nature, and it seemed to him now that his lot was a happy one.

When Delia and Barton got home, shortly past noon, the kitchen was in bustling disorder. Mrs. Parker and Lydia were picking chickens and a turkey, Caroline stirring a cake, and Phœbe slicing pumpkin into the iron kettle on the crane.

Delia took the place of her mother, who had been working with an aching head bound in vinegar-soaked brown paper. Barton brought in armfuls of snowy wood, and replenished the roaring fireplace. Then he fell soberly to the task of pounding cinnamon, for he was a handy boy, ready to do anything needful.

This was singing-school night. Barton, wielding his pestle, struck up a singing-school tune. The lad sung well. With the snow drifting on the window-sills, and the warmth and clatter within, the big kitchen was a jolly place.

"Oh, I forgot. There was a letter came for you, Barton," Phœbe cried. "It dropped on the floor, and I found it when you'd gone. It's on father's desk."

"Me!" Barton ejaculated, incredulous; and went, whistling, to solve the mystery. His absence was Delia's opportunity.

"Barton's so noisy," she said, sharply. "He ought to be told to be quiet. You ought to tell him, Lydia or mother."

"Why, Delia! You've caught mother's headache," said Lydia.

So that it was somewhat hard for Delia to go on. But the "notion" of the morning was still in her head, and she nerved herself to discourse upon Barton's inferiority. Phœbe, guessing what was coming, bent over her kettle with flaming cheeks of shame.

"We don't do right about Barton, girls; we never have," Delia began. "We make too much of him. He's just as important as any of the family; you can see he thinks so by the way he acts—just like one of us! Father and mother think so, too, and all of you seem to. You ought to know better. I think, girls, just because we live in the country, we don't need to do things so different from other people, do we?"

Lydia dropped her handful of feathers, and looked at her sister. She had pleasantly clear eyes.

"How should it be, then, Delia?" she said, quietly.

"You ought to know, Lydia," said Delia, impatiently. "It's the way everybody around here does with hired help. I know that, but that's no reason people should that know better. I don't believe Barton would care if we did the way we ought to. It's because he don't know how to do that he puts himself forward so, and we ought to tell him better. We're all young ladies now," said Delia, with a characteristic straightening of herself, "and we ought to have things as we want them, when we know how they ought to be. I don't blame father and mother; they've got old-fashioned ideas. Nor Barton; nobody's told him what his—his proper place is. But *I* mean to begin."

Phœbe tittered nervously; otherwise there was stillness.

"What *is* Barton's place, Dely?" Lydia ventured in honest perplexity.

"His place—" Delia began, impressively, but hesitated.

She had a clear enough idea of what Barton's place should be. She pictured him, serenely, as prefixing "Miss" to all their names, and staying somewhere out of the living-room of an evening, and waiting for his meals till the family had finished.

Delia had never seen such an arrangement, but in books she had never known anything else. And Uncle Daniel was coming to-morrow, straight from a place where books were lived up to! How would he look upon their backwoods ways? But with those three blank faces confronting her what could she do? She looked at them in vexation.

"I hope," Lydia began, gravely, "I hope, Delia —"

"Hush, here's Barton coming!" said Phœbe.

Barton, still whistling, entered the room. His letter stuck out of a pocket. But Barton did not mention it. The only indication of his having had the strange experience of a letter was the excitement he strove vainly to suppress all that afternoon.

He frolicked with the little boys, prancing them about with long-legged strides. He sung for them lustily:

> Did you ever go up to Thanksgiving?
> What a terrible rumpus it makes!
> And your mouth is as hot as a pudding,
> They put so much spice in their cakes,
> They put so much spice in their cakes!

As a crowning act he went out through the snow to give the headless picked turkey and chickens a last roost in a tree. The little boys enjoyed his mood exceedingly. But Delia frowned on all his proceedings.

If Barton had still any doubt of Delia's being displeased with him the evening removed them. As he came home from singing-school with Phœbe, Delia marched alone and high-headed several yards in advance of them. Barton asked himself in patient anxiety what he had done.

On reaching home Delia would not condescend to speak to him. Lydia had been laughing at her sister's grand airs, and Mrs. Parker had ruthlessly remarked that she guessed Barton Hobart's folks was just as good as anybody else's. Delia's temper, not usually bad, gave way under these afflictions, and she flung herself angrily into her room. When Phœbe came to bed beside her, Delia would not speak.

There she lay awake in the dark for an hour after Phœbe had gone to sleep by her side. Delia's head was still full of the notion that Barton should be made to "know his place." But how?

Had not she herself treated him like a brother? Had she not accepted "The Chaplet of American Poetry" from him on the previous New Year's Day? That gorgeous red-covered volume had come from Barton's little savings for the year.

She was sure he had gone without a winter-cap to buy that book for her. Now the thought of it vexed her greatly. There was war in her soul. On the one side were her liking for Barton, her regard for the opinions of her people and their neighbors, and her own conscience, which did not assent to her idea of superiority to the "hired man." On the other side was her "notion." Now Delia's notions had the force of mania with her while they were new:

The more she thought, the more her conscience reproached her, and the more it told her she was wrong the angrier she became. At last the bad temper got completely the better of her. She rose from her bed, went into the kitchen, took from the "chest of drawers" that volume, "The Chaplet of American Poetry," tore out the leaves and thrust them into the kitchen stove, which still glowed with brands of hickory. Then Delia crept back to bed with a sense that she had done a very wicked thing, as indeed she had. With that consciousness the tired girl fell into sleep and troubled dreams.

—

Delia woke suddenly with the sound of affrighted voices in her ears. Her grandmother had roused her. On the snow under her window lay a broad, red glare.

By its light she saw her father standing, swinging his arms, and hoarsely shouting "Fire!" She woke Phœbe, her heart pounding; they huddled something on with shaking hands and ran downstairs.

In the best room their distracted mother was pulling up her good yarn carpet; they saw the chairs flying over it. From opposite doors burst Lydia, her arms piled with clothing, and Barton with their father's books and papers.

"The house is burning up," he cried. "It's going sure."

And burn it did. Delia and her sisters watched their house dwindle to red embers. Down upon the coals came rain, and on Thanksgiving morning the Parkers looked over from the tavern upon a black space around the chimney of their home.

Had this misfortune come alone it would have been dire enough. But Delia's father lay quiet and pale on the stiff sofa in the tavern parlor. In the midst of the night's confusion he had slipped on a burning stair, and his leg had been seriously broken. This was the situation which, with such courage as a sympathizing neighborhood could give, the Parkers were called upon suddenly to face.

It was Phœbe who broke down. She sat half-lost in the dress she wore, rocking the baby. They were all in other people's clothes. Barton had just been in to survey them, and make droll remarks about their appearance and his own. He wore Mr. Billings's long-tailed Sunday coat. Barton was making a brave attempt to cheer the family. It would have seemed that as viewed by Barton the calamity was a small one.

But Phœbe, gazing after him as he went, broke out crying.

"He's going away," she wailed. "I'd like to know what we'll do without Barton now. He's going away!"

Barton faced about, warmly blushing.

"Whisht!" he begged. But Phœbe went on sobbing.

"He's going to Ridgeville with George Bissell. He's got the money for it. His uncle is going to give it to him, because Barton worked so hard when he lived there. He told me last night coming home from singing-school. There!" Phœbe's tears dropped on the baby's head.

"What's this, Barton?" said her father, his tired face brightening with interest.

"It aint much," he said, uneasily. "Uncle's made some money out of timber, and he says he'll give me a little. He's always meant to when he could, so he says. 'Twon't be much. I thought maybe I'd go to Ridgeville a term or two, but I wa'n't set on it. Now I sha'n't go, nor think of it."

Barton worked his fingers in the pockets of his long coat, swallowing hard in his embarrassment.

"There's enough to do here now, I guess, and enough ways to use what little I'll have. You didn't take me in when you didn't know much about me, and give me a good home and treat me as good as you have, for nothing. I aint going to slip off the first time you've needed me," said Barton, choking, "and you needn't think so."

If any of the Parkers had tried to speak then they would have choked, too. Delia sat quiet, and looked at him. The awkward boy with his fair, pleasant face and honest eyes seemed to tower above them all, to be the worthiest among them—and in his simple modesty not to know it.

Delia could look forward and realize what he would be to them now. He would stand in her father's place in the hard season that must follow for them all; he would take up his work and do it. She knew his steady brain was capable of it, and that his willing hands would do it faithfully; she knew his own desires would be forgotten in the task. This was Barton.

Yesterday and all it had held seemed far away and hard to recall, but something odd and incredible she did recall. Why, she had even fancied him beneath her! She had planned to degrade him to a humbler plane. Her heart sunk with shame.

"Barton!" she began, but Barton had escaped.

They had their Thanksgiving dinner in the tavern kitchen, with all the guests they had looked for and with plenty to eat, for Mr. Billings had not been behindhand in holiday preparation. Uncle Daniel, whom the stage had brought, sat at the head of the table. As regarded Uncle Daniel he was a plain sort of man, who gave most of his attention to his old mother.

But later he went with Barton to look at the charred timbers of the house, and to discuss with him the plans for the future building.

"You've got a good smart boy there," he said to his nieces, coming back. "He's just what you need right at this time. You're good girls; you've got plenty of sense and grit, and you're worth a kingdom. But right now that boy is worth the whole half-dozen of you! You'll come through this all right with him, I'll warrant."

Delia's eyes met those of her sister Lydia, who found her way to her. But "You silly little coot!" was all she ever said, and it was all Delia needed.

EMMA A. OPPER.

For the Companion.

THE BELLIGERENT TURKEY.

How pompously irate he was, and how quakingly afraid was she!

I mean, of course, Mr. Sam Johnson's big bronze gobbler—who had taken first prize at three different poultry shows during the past month—and Miss Sallie Maynard, the new teacher at Clover Hollow.

Miss Sallie was not much given to fear in a general way. Six weeks ago she had walked briskly into the Clover Hollow schoolhouse, and

the way in which she had reduced to order the turbulent company there assembled had been a source of gratification to Mr. Sam Johnson, the trustee, even though his own son had come in for a goodly share in the general discipline.

Mr. Sam Johnson admired the energetic little schoolmistress greatly—she was so plucky, so bright, so business-like, so exceedingly sensible and satisfactory. She feared neither big, mutinous boys nor tall, giggling girls; she did not mind cows in the least, was fond of horses and dogs, and would not even run from a mouse. Yet here she was, cowering and cringing in abject terror before an ill-mannered turkey!

"Quit! quit!" called the turkey, baugbtily.

"Oh, my gracious!" gasped Miss Sallie.

"Gobble-obble!" he continued, sternly. "Go back, woman, go back!"

Miss Sallie wrung her hands. It was half-past eight o'clock already; how could she go back?

"Don't be afraid," said a voice from the other side of the fence—the voice of Mr. Sam Johnson, in fact. "He'll run away, if you don't. He won't hurt you, really."

Wouldn't hurt her? Even as he uttered the words, the big bronze gobbler banged himself insolently against her skirts, and Sallie, panic-stricken, sent up a dreadful shriek.

Then, in an ecstasy of fear, and without

knowing what she was doing, she grasped her umbrella, swung it aloft with a superb gesture, and brought it down with some force upon the head of the belligerent turkey; but immediately she flung away the umbrella, and clasped her hands tragically. Then Mr. Johnson came over the fence and looked at the turkey, which lay fluttering in a heap on the ground.

"You have killed him, I'm afraid," he said, coldly.

"I'm sure I hope so!" cried Sallie, her eyes full of wrathful tears.

This was adding insult to injury, and Mr. Sam Johnson picked up the hapless gobbler, and

Digitized by Google

stalked away in frosty silence. Miss Maynard wiped her eyes, and likewise went her way, though in deep dejection.

But the turkey was not dead—far from it. As Miss Sallie came over the brow of the hill that very night there he was, strutting back and forth in the road, evidently awaiting her with a heart full of fiery vengeance.

Sallie climbed the fence and slunk ignominiously by on the other side, gripping her umbrella convulsively, in case of pursuit.

"Aunt Martha," she remarked half an hour later, as she warmed her feet at the kitchen fire, after a full account of her adventures, "doesn't it seem really sinful for that ferocious creature to be swelling around in his insolent pride, when we haven't so much as a skinny, long-legged chicken for our Thanksgiving dinner? Oh, with what exceeding joy, Aunt Martha, I would break his big ugly wishbone with you, and hang the pieces over the front door to try my fortune! But he'd bring me bad luck, I dare say."

The next morning Mr. Sam Johnson, happening to glance out at the window opposite, as he sat at his late breakfast, observed the dignified Miss Sallie Maynard running for her life up the hill, with the big gobbler in hot pursuit. They were too far away for a rescue, so he leaned back in his chair and laughed till he shook.

"But that was too bad, though, really," he had the grace to say presently. "Sam, my boy, when you feed him to-night, you get him into the yard and shut him up for a spell. And now you skip for school, you rascal, or you'll be late; and I'd recommend you to walk pretty straight to-day, if you don't want a trouncing, sonny."

The advice was sound, but it was powerless to save Sam junior nevertheless.

"Samuel Johnson," was said in wrathful tones an hour or so later, "come this way instantly."

He came.

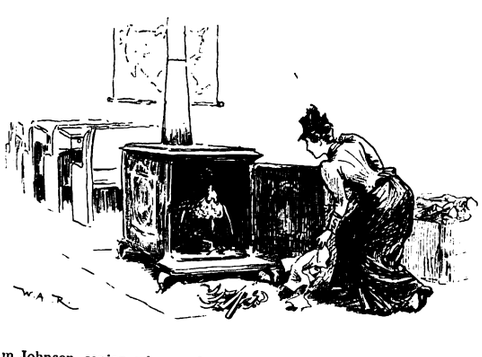
"Pa said I'd get licked to-day," he remarked, grinning sheepishly up at his angry schoolmistress, "'cause our old gobbler chased you up the hill."

Sallie proceeded at once to verify the prediction, remarking as she finished:

"There! Now tell 'pa' that perhaps he'd better shut your old gobbler up, if he doesn't approve of the consequences!"

Sammy nodded with a thoughtful air, put his hands in his pockets, and returned to his seat. He got into no more mischief that day, so far as Miss Maynard knew, but he lapsed occasionally into spells of deep and apparently melancholy meditation.

Nor was the ferocious turkey anywhere to be seen when she went home that night; but Sallie's heart now misgave her sorely.



"That finishes my chance for next term, I suppose," she thought, ruefully. "I ought to have known better than to make such a speech, of course, but to think that he saw that, and kept back out of sight without caring whether I lived or died! Yes, and laughed, too. Oh, I know just how he laughed!"

She laughed a little herself, though half-inclined to cry.

"Well, it can't be helped now. There are other schools in the land, though I shall hate to leave poor Aunt Martha again."

Next morning she started very early for the scene of her daily labor. Bobby Bangs's equations were pressing her. She had forborne to worry Aunt Martha with an account of yesterday's race up the hill, and its consequences, actual and possible.

No; the big bronze gobbler was not abroad to-day, either. Instead, she encountered Mr. Sam Johnson, senior, who was leading his horses down to the watering-trough for their morning draught.

"Good morning!" said he, cheerily. "Cold, isn't it? Just right for Thanksgiving, though. I'm very sorry that ugly turkey bothered you yesterday, but it sha'n't happen again. I've got him shut up now, where he can't possibly get out."

He spoke in the gentlest of tones, and with a decidedly conciliatory smile, and though Sallie suspected raillery in his glance, she concluded to overlook that, and went on with a light heart.

A chill struck her as she entered the empty schoolhouse. What, no fire yet? Tommy Smith had orders to build that fire punctually at seven o'clock, to insure a warm house when the little ones arrived; but she had suspected him of remissness several times of late. Now he stood convicted.

"I'll see to this!" thought Miss Sallie, indignantly. "I pay for early fires, and I'm going to have them. If Tommy Smith isn't equal to the task, he must make way for some one who is. I guess Johnny Jones would be glad enough to try."

Meantime it was cold, and the fire of her wrath was by no means calculated to warm her chilled finger-tips up to the point of Bobby Bangs's equations; so the equations must wait.

Down on her knees went Sallie before the stove, caught up a handful of shavings and flung wide the great square door.

Instantly "Quit! quit!" sounded from the sooty cavern, and as she shrank back with a faint cry, a long, purplish, evil-looking head darted out, turning sideways, and a fiery eye confronted her. It was that dreadful turkey!

Not a moment was to be lost. "Gobble! gobble!" said he, and began forthwith to swell and swell, till he seemed likely to burst the iron walls that enclosed him.

More dead than alive, Sallie dashed at the stove, and after a slight scuffle, shut the door again, with the ill-looking head behind it. Then she sat on the ledge in front, and braced her back against the door for safe-keeping.

What was she to do? Wait here quietly till the tardy Tommy Smith put in an appearance?

Suppose he, too, should be afraid of prize gobblers? Besides, the story would spread throughout the district, and she—where could she hide her diminished head?

No, no, that would not do at all. Sallie bent her head on her hand and tried to think, but her brain was in a dreadful whirl.

As the moments passed her fears naturally abated, but so did not her resentment at the trick which had been played upon her.

Such an unmanly, such a cowardly thing, she thought, for Mr. Johnson to do! "Answering a fool according to her folly," she supposed. He said he had shut him up, and no doubt he was ready to burst with secret laughter as he said it.

"A man who would do this would do anything," Sallie concluded. "If he were answered according to his folly, I suppose the joke would be turned upon him some way. I suppose I could go on with Bobby's equations, and act just as if I didn't know the dreadful thing was there; but I am afraid when Tommy opened the door, all unsuspecting, poor innocent lamb, the monster would rush out and devour us both."

She paused, looking about the room with a thoughtful frown.

Presently her glance fell absently upon one or two articles which chanced to have been left on her desk. "I wonder—if—I could," she murmured. She was under the influence of a temptation, which she ought to have resisted, to turn the tables on her supposed persecutor.

She looked at her watch, hesitated a moment, and then sprang to her feet, prepared to carry out a sudden resolution to capture the turkey.

Hastily arming herself with the articles on the desk — her own large sweeping-apron, and a ball of stout cord, lately the property of Sam Johnson, junior—she resumed her former position. Then, clinching her teeth hard and bracing her back against the door in case of emergency, she opened it little by little a few inches, and awaited the event.

It came—retreated—advanced again. Now for it!

In an instant the door gripped him and held him fast, while the snaky head was quickly swathed in the folds of the apron, and firmly bound. Then, as if taking her life in her hand, she opened wide the door, and as the great turkey floundered out, flung herself upon him.

Fierce was the battle that followed, but short and decisive. At its conclusion he lay stretched out, bound hand and foot; or at least legs and wings. Sallie sat on the floor beside him, and panted.

But there was no time to spare. Carefully wrapping the voluminous folds of the apron about the turkey, she raised him in her arms, thrust his ungainly legs under her shawl, and staggered out into the road.

Right past the Johnson domicile she bore him, half-expecting an attempt at a rescue, for both Mr. Sam Johnson and his mother looked out curiously from the kitchen window. But apparently no suspicion of the truth came to them, for she marched on unmolested.

Great was Aunt Maria's amazement when her niece came staggering in, dropped her burden upon the table, and sank exhausted into a chair. Nor was her bewilderment lessened by the account she gave of herself.

"It's ours, Aunt Martha—our Thanksgiving turkey," she gasped. It was not true, but one wrong step always suggests another. "And we thought," she went on, "that we weren't going to have a turkey at all! Isn't he lovely?"

"For the land's sake!" cried her astonished aunt. "Where on earth did you get him?"

"Where, indeed!" laughed Sallie. "Isn't he a big, beautiful fellow? Aunt, ask Mrs. Brown to bring the children over to have dinner with us; he's much too big for us, and I'm sure they haven't any turkey—unless he's given them one, too—" which he hadn't. "Now, Aunt Martha, stop staring so, and don't waste any more time. You'll have to fly round, you know, to get everything ready. Off with his head! that's the first step. I must scamper back as fast as I can, or those imps will turn the schoolhouse out of the window. He might have sent him here for me, I almost think, instead of making me bring him myself. However, we won't find any fault, will we? I think he's the most generous man I know."

"Sarah Maynard, who give you that 'ere turkey?"

"Guess! No, you never could. Well, it's from Mr. Johnson."

"For the land's sake! Sam Johnson never gave you that turkey!"

"How did I get him then, unless I stole him? He was Mr. Sam Johnson's big prize turkey, and now he's mine, and we'll kill him and eat him, and think on our marcies, won't we? You fat rascal! how I shall enjoy eating you to-morrow! And the seven little Browns, won't they labor with him? Good-by, I must go now."

As soon as her niece was out of sight, Aunt Martha threw her shawl over her head and ran across to the Brown cottage, and communicated the good news to Mrs. Brown and the seven little Browns. Then she returned to her own domain, and settled down to her work. Alas, poor gobbler!

The delights of an odorous, piping-hot, done-to-a-turn Thanksgiving dinner have come to be such an old story to most of us, that it is scarcely necessary to dwell on them here. Needless to say with what vim the seven little Browns, unwontedly clean and smooth and shiny, polished off the bones of the mighty turkey and accepted second and third helpings, to the mingled confusion and delight of their perspiring mother; or with what urgent hospitality Aunt Martha plied her guests so long as there was a presentable scrap left to ply them with, and only allowed them to leave the table, finally, because it had been reduced to the condition of Jack Sprat's platter.

But I will just pause to mention that much mirth was created by Sallie's mounting the youngest Brown on her shoulder, and directing him to hang the wishbone on a nail over the door, charging him to be sure to be the first male biped to come under the charm; which Jimmie Brown, aged two and a half, promised faithfully to do.

There was a dinner on a much grander scale up at the Johnson homestead, but as the sun slowly sank and night drew on apace, the guests one and all departed, and its accustomed air of quiet returned to the old house.

Mr. Sam Johnson, with his feet on the fender, lay back in his easy-chair and meditated on the unaccountable disappearance of his prize turkey, never dreaming of the whole-souled way in which the turkey had been making himself agreeable to the seven little Browns that day.

Rap, rap, rap! went the old knocker on the big front door, as imperiously as if the Czar of Russia himself stood without and demanded admittance. Yet all that did actually stand there was just a common pasteboard box of moderate dimensions, while a small boy could be dimly seen speeding away down the road into the gathering shadows.

Grandma Johnson set the box on the table, hastily put on her glasses and inspected it curiously. It was neatly tied with blue ribbon, and addressed to "Mr. Samuel Ebenezer Johnson."

That gentleman left his comfortable chair, and also came to the table. He studied the card for a moment, then untied the ribbon and carefully removed the lid. What do you suppose that box was filled with? Feathers!

A neatly folded note lay on the top, and after a moment's hesitation he opened it and slowly read:

"With Miss Sarah Maynard's compliments!"

With Miss Sarah Maynard's compliments! The box fell to the floor, and a cloud of downy plumage arose about them as Mr. Sam Johnson stared open-mouthed at Grandma Johnson, who in her turn stared back open-mouthed at him. Sam, junior, who had been keeping modestly in the background, broke into a shrill cry: "O pa! O pa! it's the old gobbler! O pa! O pa!"

"Sure enough!" chimed in grandma, quivering.

Mr. Sam Johnson slipped the note into his waistcoat pocket, and went back to his chair, looking very thoughtful. Grandma Johnson, getting her wind again, questioned and scolded, and questioned and scolded, but her son said never a word. Sam, junior, watched his parent furtively for a few moments, then sidled up to him and laid his hand on his knee with an engaging smile.

"Say, pa!" said he.

"Well, Sam?"

"I want to tell you somethin'," giggled the boy, still keeping his eye sharply on his father.

"Well, tell away."

"But you've got to promise not to whip me, you know."

"Sam, what have you been up to, you young rascal? I know you're at the bottom of this mess."

"Well, I aint, then, pa," said Sammy, guilelessly. "It's the teacher that's to blame—mostly."

He looked thoughtfully at the scattered remains of the gobbler. "If she hadn't whipped me for most nothing, I shouldn't have tried to pay her off for it. I think she's a good deal more to blame than me, pa."

Grandma Johnson quite agreed with him, but

Mr. Sam Johnson thought differently. Perhaps there was room for difference of opinion. The boy's "joke on the teacher" turned out to be a joke upon him and his father as well; but the teacher plainly did what she had no right to do in taking the turkey home, and acting as if it were her property. Such foolish "jokes" should be rebuked, not by a new proceeding of the same sort, but by openly confounding the perpetrator.

INSATIABLE.

Can wealth give happiness? Look round and see
What gay distress! What splendid misery!
Whatever fortune lavishly can pour,
The mind annihilates, and calls for more.

Selected. —*Dr. Young.*

For the Companion.

JOHN MACBRIDE.

Heavy rain stopped work in the Deep Gully lock-pit about ten in the forenoon of February Thirteenth. As the engine whistled "Knock off," three hundred men threw down their drills, jumpers, striking hammers and other tools used in rock excavation. Forty cart-drivers unhitched their horses. Soon all hands, except the foreman, the engineman and two others, were following the cart-horses down the road to the boarding-houses, half a mile away.

"Toot for glycerine," said the foreman to the engineman. "There's eight long holes I'd like to fire while the pit's clear."

"How many cans?" asked the engineman, with his hand on the whistle-wire.

"One will do."

The whistle sounded five short screams and one long *too-oo-oo-t* after an interval of twenty seconds.

At that the stragglers in rear of the home-going procession ran a few steps. The men were morbidly afraid of nitro-glycerine, which the contractor insisted on using because of its shattering effect.

In 1879, when John Macbride had the adventure I am about to narrate, this explosive sprang into popularity with Blind River contractors, who abandoned it in the course of a twelvemonth almost as suddenly as they had taken it up, and resorted to giant powder, dynamite, and other preparations of nitro-glycerine that do not, like the pure article, explode easily by concussion.

Meantime "the stuff" had terribly revealed its qualities. At Williamson's Cut, ten miles above Lobb's contract, Robert Watson had carried an apparently empty can home to his wife. He, she and two children were found dead in the shattered interior of their shanty. A little girl, the only survivor of the family, said that her mother had been scraping the inside of the can when the explosion occurred.

While the foreman at Wolf's Rapid was pouring

Digitized by Google

the contents of a can into a hole, he spilled some, and in rising, brought his iron-shod heel down on it. The man was hurled against the rock wall, with his leg twisted out of joint at the knee, though the main charge did not explode.

As many as fifty "accidents" more or less similar had occurred along the river, but few more dreadful than the death of William Burns and Louis Bigras at the Deep Gully Cut. They were seen, about three hundred yards above the excavation, coming from the magazine in the bottom of the gully, some seven hundred yards distant from the lock-pit. Each man had received two cans from the "glycerine boss," John Macbride.

Suddenly both men were blown to atoms in full view of their comrades. In and out from the swarming pit three hundred men ran howling and crying. Some fell on their knees, hiding their eyes. Others rolled in anguish. This confusion and madness of horror lasted several minutes. Probably one of the dead men had knocked the edge of a can against a boulder as he passed.

A certain mystery attending the disasters increased the terror felt for "the stuff." Men believed it would "go off of itself." Lobb's laborers insisted that the magazine should be moved out of the gully, and John Macbride elevated the whole lot to the uninhabited table-land above. Had he thrown up his place as "glycerine boss," no laborer on the job would have taken it at any wages.

Five minutes had elapsed after the "toots for glycerine," when a cry came down from the beetling precipice on the south side of Deep Gully. The foreman ran out from under the heavily roofed engine shed.

"All right, Mac! Down with her!" he cried, looking upward.

Though the distance to Macbride's face was only two hundred feet, he seemed to the men in the lock-pit as high as the sky, which, seen from below, looked like a long lane of gray, running eastward and westward. Rain, driving before a wind that had already shifted round toward the north, fell slanting into the chasm, soon lost its direction in that windless abyss and drizzled straight down. Thin sheets of water fell from the edge of the overhanging precipice on both sides of the platform whereon Macbride lay, for the surface behind him was of flat rock with a quick slope to the gully. This slope was not as steep as house-roofs usually are, but it was as steep as a man could easily walk down with security. Wet or dry, the gritty rock afforded excellent foothold.

Macbride's platform, about twelve feet wide, projected three feet beyond the rock face, and extended inward on the level six feet, till it met the slope. This platform, spiked to timbers bolted to the rock, carried a small fixed derrick.

As the foreman shouted, "All right!" Macbride threw down a light guide-rope which hung from the bottom of a two-chambered sack, stuffed thickly with coarse hair and wool. In each chamber a can of glycerine could be sent down securely. The upper edge of the sack was fastened to stout cords which joined and ran through pulley-blocks fixed to the derrick. These blocks had such a hold on the rope that the sack would not descend of its own weight.

Lying face downward, Macbride let the sack of glycerine slowly down, while the foreman kept the guiding-cord taut. No man, unaccustomed to great heights, could lie out, front down, on that platform without being tempted to go head-first over.

"Hello!" cried Macbride, when the foreman had taken the explosive from the sack.

"Hello yourself."

"Is work stopped for the day?"

"No, I guess not. D'you think it's going to clear, Mac?"

"Yes. Wind's getting colder up here. I s'pose you don't feel it down there."

"Not a breath. If it clears we'll start, if there's only a quarter-day to be made."

"All right. I'll stop up here."

"Got your dinner, daddy?" cried the engineman, Macbride's eldest son.

"Yes. All right, Tommy."

Then Macbride, who was usually called "Daddy Macbride" or "the old man," hauled up his ropes and his sack, covered them with a small tarpaulin, and ascended the slope.

His path was for fifty yards over smooth rock, always swept clear of snow by the winds of that table-land. The rain, not yet freezing as it fell, danced, shivered, flew forward in spray, and running down against the wind, poured over the precipice and the platform he had left.

In places a few scales of ice had formed on the slope. It had not yet absorbed much heat from the rain, which, had it been of a little lower temperature, would have formed a sheet of ice there.

The slope's upper edge terminated in a flat covered with broken stone and snow. There a shanty had been built for Macbride's accommodation. It contained a cooking-stove, a table and a chair. The magazine, containing a ton of nitro-glycerine, stood about sixty yards back from the shanty.

About eleven o'clock the increasing wind had shifted to straight from the north. The rain dwindled to a drizzle, and froze as it fell. By half-past twelve the air was clear, and a bitterly cold afternoon in prospect. The gale increased in strength till after the steam whistle told Macbride that work had been resumed.

Then the wind, having reached its height, became steady. At four o'clock, when "toots for glycerine—two cans" sounded, the thermometer stood at two degrees above zero. When Macbride, with two cans of glycerine in his hands, reached the upper edge of the slope, he saw it was a sheet of ice all the way down.

Macbride, a slow, sure man, doggedly devoted to the interests of his employer, knew Lobb's anxiety to push the work. The thought that he should not risk the descent never entered his mind.

Three hundred and forty men would, he knew, be dilly-dallying till they should hear his call, "Look out for glycerine!" Then they would run for shelter. Meantime they would be casting glances upward to his platform, listening for his voice, and "fooling away time" in a way that Macbride abhorred.

He was at once a cautious man, and very confident that his caution would bring him safely through whatever it allowed him to undertake. But he was one of the slowest-witted men I ever knew, though a man of very good sense.

When he devised a plan it was usually a sound plan, but he needed a great deal of time for the devising, and if he were hurried he could not plan anything. For this very emergency he had prepared long before, and it did not now occur to him that the fixture would not serve him well.

It consisted of a light rope fastened to his derrick, and hauled tight to a post planted at the slope's upper edge. This rope sagged in the middle to within a foot of the face of the slope. At the ends it was four feet high. Throughout its whole length it was now covered with ice.

Laying his cans cautiously down, Macbride shook the rope violently. The ice flew from it in a thousand pieces. Some stopped on the platform; but most slid clear over the edge and down among the men below.

The old man next stepped on the slope, holding the rope in his right hand. He went down fifteen feet without slipping, and came back reassured. Still he did not venture without more thinking.

Unfortunately his mind dwelt much upon how the waiting men must be wasting time, and little on the danger to which his descent might submit them. Old John felt that he himself would probably be blown to atoms if he should drop a can. But that the can might slip on the precipice, to explode on striking below, did not occur to him. His own risk, taken in way of duty, was the only risk present to this slow-witted laboring man.

If he should slip!

Placing one can under his right arm, and carrying the other in his left hand, Macbride, with the rope in his right hand, went cautiously about five yards when the thought of what would happen if he should slip brought him to a standstill.

If he clutched the rope to save himself, the can under his right arm would probably fall!

He fancied his son the engineman hearing the explosion and coming up from below to look for the pieces of him, as he himself had looked for the pieces of Bigras and Burns.

"I'll put one can down and come back for it," thought Macbride.

Slowly bending he put down the can in his left hand. It had barely touched the ice when he doubted that it would stand. Very cautiously he loosened his grasp. The can instantly slipped.

He clutched for and seized it, but let go the rope, slipped, and was flat on his back in a moment. By instinct he hitched up both cans on his breast so that neither experienced concussion. While falling he had a flash of expectation that he would, next instant, be blown to pieces. Stupefied with wonder and thankfulness at having come off so well, he lay on his back tightly grasping the terrible cans.

His rough frieze pea-jacket held him from slipping. After some reflection he shifted the cans to his lap and attempted to sit up.

It is not easy to raise oneself from lying flat on the floor without the aid of one's hands, but after some struggling the old man contrived to make use of his elbows and rose to a sitting position.

Then he found that his oiled canvas trousers had not enough hold on the ice to keep him from sliding. He slowly slipped down a foot before he stopped himself by digging his iron-shod heels into the thick scale of ice. Then he looked round.

From the deep gulf before him came faintly the click of striking hammers, the ring of ball-drills, the rattle of carts, the shouting of drivers, the puffing of the pumping engine driven by his son. At that moment the "toots for glycerine" sounded again.

Macbride shouted in reply, but the wind blew so fiercely into his face that he knew his call could not be heard below. Above his head the rope hung, swaying slightly. He could touch it with his right hand when he shifted both cans to his left arm. But it sagged too easily to give him much aid in rising. Nevertheless, he was almost on his feet when he thought the cans were slipping from his grasp.

To save them he threw his right hand across his body, slipped with the motion and came down again.

Once more he saved himself, sat up, and wondered what to do. It occurred to him that the cans might stand on the ice beside him. But the sounds from the thronged pit impressed him with a strong sense of what would ensue if a can should slip down.

He thought, "If I put down a can and tried to seize the rope it might start just when I'd left go, and I mightn't be quick enough to grab it again." The full horror of the situation was now upon his mind.

A panic came over him. It seemed to him he could not hold the cans securely enough while sitting up, so he lay back. Then he fancied the dreadful packages were less firmly in his arms than before.

But he lay still. He was afraid to try to sit up, lest in the effort he should drop a can, and be either instantly killed himself, or suffer the anguish of seeing it slide down to mangle men in heaps round his son.

The keen wind blew up Macbride's trouser-legs and under his coat. It searched his body. He had begun to suffer from the cold. Still he resolutely held the cans on his stomach, clasping them with his fore-arms crossed. He would freeze there, he said to himself, rather than make another risky move.

At the thought that he might take off his boots, and walk down the slope in his stocking feet, the old man ventured to sit up again. It was not easy to rise. His frieze coat had frozen to the ice a little. But he pulled it loose with a wrench of his shoulders and sat up.

Then he found he could not pull off his boots without the use of his hands, and he dared not attempt the action lest a can should fall.

"I'm a dead man," he thought. "The men will leave the pit by six at latest. But the pumping engine runs till eight, and my Tom will be there till then. By that I'll be a corpse—froze stiff. Well, the boys will take care of the old woman. I'm doin' my duty, anyhow. God 'll mind that."

This reflection gave the grim old laborer a sort of pleasure. It revived his heart.

"Well, I aint dead yet by a good bit," said he. "Mebby God's on'y trying me. He's fetched me clear till now, and I guess He will this time, too, if I do my best to help myself."

So he set about thinking again.

Then it occurred to him that a can, if started fairly, might be stopped by the tarpaulin on his platform. He managed to get out his jack-knife and let it slide. The knife stopped against the tarpaulin. But Macbride, when he pondered what would happen if the can should swerve aside on its way down, refused to submit the three hundred and forty men to so fearful a risk.

"It's the devil that's tempting me," thought the old man, "but I'll beat him, so I will." As he lay back once more he placed his arms in a new posture.

"When I'm froze stiff lying this way the cans won't move, that's sure," he said, with a satisfactory sense that the devil, of whose personal existence he had no doubt, would be defeated.

The sounds of work came merrily to him. He had a slow fancy of the men trudging home to their suppers, many thankful to be going to their wives and babies. He thought of the women bustling round in the lamplight to feed their men. He thought of his rough comrades, and their fumbling efforts to please the children at home.

"It 'ud be a poor thing for me to save mysen' and stop all that," thought Macbride, and the wholesome sounds of men striking for their daily bread came still more merrily from the chasm.

Suddenly Macbride began to laugh. But it was a very cautious laugh. He chuckled and thought, and chuckled again. Then he laughed at himself, for doubting that his plan was all right.

"It's porridge I've got in my head to-day instead of brains," said the old man as he sat up. "What sense is in me? I'm nowt but an old fool."

With that he placed the iron heel of his right foot about ten inches beyond his other heel, then he moved forward his left heel in its turn, and in two minutes was safely on his platform. Of course quick young readers saw long ago that he could easily descend in this manner. But Macbride was a very slow-witted man. He had been for an hour the prisoner of his own stupidity, as many people are, in some fashion, for their whole lives.

Nevertheless, I hold Macbride to have been a hero, because he had resolved to die rather than make a motion that might have sent death down among those men.

"What did you do next?" I asked, when he had at great length told me the story of his feelings during that bad hour.

"Well, sir, if you'll not give a whisper to the men I'll tell you. I just keeled down on me knees and cried. There was me son and all the boys all safe below, and meself as good as ever, and nobody a copper worse. And to be so near doing so much harm, and yet them to be all striking away like good fellevs—sure it was for joy I cried, so it was."

"Did you call to them?"

"Naw—never a whisper till I seen time would be saved by it. Then says I, '*Hello. Look out for glycerine.*' If you'd 'a' seen 'em scatter!

"'Have you been sleeping, Mac,' yells the foreman.

"'Ay, and dreamin',' say I to mysen, but I gev him no answer, and there's nobody but yourself, sir, knows the truth to this day."

EDWARD W. THOMSON.

For the Companion.

A HOTEL KITCHEN.

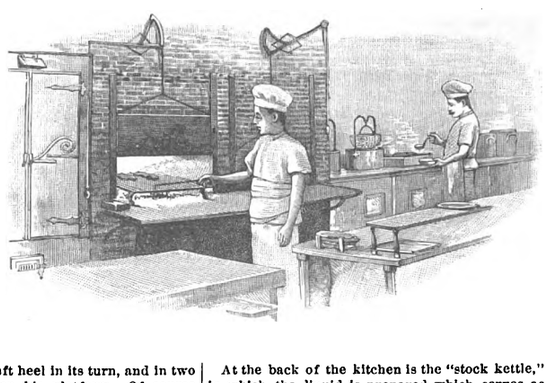
For the speedy accomplishment of a great many kinds of work at once, within a small space, few places are to be compared to the kitchen of a great city hotel at the dinner hour.

The clatter of the washing of silver and china hardly ceases for a minute. The girls who cut bread at the store-room window have just time, now and then, to lay aside the knives and straighten their deft fingers. An appetizing odor floats from the soup kettles, whose contents are being ladled into a line of tureens. There is a clashing of knives, forks, covers and plates, and a confusion of tongues about the carving-stand.

A cook at the oyster-bench is diligent enough to make an oyster stew in half a minute, and if it be a cold day, he has few half-minutes of leisure.

At a table near by salads are shaped and decorated until they are almost works of art, and the "artist" works very speedily. Clouds of steam rush out of one and another vegetable steamer, and the hands of the attendants at the vegetable kettles need to be untiring as well as steady.

In one door and out another hurry the tray-laden waiters; down this passage and through that, in line now, in a dense crowd next—in "first come, first served" race from a serving-stand here to the store-room door opposite.



It all looks like utter confusion, and sounds even more confused. In a moment more, it seems, we shall have chaos; but that never comes. There is seldom any interruption of work; there are few collisions, and a triumphant procession of waiters laden with their orders keeps the exit door swinging.

Let us visit the kitchen of a large hotel of Boston, which may be taken as an example. It is a large, low-studded apartment, ventilated by doors and windows on all sides so that the air is kept pure and reasonably cool. The arrangements and apparatus for cooking and serving are neat and compact, with a view to the economy of time and effort.

An important feature is the carving-stand. The carver stands behind a long heater, upon which is a line of eight or ten covered platters. In the first platter is roast beef; in the next is a nicely browned chicken; farther on is a young pig, roasted to a turn, once plump, but now being sliced away to skeleton thinness, and bringing up the line are platters of lamb, mutton and the roasts of the season.

Urging the orders of their hungry patrons at the dinner-tables, the waiters keep the carver busy dealing out portions of meat from his platters. He handles his knife and fork with practised skill of fingers and wrist. In addition to the roasts he has close at hand boiled meats in kettles, set in a deep receptacle of hot water.

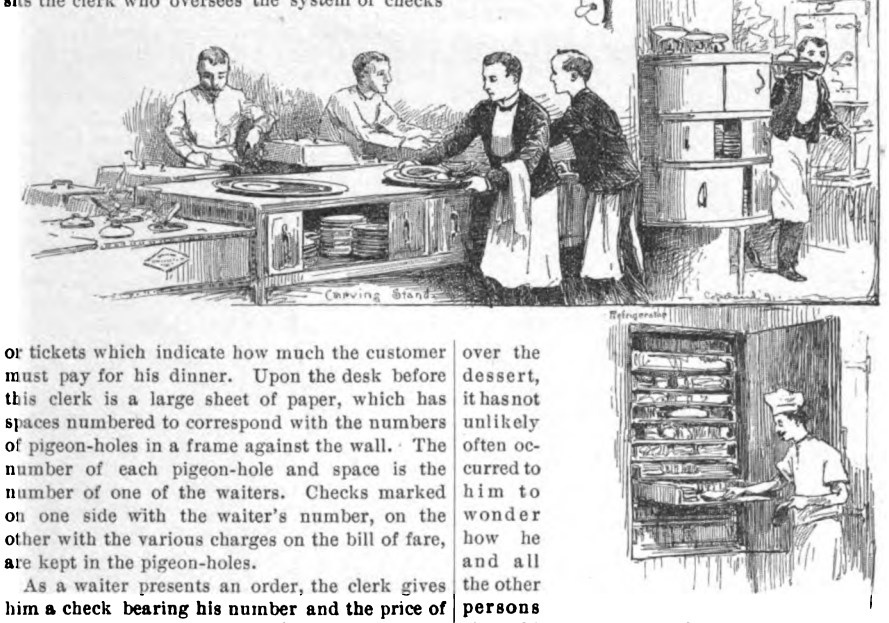
At the back of the kitchen is the "stock kettle," in which the liquid is prepared which serves as the basis of soups; there are the roasting ovens and the range. Here the chief cook presides.

Soups and *entrées*, appetizing and appropriate to the season, and properly harmonious with the roast and boiled dishes of the *menu*, and bearing evidence of a master hand, are ready to be served.

A mass of charcoal glows brilliantly at one end

Digitized by Google

of the range. Over this the broiling is done. Just beyond stand the three roasting ovens, like tall tin closets with a door for each shelf.



At a table, handily placed in the middle of the kitchen, the dishes are received as the waiters come from the dining-room. Here, at set tubs, and at one side of the room at sinks and shelves, the china and silver are washed.

If the waiter comes for toasted bread, griddle-cakes or coffee, he finds what he wants on the right as he enters the kitchen.

By means of a division of the coffee tank into several compartments, freshly made coffee is always kept on hand. Only one compartment is drawn from at a time, and this is marked by a ring placed on the faucet. When it is emptied, the ring is passed on to the next compartment, and the first is refilled with fresh coffee.

Against a chimney is fixed the egg-boiler—a tin or iron receptacle, like a long, narrow box without a cover. With water and steam, turned on when needed, the egg can be boiled at once, and with an iron wire dipper that hangs above it can be lifted out at exactly the proper second.

At one side, out of the busiest lines of travel, sits the clerk who oversees the system of checks

or tickets which indicate how much the customer must pay for his dinner. Upon the desk before this clerk is a large sheet of paper, which has spaces numbered to correspond with the numbers of pigeon-holes in a frame against the wall. The number of each pigeon-hole and space is the number of one of the waiters. Checks marked on one side with the waiter's number, on the other with the various charges on the bill of fare, are kept in the pigeon-holes.

As a waiter presents an order, the clerk gives him a check bearing his number and the price of his order, and at the same time writes the price of the check opposite the waiter's number on the account sheet.

In this way any irregularity in the payment of checks at the cashier's desk in the dining-room can be referred to the waiter who is responsible for it.

One of the busiest times is the morning. Then the meats are brought in, weighed, and put into the refrigerators. One refrigerator is filled with uncut meats, another with cold cooked meats, vegetables and lobsters; in one are placed trays of steaks, chops and croquettes, in another game, and into the cool, chopped-ice depths of a refrigerator built like a long, covered chest goes a tempting array of fish, crabs, frogs' legs, oysters and clams.

Close by is an indispensable feature of the hotel kitchen, the oyster bench. At one end of it are piled chopped ice and oysters in the shell; at the other, below a shelf for the tureens, are two stew kettles set in water which boils the instant steam is turned on.

A warm, steamy place, savory with whiffs from the variously filled kettles and steamers, is the vegetable-room. Vegetables ready to be served are kept in warm kettles which stand in hot water. Scores of potatoes are baked all at once on the shelves of a large oven.

Bags of coffee, barrels of sugar, cases of silver, small mountains of loaves of bread, drawers full of cakes and pies, shelves full of canned meats, spices and preserves, refrigerators stored with fruit, with milk and cheese, with salads and with ice-cream, prepare the store-room to meet an unending series of demands from cooks and waiters.

Here is the desk of the steward, whose duties include the marketing and the general management of the kitchen.

A short flight of stairs leads down to the neat bake-shop and pastry-room, the large store-room, that busy corner the knife-room, and a room as cool and damp—sometimes almost as watery as to the floor—as a grotto. This is the ice-cream room.

Great pieces of ice are piled ready for use in the ice-cream room. A machine for chopping ice is kept running almost constantly. The freezers are turned by steam power, but they require the attendance of several men as well.

Bread and cake are baked in brick ovens some twelve by eight feet square. Each oven has a "peel," which is like a long-handled, flat oar, and is shoved under the tins when they are to be drawn out from far corners of the oven.

In a little room by himself a young man is busy from morning to night rubbing knives with Bristol brick, or cleaning them in a revolving machine with emery. His is hardly an interesting occupation.

Every month about a hundred dozen water glasses and twenty dozen cups are broken, and the other dishes suffer many accidents. So the crockery-room is literally packed with shelves, boxes and barrels of all kinds of table-ware.

If our hotel waiter brings us our dinner hot, appetizing, just as we ordered it and promptly, we are apt, if we are hungry, to eat it without speculation; but when the guest sits comfortably over the dessert, it has not unlikely often occurred to him to wonder how he and all the other persons about him can be served at the same time as satisfactorily and as expeditiously as if each had been expected, and his individual dinner only awaited his arrival to be brought in.

The explanation is that the heads of departments and the "help" are skilful in their special tasks, and that the kitchen has a place for everything, and that everything is in its place.

ALICE L. CLARK.

THANKSGIVING.

Our chief holidays are, as they should be, festal occasions for all, but each has also its special appeal to some particular age or class.

Fourth of July, for instance, might be called boys' day, while May Day is much more girls' day. Arbor Day is becoming a day of school celebrations. The old New England Fast Day, which is now a feast day, is also the spring inaugural of out-door games.

Memorial Day, as time takes the poignancy from its memories, leaving only the beauty, the recognition and the high appeal, becomes, far more than the noisy and explosive Fourth, the day of serious patriotic feeling.

Christmas, of all days the best, is everybody's day; but it, too, has its special delights for lovers of imposing church ceremonial, and for little children not yet too old for Santa Claus.

Thanksgiving, like Christmas, is for all; but if Christmas is dearest to children, Thanksgiving may almost be called Old Folks' Day.

At Christmas childhood rules the hour, and the youngest is first. The tall fir, blazing with candles and gay with gifts, is the children's Liberty Tree, and beneath its magic boughs they hold undisputed sway, their elders following their fancies, sharing their sports, showering them with joys, and finding their own best joy in doing so.

But at Thanksgiving there is no such fairy-like pageantry, no such bewildering reversal of the usual order as this. The elders rule with no one to divide their supremacy, unless possibly the youngest baby of the family, with the serene dignity of infancy still upon him. He, perhaps, may share the honors of the day on grandmother's knee, with grandfather opposite, meeting his solemn eyes with a smile, and remembering the time when his father was just as little and as dimpled and as wonderful and as charming.

Children often do not appreciate Thanksgiving. How should they, when they are themselves its chief offering and delight? If it means a journey to the old homestead, and games in ancient garrets, and exploring old trunks, and having hosts of cousins to play hide-and-seek with through long halls and in mysterious closets, they can understand its charm; that is great fun.

But children who have their Thanksgiving at home with only the family and perhaps one or two relatives sometimes find it a little disappointing. It is a holiday, which of course they like, and they like a good dinner.

Nevertheless, one child no doubt expressed the feelings of a good many others when he said, half-dolefully and half-laughing, that people talked about Thanksgiving months beforehand, just as if it were Christmas; and then when it came, it was only no school and turkey and cranberry sauce and mince-pie, and two great-aunts.

It was probably the great-aunts, and the grandmother and grandfather, and the proud parents of the unappreciative boy and his rosy little brothers who found in it much more than the turkey and mince-pie.

They found family sentiment, and an opportunity to talk over old times, old companions and absent friends, to sympathize with each other's present anxieties, share each other's joys, and cheer one another with mutual good-will and affection for the duties of the coming year.

Where there are but few who can be gathered together, the family festival of New England, now widely observed throughout the whole country, may be but a simple and quiet celebration. Where a large family come together for the festal occasion beneath one roof, it is likely to be one of the merriest as well as one of the best of days.

Few or many, gay or quiet, if Thanksgiving is kept in its right spirit of cordiality and family affection—if it is the dinner where love is—there is no day better worth the keeping. It is the day when children should be most sweet and lovable, and when the old should tell each other it is good to have lived so long.

For the Companion.

HER MAJESTY.

The kingly Sun hath westward sped,
Now cometh soon,
By planet princes heralded,
The maiden Moon.

And as unto the throne of night,
She draweth near,
Each courtier star, with paling light,
Doth disappear.

ROBERT LOVEMAN.

CHINESE RIOTS.

During September and October it seemed not improbable that China would soon be at war with the United States, Great Britain, France, Germany and Italy. These powers had strengthened their fleets in China, and prepared for united action in case its government should fail to protect Christian missionaries and traders in future, or fail to make reparation for the anti-foreigner riots of the summer.

As no resumption of the rioting has been reported since September Third, it appears that the menacing attitude of the Western nations has been effective, and that war will not occur. This, however, cannot be predicted with certainty.

The government at Pekin, indeed, promises to do everything in its power to secure foreigners against molestation; but it also alleges its inability to prevent the sudden assembling of rioters in the upper Yang-tse river-towns. Now the Western powers have agreed that if the occasion should arise again, they will use their own forces to protect their missionaries and traders, and punish rioters. Such an act would probably bring on war.

In May the latest series of riots began at Wuhu, where a few foreigners, mostly Roman Catholic missionaries, resided. Their whole establishment was destroyed, apparently with the connivance of the superior mandarins of the district. The Christian cemetery was desecrated, and a resolute attempt made to burn the consulates.

A similar outrage, with murder of missionaries, was perpetrated at Wusueh soon afterward. During June and July riots of like nature occurred at numerous other places on the Yang-tse. Early in September the series culminated by the destruction of the American and Catholic Missions at Ichang.

In explanation of their conduct, the instigators and leaders of the mobs placarded the walls of the disturbed towns with astonishing libels against the foreign Christians. They were accused of kidnapping, murdering and dismembering children, of drying their bodies for ceremonial uses, and of encouraging a variety of immoralities.

Early in June the Emperor of China issued a decree praising Christian ethical teaching, and ordering the local mandarins to protect foreigners and punish their assailants. Within the next few months the Pekin Government had caused the execution of a number of the rioters, the imprisonment of many more, and the indemnification of many sufferers for their property losses.

The Emperor and his Ministers have thus given evidence of a sincere wish to give the Christians protection. But the imperial government has to depend on local officials, who are almost autocratic in their spheres of action, who often share the prejudices of the people, and who always have to rely much on fanatical soldiers of Hunan.

Hunan Province is the favorite recruiting ground for the Chinese army. It is inhabited by brave and vigorous mountaineers who are said to be more deeply imbued than any other Chinese with hatred of foreigners and Christianity.

During this and recent years the riotous violence of Chinese opposition to the intrusion of foreigners has usually occurred in the interior along the Yang-tse River, the only part of the interior where foreigners are permitted to reside for commercial and missionary purposes. They have a treaty-right to establish themselves at stated places along the great river.

But the meaning of the treaty is disputed. The foreigners claim that it gives them a right to navigate the river several hundred miles higher than the Chinese acknowledge their right to go. And in ascending to the higher point they must touch on or pass around the northern angle of the Hunan Province.

This is exceedingly obnoxious to the Hunanese, who have exerted themselves to annoy foreigners in all the Yang-tse towns, until the government informed them that this behavior, if continued, would lead the foreigners to ascend the river in force.

It will be understood, then, that the spirit which led to the riots is still in existence; and the haters of the foreigners are barely held in check by a government which is not strong enough to put down disorder completely.

ACCEPTING THE SITUATION.

Some youthful reader of *The Companion* may become in the future the historian of the early days of struggle and endeavor in his country. He will find one of the most picturesque and pathetic stories that of the French refugees who fled to avoid the guillotine, and took shelter here. The details of their adventures have never yet been collected or written.

One band of followers of the Bourbons arrived in New Orleans soon after the execution of Louis XVI., and made their way to a plantation which they bought for a small sum.

There was not a mechanic or laboring man among them. The dukes, counts and marquises, penniless and rankless, began gaily to hoe, plow and cook; but the experiment ended in utter failure. They crept one by one away to the cities, or back to France.

A nobleman of high rank escaped to Philadelphia, and lived there under an assumed name. He educated Aaron Burr's brilliant daughter Theodosia, and for a time was a favorite with such men as Jefferson and Adams; but his health failed, and to hide his poverty, he removed to Wilmington, Delaware, and died there in the almshouse.

The Comte de Provenchere earned a comfortable living in Wilmington as a teacher of music, and became so much attached to his new home and friends that when he was invited to return and re-assume his rank, upon the restoration of the Bourbons, he refused, and remained in Wilmington until his death.

Perhaps among the histories of these refugees the one which would be most interesting to the readers of *The Companion* is that of a little deformed boy who, with his mother, found his way to this quiet Delaware town of Wilmington, which had given refuge to so many of his compatriots.

Louis was addressed by them as "Marquis," but his real name or history was never known to the townspeople.

He and his mother were abjectly poor. He had, however, much skill as a wood-carver, and earned many pennies by selling toy boats which he made for the school-children.

At last the little cripple was able to construct a real boat, with which he brought sand from a neighboring island to peddle to zealous housekeepers. On one of his expeditions on the bay his boat was capsized, and he was drowned.

He was entitled to as much honor for his gallant fight with poverty and disease as any of his titled ancestors had won upon the tented field.

POOR BUT CONTENT.

"The best Thanksgiving I ever spent?" said Uncle Jerry. "Oh yes. I know when 'twas.

"Thirty year ago this November the snow came early, an' by Thanksgiving Day it laid over bush and fence. I can't tell ye how many days it had been a-comin'; I only know we were out of tea an' coffee an' sugar an' flour, an' the road hadn't been broke to town."

"What did you do, Uncle Jerry?" asked one of the twins at this point, her eyes wide with interest. "Did you *starve*?"

"Yes, we did; we starved to death, and here I am to tell the tale. No, Miss Honey Blossom, we lived on fried pork an' apples, went to bed early to save oil an' candles, an' laughed to think our firewood wa'n't like to give out. An' Thanksgiving Day, what do you suppose we had for dinner?"

"Turkey!"

"No, we didn't keep turkeys."

"Chicken!"

"No, there was a sort of distemper runnin' through the flock just then, an' marm said she wouldn't resk eatin' any of 'em. Guess again."

"It couldn't have been cake, for you hadn't any flour!"

"Nor pies, either!"

"No, it was just this, a dish of baked potatoes and pork, and if you don't call it a good one when you can get your mother to cook it for you, you're no nevvies o' mine. Seems to me I can see marm as she fixed that dinner, an' we all settin' by, hungry an' contented. First, she took some good, smooth potatoes, an' washed 'em clean. Then she sliced 'em, skins an' all, an' put 'em in a bakin' pan, first a layer o' potatoes, then a few little bits o' pork, then a sprinklin' o' salt, pepper an' flour —"

"But you said there wasn't any flour!"

"I guess she must ha' scraped half a cup or so out of the barrel, young man. Well, the potatoes were fixed so,—that's all *I* know,—an' into the oven they went. At twelve o'clock they were done, an' you never see a hungrier nor a thankfuller family than we when we sat down to 'em."

"But I don't see what you were so thankful for," said little Jim, musingly.

Digitized by Google

"Why—why—ye wooden-headed little thing! For all our blessin's, an' because we were all together and so contented, an' *for the potatoes!*"

DICKENS'S LITTLE JOKE.

Charles Dickens bought pictures, now and then, paying for them the sum the artists asked. But he once bought a picture for which he persuaded the painter to charge him a high price. The story, which illustrates both Dickens's generosity and his love of fun, is told in the memoir of Richard Redgrave, the artist.

Maclise, intending to paint a subject for which he wanted a lady as model, asked Miss Hogarth, Dickens's sister-in-law, to sit. When the work was finished the figure was thought very beautiful and very like the model.

A few days afterward a gentleman called on Maclise, and said that an old gentleman in the country, wishing to possess one of the painter's pictures, had deputed him to see what he had on the easel. The one for which Miss Hogarth had sat was admired by the visitor, who said he was sure it would please his friend, to whom he would write and describe it.

In a few days a letter came to Maclise, written in a feeble old hand. The writer, in a delightfully garrulous strain, expressed his admiration of several pictures of Maclise which he had seen, and asked the price of the one described by his friend, as he was sure he would be pleased with it.

Maclise, delighted with the letter, hurried away to show it to Dickens.

"The letter is almost worth the picture, and I am so pleased with it that I shall name a low price," said the artist.

"Oh, by no means," replied Dickens; "you are wrong; for it is evidently from some rich old enthusiast who can afford to pay well."

Maclise argued the point, and talked of putting a handsome frame to the picture without charge, but was finally persuaded to name a good price for the painting.

In a day or two the gentleman who acted as the agent called again, paid Maclise his price, asked to have the picture packed, and said a porter would call for it.

At Christmas, two weeks later, Dickens invited a large party to dinner, Maclise among the rest. But alas for the unraveling of the plot! Just as they were sitting down a note came from the painter pleading illness as an excuse for his absence. Dickens—for he was the garrulous old gentleman—had to unveil the picture without the pleasure of seeing Maclise's look of astonishment.

FIVE GRAINS OF CORN.

The pleasant custom of beginning a Thanksgiving feast by laying five kernels of corn upon the plate of each person at the table, in commemoration of the time when the Pilgrim founders of New England had but five grains of corn each day to eat, serves, so far as it is observed, a double purpose.

It must, in the first place, render the mere physical enjoyment of a festival keener to perceive the plain contrast between the fare of those hard days of the past and the plenty of the present. A little nibble at the hard kernels of corn, with a momentary attempt to fancy that this is all one is to have, gives an added zest to roast turkey, cranberry sauce, mince and pumpkin pies and things of that sort.

But the custom may also bring to mind the real meaning of the Thanksgiving festival.

It expresses the conviction that affliction, adversity, privation are merely trials of our character, as a nation and as individuals.

Sometimes it happens that a Thanksgiving seems almost inappropriate. There has been great personal loss, or some public calamity; a pestilence may have carried off thousands, or the times have been hard for the people.

But these things are the five grains of corn upon the plate; all may be sure that the account will be much more than righted; that our debt will be much greater than all our thanks can pay, our table more bountifully spread than we deserve.

WEARING OUT SHOE LEATHER.

"I have but one maxim for you," said a successful and wealthy merchant to a young man who went out of his employ to enter upon the study of a profession, "and that is never to try to save your shoe leather, but always to be economical of the cloth that forms the seat of your trousers."

The young man pondered this bit of advice a long time, but he thinks that he never fully understood it until he had been at work in his profession for several years.

He found, indeed, that "worn-out shoe leather" was a good investment. It meant, for one thing, keeping up with the times by gaining information at first hand. If he needed any facts bearing upon his profession, he said to himself, "I can buy them with a little shoe leather," and went out and saw the men who had the facts to give him.

If he had waited for them to come to him, probably they would never have come. He could not buy the information with pantaloon material. He saved much time by taking a little.

"THE SOCRATES."

Thirty years or more ago, Thomas Starr King greatly added to his wide fame as a remarkably fine pulpit orator, by delivering through the country a lecture upon Socrates.

A man who had heard the famous lecture in a neighboring city was speaking of it with much enthusiasm and pleasure to a group of friends in one of the public rooms of the hotel in which he lived.

One of the class of self-satisfied ignoramuses, who looked as if he were a mine of wisdom, but who never lost a chance to make his ignorance fully evident, dispersed the group as effectively as if a bomb had exploded on the spot, by saying, with an air which was intended to show how wise he was:

"Mr. King, very likely, has travelled amongst the Socrates!"

SOMETHING LIKE IT.

An *Atlantic Monthly*, of twenty years ago, gives an experience belonging to a time when enthusiastic dreamers made wild experiments of "living near nature," and tried to gain sweetness and serenity through earning their own bread by manual labor. In one such community, each person did a certain amount of house or farm work, and all confined themselves rigidly to vegetable food.

One of the number, however, a somewhat irreverent and sceptical lad, not approving of the prohibition of salt, kept a small box of it on his knee, during meal times, and slyly dipped his vegetables therein. His next neighbor discovered the secret, and, quietly shared the concealed treasure until a certain day when, by some luckless chance, the box fell to the floor.

"We hoped," he says, "that the incident might pass unnoticed, but Abel, the most rampant of our philosophers, stretched his long neck across the corner of the table, and caught a glimpse of what was going on.

"'What's that?' he asked.

"'Oh, it's only—only chloride of sodium,' gasped I, recklessly, giving the chemical name of common salt.

"'Chloride of sodium? What do you do with it?'

"'Eat it with onions,' I answered, boldly. 'It's a chemical substance, but I believe it's found in some plants.'

"Here one member of the party, who knew something about chemistry, grew red with suppressed laughter, but the others were as ignorant as Abel himself.

"'Let me taste it,' said he.

"I handed him the box-lid, which still contained a portion of the contents. He dipped an onion in it, bit off a piece, and chewed it gravely.

"'Why,' said he, turning to me, 'it's very much like salt!'

"Perkins, the boy, burst into a spluttering yell, and the others, catching the joke, hilariously joined him. But while we were laughing, Abel finished his onion, and the result was that salt was added to the 'True Food,' and thereafter appeared regularly on the table."

POSTSCRIPTS.

It is claimed by a good many people that the "gist" of a woman's letter is more apt to lie in the postscript (without which she is popularly supposed to consider no letter complete) than anywhere else. The author of "In a Club Corner" tells several stories which seem to indicate that there have been occasions on which members of the stronger sex have made use of the postscript to convey the most important part of a message. He says:

A spy named Palmer, sent by Sir Henry Clinton, the British commander, had been detected furtively collecting information of the force and condition of the post at Peckskill, and had undergone a military trial.

A vessel of war came up the Hudson in all haste, and landed a flag of truce at Verplanck's Point, by which a message was transmitted to Putnam from Clinton, claiming the said Palmer as a lieutenant in the British service. Putnam replied:

"Head Quarters, 7th August, 1777. Edward Palmer, an officer in the enemy's service, was taken as a spy lurking within our lines; he has been tried as a spy, and shall be executed as a spy; and the flag is ordered to depart immediately.

ISRAEL PUTNAM.

"P. S. He has accordingly been executed."

Another instance is given in the reply sent to the Bishop of Norwich in acknowledgment of an invitation:

"Mr. O——'s private affairs turn out so sadly that he cannot have the pleasure of waiting upon his lordship at his agreeable home on Monday next.

"N. B. His wife is dead."

As one example of the feminine postscript the author mentions a young lady who, having gone out to India, wrote home to her friends, after a long silence, concluding her letter thus:

"P. S. You will see by my signature that I am married!"

BEAUTIFUL BUT TERRIBLE.

The study of natural laws not infrequently reveals a close relation between some of the most beautiful phenomena of the earth and sky and the most terrible exhibitions of the destructive powers of nature. A striking instance of this is the crown of light, feathery cirrus clouds that, floating high in the clear sunshine, indicates to the practised eye of the seaman the place where a West India hurricane is raging across the deep.

These clouds radiate from the centre of the hurricane where the fierce spiral currents of inblowing air, crowding together, rise to a great elevation, and then flow outward in every direction over the storm.

From the hues and texture of the distant clouds something may be learned of the character of the storm that produces them.

The United States Hydrographic Bureau informs ship-captains that when the cirrus cloud-plumes seen radiating from the storm are faint and opalescent in tint, gradually fading behind a veil of haze, the approaching storm is an old one of large area; but if the clouds are "of snowy whiteness, projected against a clear blue sky, it is a young cyclone of small area but great intensity."

The procession of clouds that accompanies a hurricane at sea is sometimes a most beautiful scene when viewed from a distance, although a fearful tragedy may be enacting beneath that glowing canopy of sun-tinted vapors.

HEAVY WOODS.

There are four hundred and thirteen species of trees found within the limits of the United States and Territories, sixteen of which, when perfectly seasoned, will sink in water.

The heaviest of these is the black ironwood *(Condalia ferrea)*, found chiefly in southern Florida, which is more than thirty per cent. heavier than water.

Of the other fifteen, the best known are the *lignum vitæ (Guaiacum sanctum)* and the mangrove *(Rhizophora mangle)*.

Texas and New Mexico lands, full of queer, creeping, crawling, walking and inanimate things, are the homes of a species of oak *(Quercus grisea)*, which is about one and one-fourth times as heavy as water, and which, when green, will sink like a bar of iron. It grows only in mountain regions, and has been found westward as far as the Colorado desert, where it grows at an elevation of ten thousand feet.—*Scientific American.*

For Sore Throat, Coughs and Hoarseness, use "*Brown's Bronchial Troches.*" Containing nothing injurious, they will not disorder the stomach like cough syrups and balsams. For forty years they have been recommended by physicians, and are known all over the world as one of the few staple cough remedies. [*Adv.*

HOME STUDY. It will pay every young man and woman to secure a good **Business Education** in Bookkeeping, Shorthand, etc., by Mail at their own **Homes.** Low rates and success assured. Gives a *practical business training* that every one needs. Catalogue and Trial Lesson *free.* Write to **Bryant & Stratton,** 467 Main St., **Buffalo, N. Y.**

THE TENTH EDITION OF THE
INTERNATIONAL POSTAGE STAMP ALBUM
Is now ready. Much better and finer than ever before. 53d Edition of Postage Stamp Catalogue will be ready between December 1st and 10th. Send for free 40-page illustrated price-list containing full particulars of the above.
SCOTT STAMP AND COIN CO., L'd.,

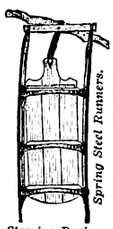
WAGNER — The tone of the **Estey Organ** is very beautiful and noble.

FRANZ LISZT — Is delighted with them.

WILHELMJ — I rate the **Estey Organ** above any other that I have seen. It is fine beyond comparison.

MME. ESSIPOFF — On no other organ but the **Estey** can be produced with such purity and precision the choir-like sound in the lower registers.

PAULINE LUCCA — I have never found in any other American organ the full, noble, and sweet tone of the **Estey** Cottage Organs.



FRANZ ABT — I consider the **Estey Organ** unsurpassed by any other I have ever seen.

OLE BULL — The **Estey** tone is very beautiful and effective.

RUBINSTEIN — A really splendid organ.

SAINT SAËNS — The tone comes very near that of a pipe organ.

SUGGESTIONS

THANKSGIVING.

How came Thanksgiving Day to be celebrated?

Is such a day observed in other countries?

What relation between giving thanks and feasting?

How came the turkey to be specially appropriate to this day?

What classes of officials can appoint the day?

Who appointed the first national Thanksgiving?

For the Companion.

THE FLAG THAT THE EMIGRANTS CHEERED.

I.

Gibraltar rose dark, and the sun's disc burned low,
Like a far gate of Heaven with banners aglow.
And red o'er the Pillars of Hercules blazed
The Star of the Pilots of old, as we gazed.
And swift the breeze freshened, and deep boomed the gun,
And the ships of the nations swept by, one by one.
The Red Cross of England, the Tricolor proud,
And the dark German Eagles in billows of cloud.
Then the Flag of the Stars from the Western waves came
And passed in review by the old flags of fame.
"Why are the ships shouting?" Our feet forward pressed.—
"'Tis the emigrants cheering."—"Which flag?"—"Of the West."

The Cross of St. George
Floated free o'er the main,
The black German Eagles,
The Lions of Spain,
And the flags of all seas
In the bright Straits appeared,
But, oh, 'twas my own flag
The emigrants cheered!

II.

The emigrant mothers their gladdened eyes raised,
And memories wove of the past as they gazed.
And their thin hands they waved 'neath the lone Afric Star,
And greeted the flag of the new lands afar.
Then the emigrant children laughed out with the rest
As their eyes caught the light of the Flag of the West.
Laugh on, little ones, in your star-lighted way,
To the Lakes of the States and the Georgian Bay,
Round the Flag of your birthright the sea birds are veering,
'Tis for you, not themselves, the old mothers are cheering.

The Red Cross of St. George
Waves free o'er the main,
The Gallic Tricolor,
The Lions of Spain,
And the flags of all seas
In the bright Straits appear,
But oh! 'tis my own Flag
The children's hands cheer!

III.

Young Romans were there, of the Eagles of old,
Strong Charlemagne's sons, of the helmets of gold,
The heirs of the heroes of war-making wars,
Passed outward that hour in the night march of Stars.
All thought of the friends to their bosoms most true,
Of the hearts of the Old World that beat in the New,
Of the world-weary struggles of peoples oppressed,
Of the Kingdom of God in the Suns of the West.

The Cross of St. George
Passed them by on the main,
The dark German Eagles,
The Lions of Spain,
Off Trafalgar's waters
The last flag appeared,
But mine was the last flag
That the emigrants cheered.

IV.

That scene at Gibraltar in mind lingers yet,
That eve Andalusian what heart could forget,
And where'er I may roam through the nightfall of years,
My heart will re-echo the emigrant's cheers.
Can the soldier forget the last roll of the drum?
Or the wanderer the song of his mother at home?
Or the patriot his vision of duty sublime,
As seen on the heights of the summit of Time?

I still see the Eagles
That swept o'er the main,
The leonine banners
Of England and Spain,
The African star-light,
The gray fortress crest,
And the emigrants cheering
Their flag of the West.

V.

No voice of the bugle, no war-rolling drum,
Disturbs the sweet peace of my roof-tree of home,
But the Anthem of Liberty gladdens the main,
And the chorus of hills wakes the patriot's strain.
O Flag of my own land, Hope's bow in the air,
O'er my home let me lift thee, my altar of prayer!
Many flags have the people that grand deeds recall,
But my own Flag of faith is the pride of them all.

The Red Cross of England
Waves free o'er the main,
The dark German Eagles,
The Lions of Spain,
But ever while stars
For all men shall appear
Our flag of all peoples
The pilgrims will cheer.

HEZEKIAH BUTTERWORTH.

For the Companion.

HIS THANKSGIVING.

"I well remember the first Thanksgiving which was kept in my native village," said a Western congressman, not long ago.

"I was then a little shaver of nine years old, trying to earn a few pennies by selling newspapers. Some one marched all the newsboys to the union meeting where all the churches of the town joined in thanking God for His mercies. There was a great deal said about the prosperity of the nation, the general peace, the abundant crops, and what not.

"I confess it puzzled and bored me. I knew nothing about the nation outside of our little city. I had no idea of war, and so I could not rejoice in peace, while as for the crops I supposed that meant Squire Potts's corn and oats, which did not concern me.

"I came out of the church indifferent and sleepy. Just then the squire himself met me. He was a portly, kindly man.

"'Hello, youngster!' he said. 'Here's something for yourself, something to keep Thanksgiving on.'

"He gave me a quarter.

"That seems a trifle to you; but I had never before had a penny that I felt was my very own. The money I made with the papers all went to my mother. We were very poor.

"I remember that I sat down on a doorstep with the quarter. I felt that I should shout aloud if I spoke. What should I buy with it? I thought of twenty things that would be a grand surprise to mother and riches to myself. I was fairly dizzy with happiness. The sun shone bright and warm, and a tree overhead rustled as I never had heard a tree rustle before. Suddenly it occurred to me that God had sent me this money through the Squire.

"I said nothing; but there was no such thankful heart in the city that day as mine. I was a living Thanksgiving."

The little story has its meaning. It is possible for us to give some one a personal reason for Thanksgiving. We may never be able to praise God with our voices or with any investment, but we can call forth thanksgiving from the poor and needy, and cause the heart of him that is ready to perish to sing for joy.

A LONELY LITTLE GIRL.

The people of Holland are very proud of their noble Rijks Museum in Amsterdam, into which are gathered the treasures which illustrate the growth of the arts and sciences in their kingdom from barbarous ages until the present time. The great corridors are usually crowded with all classes of the Dutch nation. A visitor to the Museum last summer noticed that the long procession swerved aside from the galleries of pictures and statues, to pass through a little room which held only a large blank book inscribed with the names of noted visitors.

Upon the open page of this book was written, in a child's unsteady, careful hand:

WILHELMINA.

It was a motley crowd that paused to look at this name, and a picturesque one, for the Dutch still wear many of their national costumes. There were nobles with their equerries, wealthy burghers, peasant women from Zeeland in hooped skirts and white caps with gold helmets, priests in black gowns, with white cords about their waists, maid-servants from Scheveningen, with huge golden corkscrew pins in their hair, and orphan boys from the Stadt asylum, one-half of their bodies clothed in black, the other in scarlet.

On each face, old or young, came the same amused, tender smile as they saw the childish writing, and they passed on, nodding to each other with delighted approval.

"She writes well."

"She is wonderfully clever!"

"Ah, the dear child!"

"Who is this child whom everybody loves?" asked the American visitor of a Dutch lady standing near her.

"She is die kleine Königin, our Queen, Wilhelmina," was the reply. "She is only ten years old, and not a strong child; but each of us prays every day for her life as if she was one of our own. That is not only because she is the last of the royal race, and if she dies, Holland would be torn to pieces by wars for the succession, but because we love her. She is so good, so honest and friendly a child!"

Wilhelmina is a slight, erect child, with brown hair, a smiling mouth, and dark, candid, friendly eyes. She lives with her mother, the regent, in the pretty château of St. Loo in summer, and in one wing of the royal palace at the Hague in winter. The great State ball-rooms and throne-hall are closed since her father's death, and the little maid has a wing of the palace like a cozy house to live in, full of pretty china stoves and easy-chairs, with flowers in the windows; but few girls have so lonely a life as she.

"She cannot play with other children," said one of her subjects. "Whom could she have for a companion? She is Queen. She must study, study; she must learn to rule."

Poor lonely little Queen! Yet she has her pleasures.

When her mother's last birthday arrived, Wilhelmina with great joy surprised her with her portrait, painted by a famous artist. She had contrived to keep the secret for months, and had chosen a dress to wear which her dead father had loved her.

Sometimes she gives a fête to the Stadt orphans in their queer red and black garments.

"She loves the orphans," said the Dutch frau. "When, after the King's death, all the people of Amsterdam came to pay homage to the regent mother, the little child suddenly stepped down from the throne, and going up to one of the poor girls, who, like herself, had no father, she put her arms about her and kissed her. Ah! then you should have heard the acclamations of the people! All our boys in Holland love their child-queen. They would protect her with their lives!"

While all Americans will agree in rejoicing that the well-being of our country does not depend on the life of a child, yet we can recognize the truth in the shrewd remark of the frau in Amsterdam:

"If one must have a monarch, it is best that she should be a child and a girl, for then all that is best in the hearts of her subjects will rise for her support and her defence!"

AURORA BOREALIS.

There are few more impressive spectacles than a display of the Aurora Borealis. These strange atmospheric lights, which are of nightly occurrence and great brilliancy in the Arctic regions around the north magnetic pole of the earth, are comparatively rare in our latitude. At present, however, they are becoming more frequent and beautiful, in accordance with a somewhat mysterious law which connects them with the varying condition of the sun. Whenever black spots appear in the greatest numbers upon the shining face of the sun, the Northern Lights stream and flicker across the sky at their brightest.

The sun-spots appear and disappear in recurring periods of about eleven years, and the auroral displays follow them with a fidelity which of itself is sufficient to convince the observer that the two phenomena are intimately related.

Just now, as *The Companion* has recently informed its readers, the sun-spots are becoming, from month to month, larger and more numerous, and anybody who has observed the sky at night must have noticed that the Aurora Borealis has returned with a brilliancy that it has not displayed since early in the eighties. For several years to come we shall enjoy these celestial spectacles, and it is not unlikely that some very notable displays will be witnessed.

Few things can appeal more powerfully to the mind which understands what the eyes behold than the sight of those vast arches and streamers and rolling curtains of mysterious light which this great magnet, the earth, flings like a scarf of glory around its poles when its mighty brother and ruler, the sun, wrought by contending forces to the highest tension of excitement, sends its electric impulses like telegraphic flashes to the worlds that revolve around it.

Notwithstanding the evident electrical or magnetical origin of the aurora, and its analogy in appearance with the glowing lights seen in a Geissler tube when an electric current is passed through the exceedingly rare air remaining in the tube,—resembling in its rarity the atmosphere at the great elevation where the Northern Lights appear,—many persons suppose that it is merely a reflection of the sun's light.

During a very beautiful auroral display on the night of September Third, this year, a gentleman who had travelled widely over the globe, and was well informed on most ordinary topics, gravely assured a company assembled on the lawn of a hostelry in the White Mountains, that the spectacle they were admiring was caused by the reflection of the sunbeams from the glaciers around the North Pole! He had read that preposterous statement somewhere, and had stored it in his memory on the supposition that it was a scientific fact.

There is still very much for us to learn about the aurora, and about the strange influence that the sun exerts upon it. It is probable that our knowledge will be considerably enlarged in this direction during the coming decade.

"IF."

If wishing could bring it back to me,
If wishing could bring it back!
The wrathful sentence that flew away
To mar the joy of another's day:
If wishing could bring it back!

If working could bring them back to me,
If working could bring them back!
The selfish hours I dreamed away,
That made all toil-full another's day:
If working could bring them back!

If praying could bring them back to me,
If praying could bring them back!
The chilling doubts that I gave away
To cloud the light of another's day:
If praying could bring them back!

MARGARET GILMAN GEORGE.

MORE SCARED THAN HURT.

The Meadowbrook stage was not a vehicle calculated to inspire a stranger with confidence, nor were the horses that drew it over the long hills very attractive specimens of their kind. They had a depressed, humiliated appearance, and carried their heads as low as possible; but the stage-driver was a person in whose ability to drive—even such a coach and such horses—one instinctively trusted.

"There's been some strangers, off an' on, thet's looked sort of sideways at me, fust off," said the driver to a passenger who had secured the box-seat one crisp October afternoon; "but take 'em by an' large, they've none of 'em made much fuss, 'xceptin' one elderly lady that come up here t' visit some relatives o' hers that lived off on the road to West Medderville.

"It appears they was to hev met her, but ther was some mistake, an' they wa'n't there; so th' stationmaster, he told her she could come right along in th' stage, an' she seemed sat'sfied; but when she see th' stage, she capered round consid'able lively. She was a kind of slim, wiry-lookin' woman, an' she stepped round some like a pa'tridge. I reely calc'lated once that she *was* a pa'tridge.

"'Hev I got ter go in *that*?' says she.

"'This is the only conveyance I've got, marm,' says I.

"Well, she looked pooty wild-eyed; but she got in, an' I stowed all her bundles in round her, an' she calmed down some. I took all her suggestins 'bout 'drivin' with care,' an' then I closed th' door an' climb up here.

"Well, p'r'aps you noticed thet when the stage *starts*, she's apt ter bump a hair more'n common, an' I hed jest started when th' elderly lady she give a turrible screech, an' I hauled up, fer I thought likely she'd lost a bundle. But she hedn't; she was jest scat by the bumpin', an' says she, stickin' her head out an' lookin' up at me:

"'Do you know, young man, thet ef ther's any harm comes ter me, ther'll be heavy damages t' pay?'

"'Bout how much?' says I.

"'Five thousand dollars, ef it's anythin' ser'ous,' says she, quite prompt.

"'Well,' says I, 'five dollars'd suit me better, considerin' my income;' an' then she drew in her head, kind o' snappy, an' we started on again.

"The roads was hubblier'n usu'l thet spring, an' whenever we give a jounce, I'd hear a kind of a squawk fr'm her fer the fust two miles or so. After we'd got thet far she quieted down some, an' only groaned.

"At last we got t' where her relations lived, an' when we drawed up t' their gate, I stepped down an' opened the door fer her, an' I said:

"'You see, marm, I aint got no damages t' pay, an' ef you please *I'll* take thutty cents!'

"Ye never see anybody look so wilted an' meachin' as she did, an' she kind of 'pologized, but I told her 'twas all right. I spoke with her a number o' times at the post-office durin' her stay, an' when she went off she rid here, on the seat w'th me, an' was es chipper an' talkable a passenger as ever I kerried."

PERILS OF WATERS.

Fraser River, British Columbia, is named after Simon Fraser, the first English-speaking man who gave any trustworthy account having explored it. His journal of the year 1808 is a long series of descriptions of wild adventures and hair's-breadth escapes in the gorges through which the river raves in tremendous rapids. On the Fourth of May Fraser and his men were obliged to portage along the face of a declivity high above the water. Loose stones and gravel constantly gave way under their feet.

One of the men, with a pack on his back, got into such a position that he could move neither backward nor forward, nor throw off his load. Fraser crawled to the man's assistance, and cut the pack from his back. It never stopped bounding till it reached the river. On this carrying place of two miles long the stones were so sharp that the shoes of the whole party were cut.

On the Twentieth of May Fraser's party reached the place now known as Jackass Mountain—because the gold-seekers of the sixties lost so many mules there. The sure-footed animals tumbled off the precipice, and rolled into the great rapids below. Several Indians had perished in the same way shortly before Fraser arrived. When one of his men stumbled, the kettle he carried bounced into the river.

From the head of these rapids three of Fraser's canoes were accidentally swept down. The boats were smashed to pieces, but the men were all saved, mostly by Indians, at the rapids' foot. A voyager named Dalaire gave the following account of his experience:

"In the first cascade our canoe upset. The bow and stern men got on the outside and held on. But I remained under the bars. It seemed a terribly long time. My senses were almost gone when one side of the canoe raised up. The men outside had let go.

"I had swallowed a great quantity of water. I was stupid with being so nearly drowned, and had trouble in pulling myself from under the bars. When I did I held on by the bottom. The canoe was in the middle of the river then. Down I went over the second or third cascade—I don't know which. The canoe plunged from a great height, struck the bottom, and was smashed into two pieces. I was knocked senseless.

"When I recovered I found myself holding by one piece of the canoe, and drifting in an easy current. I went through three more cascades, and then lost my hold, because my strength was exhausted. A large wave washed me among the rocks, and the next one, still bigger, bolsted me ashore. There I remained unable to move for a long time, and the waves often rushed up nearly over me. At length I managed to crawl up among the rocks, and here I am just like you see."

WHY THANKSGIVING WAS LATE.

The private history of public measures is sometimes curious and interesting. A correspondent of the St. Louis *Republic* not long ago received from a venerable Methodist clergyman an account of the first Thanksgiving proclamation ever issued by the Governor of Missouri—in November, 1859. The clergyman was then the presiding elder of a large district, which on the southwest reached Fort Scott, Kansas. There were no railroads, and nearly all his time was occupied in riding the circuit.

In the summer of 1859 I was the guest of an old friend, a good Methodist down in Benton County, and during the afternoon he asked me how it happened that the Governor of Missouri never issued a proclamation appointing a day of thanksgiving and prayer, as was done by the governors of the New England States. I told him that I had never considered the matter, but would suggest it to Governor Stewart as soon as I returned to Jefferson City.

My friend then said that if the proclamation was issued, I must be his guest on Thanksgiving Day, and that a yellow gobbler should at once be put in fattening against the feast.

In course of time I got back to the capital, and called upon the Governor to suggest the advisability of issuing the proclamation.

"Well, parson," said the Governor, "that's in the religious line. Suppose you write it."

I had no objection, and at once proceeded to try my prentice hand on a State paper. When I got to the date I was puzzled. You see, I had in mind that yellow gobbler down in Benton County, and if I fixed the date at the usual time, I couldn't possibly reach it. So I made a careful calculation as to my route, and decided that the first week in December would enable me to make connections.

Without saying a word I entered Thursday, December Eighth, as the time for the first official Thanksgiving in Missouri. The Governor read the document over carefully, signed it, sent it to the Secretary of State, and in due course the day was proclaimed.

JIMMY'S COMPOSITION.

In a public school in one of the New England States, the teacher makes a practice of requiring "natural history compositions" from her pupils. She gives them as a subject something with which they are familiar, and tells them to write all they know about it. In this way she teaches them English orthography and natural history all at once.

Not long ago she asked Jimmy, one of her bright boys, if he knew anything about ants; and when he said that he did she told him to write a composition about them. Here is the result of his effort:

ANTS.

There is many kinds of Ants My ant Mary Jane is one of these kinds. She is geully good natured and when she comes to see My Mother she brings me five cents worth of Cocknuts and tells me Why James how you've growed but when I go and see her and dont only just wawlk on the Carpit without Cleening my boots she is orfly mad.

Ants like to give you Advice and scold at you like everything but their Hart is in the Wright Plaice and once I found a Ants nest in the woods I poked it with a stick and a Million Ants run out after me and Crawled up Inside my Pants and Bit me like Sixty.

Ants nests are good Things not to Poke with a stick Ants are very Industryous in Steeling Shugar.

I forgot to say that my Ant Martha lives in Main she has a boy of Just about my Aige and He can stand on his Hed Five minits and how Do you suppose he can Do It.

I Do not think of Annything more about Ants at presant.

JAMES W. MCCREERY.

A FAMILY TREE.

A pretty custom which was at one time common in some parts of New England was the setting apart of a "family tree." This tree was not of a dry, genealogical kind, but was always one of the finest in the orchard, selected with a view to its apple-bearing abilities and its beauty.

In one little village many of the orchards have trees of this description, and the older inhabitants can refresh their memories as to the number of children in the families which have occupied farms at different times, provided the period of occupancy was long enough to make the setting up of a "family tree" worth while.

On one farm there is a large old tree which bears seven different varieties of apples: Baldwins, Jeremiahs, summer sweetings, winter pippins, Astrachans, russets and gilliflowers. The grafts on this tree were made, not one at the birth of each child of the household, as was sometimes the custom, but when each boy or girl grew old enough to choose his or her special favorite among apples.

The tree is now more than sixty years old, and its present owner shows it with great pride, and gives samples of its fruit to the children of the neighborhood with a free hand.

THOUGHTFUL.

In the churches for colored people in some parts of the South, when a collection is to be taken, the box, instead of being passed from pew to pew, is deposited upon a table in front of the pulpit, and the brethren and sisters are exhorted to come forward and put their contributions into it. A writer in the *Christian Union* says:

I had slipped into a back seat of a large African church at Columbia, S. C., one Sunday evening, and was watching the taking of the offertory, when one of the deacons, with that tact which belongs to almost all the colored race, came and politely offered to carry up for me any contribution which I cared to make.

I handed him a twenty-five-cent piece, and with inimitable pomposity he marched down the long aisle, carrying the beggarly coin so that everybody could see it. Suddenly he turned on his heel and started back, while the curious eyes of the crowd all turned to follow him. Arrived within speaking distance, the good old man called out, in a whisper audible to half the congregation:

"Do you want any change?"

TOMMY'S THANKSGIVING TROUBLE.

There's going to be turkey and duck and ham,
And salad and ice-cream and pudding and jam,
And oysters and tarts and chicken pie,
And custards with frosting piled up high!

Oh dear!—how I wish I was big as a man!
For I want to eat just all that I can,
And to think of those tarts
and custards and all,
And I—oh dear, I'm so dread-
fully small!

WHERE THE CHURN WENT.

"Somebody's got to stay home from church," said Hulda.

Hulda was the girl who helped in the kitchen at grandpa's.

"Home from church on Thanksgiving Day!" exclaimed grandpa, shaking his head. "How's that?"

"It's 'cause Mr. Robert's got to go in the train this afternoon," said Hulda. "We've got to have dinner earlier."

"Can't it be managed any other way?" asked grandpa.

"I don't see how," said Hulda. "I could put in the turkey and make a big fire, but somebody's got to be here to open the damper just at the right time."

This was a serious business. Grandpa and grandma wanted to go because they had never missed going on Thanksgiving as long as they could remember. Tony's father and mother wanted to go because they were at the old home on a visit, and liked to go to the old church and see old friends. Hulda wanted to go because it was Thanksgiving.

"I'll stay," said Tony.

"Oh, I don't believe you could do it, dear," said grandma. "You are so little!"

"I'm six!" said Tony, proudly. "I shall be seven next Thanksgiving."

"I do believe he could pull out the damper all right," said Hulda. "He always does just as he is told."

"Yes, always," said grandma.

And by reason of this good character Tony was allowed to stay home.

"Now I'll make my snow man," said Tony, looking with great satisfaction at the big sleigh as it drove away with its load.

The snow had fallen a foot and a half deep two or three days ago. To-day it was thawing a little, and Jacob, the farm boy, told him it was exactly right for making a snow man; and Tony was afraid that if he waited till afternoon it would be too soft.

He worked as hard as a six-year-old boy could work, remembering just at the right time to go into the great kitchen and pull out the damper as Hulda had told him; and by the time the others came from church there it was, a splendid fellow, legs, arms, head, nose, chin and all, waiting for a few finishing touches from Jacob.

The turkey in the oven was baking, too, just as a Thanksgiving turkey ought to bake.

Jacob touched up the man, while Hulda touched up the turkey. He made a hat for him, a difficult thing to do, and ended by putting a pipe in his mouth.

But Tony was a Band-of-Hope boy, and would not allow that.

It froze hard that night, and in the morning the snow man was as solid as a rock. He had come for the winter, Jacob said.

"You'll have to get along with the snow man," said Tony, when grandma was wishing him good-by; but grandma thought the snow man would very poorly fill the place of her merry, laughing little boy.

"What's become of the churn?" asked Hulda, the day after all the Thanksgiving visitors were gone. "It's gone."

"It must be in the shed just where you put it," said grandma.

"I should 'a' said so myself," said Hulda, "but I've hunted high and low and it isn't anywheres."

"We haven't churned for a week," said grandma.

"No, 'cause the company wanted all the milk and cream. But I want to churn now, and where that churn can 'a' went to beats me."

It was a most surprising mystery. Grandma and Hulda hunted through the whole house. Jacob hunted through barns, stables and granaries, and then came in declaring it couldn't be anywhere except in the shed and must be there. But his saying so did not make it so.

After every nook and corner of the place had been searched everybody declared the churn must have been stolen.

All winter long the snow man stood in the front yard. Sometimes a little thaw would come, and he lost his nose and chin and then his hat. But it always froze hard again, and it was late in March before his arms melted away.

That was the beginning of a long thaw. The sun must have thought him a funny man, for he smiled down on him till there was nothing left of him but a little heap of snow.

And then Hulda, looking out of the window one day, exclaimed: "My—land!"

"What is it?" asked Jacob.

"If there aint that churn!"

"I'm blessed if it isn't," said Jacob.

He went out, kicked the churn out of the snow and brought it into the house.

Four months ago a small boy had found it very hard to make a good beginning on his snow man.

"The snow slumps down so," he said. "I must have something to start it with."

He hunted about in the barn and the shed.

"Ah, there's the very thing," he said. "It isn't so big as a barrel and will do better."

So he set it firmly down, piled the snow all around it, and had a good start for his snow man.

The hoops were rusty, and the churn soon fell to pieces, but nobody cared, for a new churn had been bought long ago.

There was a great laugh about it, but grandma wiped her eyes as she said: "I'd give another churn to have the dear little fellow here again."

THE MAGIC VINE.

A fairy seed I planted,
So dry and white and old;
There sprang a vine enchanted
With magic flowers of gold.

I watched it, I tended it,
And, truly, by and by
It bore a Jack-o'-lantern
And a great Thanksgiving pie!

For the Companion.

CHUBBY AT THE TELEPHONE.

Hello, grandma! Hello! Is that grandma?

All right. This is me, grandma. We're all coming to-morrow.

Is the turkey real big? Oh, two of 'em?

That's nice. Are they undressed yet?

I'd like to sit by you at the table. I'm glad Mamie and Harry are there. Did you say Aunt Jessie was coming with Ted and Mittie?

Oh, what fun there'll be! Do you have to look at the pies? Well, good-by. We'll come real early.

A THANKSGIVING GUEST.

One-sixth of a violet, modest and blue;
Two-tenths of a heliotrope, purple of hue;
One-fifth of a pansy; one-fourth of a rose;
One-eighth of the prettiest hawthorn that grows;
One-ninth of a buttercup, all a-shine;
One-fifth of a daisy, the true-love sign;
One-tenth of a mignonette, flower undefiled;
Two-eighths of a harebell, Nature's own child;
One-seventh of arbutus, pink as the dawn;
One-fourth of a lily, fair as the morn.

These portions of blossoms, united in one,
Make the loveliest flower seen under the sun,
And on a Thanksgiving, it must be confessed,
At the family feast 'tis the most honored guest.

4.

CHRONOSTICON.

One letter from each sentence will give the date of the first Thanksgiving Day in New England.

Thanksgiving Day is an annual religious festival observed particularly in the New England States, but also in many other parts of our country. It was suggested by the Hebrew Feast of Tabernacles, a feast of ingathering at the end of the year. The occasional observance of a day of thanksgiving, formally recommended by the civil authorities, was not unusual in Europe. Such a day was observed in Leyden, Holland, Oct. 3, 1575, the first anniversary of the extraordinary deliverance of that city from siege. In 1608 the Pilgrim church, exiled from England, went to Holland and remained there till 1620, when it sent off the Mayflower colony to New England. Quite early in the history of the colony at Plymouth, Governor Bradford sent four men out fowling, after the harvest had been gathered in, that they "might after a more special manner rejoice together." God had blessed their labors, and this was to be a feast of thanksgiving. "So they met together and thanked God with all their hearts."

ON THE NORTH SEA BANKS.

In Three Chapters.—Chapter III.

Through One Gale and Home.

Here is an experience of my own. All my other sketches are true, but I had to depend on skippers and others for matters of detail, because of course I could not be in a dozen places at once during a gale or snow-storm.

My little girl had played me some heart-breaking music of Beethoven before I came away, and on one strange night this music came into my head, and insisted on singing itself until I felt that the tears must come—or something foolish like that take place.

All day long there was a something wrong. You remember how Cowper makes Alexander Selkirk say of the animals, "Their tameness is shocking to me?" Well, the birds almost shocked me by what seemed their undue familiarity and tameness.

I was sad when some poor robin or lark or thrush became weak, and could not overtake our vessel, because I knew the wicked gulls would soon have him; and thus it was pitiful to see a little creature close its wings and float away like a dead leaf.

But when they got on board, they made up for all their troubles by excessive familiarity. A robin did not in the least mind helping himself in the cabin, and the golden-crested wrens crawled like mice about my sea-boots whenever they had the fancy, and they wound in and out among the festooned nets, and seemed sorely disappointed on finding no kind of fruit.

I could imagine them saying, "How pleasant it will be to get back to Siberia in the spring! You can fly for a thousand miles there over flowers, and you need want for nothing. Then there are three gorgeous months when you can stuff the little ones in their nests with everything that is good, and all your millions of friends are round you for miles and miles, and they all sing against each other until you are bound to join in. What makes us come to this place, where there is nothing?"

What, indeed? We set up a colony of birds during that dreary day, and I know now they all made up their minds to stay if they could, for mischief was about. When the darkness came, our men had to work, but, happily, I was on a splendid vessel, where the men were treated like human beings, and they fed well before they started their big job.

As the day was so hideous, and the bodeful feeling in the air so strong, I was not sorry to sit in the crew's cabin for a while. There four powerful fellows disposed of some little trifles, such as a cabbage, a large piece of mutton, a few pounds of pudding, and an odd loaf or so which did not count.

Had they said, "We should like to eat *you*, sir," I should not have doubted their capability, and my only appeal would have been to their sense of comradeship.

"Breeze comin', sir," said one. "You jest see how this old girl jumps at her trawl when we ketches it."

The "old girl" was jumping quite enough already for ordinary tastes, since she deposited everything—including the cook—in places for which other arrangements had been made.

A bitter, bitter night it was—clear overhead, but thick below, as the wind was working up in pressure, and the drift plucked away from the tops of the seas was like a river of fine salt, if I may employ such a queer simile. Certainly it was not like water.

We were a fleet of about one hundred sail. The roar made by our procession was very imposing, for each ship was like a great harp for the gale to play on; and if you can imagine a harp with a note as strong and deep as that of a sixty-four-pounder gun, you may fancy what a noise our orchestra managed to make.

To me it was inspiriting, but our men did not enjoy it, for they had to think of reefing, and I had not.

When the King of the Winds gave his signal-blast, and the great battle began, you might have thought that all the artillery in the world had opened together. It was no review day; it was like a great battle where the roar of the guns quells the peevish, dull rattle of musketry, and would quell the thunder if a storm began.

Then we had to put our vessel's nose up to the wind, and the men got to work with their reefing. I could understand easily how it is that so many surgical cases must be tended morning after morning. The Deep-Sea Mission people attended on eight thousand men in 1889 alone, and these were nearly all surgical or dental cases.

Many of the fishers suffer like that cool gentleman who went on board a mission vessel last year and said, "Pound o' 'bacca and two teeth out. And look sharp, for the Admiral's sailing." The Admiral was going to another fishing-ground, and this eager personage wanted to catch him; so he merely mentioned the teeth casually. But the ordinary cases are more horrifying smashes and jams and internal injuries and complicated fractures of important bones.

See the men and boys reefing in a gale, and you will wonder how any of them ever escape being injured for a week together. Our boy in this gale was a pink-cheeked fellow, with a face like the ideal picture usually painted of John Bull. He despised hats and caps. He had about twenty falls per day, and he came up smiling in spite of wind, weather and tumbles.

To see that youth whip himself up on the trembling boom and work with the reefing-tackle, while ever and again came jerks that must have made the roots of his very teeth ache—to see that was to understand a new phase of life. You could not daunt that boy, though he was not fourteen; he was born amid the talk of danger, and he learned to face death before he learned to spell.

There he lay along his swaying perch. The wind rose to a scream as it rushed out of the courses of the sail; that alone seemed enough to blow him down from his eminence, but he worked and worked, and though the wooden eyelet of the reef-earing gave way, he managed his job, and came down—of course with a fall.

The task of making safe grew wilder and wilder each minute, and one of our fellows fell off the mizzen-boom with his rope in his hand. It was lucky that the rope was there, or he must have gone forever. Drenched, chilled, shaken, he was nevertheless not scared, and went on with his business as if nothing had happened out of the way.

When I said, "What a shave, old fellow!" he grinned and answered, "Seen many men lost that same way, sir. It all depends on how you're caught."

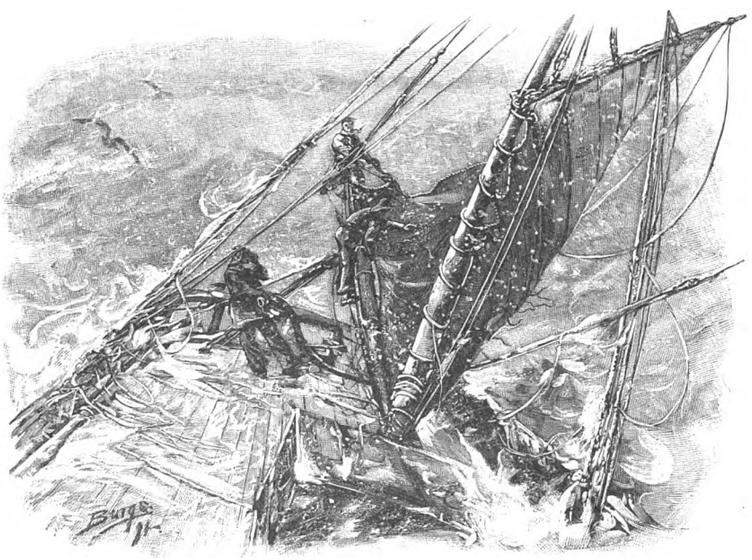
Amid all this we were resolved to fish till the last available minute had expired. A man may go through many a risk like that endured by the one who fell from the mizzen-boom, and he may earn no more than twopence or threepence for some hours of perilous work. Yet these men stick to it, and weather can hardly be said to come within the range of their practical calculations at all.

For the entire haul which we got at the beginning of that terrible breeze, our five hands received among them about two shillings and twopence, and each of them risked his life in a way in which no circus gymnast would think of doing—even with a springy net under him instead of a roaring sea.

But the gale had to be fought at last, if we were not to be forced under water; and we put the vessel so that she could ride, while our men cleaned fish, and our chubby boy slept. The wicked days are gone when a boy was not permitted to have a bed; and my pink-faced prodigy was on a mattress which would have been quite comfortable had it been dry. Bedclothes, of course, no one would dream of using. Even in this luxurious ship of ours, all the men slept in their clothes and never changed them; and Pink-face was absolutely in a trance, despite his steaming guernsey and large wet stockings.

Death was abroad; some desolate ships were scurrying about like belated ghosts, when the sad and boding dawn arose. One brig came toward us, and the rush of the sea toward her—the tremendous effort to pile wave on wave—was such that she seemed to be coming down from a terraced Alp that loomed above us, and mingled the dirty green of its summit with the clouds.

Poor brig! We could not help her very well, and she did not ask for help, but she was hard put to it, and many another vessel fared sorely that day. It seemed as though Death, like a mighty falcon, had swooped down on a flock of weak creatures, and now each was flying for dear life from the inexorable terror.



As for our fleet they were all gone, and a man at the mast-head could see nothing of them. I sneaked up on deck when I could, and watched the scene with all the fascination born of horrors.

When a steamer rolled away far to leeward of us, and lay on her broadside whenever she pitched, I knew she was doomed. She disappeared, and I knew she had foundered without making a signal of distress; yet our skipper took the business as part of the day's work.

"We have it like this off and on from October to March, and October and January are perhaps the worst."

Let me again say that work is never interrupted for an hour in all this, unless it comes to a case of foundering.

What a night was the second night! And then the morning, when at last we found our people, and watched the crippled ships draw up one by one! Death had been busy; the black flags would be sorely thick on the river, and our vessels that went home would too often be forced to put their own flags half-mast high when the crowd came to meet them.

A Terrible Gale.

We had every form of cut, wound, contusion and fracture to deal with, and I began to wonder how any fisherman ever retains his proper complement of limbs until he reaches manhood.

One poor fellow with a bruise on his side roused my pity, for his liver must have been simply disorganized by the fall which he had received. It was piteous to see his agony as he was hoisted on board.

We have beautiful swing-lifts now, and magical spring-litters, so that a man may be whisked up and down as though nothing were the matter with him. But it was not so in the old times, and I pitied the man with three broken fingers who had to climb on board of us.

The sea was sullen still, and as our sufferers came confidently up, one by one, it was hard to watch the cruel difficulty of embarking and disembarking them. They are stoics, these fishermen, and the thought of the pain they endure without flinching makes my flesh creep. Even the boys are indomitable.

Well, I left the sailing-vessel and went on board one of the steamers that make their journeys, punctually as the post, in all weathers. Then the gale was kind enough to come on again, and I stayed forty-eight hours on the bridge, while the sleet and rain and frosty gale played on me. I saw the whole panorama of the North Sea, and heard its orchestra.

My girl's Beethoven air had stayed with me all the time, and I knew that the artist to describe the sea of storms is not a prose writer, but a musician like Beethoven.

If you watch one of those sturdy steamers smashing her way by sheer power of her immense engines through seas that would make an ironclad slow down, you understand something of the resistless power of luxury, which can induce men to face the worst hurricane that ever blew only to provide an article which has become a necessity for the rich, though to the million, it is an almost unattainable luxury.

I felt as comfortable on that steamer as though I were in St. Paul's Cathedral, though the seas were knocking the life out of sailing-vessels; and as I fared home to my comfortable study, I thought kindly of the good fellows whom I had left who had no pleasant rooms to come to, and who must remain out as if there had been no gale, and as though Death had not held high revel.

HOLIDAY RECREATIONS.

Each year the approach of the holiday season brings a demand for new recreations and forms of entertainment. The annual family gathering, the church, and the many associations of social life seek what is novel and timely in the recreative arts with which to enliven the merry-making season.

The traditional features of the Christmas-tide are the growths of centuries and of the customs of many lands, but novelties in these arts usually arise from the social changes and developments of the year.

What is there that is *new* that we may offer for young people's entertainments for 1891?

The common use of electricity in most American towns makes it possible to produce in many homes, halls and churches, the decorative effect of an *electric star*. This was done in a church in one of the suburbs of Boston last year, so successfully and beautifully as to excite the admiration of all who saw it.

The literary exercises on the occasion related to the Star that led the Magi, and the music consisted of songs of the Star.

By the use of platinum, mirrors and colored reflectors, many beautiful effects may be produced in the hands of an expert by the electric lights. The Star may be made to assume the form of the Cross, as shown in Doré's famous conception, which may be seen in many illustrated Bibles. The name of such an exercise for children's entertainment may be "Following the Star."

During the year short stories have become the popular reading. In ancient times short stories were the parables of the nations. The Hebrews expressed all spiritual truth in the form of short stories, as the Germans illustrate metaphysical thought to-day. Short stories were the literary jewels of Arabia, Persia and the East. They were recited by natural story-tellers in the courts of caliphs and kings, as the old English minstrels rehearsed the Arthurian legends. This form of story has found a sudden revival in our country, and it often takes the form of a narration in the first person and in dialect.

The reading of short stories in the first person and in dialect has also become a popular feature of the concert hall. A few years ago there were few public readers. Such entertainers are now becoming as common as the minstrels in the glittering armies of the Crusades. Schools of elocutionary art multiply, and the favorite recitation is the humorous or pathetic short dialect or character story.

But a new form of relating such a story, and one admirably adapted to holiday service, is to appear in the costume, habit and apparent condition of the character assumed. The telling of stories in costume is a growing feature of New England social life. The stories of "Uncle Remus" may be read in negro costume; those of Miss Wilkins in old New England or provincial dress, and all dialect stories related in the first person, in the same picturesque way.

We attended last winter a social entertainment given by a Spanish class, in which the speakers, singers, guitar and mandolin players all appeared in costume and related and sung the ballads and romances of Spain.

The coming year, which celebrates the American discovery, invites a revival of Spanish historical tableaux and music.

The stringed instruments of the Latin races and the South are growing in popular favor as the romances of the Great Discovery again become active in the student's experience. Among the scenes that may be effectively presented in tableaux with the music of the cavalier and *bolero*, we may suggest Columbus as a boy on the quay of Genoa, after the manner of the exquisite statuette in the Boston Art Museum, a picture of which many of our readers may have seen; Columbus at the gate of La Rabida; Columbus's first sight of Isabella; Columbus listening to the music of land birds, which music may be imitated; the *Te Deum* of Columbus at San Salvador, which music may be sung by an unseen chorus; Columbus's first interview with Indians; his second meeting with Isabella; his narration to the Spanish sovereigns on the field of Sante Fé; the Viceroy in chains, and his death.

On the field of Sante Fé at Barcelona the chapel choir of Isabella sang a *Te Deum* when Columbus had finished the narrative of the Discovery. Columbus appeared in rich court dress on this occasion and was attended by

Digitized by Google

Indians with plumes, jewels and tropic birds. This scene would make a rich historical tableau for music. Any one of the old Te Deums might not inappropriately be chanted.

The fabulous Santa Claus as a holiday visitor has certainly lost the charm of novelty, but always welcome will be the idea of the coming of a merry Present-maker, who somehow represents the spirit and character of the festival of Good Will.

We have recently seen this personification made by a very acceptable and popular personage called "The Jolly Old Candy Man." The name suggests the character assumed. A man in the white apron and white shovel hat of a confectioner comes into the social assembly, school or festival bearing a large tray heaped with bonbons. He may also bear a pack of packages of candy on his back. He calls out his candies after the manner of street-criers, and may say:

"Here I come from Good Will, the great confectioner; here I come, with packages of candy for all good boys and girls. Is this the place? Ah! I see it is. Harry Goodyear! is he here? Yes; I knew he would be here. Here's a package for you, Harry. Candies! Candies from Good Will. Mary Manners! is she here? Candies from Good Will!"

The person to assume this character must be a wit and a ready talker. He must be able to say amusing and agreeable things to the young people as he supplies each a package of candy. We once saw this part so well sustained at a children's festival that the whole audience for nearly an hour was kept in a most delightful mood of excitement and amusement.

The character is a most popular successor of the old-time favorite, where a new feature is desired.

His steps from person to person or from class to class may be made to lively music on the piano, and he may sing the famous old song of

"I'm a jolly old quack, quack, quack,
And I carry my pack on my back,"

altered to suit the occasion, as

"I'm a jolly old candy man,
And I do the best I can
The world with sweetness and joy to fill,
And serve the people of Good Will!"

SOMETHING DIFFERENT FOR CHRISTMAS.

There were two little furrows between Alice's eyes, and yet she was thinking about Christmas.

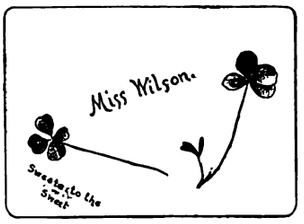
"Papa and the boys—oh dear! and mamma and Aunt Lou and Cousin Rose, and at least three of the schoolgirls and Mademoiselle Corot, and—no, do not suggest bags nor pillows nor book-marks (addressing her image in the glass), for I am sick and tired of them! I cannot paint, and I hate to sew. I can make photographs which my family do not appreciate, and I can print mottoes on cards, and—let me see! Papa wishes to have a party for his Loyal Legioners, and I heard mamma say to him, 'After the holidays, John?' Loyal Legion—soldiers—drums—flags—songs, and there's Jack's army now. Tra la!" and she shook her hand at the round face in the glass as she ran out of the room.

What she did was to get her kodak and a handful of cookies, and hurry to the sunny garden. A string of little boys with drums and whistles were following a great paper hat from under which came cries of, "March! Shoulder arms!"

"Here, Jack, want a cookie? Bring up your men. I press the button and you do the rest;" and click after click announced a soldier taken captive.

Then Alice shut herself in her dark-room, and for days was wholly occupied. The next week she came to me triumphant.

"Papa's Christmas present," she said. "Dinner cards for his party."



I never saw anything prettier. Fourteen squares of heavy, creamy paper, "bromide," Alice called it, each with a different picture of a boy soldier. By this bromide process the photograph needs no mounting, and looks like an etching or a steel-engraving rather than a common photograph. Some of the cards were further decorated with bars of army music, done with pen and ink, and space was left for the name of the guest. By means of a thin card and a letter-press Alice had given each card a plate impression, which added an aristocratic air.

Alice's eyes danced with delight.

"I have solved the Christmas problem. See!" and more ribbon-tied packets were drawn out. Mamma's lunch cards were decorated with lucky clover leaves.

"You know how many I am always finding. I used to stuff them in my school-books and look out for good luck to follow. And hasn't it? I stick them on to large correspondence cards with the white of an egg, which does not stain the leaf. The letters I put on with green water-color and a brush. How I hunted for quotations! Those on mamma's set are all cordial and 'homey.' I have found nine of them. Listen."

"Better be born lucky than rich."
"Well met."
"Sweet symbols."
"Favored ever be thy way."
"Welcome as a four-leaf clover."
"Good luck to ye."
"A small fortune."
"Live in clover."
"Lead on to fortune."

"Aunt Lou's quotations are from Shakespeare and Browning. I thought it would be fun at her party to have each guest read her quotation aloud, and let the others guess what play it is from. She might give a prize, too, and so bridge over the bouillon."

Nature and fortune joined.—*King John.*

Now heaven send thee good fortune.—*Merry Wives.*

A vision fair, and fortunate.—*Julius Cæsar.*

Fortune play upon thy prosperous helm.—*All's Well.*

Good luck lies in odd numbers.—*Merry Wives.*

Earnest of success.—*Macbeth.*

I am blest in your acquaintance.—*Merry Wives.*

The top of admiration.—*Tempest.*

Lucky joys and golden times.—2 *Henry IV.*

Thou art worthy to touch fortune's finger.—*Twelfth Night.*

I thank you for your ready presence.—*Luria.*

Made in a piece of Nature's madness.—*Flight of Duchess.*

"These I like even better. Jack borrowed a punch from a cobbler he knows, and with it I made two holes in each card. Only quotations are here now—see what pretty ones—but just before they are used the long stem of a flower is to be slipped through. These are for Cousin Rose's luncheon, and pink buds must be used."

For women are as roses.—*Shakespeare.*

My sweet Rose, my dear Rose.—*Shakespeare.*

Gather ye rosebuds while ye may.—*Herrick.*

For this I'll blush you thanks.—*Shakespeare.*

Let us crown ourselves with rosebuds.—*Wisdom of Solomon.*

Stealing and giving odor.—*Shakespeare.*

The rose was awake all night for your sake.—*Tennyson.*

The rose is fairest when 'tis budding new.—*Scott.*

She wears the rose of youth.—*Shakespeare.*

"Maud's cards are to have pansies, our class flower."

"Only a pansy blossom."
"A blossom passing fair."
"Pansies—pray you love, remember."
"Sweets to the sweet."
"I send thee pansies, flowers of remembrance."
"Fair pledges."
"Sweet symbols."
"My thoughts of gold."

"Mademoiselle may choose her own; but see, her mottoes are all in French."

"Quand le cœur est plein, il déborde."

"Qui se ressemble, s'assemble."

"On est assez riche quand on a le necessaire."

"Il n'est sauce que l'appétit."
"Plus on est de fous, plus on rit."
"Apres nous le déluge."
"Chacun son goût."
"Vive la bagatelle."
"A bras ouverts."

I held out my hand for more, and received a long box. "For Will. He always has the same boys and girls, so I put their names on now." On long, glossy magnolia leaves (those from the rubber plant are even nicer) the names were printed in fancy letters with gold paint. "How pretty they will look on the white napkins! and we must have yellow roses on the table. You like them all? And just think, I have not touched a needle to any of them!"

Lucy Elliot Keeler.

For the Companion.

AN "APRON-CHRISTMAS."

"Come around and see my aprons," said my pretty young friend, Mrs. Elliot, as we parted after a day's shopping together. "You know I had an apron-Christmas this year. I believe every one of my friends but you has been to the exhibition—and stolen all the patterns!" she added gaily, as she stepped aboard her car.

I had but just returned from a long series of travels in search of health for a dear child. Though well rewarded on that score, the settling down again into home life and housekeeping involved much work and thought. I began to find a stay-at-home wardrobe needed many things uncalled for in our family flights from hotel to hotel.

"Now there's another thing I must have. Some aprons! Bless my heart! I have not worn one for four years, and I used to have so many!" I said to myself on the way home.

So next week I called on my pretty friend. After I had seen the treasures added to her home, and heard of many things that had happened to the Elliots during my absence, my hostess said, "And now you must see my aprons!

"Charlie laughs at me," she explained. "He says the diamond ear-rings and lovely china that he and father gave me have quite lost their novelty, while the aprons are talked of and shown to somebody at least once a day!

"You see," she chatted on, as we went up-stairs, "when Emily and the girls at home were hinting and asking about what I wanted this Christmas, I didn't care to mention anything expensive for them to buy. Besides that, my wedding gifts are only two years old. I had so many that bric-à-brac and 'Jamescracks,' as Howells says, are already too numerous to mention in my rooms. So I said to the girls, 'Oh, just make me some aprons. I am entirely out of them, and baby's sewing takes so much time.'

"Well, those dear girls! They didn't think at first of making so much account of my remark. But Emily says that as they were talking together, thinking what kind of aprons to make, and each suggesting something different, Hattie cried out, 'Let's give her an apron-Christmas! Each one of us take a particular kind and see what we can do.' Now see if they did not do wonders!

"I had forgotten my own words when they came. You can't think how surprised and pleased I was with them all. Emily had feared I might be disappointed to receive only aprons from everybody at home! But you will see that these are not ordinary aprons, by any means."

We were now in her sleeping-room. Opening the drawers of a chiffonnier she took out first something shaped very much like the high-necked aprons small children wear, but without sleeves. In this she speedily enveloped herself.

"This one," said she, "is my 'chambermaid apron.' I always take care of my own room, and I keep this here to slip on every morning while making the beds. It is so pretty I quite want to wear it down-stairs."

It was made of a very yellow, unbleached cotton. The seams were corded and all the edges bound with a strip of turkey-red. At the back it was fastened with scarlet buttons and fitted rather closely.

"Hattie," she said, "made this pile of checked gingham aprons with the hems all worked in a pretty Grecian border in cross-stitch. They are for the days when Biddy takes her 'afternoons out,' and I get tea. They come to the bottom of my skirt, so my dresses are safe from spots.

"But see my bath apron!" she exclaimed. "I used to have to spread a blanket across my lap to lay baby on, after lifting him all dripping from his tub. It was so clumsy and took so long to dry every day, that I am disgusted just to remember it now! Florence made this of a square of heavy, twilled flannel, feather-stitching the hems with blue wash-silk. The top has a ribbon run in for a belt, but it can be slipped out when the apron goes to the laundry. There are blue morning-glories worked in the lower corners. And here is another like it, only with the stitching and flowers in pink silks."

The younger sisters had chosen still more fanciful aprons. One especially dainty was made of five strips of linen lawn, each five inches wide and thirty long, alternated with four rows of crocheted insertion of a pretty pattern. The strips were sewed together lengthwise, and the apron finished with broad strings of the lawn.

"One of my old school friends," said Mrs. Elliot, opening another drawer, "joined in the 'apron festival' by accident, for she sent me this beautiful one from Chicago. She was always rather stout, herself, and used to think she could not wear an apron, however handsome it might be, because it seemed to add to her size. But she writes that since she learned this way to make them she wears one on all possible occasions—they are so becoming."

This apron was the prettiest of all. The material was a plaid India linen, prettily trimmed with lace, but the peculiarity lay in the binding and the way it was applied. It was a pointed yoke shape. The V in the centre about four inches in depth sloped gradually to each side, where the width was an inch and a half. The gathers were thus brought below the line of the waist, and the effect was very good.

There was another of this pattern, but made of India washable silk with pockets and strings pointed to match the yoke binding.

"Mamma was at a loss," she said, "to find some kind no one else had chosen, until she noticed in one of the large dry goods stores in Boston the skirt-aprons of black sateen or cambric which the salesgirls wear to protect their dresses behind the counters. I have found it just the thing to put on over my dress while sweeping and dusting. It is quite full and has an extra long placket-opening, so it slips on and off easily.

"Then mamma added a set of creeping-aprons for baby, and they are such a comfort! His old ones were always pushing up and leaving his white dress and skirts to rub over the carpet. These are a quarter of a yard longer than his dresses, and sewed up like a bag across the bottom. He comes out of his 'bag' all fresh and clean when he gets tired of creeping, instead of having to be dressed all over again to be presentable."

By this time there was a veritable apron-show spread over bed, tables and chairs. As we folded them away, I not only planned to copy most of them for my own use, but to begin an apron-outfit for a next Christmas present.

Alice C. Tilden.

For the Companion.

UP IN GRANDMOTHER'S ATTIC.

Nowadays a roomy attic is a luxury with which houses are seldom provided; but our grandfathers built their homes with much consideration for their ample store-house under the rafters, which made so delightful a rainy-day playground for the boys and girls.

A good deal of space was given to these high-peaked rooms which, in the opinion of modern builders, belongs to the rooms below. Be the practical question as it may, it is rare good luck if one can get a peep into one of these old-fashioned receptacles of the household gods of a former generation; for if the attic has not been pillaged by collectors, most of the old articles are still resting there, hanging from wooden pegs driven into the timbers of the roof, or tucked snugly away under the eaves.

I shall bring out some of these things, and brush the dust from them for the benefit of present-day readers.

We shall need a light to explore the dark corners of our attic; so let us strike one with this

TINDER-WHEEL.

ancient tinder-wheel, and light that whale-oil lamp over there on the shelf.

Into the end of the tin box nearest the wheel was placed the tinder, a bit of tow, or other substance easily ignited. The wheel was made to revolve rapidly by pulling on a string wound around the shaft, as a boy spins his top. The wheel, rubbing against a piece of flint, sent a shower of sparks into the dry tinder, which quickly sprang into a blaze; and thus a fire was obtained.

OIL LAMP.

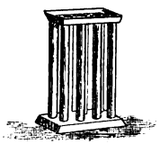
The lamp was filled with whale-oil, and had two small, round wicks which emerged through two small tubes. There was no chimney or shade, but undoubtedly a good deal of smoke.

If we need more illumination we can light another lamp, which was used at a somewhat later period. This had a broad piece of cloth for a wick, whose flame sputtered merrily beneath a gaily-painted shade. This great-great grandfather of our electric light had no chimney, and was filled with lard.

The old-fashioned candlesticks, made of brass or iron, are quite familiar objects, even at the present time. The candles used in them were of tallow, and were made in two ways.

The tallow dip was the most ancient and well-known illuminating contrivance in this country. It was made after this fashion: A great many round, slender sticks, each from ten to fifteen inches long, were provided, and upon each stick, about an inch apart, were hung cotton wicks as long as a candle. All these sticks were then hung between two long parallel bars or poles placed on chairs, each end of the stick resting upon one of the poles.

Then a large kettle of melted tallow was provided, and placed by the side of the poles.



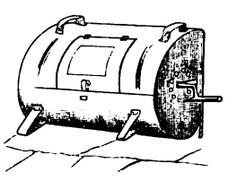
Digitized by Google

The "dipper" then began to plunge the wicks into this hot tallow, beginning at one end of his poles, and returning each dripping stickful of wicks to its place on the poles as soon as he had dipped it.

By the time he had gone the length of his poles, the tallow adhering to the first stick of wicks had hardened sufficiently to be dipped again. It was again plunged, and the round once more gone through. The process was repeated until, upon each of all the wicks, a candle of sufficient size was formed.

A single evening, in a cold room, would suffice for the making of two hundred candles.

Later came the tin candle-molds—upright tubes, in bunches, with top and base to hold them perfectly even. A wick was suspended in each of these tubes, generally held in place by nails across the top; and melted tallow was poured in around them.



CANDLE-MOLD.

A pair of brass or iron "snuffers" in a tray was a necessary accompaniment to a candle, to remove the burned portion of the wick. Sometimes men and boys grew very expert in snuffing candles with their fingers; but this method was not approved by careful people. The light made by a tallow candle seems rather meagre to us; but it must be remembered that the huge old fireplace was the source of a very considerable illumination.

SNUFFERS.

TIN KITCHEN.

Speaking of the open fire brings to mind our grandmothers' manner of cooking. Here is the old "tin kitchen" in which the goose was cooked for Christmas. It is a square structure of tin, movable, and open on the side kept toward the fire. It has a door at the back, through which the condition of the fowl or meat can be noted from time to time.

A spit of iron runs through the centre, upon which the fowl is impaled. This spit terminates in a crank at one end which, being turned, allows all sides of the roast to cook evenly.

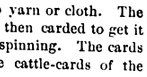
All kinds of meat were roasted in this way, being basted from the door at the back whenever necessary.

The tin "baker" was more simple in its construction, and was used in baking the bread, "johnny-cakes," cookies, cake and such food. The dough to be cooked was set at a slant in the baker, which was then placed before the fire on the hearth.

TIN BAKER.

Bread and other food was also cooked in a contrivance called a Dutch oven. This was simply a pan with legs of iron, and an iron cover. This oven was placed on the hearth over a bed of coals, and coals were also heaped upon the cover, after the articles to be cooked had been placed within.

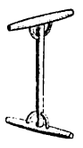
Brown bread, beans and pies were cooked in brick ovens, which were first thoroughly heated by building a roaring fire in them. When the bricks had been made red hot the coals were drawn out, the week's baking put in, and the big iron door closed.



These brick ovens were usually built into one end of the great fireplace. The other end was frequently occupied in the evening by the small boy of the family who, seated upon a low stool, laboriously endeavored by the aid of pencil, slate and "'rithmetic," to find out how eight small apples could be divided equally among nine very hungry boys.

DUTCH OVEN.

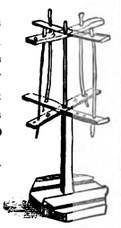
Much of the housewife's time in winter was spent in transforming the wool, as it came from the backs of the sheep, into yarn or cloth. The wool was first washed, and then carded to get it into long, slender rolls for spinning. The cards used looked much like the cattle-cards of the present day, except that they were larger and had very fine teeth.



Flax was prepared for spinning on the flax-comb—a piece of wood which had many sharp nails driven through it. Across the points of these the flax was drawn, leaving the fibres all lying in one direction.

FLAX-COMB.

The spinning-wheel and the smaller flax-wheel have become quite familiar to modern eyes; flax-wheels, in particular, being regarded by some as suitable things for parlor adornment; though they are really, in such a situation, an absurd affectation of rusticity.

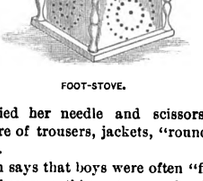


When the flax or wool had been spun, it was "reeled" off the spindle of the wheel upon a hand-reel, and thus made into skeins. When it was desired to wind these into balls for knitting, or upon shuttles for weaving, the skeins were placed upon a swift, or "swifts," as this article was commonly called. It consisted of an upright standard upon which was a revolving frame, fitted with movable uprights to accommodate large or small skeins. From the swift the yarn was wound by hand.

HAND-REEL.

The hand-looms on which the wool and flax were woven into cloth may still be seen in operation in some remote places.

Behind an old chest in the attic we shall find two curious articles that were connected with the personal comfort of the household—a warming-pan and a foot-stove. Into the round brass basin of the warming-pan were placed live coals from the hearth, and the cover was closed over them. Grasping the handle, the housewife slipped the pan deftly between the sheets, and passing it rapidly about from head to foot, soon had the beds in each cold room made agreeably warm to creep into.

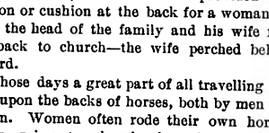


SWIFTS.

The foot-stove was a necessary companion during church services in cold weather. The "meeting-houses" of those days had no stoves nor other means of raising their frigid temperature. These foot-stoves, filled with coals before starting, went regularly to church with the family.

In the attic, near the warming-pan and foot-stove, stands a little old shoemaker's bench, with a block of pegs. These pegs had to be split off, one at a time, by hand. The shoemaker in those days was an itinerant, going from house to house once each year, and doing the shoemaking and mending for the family.

The tailoress also made yearly visits, and



FOOT-STOVE.

nimbly plied her needle and scissors in the manufacture of trousers, jackets, "roundabouts" and gowns.

Tradition says that boys were often "fitted" by laying the boy smoothly out upon the cloth, and more or less deftly chalking a line around him. Be that as it may, the appearance of the clothing when finished would give color to this theory.

The boys and their sisters, when very young, were rocked in cradles which must have been intended to accustom them to the bumps and jars of later life. Here is one of them in this dark corner of the attic, evidently home-made, as were most of the articles used in those days.

WARMING-PAN.

Hanging above the cradle, from a stout wooden peg in the rafter, is an old saddle provided with a pillion or cushion at the back for a woman, on which the head of the family and his wife rode horseback to church—the wife perched behind her lord.

In those days a great part of all travelling was done upon the backs of horses, both by men and women. Women often rode their own horses; but in going to church the wife was most frequently seated upon the pillion.

On such occasions the men wore swallow-tailed coats, with high, rolling collar, the top of which was about level with the tops of their ears. The good dame's head was adorned with a "calash," which was a kind of telescopic sunbonnet, which was extended by pulling on a string inserted in the folds.

What a queer figure this old bonnet would cut beside one of the dainty little head adornments of to-day! It would be as an eagle beside a humming-bird.

I will venture to say, however, that it lasted longer and cost less than its modern successor; and when the next spring came around, there it was all ready to put on, "stylish" and complete, as if it were new! For in those days fashions changed slowly.

After all, many of the old-fashioned modes have much to recommend them. If we have not the courage to introduce them into our nineteenth century homes, at least we can spare them a roomy corner in the attics of our memory.

WEBB DONNELL.

America again takes the lead. "We could hardly believe our good luck when we ventured to ask for Burnett's Extract of Vanilla in Paris, to have it handed us; it was like meeting an old friend." [*Adv.*

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

THINKING AND FIGHTING.

In human living day by day
The common soldier is the man at bay.
While leaders bear the worry of the plan—
The heaviest burden since the world began.
Thinking and fighting they are twins indeed;
Of each the world has everlasting need.

Mid-Continent. —*Emily Gilmore Alden.*

For the Companion.

SOME AMUSING EXPERIMENTS.

To Sweep a Cent Out of the Hand.

This seems a very easy trick, but if done fairly, it is really difficult.

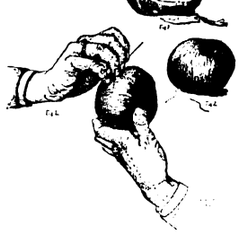
Open the hand naturally and place the cent on the palm, then ask some one to brush it out with a whisk-broom.

After repeated efforts, it will probably be suspected that the cent is fastened in your hand in some way. In order to prove that it is not, let the sweeper place it on his own palm, and he will find it remains as immovable there as when he tried to sweep it from the hand of the other person.

A few persons have flat palms. The cent may easily be swept off from such palms, but they are not common.

To Pick up an Apple with a Spoon.

It requires not a little patience to accomplish this trick. Place a large, round apple, stem up, on a smooth floor; then try to take it up with a spoon. The very effort of trying to get the spoon under the apple starts it rolling, to the amusement



of the onlookers. If done quickly enough the apple can be taken up while in motion; but the proper way is to wait until it ceases to roll, and then carefully push the spoon far enough under the apple to get the centre of gravity over the spoon, when there is no difficulty in picking it up.

To Cut an Apple without Breaking the Skin.

Thread a needle with strong thread. Insert the needle just under the skin of the apple, take a stitch, and carefully draw the needle and thread through to within six or seven inches of the end. Then insert the needle again, this time in the exact hole it was withdrawn from.

Continue the stitches in this manner around the apple, withdrawing the needle the last time through the first hole made, as in Fig. 1. The thread is

entirely around the apple now, concealed by its skin, as in Fig. 2. Take a firm hold of each end of the thread and, holding both of the ends well together, to prevent tearing the skin, pull gently.

The thread cuts its way slowly through the apple until it is in two pieces, when the thread is withdrawn through the tiny hole made by the needle.

If this trick is done carefully enough, the breaks in the skin will not be discernible on the closest inspection. Indeed, the only convincing proof that the apple has been cut in half, will be to pare a narrow strip of skin where the needle and thread have travelled, when the apple will fall apart, as in Fig. 3.

Itching Piles.
Burnett's Kalliston is a sure relief. A quarter pint bottle by mail only for 50 cts. Joseph Burnett & Co., 27 Central St., Boston, Mass. Regular size by druggists, $1.

POTATO PEELER AGENTS WANTED. The greatest seller out. Sample by mail for 10c. in silver, and Agent's prices. Double your money. Peels Apples, Pears, Turnips, etc. SEYMOUR CUTLERY CO., 5 Appleton St., Holyoke, Mass.

Do not be deceived but always insist on the New England Brand. The best made.
SOLD BY ALL GROCERS.

33 per ct. difference.
ROYAL BAKING POWDER
Strongest, Purest, Most Economical.

Certain baking powder makers are publishing falsified extracts from the Government reports, with pretended analyses and certificates, wherein an attempt is made to compare their baking powders with the "Royal," or making bogus tests from house to house, their obvious purpose being to counteract the recent exposures of the inferiority of their own goods arising from their impurity, low strength, and lack of keeping qualities as shown by the Government chemists and others.

As to whether any of these baking powders are equal to the "Royal," the official tests clearly determine. When samples of various baking powders were purchased from the grocers, and analyzed by the United States Government Chemists and the Chemists of State and City Boards of Health, the reports revealed the fact that the "Royal" contained from 28 per cent. to 60 per cent. more leavening strength than any other cream of tartar baking powder, and also that it was more perfectly made, of purer ingredients, and altogether wholesome.

As these powders are sold to consumers at the same price, by the use of the Royal Baking Powder there is an average saving of over one third, besides the advantage of assured purity and wholesomeness of food, and of bread, biscuit, and cake made perfectly light, sweet, and palatable—advantages not to be had in the use of the low-grade, cheaply made baking powders that contain lime, alum, and other impurities.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

GHOSTS.

One or more of a man's senses may play him false while his reasoning powers in general remain unaffected. He may "see" what does not exist; hear a voice where there is no utterance; smell an odor where there is none; have a bitter or nauseous taste where there is nothing to cause it.

Furthermore, all emotions are capable of being propagated from person to person, so as to assume an epidemic form. Almost every age has witnessed such epidemics.

About one hundred and fifty years ago the Convulsionnaires of France, beginning with fanatical prayers at the tomb of François de Pâris, at length threw themselves down, rolled upon the ground, imitated all sorts of animals, and finally went off into swoons.

During the witchcraft delusion in this country, in every town to which the "afflicted" were carried young girls were sure to be taken with the same fits, and see the same sights.

In the Great Revival in Tennessee and Kentucky, at every gathering hundreds fell like corpses; others went on their hands and knees and barked like dogs; others rolled on the ground, and others still shook as if in convulsions. Some were seized while swearing at the whole thing.

Generally only one of the senses is thus disordered, but sometimes more than one is affected. Blake, a distinguished English painter, who was liable to disordered sensations, describes a fairy funeral which he seemed to have witnessed. He was walking alone in his garden on a still night, when he apparently heard a low and pleasant sound, and at length saw a procession of creatures of the size and color of grasshoppers bearing a body laid out on a rose-leaf, which they buried with songs and then disappeared.

Apparitions are a result of disordered sensations. They are generally seen in the dark, the nervous system being then most impressible; but whatever excites the mind puts one in a state favorable for false appearances.

In Berlin, Germany, not long ago, the pupils in one of the public schools saw a "ghost." Soon others began to see similar apparitions, and "ghost-seeing" extended from school to school as a regular epidemic.

Last year a patient came to the Vanderbilt Clinic, New York, with mental hallucinations and disorders of sight, hearing, smelling and tasting. He believed himself persecuted. He saw skeletons and various persons moving about. With his right ear he heard three voices talking to him at once, swearing at him and calling him names. He was also tortured by disagreeable odors, and by peculiar tastes in his drink and food.

WISE TOAD.

A lady used to sit after tea almost every evening on a stone step at the head of a flight of terraces which led from a bay-window down into the garden. As this window was not overlooked by any neighbor's windows, it was the family custom to leave the curtains up in the evening, and let the cheery light of the student-lamp which stood on the large reading-table shine out.

One evening, as the lady sat on the step, she saw a large toad hopping across the grass toward her. When he had come within about eight inches of the window, he suddenly settled himself into the long grass, having selected as his resting-place a little hollow, so that only the very top of his head and his gleaming eyes showed above the grass.

There he sat, without moving, until the dampness sent his observer into the house. The next evening she found that the toad had already taken his place when she seated herself on the step; and on several successive evenings he was sitting in exactly the same spot by the time the sun had fairly set.

The lady's curiosity was by this time aroused to such a degree that she determined to defy the dampness, and stay in her position on the step until she saw what the toad accomplished in his hiding-place. The next evening, therefore, she provided herself with a thick shawl, and took her accustomed seat, a little later than usual.

As the light faded the toad rose from his position and hopped toward her a little way; then, after solemnly and anxiously regarding her for some moments, he returned to his hollow, evidently deciding that she was a harmless person, not bent on making trouble for him, as he at first had feared.

When the lamp in the window was lighted, it seemed to her that the toad raised his head a little and took on an attitude of great vigilance. The cause was soon apparent.

After a few moments a large moth, attracted by the light, dashed against the window in a vain endeavor to gain entrance. After fluttering wildly against the glass, it suddenly dropped, blinded, to the ground, and the toad sprang forward and secured it.

This was only his first victim, and at the end of half an hour the watcher went into the house with her curiosity fully satisfied. Some one to whom she told the story suggested that the toad might have happened on the favorable position the first night; but his friend persisted that he had discovered it by his own unaided intelligence.

SHOOTING A BEAR.

In the "History of Athens County," Ohio, Joseph Bobo relates an adventure in which his father took a leading part. He and one of his neighbors, a Mr. Shidler, found a hole in the rocks which they thought might conceal a bear. Mr. Bobo lighted a torch and started in to explore, while Shidler stood outside ready to shoot if Bruin tried to escape.

Father went into the cave about twenty-five feet, and was on the point of giving up the search, when suddenly a bear, which had been crouching behind a rock, rose up and struck the torch with his paw. The torch fell to the floor, and was extinguished.

Father didn't wait for ceremony, but got out of the cave as quickly as possible, and told Shidler what had happened. All remained quiet, and after waiting awhile, father lighted another torch and went in again to shoot the bear. He proceeded cautiously, and the moment his eyes fell on the bear he fired, but only wounded the animal.

Bruin uttered a tremendous growl, and father saw him coming. Quick as thought father threw down the torch and lay flat on his face. The bear rushed for the mouth of the cave, clawing viciously at father's head and body as he passed over him; but Shidler was ready for the brute, and when he showed himself at the hole, gave him an ounce of lead that settled him.

Father's wounds, though not serious, were bad enough to leave scars for the rest of his life. The bear weighed three hundred and ninety pounds.

VALUABLE DEPOSIT.

One of the most remarkable of all deposits of silver is at the Broken Hill mines in Australia. At that place the precious metal is found lying in an enormous lode.

It has been suggested by Mr. George Sutherland that this great deposit of silver was left by a large salt lake that has now disappeared, but traces of whose former existence are clearly to be seen.

According to this interesting theory, the salt lake was formed of imprisoned ocean water, a large quantity of which was caught in a basin between ranges of hills when Australia was lifted out of the sea. This water gradually leaked and was evaporated away, leaving deposits of the mineral and other matter that it had held in solution.

If this view is correct, the great store of silver at Broken Hill is a rich gift bestowed by the sea upon the land; but man has discovered the precious deposit, and seized it in his capacity of the lord of the earth.

THEIR FIRST-BORN.

The following little dialogue, borrowed from the New York *Weekly*, is of course the invention of some newspaper humorist, but it may serve to point a moral:

Young father—I am amazed, my dear, that you should think of giving the baby paregoric. Don't you know that paregoric is opium, and opium stunts the growth, enfeebles the constitution, weakens the brain, destroys the nerves, and produces rickets, marasmus, consumption, and everything else that is dreadful?

Young mother—Horrors! No, I never heard a word of it. I won't give the darling a drop—no, indeedy. But something must be done to stop its crying. Can't you carry him a while?

Young father (after an hour's walk up and down the room)—My dear, where is that bottle of paregoric?

DOROTHY'S MUSIC.

Mamma thinks Dorothy's musical taste needs to be cultivated. There was company at tea one evening, a little while ago, and afterward one of the ladies played on the piano. She plays very well, but Dorothy was not interested. Presently she said:

"Now I'm going to play something especially for Dorothy."

It was a very merry kind of tune, that made us all feel like laughing. When she finished, Dorothy clapped her hands and exclaimed:

"Oh my! Wasn't it lovely? Sounded just like a hand-organ!"

THREE EXCELLENT DOCTORS.

Some of the eminent physicians of Paris were assembled about the death-bed of Dumoulin, the most celebrated doctor of his day.

To their expressions of grief at the expected loss to the profession, the dying man answered:

"Gentlemen, I shall leave behind me three excellent doctors to supply my absence." Being pressed to name them, as each man expected to be included in the trio, he said, "*Water, Exercise and Diet.*"

"DON'T you know how to do it, dear?" asked a young husband, as they gazed solemnly at the turkey. "Yes," said she, "it's all quite clear, but it says 'First clean your turkey,' and I was wondering whether one should use toilet or regular scouring soap."—*Chicago News.*

"Brown's Household Panacea" will quickly remove pain and soreness from cuts, bruises and burns. Also an excellent remedy for internal pain. [*Adv.*

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a practical business education at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

SHICK-SHACK.

In Two Chapters.—Chapter I.

A Pioneer and His Guests.

In one of the most beautiful districts of Central Illinois there stands a round-topped hill, or "bluff," called Shick-Shack Knob. This hill derived its name from a chief of the Pottawatomie tribe, well known to the early settlers, whose village once stood at its foot, or straggled up its slope.

The country had been the home of the Kaskaskias, the Kickapoos, the Pottawatomies, and other kindred tribes of the great Algonquin nation, and they were not completely dispossessed by the crowding whites until, in 1820, a government commission negotiated a treaty with the remaining remnant for the final cession of a large tract to which they still asserted a claim.

The most valuable part of this tract was known as the "Sangamo country;" and out of it eight or ten of the finest counties of Illinois have since been formed.

After this treaty the Indians slowly and reluctantly withdrew from the State; but as late as 1830 many still remained, and had become, after a fashion, civilized—the chief trouble they gave the whites being by their habit of begging.

Not many years after the opening of the Sangamo country to legal settlement, two pioneer families came from Kentucky together, and erected their cabins as near to each other as the location of their claims allowed. The price of government lands in the new country was a dollar and a quarter an acre; but small as was the price, few of the settlers who flocked to it possessed more than a hundred dollars in cash, and the early entries rarely exceeded the eighty acres which a hundred dollars would buy.

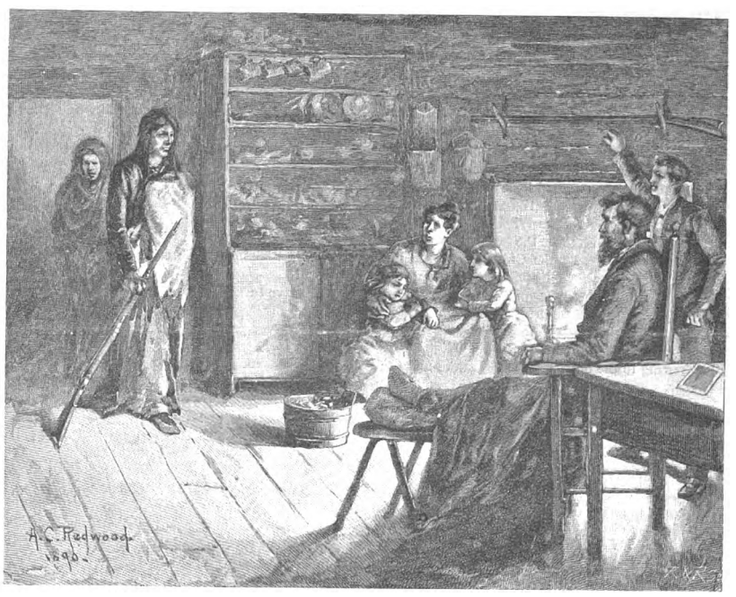
Every settler desired to obtain possession of as much as one hundred and sixty acres, or a "quarter section," and almost invariably did so as soon as his means made a further entry possible. It became from the first, therefore, a point of honor among the pioneers to respect the moral claim of each settler to the eighty acres of land on each side of the eighty which he had settled upon; and it was considered one of the most dishonorable acts of which one could be guilty to enter this land, unless the settler who had established this moral claim waived his right to it.

The two Kentuckians, whose names were Richard Monkton and Thomas Phipps, entered their eighty acres each on adjacent sections of the rich bottom-land of the Sangamon, at the foot of the bluffs, a few miles south of the river.

Immediately south of Monkton's claim rose Shick-Shack Knob, in the midst of an "eighty" which Monkton had determined to add to the land he already occupied.

He was an intelligent and industrious man, little over forty years of age, of a superior class, who had resolved to establish himself anew in life, under conditions more congenial than he found at home. He had established himself bravely in the new country; but a fever which attacked him two years after his settlement in Illinois had broken his health.

The Monktons had been in Illinois three years, when one evening in March, when the darkness had closed in early after a gloomy day of raw east wind and intermittent rain, the family sat about a crackling fire upon the hearth in their cabin. The room in which they sat was their kitchen and their sole living-room. Monkton, sitting before the fire in a cushioned chair, rested one leg upon a cushioned stool; for the cold east wind had brought his rheumatism sharply upon him.



Near him sat his wife and her two little daughters, who were hard at work shelling corn for the mill; and a little beyond her sat their son Dick, seventeen years old.

Father and son were busy, each with a scrap of paper and a quill pen, upon a computation to determine how large a crib they should need to hold sixteen hundred bushels of corn.

"Eight feet wide, thirty feet long, ten feet high, and flaring a little will do, father, won't it?" Dick asked.

"Yes, I think it will. That is just about what I made it," answered Mr. Monkton. "That will certainly be large enough, more than enough, for all we can raise this year, even if we put the forty-acre piece of bluff land in corn, as we talked of doing. We shall surely be able to enter the south eighty by the time the crop is ready to gather."

"Has your Eastern friend made up his mind how much land he will enter, and where he will locate it?" asked Mrs. Monkton.

"Shick Shack asks Food and Shelter."

"I think not. He doesn't seem to be able to come to a conclusion, or he won't let me know it if he does. So far as I understand him, he sees none that suits him so well as my land. He seemed to have such a hankering after this particular quarter-section that I told him I'd waive my claim to the forty acres east of the bluff, on the south eighty."

"I would not have done that," said Mrs. Monkton, in a tone of strong disapproval.

She was a bright-eyed, rosy-cheeked little woman, several years younger than her husband. Her alert way and positive tones were in contrast with her husband's appearance of illness and weariness.

"You are altogether too easy-tempered, Richard," she continued; "you have sacrificed your own interests to satisfy a mere whim of this stranger, who does not seem at all grateful for anything that is done for him. There is plenty of land as good as ours that he can have if he wants it. Why encourage him to crowd in almost up to our very back door? I don't think he would be a very desirable neighbor."

"Any neighbors are desirable in a country like this—particularly if the Indians should become troublesome, and Tom Phipps says there is danger of it."

"Tom Phipps has prophesied that the Indians would be upon the war-path every spring since we have been here. I'm not afraid of them. I'd like to see the Indians —"

She stopped abruptly, and the startled cry that she quickly uttered was echoed with greater alarm by the two little girls, who clung to her skirts regardless of the streams of corn which trickled from their laps as they did so.

The cabin door had been suddenly thrown open. With a dismal moan a blast of the raw outer air swept through the cabin; and with it entered a tall, dark figure, closely followed by a smaller one. The intruders moved with a noiseless step, and stood now in dead silence.

Dick Monkton had sprung to his feet at the sound of his mother's cry, and Mr. Monkton, despite his lameness, also essayed to rise.

"You 'fraid of me, Monkton?" said the voice of the foremost figure. "You don't know you friends?"

Monkton laughed. "Quiet the children, Rosa," he said. "Don't you see that you needn't be afraid? It is Shick-Shack."

Then in a sharper tone he said to the Indian: "Haven't you learned enough of the white man's ways yet, Shick-Shack, to know that it is uncivil to enter a house without knocking or asking permission? What do you want?"

"Shick-Shack asks food and shelter of his white brother," said the intruder. "He tired an' hungry, and his wife and her child cannot walk more. Give us food, and let us rest before your fire. When the sun comes we go out again, and go to our own wigwam."

"What!" exclaimed Mrs. Monkton, coming quickly forward. "Is that your wife? and has she a child with her? Come nearer the fire, woman, and sit down. You must be cold and wet. Why, this might kill the child. Take it out of the blanket, so that we can see it."

"Al-lu-lah no talk English," the Indian woman said. But she seemed to divine what had been said to her, for she took the chair her hostess offered, and unfolding the shapeless little bundle she had carried slung over her shoulders, revealed a wizen-faced baby seven or eight months old, whose eyes were preternaturally bright, even for an Indian baby.

Its quick, wheezing breath betrayed to the experienced matron who looked at it that it was not well. The first expression of amusement and curiosity changed to one of quick concern. She drew near, and laid her hand lightly on the babe's brow.

"It is sick now," she said. "It has fever. I will give you some warm, dry clothes to put on it."

The Indian woman looked up into her face, her own visage stolid and expressionless save for the black, bead-like eyes which, with the mute inquiry in their depths, seemed like those of a dumb animal.

Her husband said some words to her in their own language, and when the older little girl brought to her some garments for the child, she took them with evident gratitude, and began at once to put them upon the babe.

Mrs. Monkton, meanwhile, was setting out food upon a table at the opposite side of the room; and she brought milk in a pan to heat over the coals for the child.

After the three had eaten, and while the women concerned themselves with the sick child, managing in some way to make themselves intelligible to each other, Mr. Monkton and Dick, with less difficulty, sustained a conversation with their male guest. It was pleasant, there, to have even an Indian to talk to.

It had not been many years since Shick-Shack, in his village at the Knob, was master of all the country about. And yet his tribe had dwindled to insignificance even before that final cession of the Sangamo country which had taken from them all claim to the land. Shick-Shack of late years had separated himself entirely from his people, and had erected his solitary wigwam in squatter fashion upon a woodland tract about twenty miles south of his ancient home.

He had learned to speak English in the old Indian way; he had given no offence to his white neighbors, and had adopted so many of their ways and habits of life that he deserved the title of half-civilized. But he had never acquired habits of regular industry. The chief interests of his life were hunting, fishing, and trapping; and such cultivation of the soil as was necessary for the support of his family was done almost entirely by his wife.

He was now returning from a hunting excursion in pursuit of ducks and other wild fowl in the sloughs of the river-bottom. Following a custom unusual with Indians, he had taken his wife with him.

His trip had not been successful, he informed Mr. Monkton; and the cold and wet weather, and his baby's sickness, had compelled him to return to his home sooner than he had intended.

Having told this, it became his turn to question.

"More white man come to settle round here?" he asked. "Me see big wagon with squaw and many children down near creek."

"Yes," Mr. Monkton replied. "At least, I hope so. It is a man named English, hailing from the East, who is looking about here for a place to pitch his tent. I suppose he will enter land somewhere in this neighborhood. They have been here for a week or more, and Dick and I have done the honors of the country."

"He got much money? Buy much land?"

"Only an eighty, I reckon. I don't believe he has more than a hundred dollars."

"If him a Yankee, him take just what land he like; he mind nobody else," said the Indian.

"I don't suppose he will crowd any one else," Mr. Monkton replied, carelessly. "He is a decent Christian, I dare say, and the world hereabouts is big enough to allow us all plenty of elbow-room."

"He certainly can't help but feel friendly toward you, father," said Dick, "for you have done him a dozen good turns since he came among us ten days ago. You got this spell of rheumatism riding around with him to show him the country, and mother has doctored the whole family of children. They'd have almost shaken their teeth loose with the ague by this time, if it hadn't been for her bottle of bitters."

"That's what I made it for—to cure sick people," said Mrs. Monkton. Then she began to make arrangements to dispose of her guests for the night.

There was a second room in the cabin which contained the bed in which she and her husband slept, while a trundle-bed for the two little girls was pulled out from under it.

A broad bench, surmounted by a thick corn-husk mattress, in the larger room, was Dick's sleeping-place; but as his mother was bringing out all the extra bedding she owned to make up what was called "a field-bed" for her Indian guests, Dick said to her in a careless aside, "Give the squaw and her baby my cot; I'll take a blanket on the floor with Shick-Shack."

The Indian caught the remark, though uttered in a lowered tone; and though he said nothing, his eyes rested long and thoughtfully on the

boy's face. The family retired. There was quiet two or three hours in the little home; but shortly after midnight Mrs. Monkton was awakened by the terrible cough of the Indian child choking with croup.

Shick-Shack and his wife were fully aware of the danger their baby's life was in; and the silent, hopeless grief of poor Al-lu-lah was pitiful to see. She was sitting on the edge of her couch with her babe clasped tightly to her bosom, rocking herself to and fro, murmuring to it in her own tongue words which it needed no interpreter to make intelligible to the other mother.

Shick-Shack with folded arms stood leaning against the wall, looking down silently and gloomily upon mother and child.

He looked up as Mrs. Monkton approached.

"Two other sons have we lost in the same way," he said, hoarsely. "There is no hope. The Great Spirit has called the child, and he must go."

"Maybe He has, and maybe He hasn't," said Mrs. Monkton. "We'll not give up hope so long as the poor little fellow breathes."

Dick had risen also. He had already started the fire, and was hanging the iron kettle on the crane over the blaze, knowing that hot water would be needed.

Soon the baby was lying in the bath Mrs. Monkton had prepared; a mustard poultice was applied to the chest and throat, and medicine given to clear the child's throat.

The helpless mother could only watch in voiceless anguish the vigorous treatment pursued by the experienced white woman. In a little time her anguish became transformed into an equally voiceless hope; the infant grew better as rapidly as it had grown worse.

By day-dawn the child rested on its mother's lap in a quiet sleep, the moist brow and easy breathing showing that the present attack was conquered.

"But you must not think of taking the child out of the house to-day, Shick-Shack," Mrs. Monkton said; "it will choke up again to-night sure, if you do. You will have to stay over with us another night. I don't suppose the delay in getting home will make any difference to you."

"Me stay; me thank you much. You good woman! Shick-Shack help you some day, maybe," the Indian replied.

Al-lu-lah took Mrs. Monkton's hand and pressed her cheek to it. When the hand was gently drawn away, there were tears upon it.

M. R. HOUSEKEEPER.

(To be continued.)

ANTICIPATION.

We feel the earth move sunward,
We join the great march onward,
And take by faith, while living,
Our freehold of thanksgiving.
—*Selected.*

For the Companion.

THE WHITE PINE HERALD.

It was the greatest snow blockade that the Sierra Nevada Mountains had known for years. The cañons and gorges were choked. In places the snow-sheds had collapsed. The mountain towns were practically buried.

White Pine, half-way up the eastern slope, shut out from the great world all around, was a little world by itself. So deep was the snow that of more than one small building only the chimney was visible.

The west-bound express train could fight its way no farther up the ascent, and was stalled at White Pine. Of the passengers, some were anxious and weary and impatient; a few were patiently indifferent, and others half-enjoyed the novelty. But there was one who felt himself, and apparently with good reason, the most miserable man in the mountains.

This was Mr. John Jarvis, the victim of a cruel, raging toothache. Nursing with his hand his bearded and swollen jaw, as he sat bent up in a seat removed as far as possible from the crowd who had gathered around the stove in the opposite end of the car, he seemed almost justified in growling like the traditional bear with the burnt nose.

After learning that there was no dentist at White Pine, he had tested in succession all that were practicable of the remedies suggested by sympathizing fellow-passengers. He found them all ineffectual, and had now reached the point of savage misery at which, as an irreverent young passenger put it, he was a very good man to let alone.

The car door behind Mr. Jarvis opened slowly, but he did not look round. Two little boys, a fat one and a thin one, stepped timidly in and closed the door softly behind them. An end of a bundle of newspapers, folded square, stuck out from under the faded shawl in which the fat little boy was wrapped. The thin little boy, who was almost extinguished in a man's worn coat, held a single paper in his hand. He gulped once or twice, as if frightened, and then stepped quickly forward.

"Mister," he said, with quavering bravery, shaking John Jarvis's arm to awaken him from his supposed nap, "want to buy a paper? Only five —"

Unluckily, he had shaken Mr. Jarvis's left arm. The left hand, which was pressed against the swollen cheek, gave the aching jaw a prod that brought the man suddenly to his feet with something like a roar.

"Ouch!" he cried. "What d'ye mean by —"

Then seeing, not some offensive fellow-passenger, but two strange little lads, fairly cowering before his sudden uprising, he added thunderingly:

"Get out of here!"

The tooth, in resentment of the prod, ached more cruelly than ever, and poor Mr. Jarvis did not pause to choose his words. The thin little boy dropped his paper in fright and shrank back against the fat little boy, who opened the door. Both of them ran out, forgetting for the moment to close the door behind them. John Jarvis doubled down in his seat with a groan.

A moment later the little boys bethought them of their manners, and one of them reached cautiously in and grasped the door-handle. If Jarvis had looked he might have seen tears in the lad's eyes.

"It's no use, Joe!" he heard the one outside say, in a pitifully discouraged tone.

"No," returned the other, dismally. "They don't want our papers! And, oh, Barbie will feel so —"

The door clicked as it shut.

Perhaps because his jaw ached less fiercely just then or, it may be, for some other reason, Jarvis scraped the frost from two square inches of the window beside him and looked out.

The thin little boy was rubbing his eyes with both hands as if to dash back the tears, as he trudged along a path through the drifts, followed by the fat little boy, who was the picture of melancholy. Mr. Jarvis saw what he had not seen before—that the fat boy wore a hat which was much too large for him, and which was evidently the discarded hat of a man.

Then Jarvis undoubled himself, walked out of the car, slammed the door behind him, and strode along the snowy path which the lads had followed. He was absent from the car a long time.

Presently a young passenger, bent on stretching his legs, walked the length of the car, and seeing the newspaper which the lad had dropped, picked it up and examined it. It was a small, badly-printed, poorly-composed little sheet, blurred and inky in places, very faint in others, and bearing the title, *The White Pine Weekly Herald*.

Under the heading was the legend, "Our motto: 'Hew to the Line, let the Chips fall where they may.'" Beneath this appeared the name of "Henry Rollins, Editor and Proprietor." The general appearance of the sheet would lead one to believe that the "editor and proprietor" had given more attention to something else—perhaps to hewing to the line—than to the make-up of his paper.

"Well," commented the young man, sarcastically, "this is the poorest apology for a newspaper I ever saw!"

Undoubtedly he told the truth.

John Jarvis strode along the path that wound for some distance through the settlement, and followed the little boys to the office of the *Weekly Herald*.

It was a house which contained but one room. This room was divided into two by means of a calico curtain. The smaller apartment was the publisher's sleeping-room, and the larger the kitchen, living-room, editorial-room, composing-room, and press-room. There was a small printing-press of half broken-down appearance; the type cases were few, and the "imposing-stone" was a plank mounted on a packing-box.

Mr. Jarvis found that the household, editorial, reporting, and mechanical forces consisted of but three persons—fat little Dan Rollins, thin little Joe, and their elder sister, Barbie, a slender, anxious-looking girl of, perhaps, fourteen.

When Jarvis entered, the lads regarded him with consternation; but he had a plausible excuse, though not the real one, for his intrusion.

"I've got an aching tooth," he said, "that sets me almost crazy. You haven't any liniment, or anything of that kind in the house, have you?"

It is indeed a poverty-stricken abiding-place that does not contain at least one bottle of medicament of some kind. Barbie quickly produced a vial of liquid intended to relieve rheumatism. Whether it was by reason of the virtue of this specific, or because the molar stopped aching of its own accord, no one can tell; but soon after the second application the pain diminished, and presently ceased.

Mr. John Jarvis uttered a prolonged "Um-ah!" of satisfaction, and fell to prying, with benevolent intention, into the affairs of the children.

There had been a time, soon after the founding of the settlement, when sanguine souls believed that White Pine was destined to become a great city. Then, Henry Rollins, as enthusiastic a man as any there, had established the *Herald*.

But prosperity did not come to him or to the town. With continual struggle the little family gained enough to eat and wear, and very little more. The patronage of the *Herald* was pitifully small.

All hands assisted in the struggle. The wife and mother alternated her household duties with working at the "case." Barbie learned to set type, and the boys helped in many little ways, to the best of their ability. Thus the Rollins family toiled on, hoping for the time when White Pine should grow and "boom;" when the patronage of the paper should increase, and prosperity be assured.

But the good time never came.

One bitter day the wife and mother, worn out by the work and strain, died. Then, finally, Henry Rollins was taken away by pneumonia, and the children were left alone.

He was hardly buried before the storm began which brought about the great snow blockade. No conference was required to tell the children what to do; there was nothing for them but to stay where they were and do what they could.

Soon after her father's death Barbie had written to his brother in Ohio, an uncle whom the children had never seen; but his reply, if he had replied at all, was kept back by the snow.

But the *Herald* must still be published. To the children's loyal minds the maintenance of the paper was a matter of great importance.

Barbie had clipped a few selections from exchanges which had arrived before the blockade, and had herself written three or four paragraphs on local subjects. All three had set the type as well as they were able, preserving all the eccentricities of grammar and spelling.

The trifling edition was "run off," and copies delivered to the few subscribers who could be reached.

The children had thought that they could sell a considerable number of papers on the snow-bound train. The passengers would want to read the news! And they needed the money so—even the scanty sum that half Dan's bundle would bring.

"But they didn't want the papers!" said Barbie, with quivering lip, to Mr. Jarvis.

"And there is only a little bit of bread left," said Joe, "and no meat —"

"I'm hungry!" quavered Dan.

"Sh-h-h, Dannie!" said Barbie. "We —"

"I'll sell those papers!" broke in John Jarvis, grasping the bundle, and rushing out of the house.

When Jarvis re-entered the car, the young passenger who had criticised the *White Pine Herald* was again scanning and ridiculing the smudgy paper, having nothing else to do.

"This is the poorest apology for a newspaper I ever saw!" he repeated. "Its perpetrator ought to be ashamed of —"

"This paper," said John Jarvis, sternly, as he strode toward the stove, "is splendid! And I'm selling it at five cents a copy!"

"Ha! ha!" laughed the critic. "You turned newsboy?"

"No! I've turned human!"

The passengers looked at him in astonishment.

"Up here under the snow," said Jarvis, as if repeating a lesson, "are three children—a little, old-fashioned girl, a fat little boy, and a thin little boy; and they are publishing a paper, and I'm selling it. They've no father nor mother, and there's nothing to eat in the house."

The passengers were grave and interested now.

"Go on!" said the critical young man.

Jarvis told the story of the Rollins children and the *White Pine Herald*, and no one interrupted him.

"They had some liniment that stopped my aching tooth," concluded Jarvis, lamely. "And so I —"

"I'll take a copy!" said the critical young man. "I guess it is a pretty good paper, after all!"

Each person in the car bought a paper. Then Jarvis counted the few that remained, thrust them all into the car stove, and strode out. When he reached the *Herald* office the little pile of coins that he deposited on the table included the price of the papers he had burned.

"Hoo-*ee!*" cried little Joe. "They wanted 'em, after all!"

"Yes; they said it was a pretty good paper."

"And now we can have som'pin' to eat!" chirped Dan. "I can get to the store just as easy as not; the path is dug out first-rate." He put on the shawl and scudded away.

"I am glad they liked the papers," said Barbie, thankfully. "I tried so hard, but I was afraid —"

"Liked 'em?" interrupted Jarvis, heartily. "Of course they did!"

"Hoo-*ee!*" cackled Joe. "I'll bet you Dan brings som'pin' good—a can of oysters, mebby."

"I wish I had told him to be careful," said Barbie. "There isn't much money, and —"

"I say!" broke in Jarvis, suddenly. "Let's run a daily paper while the blockade hangs on!"

Barbie gasped with delight and doubt.

"Do you think they will want them?"

"Of course they will! You attend to this end, and I'll take care of the sales."

Little Joe whooped, and when Dan came in and was told of the project, he whooped, too, while Barbie smiled happily.

Sure enough, Dan, the prodigal, had brought a can of oysters, and crackers besides. They felt so rich that they invited Jarvis to share the meal, and he promptly accepted, though he pretended to eat much more than he did.

It was the pleasantest meal the Rollins children had known for many days. The canned oysters were so good, and the children were so full of the plan for the daily paper that they could hardly eat for talking, and hardly talk for eating.

Cautious Barbie, though very hopeful, had her doubts of the success of the plan; but Jarvis set them at rest by emphatic declarations to the contrary. When the meal was over he trudged back to the train. As he went he muttered:

"It's got to be successful! I haven't any more money than the law allows, but if they don't buy the papers, I will!"

When he told of the proposition to the passengers in his car, they were all in sympathy with it.

"I will help you sell them in the other cars," said the critical young man.

"And we will all contribute to the contents," said some one else.

The project was taken hold of with alacrity, and when the morrow's issue of the *Herald* appeared it was quite a literary, as well as financial, success. Mr. Jarvis had collected what news he could. The young man who had constituted himself Jarvis's assistant had gathered nearly a column of gossip about the blockade, and the opinions of the train men concerning it.

A young lady returning from boarding-school contributed some verses. A commercial traveller sent in a very funny story. A grave, reserved man, who had had not much to say, plodded to the station, and by paying what was necessary, and inducing the telegraph operator to "talk" over the line with other operators at a distance, obtained a few bits of news from the outside world—news which alone would have caused the papers to be bought eagerly.

He secured an item, too, about the attack that was being made on the blockade at either end.

It would hardly have been possible for the half-taught fingers of Barbie, Dan and Joe to set all the type, though they worked heroically. But among the passengers was a man who had been a printer; and he promptly went to the office and made the type click merrily.

John Jarvis, who had completely forgotten his toothache, undertook the manipulation of the press, and everything went off as smoothly as could be wished.

The *Herald* improved with every issue. Apart from their desire to assist the children, the passengers found recreation in aiding the paper. The amateur reporters raked and scraped items through the train till they were almost like so many news-hungry highwaymen, commanding their victims to stand and deliver at the point of the pencil. Every one was interested and enthusiastic; every one took his copy, paid his money, and was sure that he had received the worth of it.

Thus the days passed on. Meanwhile, the railroad company had been making a fierce fight to raise the blockade. Now and then a snow-shed, as if wearied at last beyond endurance, collapsed; or a great mass of snow and rock slid down a slope and greatly increased the task of clearing the track. But over the range to the westward the rotary plow, a huge affair with a great steel drum in front armed with knife-edged shovels, was cutting its way slowly and steadily through the frozen drifts, backed by four and sometimes six engines.

Upon the night previous to the raising of the blockade, John Jarvis and the quiet man who had paid for the telegrams held a conference.

"I don't see how those children will live after we are gone," Jarvis said, in the middle of it. "I haven't got much money, but I should like to buy out the paper."

"I will give half," said the quiet man. "Send me a copy of your first issue."

The passengers were as busy as bees during the following forenoon. Release was at hand. They hastened to make their last contributions to the *Daily Herald*, and its last issue was its best.

When the paper came out they read that Mr. John Jarvis had purchased it outright, and would take immediate charge. But while they were reading, the smoke of the rotary plow's six engines was sighted, and the *Herald* was forgotten.

Then presently the track was cleared to the westward; John Jarvis and the Rollins children were bidding their friends of the blockade good-by.

"Send me a copy of your first issue," said the quiet man to Jarvis, again.

The long-delayed train left White Pine, and went over the ridge and away.

Before the track was cleared, the over-due mail from the East was brought to White Pine, and in it was a letter from Henry Rollins's brother in Ohio, bidding the children come to him. He was comfortably situated, and promised them a warm welcome. But they could not have gone had it not been for the money that bought out the *Herald*—the money of John Jarvis and the quiet man.

Little time was required for preparation, the children were not burdened with possessions, and so by the time the drifts were cut through from the eastward Jarvis bundled them upon the train.

When Barbie and fat little Dan and thin little Joe had gone on their eastern way rejoicing, Mr. John Jarvis trudged up to the *Herald* office, muttering to himself:

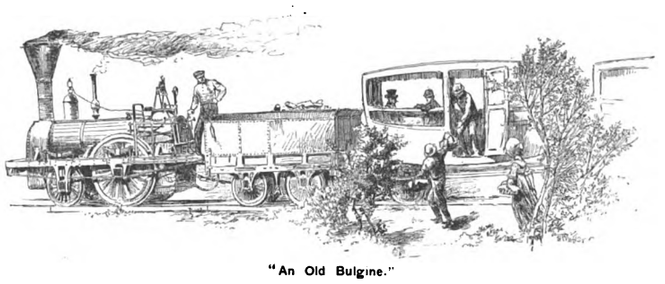
"It's a dead loss! But what's the difference? No wife nor child to suffer by my foolishness. I'll only have to work a little harder for a few months to make up for it, and—well, what's the difference?"

The first and only edition of the *White Pine Herald* under the sole editorial charge of Mr. John Jarvis was issued next day. It did not take very long to set the small amount of type required, and just one paper was printed. Then

Digitized by Google

John Jarvis boarded the west-bound train—holding his hand at his jaw, for the tooth had begun to ache again—and was seen at White Pine no more.

When the quiet man received the promised copy of the *Herald*, he read without comment John Jarvis's sole editorial utterance, as follows:



VaLiaDICTORY,
GONE UP THE SaONT!

TOM P. MORGAN.

For the Companion.

AN OLD-TIME LOCOMOTIVE.

While riding, not long ago, through the Maine wilderness in the cab of a locomotive on the Canadian Pacific Railway, I noticed that the machine seemed to be "working hard." I left the fireman's seat, and crossing over to the engineer, shouted into his ear the question: "How fast are we travelling?"

"An Old Bulgine."

Without taking his eyes from the steel rails, which seemed to be running beneath us like swift streams of metal, he answered, "Take your watch and time her. Thirty-five telegraph poles to the mile."

I took out my stop-watch, and began to count the poles as we flew past them.

Sometimes the number was thirty-six or thirty-seven to the minute; twice the total dropped to thirty-four in sixty seconds, and once we ran past forty while the hand made the circuit of the dial. To pass forty telegraph poles in one minute along that line is to go at the rate of sixty-eight and four-sevenths miles per hour. Yet I did not then marvel much, for the Canadians have a fine road, and are daring runners; and I knew of several engineers along the line of the Maine Central whose daily duty calls for a speed of sixty miles per hour on several favorable stretches of road.

Along this line President Harrison, on his way to Bar Harbor in 1889, was borne fifty-eight miles in fifty-seven minutes. In a jocular way the President remarked to the engineer, who was introduced to him, that on the return run he hoped the speed would be kept down to a mile a minute, in order that he might get a glimpse of Maine as he passed through it.

A few days after my Canadian Pacific ride I came, in the village of Oldtown, twelve miles above Bangor, upon a relic which caused me to recall the ride, and to marvel at the change which has taken place in railroads and locomotives within the recollection of men still engaged in active pursuits.

This relic was the driving-wheel of an old "bulgine," as the locomotive was then familiarly termed, which had been out of use nearly fifty years.

It was made of wood and resembled, in size and clumsiness, the old ox-cart wheel of early New England; and like that wheel, it had an iron tire which had evidently been put on hot, and was held fast by the contraction in cooling.

At a bank in Bangor, which bears the name of Mr. Veazie, who owned the second railroad in America, I learned the history of the old locomotive to which the wheel belonged. Here hung a photograph of the old "bulgine." I learned here, also, that the conductor who had run the old-time train was still at work, being now, without doubt, the oldest conductor in point of service in this country, if not in the world.

He now runs the "mail" upon the Bangor & Piscataquis Road, between Oldtown and Moosehead Lake. He is wonderfully well preserved, and gave me many and minute details of the operation of the ancient road.

This old road was eleven miles long. It was built to bring down to tide-water at Bangor the products of the lumber mills on the Penobscot in Oldtown.

At the outset of the enterprise there was, for those times, a wonderful "boom" in the stock. It sold at a premium of eighteen per cent. before the construction of the road had begun.

The road-bed was graded no better than the average New England county highway. Upon it were laid stringers of pine plank, to which were strapped iron rails twelve feet long, two and one-half inches wide, and three-eighths of an inch thick. They were more like iron straps than rails, and were held in position by spikes. The chief duty of the roadmaster was to walk over the line each day, looking for such of these spikes as had become loosened. In one hand he carried a hammer and upon his arm a basket filled with pine plugs. When he found a loose spike he drove it down, and then forced in beside it one of these pine plugs, to bind it more firmly.

The cars were built in England, and each was twelve feet long—the length of the rail. They were built after the old English pattern, with doors upon the sides; they were called "coaches," and were like them in appearance.

The engine rested upon four wheels, and had a tender to carry wood, also four-wheeled. To "make draught," the engine carried a pair of wooden bellows, like a blacksmith's. It was what is termed a "drop-hook" engine; that is, there was no "shut-off," and the engine could only run at full stroke.

The tender had a stage-coach brake, worked by the foot-power of the engineer; and there was no other brake attached to the train.

There was no cab. The engineer stood with one foot upon the machine, the other upon the tender; and when the rain and hail, or the blustering snows of winter, beat down upon him, he shielded his face with a pine shingle.

In the earliest engines the bell had hung upon the inside, attached to the bulkhead; but some American genius had suggested that its sound would be more clearly heard if it were placed upon the outside, and the suggestion had been adopted.

Upon the upper surface of the boiler was an escape pipe, and also a whistle which announced to the cows, which then ran at large in these parts, the coming of the monster. As the engine had a running capacity of twelve miles an hour on the level, it was needful that the cows should make some haste in getting out of the way.

The flues were of copper, and the total weight of the whole engine was so little that it was possible to set up the machine in England, at the works of Robert Stephenson, at Newcastle-upon-Tyne, and to send it across the Atlantic under the deck of one of the Black Ball Line packet ships.

The average speed attained on this ancient railroad was about the same as that of a gentleman's roadster, or nine miles an hour. In some places one could throw down a hat, jump off, pick it up and easily catch the cars again. But on down-grades tradition records that a speed of fifteen miles an hour was sometimes made. The prophecy was even heard that twenty-five miles an hour would be reached in the future, though many persons doubted this.

Farmers, berry-pickers and girls with butter and eggs stationed themselves along the up-grades, and passed their wares to the conductor, who sold the articles in Bangor, and gave back the receipts on the return trip.

When the passenger traffic was large, that is to say, when there were a dozen extra "riders," the effect of this unusual weight was visible upon the machine. Especially was this true when frost or dew were upon the rails. Under such circumstances the train often "stuck." Then the passengers got out and pushed until the machine could draw the cars without their aid.

When in the yard, or when upon a down-grade, or before going down one, it was desired to brake the train, a stick of cord-wood was inserted between the wooden spokes of the wheels. When the stick was brought up against the cars, the wheels, of course, ceased to revolve, and slid along the rails.

There were many actual dangers upon the rails then. Once a belligerent cow locked horns with the driving-wheel, and thus overturned the machine. A broken gauge-cock allowed the steam to escape, scalding one passenger to death. Sometimes, after the roadmaster had been over the line, the strap iron rail, which had a tendency to curl, would pull a spike, and then the end of this rail, catching the bottom of the cars after the locomotive had passed over, broke through with a crash, throwing the train off the track and causing a panic.

Two trips—forty-four miles—were run daily. There were no baggage cars or checks; passengers loaded and unloaded their own "luggage." The regular fare was five cents per mile, but if one rode in the forward car there was a reduction of one cent and one-quarter per mile.

Lumbermen, river drivers and others who smoked, took this car, and later it became known as the "T. D.," after a famous make of clay pipes then, as now, in common use.

The road, in spite of early hopes, did not pay its running expenses, and later came into possession of the City Bank of Boston. Traffic was interrupted, and afterward resumed with varying success.

Upon the completion of the International line into the Province of New Brunswick, known as the European & North American Railway, which was opened by President Grant, the rails were taken up, and the old and long-disused "bulgine" was sold and broken up. The cows now graze undisturbed where once the odd machine puffed through the tangled wilds.

Conductor Nathan Swan began his business life upon this road as watchman. He soon rose to the position of conductor.

In all the years which have elapsed, he has seldom been missing from his train, and now has a daily run of about one hundred and eighty miles.

Looking back over his railroad experience, he says that the development within that period leads him to believe nearly all things possible in the future, in that wonderful piece of mechanism, the American locomotive. R. H. STANLEY.

For the Companion.

THE INDIAN PIPE.

By the Right Rev. W. H. Hare, Bishop of South Dakota.

One of my first journeys in the Indian country, seventeen years ago, brought me to a band of Sioux,—or as they always call themselves, Dakotas,—known as the Minneconjou. They were living west of the Missouri River, not many miles above Fort Sully. I refer to this visit because, in the interview which followed, the Indian pipe figured quite strikingly.

Every one knows how prominent a part the pipe has played in all the intercourse of the Indians with each other and with the whites, as the emblem of peace and friendship; but all are not, perhaps, as familiar with the fact that the pipe has an important place in the religious acts and ceremonies of the Indians.

I touch upon the religion of the Indians with some diffidence, because I think nothing is more difficult for us to get at than the religion of another race, especially if it be a barbarous people. They have no books in which we may find their religion recorded, and no creed in which we may study it arranged in orderly and permanent form; and, besides, our minds work somewhat differently.

It is very likely, therefore, that as yet we are far from understanding exactly how the Indian thinks in matters of religion; but this much is certain, that his conception of powers invisible and mysterious, however distorted or hazy, is very powerful, and makes a deep impression upon his feelings and his acts.

Colonel Dodge tells us that in 1868, when Forsyth's little band, buried in their rifle-pits, were holding at bay an overwhelming force of Indians, a Cheyenne who had prepared himself by religious ceremonies, confident in their efficacy to protect him against any power or missile, dashed alone almost into the lines of the whites. He was shot and killed.

The Indian's Pipe.

The Sioux uprising of 1890 partook very largely of a religious nature. For some months the Indians had been gathering together, at points removed as much as possible from observation and interference, and there, by harangues and songs and dances, worked themselves into a frenzy of excitement.

Old heathen ideas had been invigorated with snatches of Christian truth. They taught that the Son of God would presently appear as the avenger of the cause of the wild Indian; the earth would shiver; a great wave of new earth would overspread the present face of the world, and bury all the whites and all Indians who imitate their ways; while the real Indians would find themselves on the surface of the new earth, basking in the light.

The old ways would all be restored in primitive vigor and glory, and the buffalo, antelope and deer would return.

The devotees of these ideas dressed in their exercises in special garb—a shirt made of calico and worn like a blouse called by them "the holy" or "mysterious shirt," being its chief feature—and amid harangues from their leaders and songs in which they cried, "The buffalo are coming!" the people formed rings by joining hands, and whirled themselves round and round in wild dances until they fell to the ground unconscious.

They were then said to be dead. Their leaders promised that while in this state they would be transported to the spirit world and would see their friends who had died, and the Son of God; and accordingly, when they recovered consciousness, they told of the strange visions they had enjoyed.

Their confidence in the efficacy of their new-found faith and its tokens or insignia to protect them was complete. Hence, when the military were summoned to the Indian Agencies, their appearance did not dampen zeal, but fanned the flames. Why should they fear who wore the bullet-proof sacred shirt?

When Colonel Forsyth's cavalry overtook Big Foot's band and endeavored to take from them their arms after their surrender, the commanding officer's forbearance and coolness availed nothing. The medicine man addressed words of prayer to the father,—so they call the expected Messiah,—then shouted, "No bullets will hurt you!" and stooping down, threw dirt into the air or towards the soldiers.

Instantly, although two pieces of artillery were trained upon them, and the soldiers who surrounded them outnumbered the Indian warriors three or four times, they fell upon the troops with savage fury, and often continued fighting even when wounded and dying.

It was pitiable to see one of them when the illusion was exposed. When one of the women, wounded in the fight, was approached as she lay in the church and told by Miss Goodale she must let them remove her ghost-dance shirt in order the better to get at her wound, she replied, "Yes, take it off. They told me a bullet would not go through. Now I don't want it any more."

Religious feeling, like electricity, is a tremendous force, and may be destructive; but electricity, when intelligently directed, is highly beneficial. It lights our cities and pulls our cars.

So it is with religion. In its intelligent Christian form it has proved a wonderful help and solace to our Christian Indians. This craze has not taken hold of them. The heathen have been the victims of the infatuation.

But now for a few words about the Indian pipe. The mouth-piece is very small, and in smoking is inserted only just within the lips, quite delicately. Indians never hold the pipe by grasping it with their teeth or lips.

The stem of the pipe is usually from eighteen to thirty inches long, made of wood, decorated near the mouth-piece with bright-colored down from a duck's head or neck, and covered throughout its length with brass-headed tacks, ribbons and porcupine-quill work, with a scalp-lock or horse's tail flying loose from some part of it.

The bowl of the pipe is made of a reddish stone, which is in its texture and feeling somewhat like soapstone, such as pencils are made of, but harder, capable of a high polish, and very heavy.

Though this pipestone is found only in one part of our country, in a quarry in southwestern Minnesota near the South Dakota line, about fifty miles from Sioux Falls, it has been carried from tribe to tribe all over the United States; and pipes made of it are dug up sometimes which evidently belong to prehistoric times.

The Indians have a curious legend about the pipestone. It runs as follows: A large party of Dakotas had gathered together at the quarry to dig the stone. Upon a sultry evening, just before sunset, the heavens suddenly became overclouded, accompanied by heavy, rumbling thunder and every sign of an approaching storm, such as frequently arises on the prairie without much warning.

Each one hurried to his lodge, expecting a storm, when a vivid flash of lightning, followed immediately by a crashing peal of thunder, broke over them. Looking towards the huge boulder beyond their camp, they saw a pillar or column of smoke standing upon it, which moved to and fro. Gradually the smoke settled down into the outline of a huge giant seated upon the boulder, with

Digitized by Google

one long arm extended to heaven and the other pointing down to his feet. Peal after peal of thunder and flashes of lightning in quick succession followed, and this figure then suddenly disappeared.

The next morning the Sioux went to this boulder, and found the figures of lizards, snakes, otters, rabbits with cloven feet, muskrats with human feet, and other strange and incomprehensible things and images upon it, where before there had been nothing; and ever since that place has been regarded as *wakan* (pronounced waukawn) or mysterious.

The use of the pipe in acts of religion is very common among the Dakotas. In employing it for this purpose the pipe is pointed toward the sky or toward the four winds: "First," says the late Lieutenant Clark, "to the southwest—the place where ponies come from; second, to the southeast—the place where there are many people; third and fourth—to the northeast and northwest, whence come deep snows and buffalo."

Lieutenant Clark reports that Running Antelope, a chief of the Oncpapa Sioux, explained that the Indians, in pointing the pipestem towards heaven and to the four winds, meant to pray thus: "To the Great Spirit: Give me plenty of ponies, plenty of meat; let me live in peace and comfort with my wife, and stay long with my children. To the earth, my grandmother: Let me live long; hold me good and strong. When I go to war, give me many ponies, and let me count many 'coups.' In peace let not anger enter my heart."

Now let me conclude with the story of my visit to the Minneconjou Sioux, with a reference to which I began.

The chief of the tribe received me cautiously, but courteously, seating me in the place of honor opposite the entrance. The tepee or tent was made, not as has been the custom more lately, of tent-cloth, but of buffalo hide, adorned on the outside with grotesque figures in red. It was conical in shape, and supported by poles and would accommodate from twenty to thirty persons. A few sticks burned in the middle, and the chief and headmen of the tribe sat around the fire. My talk seemed to make slight impression. The chief occupied himself, with an air of nonchalance, in picking up beads and stringing them on a piece of tendon.

As I talked on, however, an Indian motioned to another near by to lend him his pipe. Tobacco-pouch and pipe were produced, and the owner, having filled the bowl, handed the stem to his companion and touched a live coal to the tobacco.

It was a pretty piece of good-fellowship. The second Indian took a puff or two, and as the smoke was wafted by the heat of the fire toward the sky, lifted the pipe, pointing it toward heaven, and simply but reverently said, "I smoke to God."

This evidence of religious feeling helped me somewhat as "Amen, amen," in a congregation sometimes helps a preacher, and recovering my hopefulness, I said, "Well, we want to do you good. That is what I have come for."

This remark broke the stolidity of the chief, and called out the reply, "All the white men that ever came before you said they had come to do us good; but they stole our goods and abused our women, and how are we to know you are any different?"

This was carrying the war into Africa with a vengeance; but I replied, "Well, you must watch and see how we live," and soon after I bade them good-by.

I gave up my effort as lost, for years passed and nothing seemed to come of it; but last October, after seventeen years, that chief appeared at a convocation of Christian Indians at which I presided, and made a request that the "White-robes"—so they call the Episcopal Church from the surplice which its ministers wear—would begin a mission among his people.

THE FASHION.

Marie Antoinette, history tells us, one day noticed on her toilette table some peacock feathers which had been placed there accidentally, being designed to decorate some fancy work.

She stuck one of the feathers in her hair. Being pleased with the effect she added another, and then called for some ostrich feathers. The next day she appeared in court with a beautiful headdress of feathers, a fashion which immediately spread throughout France and Europe, and which is followed in dress circles down to the present day.

Don John of Austria, the son of Charles the Fifth, and the fascinating young hero of Lepanto, had a patch of hair on one side of his head which grew upright, and to conceal this peculiarity he used to comb all his hair back from his forehead.

When he went as governor to the Low Countries, all the people of fashion imitated the mode, and from them it has descended to our own day.

Dionysius was extremely short-sighted; and his flatterers, Montaigne tells us, "ran against one another in his presence, and stumbled at or overturned whatever was under foot, to show that they were as purblind as their sovereign."

Thus in olden times, as well as now, did a few persons set the fashion. Does Worth or Felix advise trained skirts for the street, straightway we abandon our comfort and our common-sense, and sweep the crossings behind us.

Johnny Lenox, who is fifteen years old, discards the boyish knickerbockers and long stockings, and appears in his first pair of long trousers. Although knee-breeches are the most appropriate article of wear for a boy who is playing base-ball or football, who runs and jumps and rides a bicycle, every boy of John's age in his school must have long trousers at once.

Yet it is idle to rail at fashion. Human nature will not be changed by all the ridicule that can be heaped upon the absurdities of fashion. Even the silliness of awkward gait and uncouth speech, supposed to be English, survives the assault of sarcasm.

It is well to follow the fashion when the fashion is reasonable; when it is grotesque or otherwise objectionable to reject it is honorable. But it will be the fashion, still.

For the Companion.

Mechanical Trades as a Means of Livelihood.

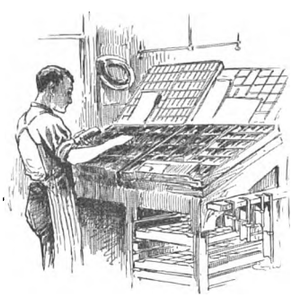
The Printing Trade.

What it Offers to Boys and Girls.

Formerly a printer who was master of his business was supposed to be intimately acquainted with all branches of it. There were men who were thus qualified, but they were comparatively few in number. To-day important printing establishments are divided into departments, with a man of intelligence, versed in the work to be done, at the head of each. Bright boys will find these positions worth competing for.

THE COMPOSITION ROOM.

The leading position in the Printing Trade is occupied by the great printing firms that make a feature of book and magazine work. Many of them also do general job printing. They combine in their establishments the departments included in typesetting, electrotyping and press work.



Next in grade come the large mercantile printers who do job work ranging from a visiting-card to a poster, and also print pamphlets, magazines and weekly newspapers.

Job printers, who devote their entire energies to specialties for business houses, railroad companies, theatrical managers, etc., are very numerous.

The daily newspaper office is divided into departments on the same principle as the great book establishment. In these offices typesetting, stereotyping and press work are done.

Typesetting.

In the large establishments where book, magazine and general job printing are done, there are usually two departments of typesetting, one for plain work, like that seen in an ordinary book

SETTING TYPE.

page, and the other for job work, such as business-cards, handbills, street posters, and all other printed matter composed of fancy types.

The department of plain typesetting is in charge of a foreman. The rate of wages for men of his class runs from $25.00 to $30.00 per week. Men doing plain typesetting, in nine or ten hours, working by the piece, earn from $10.00 to $15.00 per week. Women working by the piece in the same length of time earn from $8.00 to $14.00 per week.

Boys in such establishments are taken as learners between the ages of fourteen and seventeen years, and are not fully competent until they have served about five years. Wages to boys vary from $3.00 to $5.00 per week. In most cases the wages are increased according to the industry and skill shown by the boy, until they reach the prices that are paid to journeymen.

Girls are not usually taken to learn typesetting until they are from seventeen years to eighteen years of age. During the first five or six weeks they often receive no wages. In some offices the woman who instructs the girl receives the proceeds of her labor during the time mentioned. The girls learn only typesetting, and after a short time are given piece work. In six months girls can earn from $3.00 to $5.00 per week.

In the job printing department of the book and general job printing establishment, the foreman's wages run from $25.00 to $30.00 per week. Journeymen earn from $12.00 to $18.00 per week. The training of the boy is here about the same as it is in the plain typesetting department. As a rule females are not engaged in the job printing department.

The rates of wages I give throughout this article are to be understood as referring to Boston and vicinity, and may vary a little from those of the other chief cities of the United States. Boys learning the trade of compositor or job printer are subject to about the same conditions in nearly all the large mercantile printing houses. If intelligent and steady they can progress rapidly.

The proof-readers employed by book and general job printers are men and women of intelligence and technical education, who are paid according to experience and merit, from $10.00 to $25.00 per week. Some of them are practical printers.

Electrotyping.

Some of the great book and general job printing houses have a department for electrotyping, with a foreman, journeymen and boy learners.

The "form," or iron frame containing the type that is ready for printing, is given to the electrotyper, who makes a wax mold from it. This mold, after undergoing a preparatory process, is placed in a depositing tank opposite a sheet of copper. By means of electricity, sufficient copper will be deposited upon the wax to form a shell, and this is made solid and permanent by pouring fused metal upon it. This plate, when blocked on wood or metal, is ready for the printer.

ELECTROTYPING.

There are two divisions in the electrotyping department. In the great book and general job printing houses foremen receive from $25.00 to $30.00 per week; journeymen molders and journeymen finishers from $18.00 to $24.00 per week. Boys between fifteen years and seventeen years of age are taken as learners in each division. Wages begin at from $3.00 to $4.00 per week, and are advanced by degrees to those of journeymen. It takes about five years to attain proficiency in molding or finishing.

Electrotyping, like the other branches of the printing trade, is carried on as a business by itself, in which work is done for job printers who have no electrotyping departments. In such business a foreman has charge of the molding department, and there is also a foreman in the finishing department.

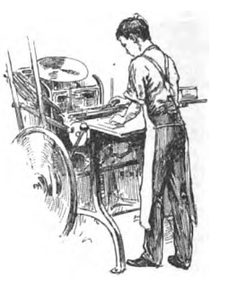
The wages of each are from $25.00 to $35.00 per week. Molders are paid from $20.00 to $24.00 per week, and finishers about the same.

In the molding department there are men who devote all their attention to certain branches, such as blackleading, battery work and backing up. Their pay runs from about $12.00 to $16.00 a week.

Boys in this business begin the course of training between the ages of sixteen and eighteen years, and serve from three to five years. During the first year they are paid from $4.00 to $6.00 per week, with an increased rate every six months until they reach the pay of journeymen.

The bright boy in this business can reach proficiency in the higher grade in a few years, and become so valuable that he can hold his place even in dull times, when the workman of less skill is suspended.

PROOF-READING.



Press Work.

The department in the book and general job printing house devoted to press work in some respects is the most important branch of the trade. The wages of foremen are from $20.00 to $30.00 a week. Journeymen's wages range from $15.00 to $22.00 per week.

Boy learners are taken between the ages of fifteen and seventeen years and should give four or five years to learning the business. Their wages are from $3.00 to $5.00 per week. The wages are increased in the book and general job offices according to merit until boys are able to take charge of the presses.

Some of the leading book houses have two grades of press work. The coarser is all from plain type, and the finer includes engravings. The most promising boys at the coarse work are promoted to the press room where fine work only is done.

The firms making a special feature of coarse and fine press work for the trade pay their boys about $4.00 per week to begin, and increase this rate to $9.00 or $10.00 per week. Boys who feed job presses earn from $6.00 to $8.00 per week. They are encouraged to persevere, and advanced to journeymen's wages when competent, and when there are vacancies for pressmen.

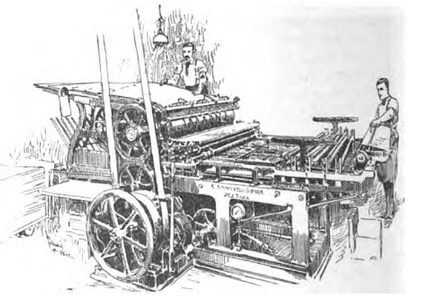
A SMALL JOB PRESS.

Girls employed as feeders in some of the book and job printing establishments are paid about $7.00 per week.

The Daily Newspaper Office.

In the typesetting departments of daily newspapers, foremen's wages range from $30.00 to $50.00 per week. Assistant foremen receive from $25.00 to $32.00 per week.

Journeymen on morning papers earn from $20.00 to $30.00 per week, and on afternoon papers from $15.00 to $25.00 per week.



Boys taken as learners must be between the ages of sixteen and seventeen years for day or night work, but in most of the Boston offices they do day work only. According to the rule of the printers' union, a boy may go to journey-work after four years' service.

The pay of a boy runs from $3.00 to $5.00 per week, and the rate of increase from $1.00 to $2.00 per week per year. Each office has its own arrangement for learners.

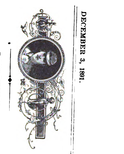
Girl learners are not taken in newspaper offices, but women who are competent compositors have situations in some of the afternoon papers. They are paid the same rates as men, and earn from $15.00 to $20.00 per week.

Proof-readers for the morning papers are paid from $18.00 to $30.00 per week.

In the stereotyping department of the daily newspaper in Boston the men are paid from $3.50 to $4.00 per day. Foremen are paid from $5.00 to $6.00 per day. Learners are taken into the stereotyping department between the ages of eighteen and twenty-one years. In four years they are considered journeymen.

THE LARGE CYLINDER PRINTING-PRESS.

Foremen in the press department of the daily newspaper are paid from $30.00 to $60.00 per week, and assistant foremen from $20.00 to $40.00 per week. Journeymen's wages vary from $16.00 to $21.00 per week.



Where boys are taken as learners they begin at from fifteen to sixteen years of age, and receive wages at the rate of about $5.00 per week. It takes four years to qualify a boy to take charge of a press, and he does not reach the highest rate of pay for journeymen until he has served a term of five years. In four years he works up to from $10.00 to $12.00 per week.

The departments of printing are not overcrowded with competent workmen. There is plenty of room for intelligent, fairly well-educated boys who enter this business with the view of advancing to the most lucrative positions.

In this trade, as in most others, there are a majority of inefficient, incompetent men who have foolishly only half-learned their business. These make the transient, shifting class, who seldom remain long in any one office. But men who are steady and intelligent, and who thoroughly understand their trade, are in demand, and can always find permanent and satisfactory positions.

told among the Cree and other Indians in the American Northwest, where great elks, big beavers and fairies have been seen by mortal eyes that vouch for their existence.

These tales, whether of beasts or of men, never give any dates for the occurrence of the events they relate. It is always, "When so and so was," or "Once upon a time." They are probably often told now among the Highlanders who have gone to Cape Breton and other places in America, where the original settlers have not become mixed with others or disturbed, and have not wandered westward. It is odd to think that many of these narratives may have entertained our common Aryan ancestors in the heart of Asia, and have been brought by them across all Europe in their wanderings, as they moved ever onward and sunward, following the track of the great orb of light which their ancestors used to worship.

Indeed, there is still a great deal of sun-worship in many of the customs of peasants, as well as of peers, in the Old World. The rich man makes the wine circulate among his guests from left to right—sunwise; and the Highland peasant, when he takes to his boat for a voyage or for a fishing expedition, used until quite lately to turn his boat three times round with the sun before starting. He does it still, in some remote parts; and in the same way, when a corpse was taken for burial to a church, the mourners walked sunwise three times round the church in procession.

It was supposed to be good for the success of the voyage to pay the tribute to the sun god. It was supposed to be good for the soul of the departed, that his body should be taken with the sun three times round his place of sepulture.

The Christian church took the old heathen forms, and adapted the habits of the people to embrace the new religion, and to render unto God the things that were the idols'.

But better usages there were also. Here are old prayers on embarking:

The steersman—"Let us bless our ship."

The answer, by all the crew—"God the Father bless her."

Steersman—"What do you fear since God the Father is with you?"

Answer—"We do not fear anything."

Steersman—"What do you fear since God the Son is with you?"

Answer—"We do not fear anything."

"Be the Three in One with us day and night. On the crested wave, when waves run high, O mother, Mary, be to us nigh."

A pretty song, in speaking of the mountain sheilings says: "A lovely summer sheiling with one tree; behind the wind, in front of the sun, where we could see all the world, but where no man could see us!"

The belief in the evil eye is so strong that I have known a woman in very good circumstances, and having a good house, to implore a friend of hers who had often been hospitably received by her as he passed her house, to enter it no more, and if possible to pass another way, as she was sure he must have the evil eye. Some horse or cow or hen had died each time he had honored her by a visit.

Not long since, in one of the islands a woman brought an action for libel against another woman, because she had been told that her "gossip" had declared she had seen her changed into a hare. Yes, she had seen her become a hare, and run away from her across a field! The magistrate before whom the case was brought, found that the belief that such things were possible was so universal in the neighborhood where the women lived, that the person against whom the accusation had been brought was quite right in thinking she was damaged by it, and money as compensation was paid to her accordingly.

I have been given a flint arrow-head by a person who declared it had been shot at him by the fairies, and that it was quite hot when he picked it up!

Witches used to be feared and consulted in the Island of Mull within my memory; and once I paid a visit to the last of the ladies who was reputed to have the talent of prophecy, and to my relief got from her only the good wish, "The back of the wave to you;" for I was going on a voyage, and this was her picturesque expression of the desire that I might have a fair wind.

It is remarkable how many vestiges of heathen habits linger in some of the popular customs. It is owing to the action of many clergymen who traced too surely the origin of some of these habits that they are dying out in the Highlands, and the spread of education and the movement of the people, both of migration and emigration, are changing others.

I do not know whether an amusement is widespread which used to be in favor in my parish. On a certain night all the old bachelors' gardens were visited by the damsels, who in the darkness pulled up the cabbages. If a full-leaved cabbage was pulled, good luck would, it was believed, attend the "lifter." If the cabbage were only a poor stump of a plant, the plucker would remain in single blessedness all her days.

Sometimes and in some places, notably Aberdeenshire, the game is in this wise: The kail are picked blindfolded or in the dark, or maybe even in the day, and the one that brings most earth up with the roots will get the richest marriage. The cabbages are taken and are hung over the doorway, and the man that first enters, be he fair or dark, gives warning to the lady that her future husband will be fair or dark-complexioned.

Very common on November nights, too, is the habit of burning the hazelnuts. A young man and a young woman place two nuts close together at the fire. Each nut represents the fate of the depositor. When the nuts jump away from each other as they sometimes will, it betokens quarrelling. When the nuts remain and burn amicably together, it prophesies happiness; and the nut that burns away soonest denotes the life that will be the first to end.

Much of the picturesqueness of the old life is gone, but much yet remains, especially where along the western coasts of rock and island, and sleeping fiord and sound, the herring boats lift to the summer sun, and moving the countless banners of their brown sails, and like dark-winged butterflies float seaward to spread or gather in their nets.

Through long centuries repeated,
Live the legends told in Erse;
But a change comes swift or slowly;
Fades the language, and defeated,
Flies the faith once counted holy,
Old World ways and oral verse.
Not from men of note or learning
May we gather now these tales,
But beneath the cotter's rafter,
Or where smithy sparks are burning,
Or at sea, when hushed the laughter
Of the breeze on hull and sails.

LE PARAPLUIE.

A March and Drill.

Action songs, manual exercises and marches with musical accompaniment are becoming more and more a means of educating young folks in singing, graceful movements, memory, elocution, color and art.

"Le Parapluie" is a march and drill combined, arranged for sixteen girls, who ought to be near the same height, erect, able to walk firmly and gracefully, and to keep good time. A leader to direct the rehearsals and give all needed instruction should be added to the number.

This exercise is intended for school or holiday festivals, and directions are here given for its presentation in elaborate form as an entertainment for friends, or before an audience. Yet the movements of the march and drill can well be utilized for daily practice in schools, as a pleasant and interesting means of temporary diversion during study hours. In schools parasols of ordinary cambric may be used.

The evolutions of the drill, in order to be effective, must be performed without rigidity of movement—the arms and body bending and swaying easily and naturally. The movements must be executed simultaneously.

In the march the same rules apply to the keeping of step, not the slightest deviation from strictest time being allowed. In order to do this perfectly, the performers must count the time both for the manual movements and the march. As a rule when marching the different changes occur on the seventeenth step; in the drill on the ninth count.

Parasols of medium size, either Japanese, or other parasols covered with bright-colored fabrics, are used throughout the exercise.

Costumes, whether uniform in style or not, should vary in color to match the colors of parasols. Blouse waists, peasant jackets, plain full skirts, low shoes, stockings to match color of parasols, velvet capotes to match jackets, make pretty costumes. Red, pink, blue, yellow, lemon-color and white should predominate.

Decorations for the room may be more or less elaborate, as desired. A large umbrella-shaped frame which any carpenter can easily construct, covered with bright red cambric, lined with blue or pink, then decorated with festoons of flowers,—paper flowers are best, as they do not wilt,—should be suspended by strong cords from the ceiling above the centre of the space assigned for the march and drill.

The covering of this umbrella frame may be neatly done, thus: Ascertain the exact dimensions of one section of the frame, then cut the required number of duplicate pieces and stitch them together. The lining is prettier to tack the cambric plain at the edge of the frame, then fasten it in folds at the centre. If possible there should be an opening at the apex of the umbrella, so that a hanging lamp may depend underneath its arch to bring out the desired brilliant effects.

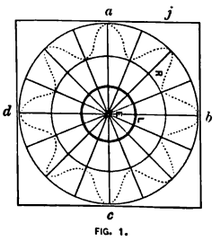

FIG. 1.

The walls of the room, chandeliers, etc., may be decorated with flowers and Japanesque designs made out of bright-colored tissue paper and buntings. The space on the floor allowed for the drill and march ought not to be less than twenty feet square.

Musical selections, simple in form yet of brilliant style, 4-4 time, with marked accent, should lead the performers. Much depends on the pianist or leader of orchestra that the time be uniform and the signals given at the right moment. Lacking music the leader must count the time.

March.

Girls enter room at *j* marching single file, the leader walking at left of first girl; parasols spread and held over right shoulders.

1. March three times around circle a-b-c-d.

2. March a-e-c. At *c* odd numbers—1, 3, 5, 7 to 15 inclusive—turn to right, marching c-d-a; even numbers—2, 4, 6 to 16 inclusive—c-b-a. At *a* numbers 1 and 2, 3 and 4, to 15 and 16 inclusive, join to march by twos a-e-c-d-a-b-c-a. At *a* first two march a-b-c, second two a-d-c; meeting at *c* first and second twos join to march by fours, followed by those remaining by fours. Fours march c-a-b-c-d-a-e. At *e* first two march e-d-a; second two e-b-a followed by others. At *a* second two fall in line behind first two, fourth behind third, etc. March a-e-c-d-a-b-c. At *c* even numbers fall in line behind odds, thus forming single file. March c-e-a-b-e-d-c-b-a-d-c, stopping at the points where the dotted lines touch the outer circle, girl No. 1 standing at *c*.

3. All march by straight lines towards *e*. Form circle *l*, which ought to define the outer edge of the hanging parasol. With parasols upon right shoulder march to right three times around circle. Right about. (Rest full weight upon heels and turn to right one-half around.) Repeat. Return to place in outer circle.

4. With parasols over left shoulder follow serpentine path indicated by dotted line past points c-d-a-b-c. Right about. Parasols over right shoulder. March past points c-b-a-d-c.

5. March single file to *e*. At *e* odd numbers march e-b-a; even numbers e-d-a. At *a* join to march by twos e-c-d-a. On line a-e first two stop near *a*, turn face to face at sufficient distance apart to permit second two to pass between first two and take places in same way until the eighth two stand face to face on line a-e-c, at equidistant points. First two march between other twos along line a-e-c, second two and others in turn following after. March by twos c-d-a. Repeat this from beginning of order 5.

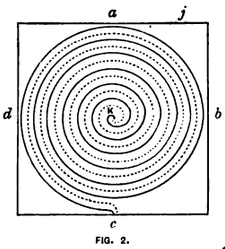

FIG. 2.

6. First, second, third and fourth twos march a-e-b. On line e-b, between circle *l* and outer circle, halt; turn face to face; lift parasols as high as possible to form a canopy. Meanwhile at *c* even numbers of remaining eight fall behind odds and march single file e-d-c-e. On line c-e numbers 9 to 16 inclusive shut parasols and lower them to almost horizontal position on right shoulder, then pass under the canopy formed by the first four twos. Those in single file march b-a-e under canopy e-b-c-d. At *d* join to form twos on line d-e. Halt. Turn face to face. Form canopy. Meanwhile other eight march single file b-c-e, under canopy, past d-c-b to e. Number nine falls in behind number eight, others following march single file d-a-e-b-c-e-d-a-e-d-c.

7. Execute the maze (Fig. 2) following line *c* to *k*. Return by dotted line to *c*. March c-b-a-d-c. Execute maze again. March c-b-a-d.

8. Execute Fig. 3. Commence at *h*; follow line as indicated. Repeat.

Drill and March.

The following changes occur on the ninth step. The parasols should, if possible, be held towards the audience, both in the march and drill. March on outer circle to left.

1. Shut parasols.
2. Hold parasols with right hand upon handle, and left for use in opening or closing parasols.
3. Point parasols at angle of forty-five degrees.
4. Shove parasols one-third the distance required to open them.
5. Shove it one-third more.
6. Shove it till fully opened.
7. Carry upon right shoulder.
8. Carry perpendicularly.
9. Carry upon left shoulder.
10. Carry perpendicularly.
11. Lift parasols three inches; six inches; nine inches. Drop same in reverse order.
12. Thrust parasols arm's-length to horizontal position with left hand; thrust to right diagonally; perpendicularly. Grasp parasol with right hand, thrust it arm's-length horizontally.
13. Reverse order 12. Repeat.
14. In same position whirl parasols to right; to left; to right; to left. (The whirling is done with right hand on handle.)
15. Raise parasols to perpendicular; whirl to right; to left; to right; to left.
16. Right about. Parasols pointed to right, the left hand grasping handle. March diminishing size of circle, approaching each time around a little nearer to circle *l*. Close parasols one-third; two-thirds; wholly.
17. Raise to left shoulder; to perpendicular; to right shoulder.
18. Raise parasols one-third; two-thirds; wholly. (By this time circle *l* is reached.)
19. Face toward outer circle. Hold parasols diagonally above face. Grasp handles with right hands. Odd numbers forward two steps; kneel; all whirl parasols to right; to left. Odd numbers rise; back two steps; even numbers forward two steps; kneel; whirl parasols to right; to left.
20. Even numbers rise, march to right with parasols brought close to right shoulder; odd numbers to left with parasols lifted perpendicularly. March three times around circle.

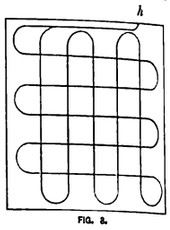

FIG. 3.

21. Odd numbers move two steps farther towards outer circle; stand at equidistant points in position not to hide even numbers. Even numbers hold parasols diagonally front; whirl rapidly. Odd numbers swing parasols rapidly. Music increases time. Number one starts with quick step, others follow in line. March around outer circle. Retire in good order, with parasols over right shoulders.

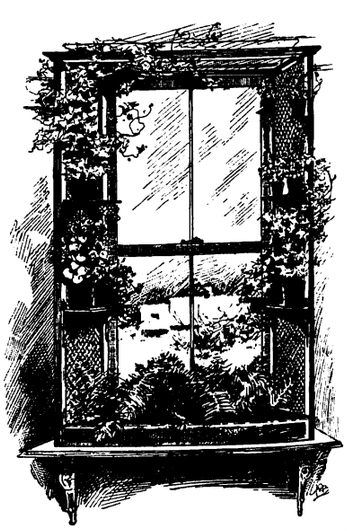
MRS. ABBIE G. LEWIS.

For the Companion.

A WINTER WINDOW.

House plants must have light and sunshine if the winter garden is expected to blossom abundantly.

It is difficult, however, to accomplish this with the usual arrangements, since shelves across the window not only obstruct the view from within, but also expose the plants to greater changes of temperature than is desirable.



It becomes too warm for them in the middle of the day, when the sun is shining, and too cool at night from the nearness of the plants to the glass, which radiates heat rapidly.

Flower-stands below the window, moreover, are objectionable for two reasons. The spreading legs take up a good deal of room, and the plants upon the upper shelves shade those below.

To obviate these difficulties, an arrangement similar to that shown in the cut will be found very satisfactory. A broad shelf is fastened a few inches below the window-ledge by stout iron brackets, which can be procured at hardware stores. Upon this can be placed a window-box, four or five inches in height, lined with zinc or galvanized iron.

The front of this box can be made as ornamental as one pleases, either by fretwork, paint or other device. It may be used to contain the low-growing plants, the delicate little ferns, and many others that meet one's fancy.

At each end of this box, at the corners, are two uprights that are mortised into the broad shelf first mentioned, and extend upward a little higher than the window. Cross-pieces at the top complete the framework. The whole is held firmly in place by a light iron brace extending from the inner upright on either side to the casing of the window. These braces should be placed near the top, since the framework is held firmly in place at the bottom by the mortises.

The shelves that extend on each side, from upright to upright, can be placed in the manner shown in the figure, or varied in any way to suit the maker's individual taste.

Plants placed upon these will each receive a proper share of light, as will those in the box below; while the view from the window will not be obstructed, nor will the whole structure occupy much room.

This arrangement is capable of affording accommodations for climbing-vines, also. Let a light lattice-work of wire be arranged between

Digitized by Google

the uprights and between the cross-pieces above the window. Vines can be trained over the whole, forming a beautiful arch of green around the winter landscape that is seen through the glass.

The pots from which the vines grow can be placed on each end of the broad shelf, since this should be considerably longer than the window-box.

If it is desired, other small bracket shelves can be placed upon the uprights in front. All the woodwork should be well painted, especially the shelves, since more or less water will fall upon these, be as careful as one may in watering the plants. The water will cause warping and splitting unless the grain of the wood is well filled.

LONG LIVE THE TREES.

So long as the rivers flow,
So long as the mountains rise,
May the forests sing to the skies
And shelter the earth below.

Our Dumb Animals. —*W. H. Venable.*

WINTERING IN A DUG-OUT.

In Three Parts.—Part I.

"Would you advise girls to 'homestead' land in the West?"

I have been asked this question so many times since the fact found its way into a Dakota paper that I had made a home for myself under the Homestead Law, that I have come to think that the best reply I can make is a matter-of-fact description of the first twelve months of my experience while homesteading my farm.

I was twenty-six years old. The last four years of my life had been passed in the care of my father, who was a paralytic invalid. At his death my portion of his small estate amounted to three hundred and fifty dollars.

Looking about me, with this small sum in my pocket, for an opportunity to start in life, I thought and heard of many things to do. I read in the newspapers about land claims in the West which had been "homesteaded" by women, and I began to contemplate an exploit of this sort. I had good health and strength, and liked out-of-door life, and I was not afraid of domestic animals under ordinary circumstances.

One day I broached the subject to my friend Helen J——, who had for several years been supporting herself by teaching a country school. Her annual income from this source was about sixty dollars—twenty weeks of school, at three dollars a week. On this income she contrived to live and dress quite neatly. She was, moreover, unusually attractive, personally; but she knew what it is to pinch and to plan with painful closeness.

We planned it all out in advance, of course. We expected to work hard and endure privations for three or four years, but in the end, when our fine wheat farm was equipped, we fancied that we should reside on it only from April to October; and during the winters we should live in some large city.

We talked it over until we had convinced ourselves that we could do it, and then we gathered together our small means, and started for Dakota. We began our journey the last day of April.

We settled a short distance from what is now the line between the two new States of North and South Dakota.

We spent a week making inquiries as to land, probable town sites, future railroads, highways and so forth, and at last selected a surveyed quarter-section of land, along one side of which there once had been a little belt of timber. This wood had all been cut off by settlers at a distance, except eight shaggy oaks and two cottonwoods.

These ten trees were really what attracted us to the claim. It was farther from other settlers than we liked to be, but the land agent assured us that we should have plenty of neighbors before the close of the season. The trees, he remarked, would furnish logs for a house, and fuel for one winter, at least.

But Helen and I had other uses for the trees. We had resolved to preserve them all for shade.

We were assured that either a log-house or a dug-out was the proper sort of dwelling to start with, but we both disliked the idea of a sod-house, and at a cost of fifty dollars had a thousand feet of rough lumber delivered to us. Carpenters were scarce, but we succeeded in hiring one for a single day for seven dollars. His name was Andrew Phillister; he was a young man, and had recently preëmpted a claim two miles from ours.

In one day Mr. Phillister built us a house, ten feet by twelve, put in two windows consisting of a pane of glass each, hung the door, cut a hole for the stove-pipe, and put up a shelf-dresser; and with some two hundred feet of lumber which were left he constructed a cow-shed and a chicken-pen, and then with his axe trimmed up our grove, and built a cow-yard of the brush. I have never seen a man work so rapidly. He had everything complete by five o'clock, and had found time all day to chat with Helen more than I approved of.

We bought a cow and twenty hens, and begged a cat, and, rather too late, we hired a man and team to break two acres of land for us, the most of which we planted to corn with our own hands; but the greater part of this corn was soaked out by a heavy rain early in June.

A garden plot a hundred feet square near our house, which we had spaded up earlier, did better. We had brought good seed from home, and we worked very hard in that garden. Nature smiled kindly on our efforts; it is quite astonishing what a crop we raised from it.

The sun browned our skins, and Helen complained of the hard work at times; but on the whole we were very happy all summer long. We had four hens setting on about a dozen eggs each at one time, and later our yard swarmed with chickens; nor did we lose one chick from hawks, foxes or coyotes.

During the whole summer we were not troubled by wild beasts, or by ill-disposed human beings. In fact, nobody came near us. Two or three times Helen or I walked to our nearest neighbor's, three miles away, and asked him—he was a Scandinavian who spoke very little English—to bring anything we needed to us, when he went to the "store," ten miles distant. Having produced our own eggs, milk, butter and garden crop, our food cost us surprisingly little. We had more milk than we could use, and had to throw some of it away.

The weather was delightful. We were well all the time, and I can but laugh now when I think how much we played—actually played! Twenty-six years old, too! But when I was a girl I had never played half enough, and I had a great deal to make up.

I sent for scythe, rake and hay-fork, and we put up a stack of hay for winter. My first efforts with the scythe were, Helen said, extremely funny.

Three thunder-squalls, accompanied once by hail, and always by vivid lightning and wind, were about the only exciting incidents of the summer.

As I said above, I had never before been so happy; but thus far we had seen only the sunny side of pioneering.

Andrew makes us a call

September and October were busy times with us. We were preparing for a crop the following year. I had still a little money left, and we realized a little more from the sale of chickens and eggs. Six acres were prepared for wheat, although the man who plowed for us charged five dollars a day for himself and team.

We had raised enough garden vegetables, potatoes and corn, for winter. To store our vegetables safe from frost, we dug laboriously a hole five feet square beneath our house floor. It was much like a squirrel's store. We spent a great many hours gathering dry stuff for fuel from the scattered brush and timber at a distance from our cabin. Where trees had been cut the year before we gathered bushels of dry chips, till we had made a considerable woodpile beside our door.

With sods and earth we banked up the cow-shed to the eaves, and we also built a chicken-house adjoining it fifteen feet by ten, with walls of sod and a thatch roof of dry grass and poles.

Our house we also banked up to a height of three feet outside, carefully calking all the cracks, and papering the inside with the newspapers which we received occasionally from home friends. A water supply was the requisite most difficult to manage. Thus far we had brought water from a slough two hundred yards or more away, and we did not feel able as yet to dig a well.

In October came what was to me the first touch of adversity and unhappiness. As I have said, no one called on us during the summer, but one day in October, as we were fetching chips in a blanket, we saw a man approaching across the prairie. Even before he had come within a quarter of a mile Helen exclaimed, "It's that Mr. Phillister!"

"What can he want?" I said. "We paid him his seven dollars." Helen laughed, although there did not appear to be anything especially ludicrous in his coming to call on us.

He bade us good morning very cordially, and looked about approvingly on our preparations for winter. He seemed somewhat embarrassed.

He told us that, after working at his trade for other settlers till September,—during which time he had built thirteen houses, and I do not remember how many barns,—he had returned to his claim, and erected a house for himself.

His claim was out of our view, over a swell of the prairie, and he seemed quite solicitous that we should come to see his new home. He offered several times to do any job of carpenter work that we might need that fall free of charge. In short, he made himself very agreeable, and he remained with us for two hours.

"Helen," I said, when at length Andrew had taken leave, "that fellow is coming here after you! He wants you for his new house. And you will desert me and go there!"

Two evenings afterward, Andrew called again, and remained three hours. I will make what was not a very long story shorter still. Five weeks later, Helen told me that Andrew had asked her to marry him—and—would I ever forgive her, and so forth, and so forth.

I had already settled it in my mind, after a struggle with myself, and I am glad to say that I uttered no reproaches. Thenceforward, I foresaw that my life would be a solitary one.

Those were bitter days for me, but I summoned courage to go on alone. I felt the keenest of sorrow at Helen's desertion of me, for I had come to love her like a sister.

With the first snow in November came Andrew with a horse and sleigh, and carried us both to R——, thirteen miles distant, where the marriage ceremony was performed by a magistrate.

Next day we returned, they to their new home—a very comfortable little house, with a pretty set of furniture, and even a small cabinet organ—and I with them for an hour or two. They had very kindly planned to have me pass the cold season with them; but I declined,—a little grimly, I fear,—and returning in tears to my cold cabin, my pussy-cat, my cow and my poultry, I settled myself to pass the long winter.

There was a period of good sleighing in December, and every day while it lasted Helen and Andrew rode over to call on me. They were so happy that I knew I ought to be glad for them.

The day after Christmas there came what was, for Dakota, a prodigious snowfall. There were several inches of it, and the prairie was covered with white drifts. The wind blew fiercely. I had difficulty in reaching the door of my cow-shed, and for two weeks I was forced to melt snow for water. Blizzard weather was upon us, and I felt glad that Andrew did not attempt to come over to my cabin.

The fourth night after the storm, the wind blew a fearful gale. The gusts waked me, a little after midnight. The snow was sifting sharply against my little window-panes.

Suddenly I heard a wild, loud, cracking noise, followed, an instant later, by a frightful crash upon my cabin. The roof broke down, letting in an avalanche of snow.

Fragments of split boards and brush fell upon my bed. I was slightly bruised, and held partly down by the weight of what had fallen.

One of the cottonwoods, dried up by the removal of the timber around it, had blown down, and the top of it had crushed my cabin.

I was greatly terrified, but extricating myself, I tried to dress. But it was so cold that I feared I should be frozen, and crept back beneath my blankets. I covered up my head and ears, and lay still and let the snow which fell in almost bury me. In the morning, having dressed literally in a snow-drift, and found my axe, I began the cold task of clearing away the top of the tree, along with the wreck of my house.

The cabin was wholly shattered, and I now perceived how narrow my escape had been from being crushed to death. For the first time I felt thankful that Helen was in better quarters. I knew that she was not robust enough to endure what followed.

My stove-pipe and stove had been knocked down, and lay amidst the shattered boards. I had no means of making a fire, or preparing warm food. I saw that my cabin would have to be entirely rebuilt. I stood knee-deep in snow and wept.

When my feet grew so numb that I knew they must be freezing, I would go into my cow-shed and warm them on the cow. Ah, how comfortable the good creature seemed to me! Then I would sally forth, and with axe and shovel fall to work.

All that day I worked desperately. Not only did I clear away the wreck of the cabin and tree-top, but I took up the floor, and with a shovel, enlarged my cellar from a hole five feet square to the full size of the cabin. In short, I transformed my cabin to a "dug-out," and carrying up a wall of earth and turf to a height of three feet above ground, roofed it over, laid a floor, and lined the earthen sides with the cabin boards.

This may seem like a very large achievement, but to work hard was the only means by which I could keep from freezing, away from the cow. The cow, too, supplied me with milk.

I dug an incline, and set up the door-frame and door, but did not trouble about windows that day. Then I got my stove together and the pipe out through the roof and kindled a fire.

I do not think that the temperature had been higher than ten degrees below zero all day. If any poor woman ever did a harder day's work, I pity her.

All my vegetables and potatoes chilled in spite of the bedclothes which I spread over them. Nearly all my dishes were smashed, and poor pussy had been crushed to death beneath a joist.

I put a teakettle full of snow to melt, and made a basin of hot porridge for myself. Then I shook the snow out of my bedclothing, made up my bed, and sitting up in it began to drink my porridge.

I passed the night miserably. Rising and dressing, I once more kindled a fire in my stove. I then found that the "dug-out" held the heat much better than the cabin. In fact, the snow had drifted entirely over it, and the reason why my stove had been so slow in heating, was probably because the pipe was partly choked with snow.

As soon as my cow smelled the smoke of my fire she began to low plaintively to me for water. I had been unable to give her drink the previous day. I could hear her calls faintly through the snow canopy beneath which I sat.

Opening my outside door, I filled my kettle with snow, to melt. Then I made coffee, baked potatoes, and prepared myself a good breakfast. I also made warm dough, well-peppered, for my poultry; and as soon as it was light, I dug through into the cow-shed and chicken-house, where I found the fowls very stupid from cold.

The weather continued bitterly cold, and the wind blew almost constantly. It seemed that no living creature could exist abroad on the prairie; but at about ten o'clock on the third night after the accident to my cabin, I heard the wild yelping and howling of timber wolves, close at hand.

After listening awhile, I opened my door a crack and peeped out, and then distinctly heard the famished creatures digging furiously at the frozen sod walls of my cow-shed and poultry-house.

Fearing that they might break in and throttle my cow, I opened my stove, and first allowing the ends of two sticks of wood to get well afire and blazing, I ran suddenly out and threw them at the wolves.

I may add that I ran in and fastened my door quite as quickly, for I was afraid of the hungry beasts.

The sight and smell of the fire frightened them away for the time, but they returned twice, and I spent the most of the night listening at the door, and preparing brands to throw at them. It was so dark outside that I did not obtain a good view of the wolves, but I thought that there were four of them.

The snow-drift in front of my dug-out was now nearly five feet in depth; and next day I shovelled out a trench, in place of my path, from my door around to the door of the cow-shed, down to the ground. I then covered this trench over, first with cottonwood brush, then with cakes of snow to a depth of three feet, thus making a covered way about thirty feet long.

This I did to defend my premises from wolves. It proved a great convenience throughout the remainder of the winter. I could now visit my animals without wallowing in snow, or facing the cold wind. But there were far more dangerous foes than the wolves abroad that winter.

CHARLOTTE H. SMITH.

(To be continued.)

For the Companion.

THE MILITIA SAILOR.

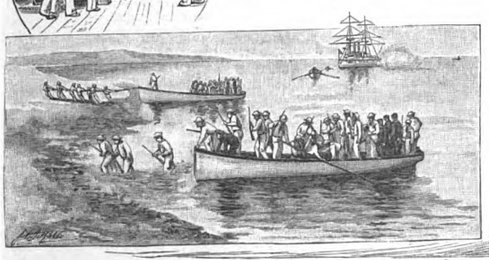
The militia soldiery of our States plays so important a part in the country's military life that the standing army, vastly smaller in actual numbers, is dwarfed in comparison with it. Until very recently the regular navy of the United States has stood alone in representing the nation's powers of defence by sea. Since the beginning of the new decade, the century's last, the militia sailor has taken his place among the country's armed defenders.

The war power of a nation like ours is found quite as much in the troops it can raise at short notice as in the force actually under arms. The thorough State militia organizations of the whole country have given confidence that on land the nation could be quickly and well defended. For some time it has been felt that the navy, no less than the army, needed a volunteer force behind it.

In Great Britain, France and many other countries of Europe the Naval Reserves have long been organized, ready to respond to any call for national service.

Since Jefferson, in 1805, formed an unfulfilled plan for a United States naval reserve, several attempts in the same direction in this country have failed. At last, with the stimulus which the new war vessels have given affairs of the sea, with the feeling that something must be done to draw the navy and the people nearer together, and with a conviction that a plan of State service was more feasible than federal organization, the naval militia has been born.

In Massachusetts, whose governor, curiously enough, has always borne the title of "Captain-General, Commander-in-Chief and Admiral of the Land and Sea forces of the State," the movement first took form.



A committee of a yacht club in Boston, at the instance of the commodore of the club, a retired naval officer, in 1887 presented to the State Legislature a bill for the creation of a naval branch of the State militia, to be known as the Naval Battalion. In 1888 the bill became a law, providing most simply for the battalion organization, the

Digitized by Google

number of officers and men, and permitting the force to be "raised as provided by law when the United States Government is ready to furnish arms and equipments and a vessel of war for performance of duty required by law."

Early in 1890 the action of the Secretary of the Navy made the accomplishment of this plan possible, and on the Twenty-eighth of February, in the Massachusetts State House, one hundred and seventy-two men were mustered in—the largest number sworn into the service of any State at one time since the Civil War.

Drill of a Naval Battalion.

The national government has further shown its sympathy with the movement by inserting in the Appropriation Bill of the last Congress an item of twenty-five thousand dollars for arms and equipments for the Naval Militia. The Secretary of the Navy has ordered a just division of this sum through the year among the companies organized in various States before July 1, 1891.

New York, Rhode Island, Connecticut and California had already passed laws for the creation of forces like that of Massachusetts.

Toward the end of June New York, and on the night of June Thirtieth Rhode Island, swore in their new Naval Battalions. In New York the battalion had been formed for some time before its admission to the State militia.

In California and Pennsylvania the movement is well under way. Other States are expected to pass Naval Militia bills in the near future. Thus it is seen the enterprise is far from local.

Through the winter months the Massachusetts battalion meets for one evening in the week in the great Boston "South Armory." In their uniforms of blue or white duck working suits, the men look as much like real tars as landsmen possibly can. The officers are so uniformed as plainly to suggest the navy without actually reproducing its dress.

In one of the armory's larger rooms, the "Boat Hall," a frigate's launch is mounted on a cradle. This is equipped with a howitzer and all the essentials, except water, for a torpedo drill.

Another room, the "Battery Hall," is arranged like the side of a modern war-ship, with a six-inch breech-loading cannon pointing forth. Though the gun and its carriage are but wooden models, they serve the purpose of teaching the men to handle the real implement of battle.

On the vast floor of the hall the command is trained in the manual of arms, broadsword practise and manœuvres peculiar to naval warfare.

On Saturday afternoons in May the drills are held on the Charles River basin in the battalion's boats, four cutters and two launches. Howitzers and small-arms are fired at an imaginary enemy; the boats advance in column and in line; and torpedoes, throwing great columns of water into the air, are exploded.

After an hour on the water the men land and go through a skirmish drill on the Common, ending, perhaps, in the bloodless capture of Monument Hill.

A day of out-door service in the fall is required. In 1890 it was devoted to landing under a supposed fire at Fort Lee, Salem, and storming—with success, be it said—its ancient battlements.

Sufficient pleasure, it may be thought, the battalion finds in these exercises; but the annual "tour of duty," the five days of July spent on the old United States frigate *Wabash*, the receiving ship at the Charlestown Navy Yard, is their crowning joy.

As in their other duties, there is no lack of hard work for the men in this period of service. From Monday till Saturday, drill at the great guns, small-boat exercise, enlivened by races between picked crews, dress parade on shore, torpedo practice, field telegraph and telephone work, response to the call of fire, and many other details of duty fill their time to the full; but the evenings aboard ship, the nights in true sailors' hammocks, the novelty of it all for landsmen give great zest to the work.

In the 1890 tour of duty the new U. S. gunboat *Petrel* was at the yard, and gave the men opportunities for actual practice with modern ordnance. This year, 1891, the famous White Squadron came to Boston during the battalion's week of service. On the decks of its four beautiful, purely modern ships the militia sailors were drilled in the naval warfare of to-day.

After two days' work at anchor with the guns, the vessels put to sea with the Massachusetts sailors on board, and gave up one day to genuine ocean target-practice, the ships steaming in column past a floating target, that the effect of broadsides might be tried.

One of the evenings of the week was devoted to the battalion's attack upon the fleet. Torpedoes for the militia, search-lights and free-firing for the regulars rendered each branch of the service the better able to attack or repel a foe.

The last night on the *Wabash* was celebrated by a ball, to which the "petty officers and men" bade their Boston friends, and the State sailor found himself in happier case than the traditional tar whose friends are far away.

The New York Battalion enjoys the same advantages of practice upon the vessels of the navy. As other States upon the seaboard form their naval militia, the Navy Department will doubtless extend like privileges to them.

With the aid which the government is plainly prepared to give, there is no reason why both seaboards, the Gulf and the Lake States, should not within a few years boast a naval battalion force which will compel the militia soldier to look to his laurels, and will prove of immense value to the country and its interests by sea.

M. A. DE WOLFE HOWE, JR.

THE NOBLE DEAD.

Let us give thanks that they have lived,
And on our lives such radiance poured
That with the sunshine of the past
Our later, lonelier years are stored.

—*Selected.*

A POLITICAL SKIRMISH.

The elections which took place in November in several of the important States of the Union may be aptly compared to a skirmish between large reconnoitering parties of two armies, facing each other on the eve of a decisive battle.

The great political contest in this country, which repeats itself once in four years, is to take place in 1892. Already the forces between which that battle is to be fought have taken their positions, and each is manœuvring to obtain every advantage that the field and the mistakes of its adversary render possible.

In themselves considered the elections of this year were of little consequence. It does not really matter much whether State officers are Republicans or Democrats. The political results depend for the most part upon President and Congress. As indications of what the result in the general elections of next year is to be the November elections are worthy of notice.

It is to be borne in mind that under the new apportionment of members of Congress, following the census of 1890, the electors of President and Vice-President in 1892 will number four hundred and forty-four. The President to be chosen must have at least two hundred and twenty-three electoral votes.

Sixteen States of the South, having one hundred and fifty-nine electoral votes, are expected to be carried by the Democratic party almost without a contest. If that party can obtain sixty-four electoral votes in the North, it will be successful.

Let us now notice the result in November to discover what it signifies with reference to the coming grand contest. New York was carried by the Democrats by so large a majority that it seems more than probable that it will give its electoral votes, thirty-six in number, to the candidates of that party. Pennsylvania, on the other hand, which was lost by the Republicans last year, has returned to its old allegiance.

In each of these States local questions had something to do with the result—enough to make it worth while for the defeated party to fight over the ground next year, but not enough to make it likely that the verdict of last month can be reversed.

In Massachusetts the Republicans were successful at every point with one exception: the governor elected is a Democrat. In Iowa, where personal and local questions were largely at issue, the Democrats were successful, enough so to make them hope that they can carry the State next year. New Jersey also elected a Democratic legislature, and seems sure for the Democrats in 1892.

Ohio was the greatest battle-ground, and much more was decided there than the question of who shall be governor. The Republicans carried the State after a very hot contest, and elected Mr. McKinley, whose name is associated with the present tariff, to be governor.

In Ohio, and in a smaller degree in other States, the question whether the Democratic party shall declare itself in favor of the free coinage of silver was more or less at stake. The Republicans opposed free coinage. The Democrats of Ohio favored it in their platform, but did not make the question prominent "on the stump." The victory of the Republicans seems to have settled it that neither party will demand "free coinage" in its national platform.

On the whole the result has not been decisive of the question which party will be victorious next year. The Republicans have won back a part, but by no means all, of what they lost in 1890. They may hope to win back the rest next year; and the Democrats also have good reason for entering upon the contest with high hope of success.

As matters stand to-day the result cannot be predicted with confidence. Very much depends upon the course of Congress during the next few months, and upon the personal qualities of the candidates who will be nominated next summer.

For the Companion.

APPRECIATION.

Not praise undue, not censure more than meet,
Giveth my twin;
But gentle blame, well-earned approval sweet,
Motive for action, courage in defeat,
And in my loftiest moods my soul doth greet
With thoughts akin.

MARY H. LEONARD.

ELECTION AND PAYMENT OF LEGISLATORS.

The questions of suffrage, of systems and methods of election, and the position, rights and duties of law-makers, are being much discussed in these days in many countries.

In this country a great change has been made within recent years in a number of the States by the introduction of the Australian ballot, and the larger security it gives to freedom of voting; and other reforms in election methods are being agitated here and there.

But there has been no proposition to disturb in this country the principle that each man is entitled to one vote, and one only, whatever his position or possessions.

One of the political cries in England to-day is, "One man, one vote." This means that the Liberals, who make the cry, desire to bring about the same principle which has always been maintained in this country.

At present some Englishmen have the right to cast several votes at a general election for Parliament. A man who lives in a borough, has a certain amount of property in a county, and is a graduate of one of the great English, Scottish, or Irish universities, has a right, for instance, to cast a vote in each capacity.

On the other hand, a proposition has recently been discussed in the Cape Colony, one of England's self-governing dependencies, to multiply votes in one person; that is, to make a distinction in classes, and to give to certain classes, according to intelligence and property, more than one vote.

Another subject which has long been agitated in England is to pay salaries to members of Parliament. Formerly members of Parliament received small salaries. At a remote period a knight of the shire was paid four shillings, and a burgess, that is a member for a borough, was paid two shillings, each being paid by his constituency; but for about two hundred years no member of the Commons has been given a salary as such.

Forty-three years ago the Chartists made it one of their "points" that members should be paid. Not to pay them, the Chartists said, was to keep the House of Commons an aristocratic body, in which only men of wealth and birth could afford to sit.

The demand for the payment of members has just been revived by the Trades Union Congress, during its session in London.

It need not be said that Senators and Representatives in Congress have always been paid, at first so much a day during the session, and afterward the annual salary, which is now five thousand dollars. Numbers of State legislatures are also paid for their services.

This is not, however, a custom peculiar to democratic countries. In nearly every constitutional monarchy in Europe, legislators receive payment for their time and labor. In Prussia, they get five dollars a day; in Bavaria, two dollars and a half is given to those Deputies who do not live in Munich; in Belgium, they receive four hundred and twenty-three francs (about eighty-five dollars) a month during the session; in Portugal they receive two and a half milreis, equal to about two dollars and sixty-five cents, a day.

In France also, Deputies have a salary of nine thousand francs, and Senators of fifteen thousand a year. But in Italy, Deputies receive no salary, but are given the right to travel free throughout the Kingdom, either by railway or steamer.

The Japanese, in constituting their new government, established salaries for their Representatives at the figure of eight hundred yen, about six hundred and forty-four dollars a year; while in Canada members receive ten dollars a day up to the end of thirty days, and for a longer session one thousand dollars, with ten cents a mile for travelling expenses.

EXCLUDED.

"Why did you and the little Brown girls go off by yourselves this morning, and leave Susie Smith crying on the corner?" asked a young girl of her little sister sharply the other day. "She wanted to go with you, and was almost heart-broken when you laughed at her and wouldn't let her come. She leaned her head against the fence-post and sobbed for nearly half an hour after you were out of sight. What made you treat her so? What had she done?"

"She hadn't done anything," answered the little sister, half-sulkily and half-apologetically, "only we had a secret, and she wasn't in it, and we didn't want her tagging round."

"Tagging round!" echoed the elder, hotly. "I should like to know what harm it would do if she did tag you round, poor child! I don't believe your precious secret was anything she couldn't have known just as well as the Brown children. Something about that Christmas fair, I suppose. It was cruel to shut poor little Susie out of the good time, and make her miserable."

A silence followed this reproof, broken by the girls' mother speaking from the next room to ask how the new Charade Club was coming on, and who had been elected at the last meeting. The answers to these questions turned the conversation in another direction, and the elder girl chattered gaily about the new scheme for some minutes before her mother asked if the Jones sisters had been invited to join.

"The Jones girls? Why, no. Nobody knows them very well, and there are enough without them."

"But perhaps they would like to belong."

"I dare say they would; and they're pleasant enough, and well-bred and clever and all that sort of thing, but they never have been exactly in our set, and the Club is a little bit exclusive; they really have no claim to be asked. It isn't ever very easy to explain that sort of thing, but you understand, don't you, mother? You see how it is?"

"I see exactly how it is," was the quiet reply. "They haven't done anything to deserve exclusion, and are particularly fitted to belong; but you have a club, and they sha'n't be in it, and you don't want them tagging round. It is perfectly safe, my dear; they are too old to enlist sympathy by crying on the corner."

Big sister and little sister exchanged startled glances, and the elder opened her mouth to speak, but changed her mind, and shut it again in silence; but little Susie Smith was initiated into the Christmas secret next day, and before the month was out the Jones girls were elected to the too-exclusive Charade Club, at the suggestion of that member who had been assisted to imagine their feelings by the sight of Susie's tears bedewing the front fence.

LIBERTY POLES.

A dramatic feature of our early history was the liberty pole so dear to American boys and boyish men a century ago, although many of their descendants have never heard of them.

Liberty poles were, for the most part, erected after the Revolutionary War was so long an acknowledged fact that the rebels could take time and breath to give it some picturesque expressions. After the republic was established we hear little more of them until the War of 1812 roused the antagonism of the people, and up went the long shafts again, each a protest against British aggression.

During the Whiskey Insurrection in the last decade of the eighteenth century, when seven counties of Pennsylvania and Virginia arrayed themselves in defiance of the national government, liberty poles shot up during the night in the rebellious towns and villages, painted a bright red as signals of war.

Liberty poles were erected during presidential campaigns in the first part of the century by both Whigs and Democrats.

They were usually made of white pines, lashed together until they reached a great height. The more fervid the zeal of the party the higher rose the pole. Sailors were often brought out from the seaboard to inland towns to assist in the erection, and to rig flags to the amazement and delight of the boys who knew nothing of ships or seamen.

Mass-meetings were held under these poles, which were often regarded with a superstitious affection. The blowing down of a pole by a high wind during a campaign chilled the hopes of one party, and cheered the others.

These singular emblems of protest against oppression have wholly disappeared of late years throughout the country, except in some remote districts where old customs still are cherished by rural communities.

DOES IT PAY?

John Hapleigh was a graduate of an Eastern college, and had studied with special reference to the teaching of rhetoric and elocution. He had brilliant powers, and armed with excellent credentials, he applied for a position in a Western university.

Pending the action of the university Board of Trustees upon his application, the young teacher spent a social evening with one of the professors. Several invited guests were present, among them the president of the university.

ANNOUNCEMENTS

For the Year 1892.

The following Announcements will enable the friends of THE YOUTH'S COMPANION to judge somewhat of the scope and character of the reading that will be given in its columns during the year 1892 — the sixty-fifth year of its issue.

A Brilliant List of Contributors.

Articles have been written expressly for the forthcoming volume by a host of eminent men and women, among whom the following may be mentioned:

The Right Hon. W. E. Gladstone.

Dr. Lyman Abbott.	**Justin McCarthy.**	**Cyrus W. Field.**	**The Earl of Meath.**
Frank R. Stockton.	**Walter Besant.**	**W. Clark Russell.**	**Prof. James Bryce.**
Charles Dickens.	**Henry Clews.**	**Donald G. Mitchell.**	**Andrew Carnegie.**

Sir Lyon Playfair. **The Marquis of Lorne.** **Vasili Verestchagin.**

Dr. W. A. Hammond.	**Gail Hamilton.**	**F. Hopkinson Smith.**	**Admiral Kimberly.**
Camilla Urso.	**Lucy Larcom.**	**Kate Field.**	**Margaret Deland.**
Amelia E. Barr.	**Mary Mapes Dodge.**	**Mrs. Henry M. Stanley.**	**Mary E. Wilkins.**

Count Ferdinand de Lesseps.

Illustrated Serial Stories.

The Serial Stories for the coming year will be of rare interest as well as unusual in number, as will be seen from the following list of titles and authors:

Lois Mallet's Dangerous Gift. A New England Quaker girl's first contact with "World's People;" by . . . **Mrs. Mary Catherine Lee.**
A Tale of the Tow-Path. The hardships encountered by a boy who found life at home too hard for him; by . . . **Homer Greene.**
How Dickon Came by his Name. A charmingly written Story of the Age of Chivalry; by . . . . **Harold Frederic.**
Two "Techs" Abroad. They set off on a tour of the world in quest of profitable enterprises; by . . . . **C. A. Stephens.**
A Young Knight of Honor. The Story of a boy who stood at his post while death was all around him; by . . . **Miss Fanny M. Johnson.**
A Boy Lieutenant. A true narrative of a young Officer of a Black Regiment, in service during the Rebellion; by . . . **Free S. Bowley.**
Touaregs. A Story of the Sahara, vividly real, and full of dramatic incident, by . . . . . **Lossing G. Brown.**
Smoky Days. A thrilling Story of escape from a Canadian forest fire; by the author of "Petherick's Peril," . . . **Edward W. Thomson.**
On the Lone Mountain Route. A tale of the Tennessee hill country, very graphically told; by . . . **Miss Will Allen Dromgoole.**

Short Stories.

We have space for the titles of only a few of the one hundred or more Short Stories that will be published in THE COMPANION during the year 1892.

The Adelphi Society. How the boys carried the Town Meeting; by . . . . **F. E. C. Robbins.**
The Belles of Spruceland. A Story of a sleigh-ride; by . . . . **J. Mervin Hull.**
Dick's Scheme. How it originated, and how it worked; by . . . . **Grace Schuyler.**
Dulce. A mistake in a name leads to pleasant consequences; by . . . . **Lucy C. Lillie.**
The Great Launching at Gridley's; and why the vessel's name was changed; by . . . **Sophie Swett.**
A Girl of the Black Hills. A Story of the Little Seneca, by . . . . **Louise R. Baker.**
Joanna. A brave heart in a pauper girl; by . . . . **Mary E. Wilkins.**
A Kindly Ghost. A mystery comes into plain lives; by . . . . **Mrs. F. B. Getchell.**
Mongrels; both of them. An unusually graphic and touching Story of a negro boy and his dog; by . . **Cornelia Rathbone.**
How Santa Claus Was Actually Caught. A Story that will please the boys; by . . . **C. A. Stephens.**
The Story of a Corn Prize. An amusing as well as interesting Agricultural Experiment; by . . **John O. Todd.**
A Wild Goose Chase. An Episode of the Civil War; by . . . . **Thomas W. King.**
A Wizard from Gettysburg. What happened long after the battle; by . . . **Kate Chopin.**
Tom Crump. A Westerner who used his fists in behalf of a Sunday School; by . . . **W. Ricard.**
My Grandmother and Red Feather. An Indian's endeavor to steal a little girl; by . . . **F. H. Costello.**
The Legend of a Brass Kettle. An old colonial Story; by . . . . **C. A. Stephens.**
The Old Minister's Girl. Showing what a plucky, unselfish girl can do; by . . . **H. A. Stone.**
My Camera and a Deer. An Amateur Photographer's amusing Experience; by . . . **John H. Whitson.**
Boy's Play. An Episode of the Civil War; by . . . . **James B. Wilson.**
Captain Skaggs. An old Southerner's pathetic account of the battle of Skaggs cornfield; by . . **Frank L. Wells.**

[Continued on the following pages.]

Digitized by Google

Several Special Features.

A Rare Young Man; by the Right Hon. W. E. Gladstone.

This is the third article which the great English statesman has written expressly for THE COMPANION. It describes the life of a young inventor of extraordinary gifts and lofty character. From the first line to the last it is deeply interesting, and is written in a most attractive style.

The Story of the Atlantic Cable; by Cyrus W. Field.

Mr. Field was the projector of the first Atlantic Cable, and his personal narrative of the enormous difficulties encountered before the enterprise succeeded has the thrilling interest of a romance.

Episodes in My Life; by the Count de Lesseps.

The venerable Count de Lesseps will contribute a delightful paper, telling in a most amusing manner how he came to build the Suez Canal.

Unseen Causes of Disease; by Sir Morell Mackenzie.

Three Admirable Articles by the Physician of the late Emperor of Germany.

How to See Famous Cities.

Practical Suggestions to Travellers in the direction of Economy of Time and Money.

How to see London; by **Charles Dickens and Walter Besant.**
How to see Rome; by **Prof. Rodolfo Lanciani.**
How to see Paris; by **Louise Imogen Guiney.**
How to see New York; by **William H. Rideing.**

Looking Back on Girlhood.

A Series of pleasant Anecdotal Sketches of their Youth; written by

Sarah Orne Jewett. **Margaret Deland.**
Lucy Larcom. **Mary Mapes Dodge.**

Looking Back on Boyhood.

A Series of Articles narrating their Boyish Experiences; written by

Donald G. Mitchell. **Frank R. Stockton.**
General O. O. Howard. **Dr. Lyman Abbott.**

Southern Stories.

Stories of Southern Life by Southern Writers, will be a marked feature of the next Volume. Among the authors may be mentioned:

Julia Magruder, **Elizabeth W. Bellamy,** **Kate Chopin,**
Mrs. M. E. M. Davis, **Will Allen Dromgoole,** **W. N. Harben.**

Boys and Girls at the World's Fair.

Most Valuable Paper, giving hints as to what young Americans may do as exhibitors at the World's Fair; by the Director-General of the Columbian Exposition, Chicago, Col. George R. Davis.

Three Sea Stories

Will by given by W. Clark Russell, the Celebrated Sea Novelist, written exclusively and in his best vein for THE COMPANION. The titles are: "The Haunted Cliff." "A Yarn of Ramsgate Harbor." "An Ocean Stampede."

Going Abroad.

Four interesting and useful papers, giving to persons intending to travel in Europe minute information which is not found in the Guide Books.

The Household and its Interests.

The Kitchen of a Big Hotel. The ingenious apparatus of cookery; novel methods of cooking; enormous larders, etc.; by . . . **Everett Blair.**
Simple Gymnastics for the Family. By an English nobleman who has distinguished himself through his advocacy of compulsory physical education, **The Earl of Meath.**
How the Pope keeps House. A familiar description. . . . . **By an Italian Journalist.**
New Treatments of Common Ailments, giving interesting information, new to the ordinary reader; by . . . **Dr. W. G. Eggleston.**
Daily Dangers to Our Bodies. A popular Series of Articles, simple in style, by the Chief Inspector of the New York Board of Health, . **Dr. Cyrus Edson.**
Unique Features of Modern Houses. A popular description of clever devices for increasing comfort and luxury; by . . **Charles Barnard.**
New Pastimes for Winter Evenings, for home, church and school; by . . . . . **George B. Bartlett.**
Poisoned by Ivy. Interesting discovery concerning the nature of ivy-poisoning. Remedies used; by . . . . **Wm. S. George.**
Terrors of the Morphia Habit. Describing the evils and the consequences of the intemperate use of Morphia; by . . . **E. S. Bell.**
The Bellamy Quadrille. An amusing entertainment performed by young girls; by . . . . . **P. H. Horne.**
Tea Culture, and Manufacture. Facts concerning Tea given from personal knowledge; by . . . . . **C. F. Amery.**
A Fagot Party. Directions for spending a pleasant and profitable evening; by . . . . . **Mary A. P. Stansbury.**
The Windows of the House. Advice about windows and window decorations; by . . . . . **Ellen Winship.**

[Continued on the following page.]

Digitized by Google

Glimpses of Royalty.

Housekeeping at Windsor Castle; by a Lady who has been connected with the Court for many years, . **Lady Jeune.**
How Queen Victoria Travels. The extraordinary precautions taken to insure safety, etc.; by . **H. W. Lucy.**
The Story of Kensington Palace and its famous occupants; by the present occupant of the palace, . **The Marquis of Lorne.**
How I Met the Queen. An amusing incident which occurred to a tourist in the Highlands; by . **Nugent Robinson.**
Kings Who Earn Their Living. The traits of the last three German Emperors; by . . **Gail Hamilton.**
A Visit to Balmoral Castle. Personal reminiscences of an unusual experience; by . . **Molly Elliot Seawell.**
With the Prince Imperial at Chiselhurst. A Visit to the exiled Prince on his eighteenth birthday; by . **Nugent Robinson.**
Famous Sitters I Have Had; Kings, Queens and Statesmen; by the celebrated portrait painter, . **G. P. A. Healy.**
Wilhelmina; the Little Queen of Holland. A Life Picture of a girl sovereign; by . . **Eleanor H. Patterson.**

Adventure Sketches.

More than fifty capital Stories of Adventure, Pioneering, Hunting, Touring in every quarter of the globe, will be printed in this volume. Among them are:

In the Burning Pineries. A Story of the timber lands of Michigan, in Two Chapters; by . . . . . **G. E. Laike.**
A Young Doctor's Queer Patients. His professional experiences on the River Paraguay; by . . . . **Herbert Philbrook, M.D.**
The Cruise of a Wagon-Camp. Amusing details of a Tour of the Maine Lakes and the White Mountains in a camp on wheels; by . . **C. A. Stephens.**
The Flash-Light. How two girls brought confusion upon village rogues; by . . . . . **Henry Farley.**
A Boy Hero. A deed worthy to be commemorated, by . . . . . **Oscar Chase.**
A Wild Hog Trap. An exciting encounter in the Arkansas backwoods; by . . . . . **A. J. Towle.**
Very Singular Burglars. An unpleasant midnight intrusion; by . . . . . **Ocila Jones.**
The Tin Peddler's Baby. A Touring Tradesman is burdened with an unwelcome responsibility; by . . . . **Henry A. Upham.**
A Pioneer Boy's Exploit; by . . . . . **W. Cochrane.**
Blown Across Lake Superior. A thrilling and perilous Adventure; by . . . . . **Howard Questor.**
Molly Barry's Manitou. Historic Sketch from the early annals of Wisconsin; by . . . . . **Daniel T. Carroll.**
On a Cattle Steamer in a Storm. The perils of a living cargo; by . . . . . **H. L. Erickson.**
My Queer Passenger. How a rascal was neatly caught; by . . . . . **Tyler Wilson.**
His Day for the Flag. A Patriotic Boy's contribution toward the School Flag; by . . . . . **Marian L. Cummings.**
A Little Moose's Mother. How she defended her calf, and saved herself; by . . . . . **Alfred A. Winch.**
Asleep at his Post; by a former Superintendent of the Michigan Southern Railroad, ... **Charles Paine.**
Roundhouse Stories. Rollicking and pathetic, with many humorous Character Sketches; by . . . . **An Old Brakeman.**
A Strange Yule-Tide Visitor. Christmas festivities interrupted; by . . . . . **G. P. Loomis.**
Shut Up in a Microbe Oven. An Irishman's predicament; by . . . . . **C. A. Stephens.**
The Boys and the Wild-Cat. A bright sketch of the killing of a wild-cat by three small boys; by . . . . **Mrs. Geo. A. Palmer.**
Old Thad's Stratagem. Entertaining Story of the clever ruse by which an old man escaped from Indians; by . . . **Myron B. Gibson.**
Fridolin's Frailty. An amusing little Story of a Donkey's unhappy indulgence in beer; by . . . . **Rachel Carew.**
The Treasure Found Among the Mezquites. An original and life-like Narrative; by . . . . **L. A. Erath.**
Capturing a Desperado. A true picture of Western administration of justice; by . . . . . **C. L. Wood.**

Hints on Self-Education.

Take the case of a boy who, through force of adverse circumstances, is compelled to leave school and to earn a living at fourteen or fifteen. He is fond of study and desires to continue his education. What advice would you give him? This question is answered in a most important Series of Articles by:

Prof. James Bryce, M.P., author of the "American Commonwealth."
The Hon. Andrew D. White, Ex-President of Cornell.
President Timothy Dwight, of Yale University.
President E. H. Capen, of Tufts College.
President G. Stanley Hall, of Clark University.

During the evening, as the guests were talking together, the president overheard the following little dialogue between the young applicant for the chair of elocution and the son of the hostess.

"Do you play tennis?" asked the young fellow.

"You bet I do," replied the candidate for a professorship.

"It's a fine game, don't you think so?"

"Bang up."

"Did you play base-ball in college?"

"Well, I should smile! I was way out of sight in it."

That was all the president heard; and it was all said by the professor in a tone of fun, with an evident desire to be free and easy with the lad, and not to appear formal. But the president reflected that a man who would use such phrases was not the man the university wanted, and he took action accordingly.

When the young man's application was refused, he was much surprised, as he had fully expected to secure the position. He is to-day filling an inferior place in spite of his ability because of that little conversation.

AN ECCENTRIC ARTIST.

Turner's landscapes were radiant with poetry and power, but the artist himself was a riddle.

A brother artist, Mr. Richard Redgrave, who knew him well, wrote in his "diary" that Turner's advice to artists was worth much, if understood, but that usually it was so mysteriously given as to be an enigma. It would be conveyed to the artist by the wave of a hand, or by a poke in the ribs and a significant pointing to some part of his picture, with "Humph! Why did you do that?"

During his active life, his dress and the furniture of his house showed that he despised show. But when he was about to leave the world he expressed the desire to be buried in St. Paul's Cathedral, and carried there in a regulation hearse, followed by mourning coaches filled with artists.

The funeral was in midwinter, the hour nine o'clock in the morning, and the artists came to the house expecting—what is usual in England under such circumstances—that a luncheon would be provided for them.

They were shown into a dingy, dirty room, Turner's gallery, covered with a fusty matting, hung with stained draperies which did not conceal the broken plastering patched with newspapers.

But not a biscuit, nor a glass of water, was offered to the hungry mourners. Turner had never been known, when alive, to feed any one in his own house, and it seemed as if he was determined that no one should be fed there when he was dead.

The gallery was empty of everything except pictures painted by himself. Some of them, wonders of art, were dropping from their canvases. Turner had valued one of these so highly, that he always declared that he would be wrapped in it when he was buried. One day he asked Chantrey, the sculptor, if as his executor he would carry out his wishes on that point.

"No doubt," he bluntly answered, "I shall bury you rolled up in your picture, if it is one of the conditions of your will; and take you up the next day and unroll you."

STATE EXHIBITS.

To an American one of the most interesting features of the World's Fair of 1893, as it was also of the Centennial Exhibition of 1876, will be the exhibit made by the respective States of the Union. Every State is likely to make an appropriation to set forth its own peculiar products, and most of the States will be represented by special buildings or pavilions, each of which will, in its construction and in its contents, be characteristic of the State which erects it.

At the Centennial Exhibition thirty-seven States were represented in one way or another, for though Colorado was admitted to the Union in 1876, and is therefore called the Centennial State, it was not admitted in season to place it among the States which were represented at Philadelphia.

At the World's Fair of 1893 at Chicago at least forty-four States will be represented; perhaps the number will be larger still.

There is so much diversity among the States that no two pavilions and no two exhibits need be alike, if each is thoroughly characteristic of the State. Though Massachusetts and Connecticut, Indiana and Illinois, Oregon and Washington lie side by side, there is in each case a considerable difference in many respects one from the other—a sufficient difference to be distinctly reflected in an exhibit.

In respect to products and outward features, the difference between distant States, as, for instance, between California and Vermont, or between Florida and Montana, is as great as the difference between England and Egypt—between Europe and Africa.

It is this diversity of outward features and products, joined with an essential likeness of the people, which constitutes the peculiar strength of the American Union.

We have, in a sense, the world within our borders. In such a land, and with a people undivided in their allegiance to a single flag, patriotism seems indeed a sentiment easily acquired.

EQUAL TO THE OCCASION.

Professor Green, of Brown University, was one of the best teachers in New England, but he sometimes became so much interested in his lecture that when the noon bell rang he kept the class five or ten minutes over the hour.

Certain restless spirits in the class thought they would give the Professor a gentle hint, so they bought a small alarm-clock, set it to go off precisely at noon, and placed it on the Professor's desk when they came in to the next lecture. They knew that he was a little absent-minded, and expected that he would not notice it.

As the noon hour struck, the alarm went off with a rattling crash, and those of the class not in the secret started, and took in the joke at once. There was a round of applause.

The Professor waited until the alarm and the applause were over, and then said, deliberately:

"Young gentlemen, I thank you for this little gift. I had forgotten that it was my birthday. A clock is something my wife has also needed in the kitchen for some time. It is a very kind remembrance on your part."

The Professor then went on to finish a demonstration interrupted by the alarm, and it was ten minutes later than usual when he dismissed the class! He also took the clock home with him, and the boys never knew whether he understood the hint or not; but the probability is that he did.

Large Prizes for Serial Stories.

The Publishers of "The Companion" offer four magnificent prizes for the Best Serial Stories, to be written expressly for "The Companion."

TWO THOUSAND DOLLARS for the Best Serial;

ONE THOUSAND DOLLARS for the Second Best;

ONE THOUSAND DOLLARS for the Third Best; and

ONE THOUSAND DOLLARS for the Fourth Best.

The competition will be governed by rules, to which all who enter it must conform.

For the terms of the competition send your name and address and a two-cent stamp, to

DISCOVERIES MADE BY PHOTOGRAPHY.

Photography applied to astronomical purposes is continually achieving unlooked-for triumphs. One of the latest is the discovery of previously unknown objects on the moon. The photographs of the moon made with the great Lick telescope on Mount Hamilton in California are the finest in the world, and last summer the ruins of a huge crater, some fifty miles in diameter, were discovered by means of one of these photographs.

The ruins lie near the celebrated crater mountain called Copernicus. With telescopes alone these rocky ruins had escaped attention, but on the exquisitely clear negative of the photograph they were discernible.

There seems to be something in the quality of the light reflected from this spot in the moon which enables its features to print their image more sharply on the photographic plate than they appear to the eye even when aided by a powerful telescope.

Apparently the ruined crater in question has had its walls broken down and nearly buried by vast outflows of lava which have burst from the interior of the moon in its neighborhood. Copernicus, although itself immensely old and long since extinct, is evidently far younger than its ruined neighbor.

More recently Professor Weinek of Prague in examining the photographic negatives of the moon made by the Lick telescope has discovered upon them the remains of another great crater wall at some distance southeast of the well-known crater named Triesnecker.

Professor Weinek finds that the negatives are so perfect that they must be strongly magnified in order that all the minute details which they contain shall be rendered visible.

No one can yet fix a limit to the power of photography to reveal what would otherwise be hidden from human eyes in the depths of space.

TRAVELLING IN GREENLAND.

Every one knows that a winter in Greenland is a cold season; but it is "pretty late in the fall" all the year round in that part of the world. Here is a description of a September day taken from "The First Crossing of Greenland."

On the morning of September Fourth the weather was glorious and the air still. There had been a light fall of snow in the night. The sun shone over the infinitely monotonous snow-field, which, rising almost imperceptibly, stretched away and away in front of us like one huge white carpet, glittering with diamonds, soft and fine in texture as down, and laid in long, gentle undulations which the eye could scarcely follow.

But in the afternoon the aspect of our landscape changed entirely. A biting wind got up from the northwest which drove the snow before it in one overwhelming whirlwind. The sky then cleared completely and the weather grew colder.

The wind increased in strength; it was bitter work toiling along against it, and we had to be careful not to get badly frozen.

First my nose hardened, but I discovered this in time to save it by rubbing it well with snow. I thought myself safe now, but then I felt a queer, chilly feeling under my chin, where I found that my throat was quite numb and stiff. By more rubbing, and wrapping some mittens and other things round my neck, I put matters straight there.

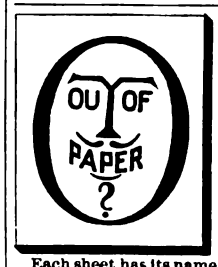
But then came the worst attack of all, as the wind found its way in through my clothes in the region of my stomach, and gave rise to terrible pains. This was met by the use of a soft felt hat as a chest-protector, and I was now armed at all points. My companions suffered as I did, and the bodily comforts of our tent were more welcome than usual that evening.

LIVE ISSUE.

Artemus Ward told in one of his papers of an enthusiastic orator who wished to take advantage of the gathering of a crowd at a hanging, to address the assembly on the subject of the tariff—"if our unfortnit feller-citizen is not in a hurry." A somewhat similar story comes from Kansas, where the Farmers' Alliance and its platform of principles are the chief topics of conversation.

A man of rather questionable character died in a remote part of Waterloo township. The nearest preacher was summoned to preach a funeral sermon. Not knowing the man, the preacher contented himself by a few general remarks on the solemn nature of the occasion, and then said he would be glad to have any of the company present say a word about the dead man if they desired.

No one moved or spoke, and again the preacher extended an invitation to the company to offer remarks, but again his invitation met with silence.



Finally an old farmer who sat in the corner of the front room rose and said, "If no one has any remarks to make about the deceased I would like to make a few remarks about the sub-treasury."

"Brown's Camphorated Saponaceous Dentifrice" *cleanses* and preserves the teeth. Used daily it prevents trouble from bad teeth or soft gums. *[Adv.*

How Much Will It Cost to Learn TELEGRAPHY?

That depends upon how hard you work, but it ought not to cost you over **$125.00**, which you can earn back in three months. Then you have a trade. Every man should have a trade. Do we put our graduates at work? Certainly we do. **Write for our Circulars, which tell all about it.**

Frank Leslie's Popular Monthly

For 1892.

Popular from its first number, this great Illustrated Magazine, now entering upon its thirty-third volume, is to-day better than ever. It has kept pace with, if not in advance of, the phenomenal progress in the art of pictorial illustration during the past few years.

It has absolutely no rival in the profusion of its pictures, the variety and scope of its literary contents. Every subscriber to

Frank Leslie's Popular Monthly

For 1892 will receive:

Over 1,000 Fine Pictures by the best illustrators of the day;

Twelve Beautiful Full-page Colored Plates;

Two Serial Stories of surpassing interest, by favorite novelists;

One Hundred Short Stories by the most original writers in this popular department of literature;

A Splendid Series of Illustrated Papers by specialists and writers of recognized ability, covering from month to month the various subjects foremost in popular interest.

These in addition to the regular departments, including current Scientific, Geographical and Literary News, Wit, Anecdote and Poetry.

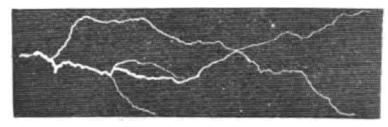
THE HOLIDAY NUMBER

For January, 1892 (published December 15),

Contains a score of contributions, in prose and verse, from the pens of favorite magazine writers of the day, and is unusually rich in illustrations.

Bound in a special illuminated cover of appropriate design, this number of FRANK LESLIE'S POPULAR MONTHLY constitutes the ideal holiday book of the season.

SPECIAL Send for 1892 Prospectus and Clubbing Rates. Specimen Copy on receipt of 20 cents.



Single Number, 25 cents; Yearly Subscription, $3.00.

For Sale by all Newsdealers, or sent post-paid on receipt of price. Address,

Mrs. FRANK LESLIE, Publisher,
110 Fifth Avenue, New York.

A Flash of Lightning!

The engraving is an exact reproduction (but reduced in size) of a FLASH of LIGHTNING that was taken with the $1.75 HARVARD CAMERA, by George W. Stetson of Woburn, Mass., on the 17th of last September at 8.15 P. M.

As a Holiday Gift

we know of nothing that is better adapted to please and profit a boy or girl than our **HARVARD CAMERA and COMPLETE OUTFIT. This Camera has a French Lens that is wonderfully quick in action and capable of taking most beautiful pictures.**

We will send the HARVARD CAMERA and COMPLETE OUTFIT by mail to any address for only $2.25, or by express, charges to be paid by the receiver, for only $1.75.

A SAMPLE PHOTOGRAPH taken with the Harvard Camera sent to any one on receipt of a two-cent stamp.

Grand "Santa Claus" Prize Offer.

We have a curiosity to see how Santa Claus may look in the various sections of our country. To stimulate the inventive genius of our subscribers in arranging the "make up" of a person so that he shall resemble the ideal Santa Claus, we make the following offer:

For the best photograph of a "made up" Santa Claus, we will give the choice of a beautiful $15 SILVER WATCH, a $15 Hawk-Eye Camera or $15 Anthony Photograph Camera and Outfit. This offer is open to any one, but the photograph must be taken with a HARVARD CAMERA and sent us previous to January 15, 1892.

SUGGESTIONS

DISTANCE DETERMINED BY SOUND.

Notice a distant steam-whistle.

Why does the sound come after the puff?

At what rate does sound travel? If possible determine from whistle of known distance.)

Make a one-second pendulum, 39 1-10 inches from attachment to centre of ball. Practise counting seconds.

By counting estimate distance of lightning, trains, boats, guns, etc.

For the Companion.

THE SWEETNESS OF LIFE.

It fell on a day I was happy,
And the winds, the convex sky,
The flowers and the beasts in the meadow
Seemed happy even as I,
And I stretched my hands to the meadow,
To the bird, the beast, the tree;
"Why are ye all so happy?"
I cried, and they answered me.

What sayest thou, oh meadow,
That stretchest so wide, so far,
That none can say how many
Thy misty marguerites are?
And what say ye, red roses,
That o'er the sun-blanched wall
From your high black-shadowed trellis
Like flame or blood-drops fall?
"We are born, we are reared, and we linger
A various space, and die,
We dream, and are bright and happy,
But we cannot answer why."

What sayest thou, oh shadow,
That from the dreaming hill
All down the broadening valley
Liest so sharp and still?
And thou, oh murmuring brooklet,
Whereby in the noonday gleam
The loose strife burns like ruby,
And the branched asters dream?
"We are born, we are reared and we linger
A various space and die;
We dream, and are very happy,
But we cannot answer why."

And then of myself I questioned,
That like a ghost the while
Stood from me and calmly answered
With slow and curious smile:
"Thou art born as the flowers and wilt linger
Thine own short space and die;
Thou dreamst and art strangely happy,
But thou canst not answer why."

ARCHIBALD LAMPMAN.

For the Companion.

PERFECT THROUGH SUFFERING.

Frank Carr was a young clergyman. He was well educated, sincere, and anxious to do his duty. He called regularly upon the members of his congregation; he studied hard, and gave much thought and time to the composition of his sermons.

At the end of two years, however, he felt that neither his visits nor his sermons had brought him closer to his people. His own life had been prosperous and happy, and when death or trouble came to a house, and he tried to give consolation, he felt awkward and out of place.

His flock admired his sermons, and boasted of them as fine literary efforts, but he did not know that any word which he had spoken had really touched or elevated a human soul.

He was young; his life was full and complete; he had a wife and child whom he loved, a happy home and hosts of friends.

Suddenly, as lightning out of a clear sky, a blow fell upon him. His child, a boy two years old, sickened and died in a few hours.

The young minister was stunned. His grief seemed to him so great that none had ever before been like it in the world. Underneath this grief was a sullen amazement, a feeling almost of rage against God.

As he stood over the little grave he cried out, "Why—why has He done this thing? The boy was innocent. He would have been a useful and good man. We were so happy in our home with him, and it was a pure, noble happiness. Now the child lies there dead, and we are wretched. Why is this?"

As time passed he grew stronger, and was able once more to preach to his flock. But it seemed as if he spoke with a new voice and a new language. He had been down into the depths, and there had stood face to face with God. In the darkness of his great grief he had groped for the hand of his Heavenly Father, and had found it.

His words moved the people with a great power. No man heard him speak that day who did not feel that he had helped his soul.

A year later Mr. Carr left the village, and did not return to it until he was a gray-haired old man. In the meantime he had become one of the most helpful ministers who ever worked among the poor and criminal classes.

"He does not stand upon a height and lecture us," said a convict in a prison which he visited. "He leads us to God. He, too, has suffered and been tempted."

When he came back and stood again over the grave of his first-born son, for whom he had never ceased to mourn, he knew what had softened his nature and brought him close to his fellows.

"I know now why this grief came to me," he said, as he turned away.

However young we may be, into every life comes some time the question: "Why has God sent me this pain?"

Earlier or later we read the answer in our own lives or the lives of those whom we have influenced, for ill or for good. We have been His tool or weapon, and have been seasoned in the fire for use.

BEATING TIME.

Recent investigations into the origin of the baton, or stick for beating time, which is used nowadays by the conductor of every large orchestra, have brought out the interesting fact that the first conductor's baton was a formidable staff, about six feet long, which the old-time French musician, Lully by name, who invented it, may have used as much to intimidate the members of his orchestra as to mark the time. In the very oldest orchestras, as in Chinese orchestras of the present day, there was no conductor in the modern sense. Every performer played as well as he could, and the man who played upon the loudest instrument—the kettledrum, for instance—marked the time for the rest.

When music became more systematic and refined, the chief command of the orchestra was given to the member who was regarded as the most accomplished and skilful. He assigned the other members their parts, drilled them at rehearsals, and supervised the final performance.

To produce a good effect, it was necessary, of course, that the musicians should play in time, and the chief of the orchestra, who himself played one instrument, was accustomed to mark the beat by stamping on the floor with one foot. For this reason the conductor of an orchestra was at that period called the *pedarius*.

Afterward it became customary for him to give the time by clapping the fingers of his right hand against the hollow of his left. The beater of time after this fashion was called the *manuductor*.

Meantime experiments were made in marking the time by striking together shells and bones. The bones were soon given up as instruments to be used by the conductor of an orchestra; but they survived as an independent instrument. Boys and negro minstrels "play on the bones" with great gusto to this day.

In the early part of the seventeenth century the musician already alluded to, Lully by name, arose. He found all these instruments of leadership ineffective, and in order to reduce his performers to complete subjection, he procured a stout staff six feet long, with which he pounded vigorously on the floor to mark the time.

One day, becoming particularly impatient, and pounding with especial vigor, Lully struck his foot instead of the floor with his baton. The wound gangrened, and Lully died from its effects in 1687.

The baton continued in use throughout the seventeenth and eighteenth centuries, but though it gradually decreased in size, there is no evidence that conductors marked the time in any other way than by pounding upon their music-stands or some other hard object.

All this pounding must have had an unpleasant effect upon the music, and critics and musicians began to ridicule the practice. In course of time, therefore, we find musical conductors no longer thumping upon the floor or their music-stands, but beating the time entirely in the air. It seems to have taken players a very long time to learn that they could get the time as easily by means of the eye as by means of the ear.

AT THE COLLEGE OF VANNES.

The French college or academy of Vannes was attended by poor students who came from the neighboring villages, and lodged in garrets or little bedrooms which they hired in the town. They went home for the Sunday, and usually brought back bread enough to last them through the week. When they had a little pocket money they bought soup or a bit of beef of the woman in whose house they lodged. In his "Nouveaux Mémoires des Autres," Jules Simon relates how he earned his college expenses, which by the aid of a scholarship were reduced to about fifty dollars.

I never had any pocket money, but I do not remember once regretting it. Even the indispensable fifty dollars were not easy to get.

Happily for me, it was customary for upper class students to tutor beginners, giving a daily lesson for three francs a month. I had classes from half-past six to eight in the morning, and from six to seven in the evening. Every evening in the winter I went to my class, lantern in hand, but poorly protected against the rain by my calico shirt.

After all I did not earn enough to pay my entire debt to my landlady. She was a kind-hearted woman, and urged me not to think of it, but I was terribly unhappy about it.

At commencement I took all the first prizes, and the committee made me a present of forty dollars, so that I suddenly found myself rich. I paid my debt, bought a cloth coat and some shoes, and allowed myself the luxury of new text-books in place of my ragged second-hand ones.

In 1872, when as minister of public instruction I was receiving the faculty of the University of Paris, a gentleman whose familiar face I had been trying in vain to place, was presented to me by M. Mourier, who said:

"Here is M. du Pontavice, to whom you gave lessons at Vannes."

"For three francs a month!" I cried, and greeted him with delight.

I do not count those years at Vannes among the hard ones of my life, though certainly we students were not too comfortable. In the school-room benches ran along the walls, there were no desks, and we wrote on our knees.

There was no fire. Sometimes our fingers were so cold that we could not hold our pens. Occasionally the teacher struck three blows on his desk. Then we jumped up, shouted at the top of our voices, seized each other by the hand and danced in a ring around a post. At the end of a quarter of an hour three taps on the desk recalled us to our work. It was an economical, and I believe, a healthful way of keeping warm.

ALMOST A PANIC.

It is not what a thing is, but what we think it is, that frightens us. A man walks within an inch of death without knowing it, and therefore without trembling; and then his hair stands on end at some empty noise as harmless as the buzzing of a fly. Soldiers, as often as other men, are subject to such experiences.

The Confederates had left a big forest fire burning somewhere within half a mile of us, says the historian of the Forty-third Massachusetts Regiment. It illuminated the forest all round with a dim light, and we were near enough to hear its constant dull, furnace-like roar.

My six companions were supposed to be asleep in a small hut close to me—the reserve post. I was in a sitting posture outside, dozing, but conscious. In an instant I was put upon my feet, wide awake, by one of the most tremendous crashes I ever heard. Some giant of the forest had gone down, and in its fall had dragged down an acre or two of trees with it.

I comprehended the state of the case at once, and so of course was not thrown off my balance; and so of course was not thrown off my balance; but not so my companions, all of whom were naturally cool and brave men. I judge that they were soundly asleep, but in a state of mental tension from their recent experiences, especially in blowing up some Confederate earthworks.

At any rate, they were for an instant or two scared out of their wits. Only once in my life had I seen men's hair actually rise on their heads and their eyes look like saucers, and that was in circumstances of extreme danger on board ship; but I saw it now.

The sight was ludicrous in the highest degree, and yet it was fearful. For a few seconds I thought they would get away from me, and go back to camp on the dead run without their guns; but the tones of my voice, as much as anything I could say in such a situation, soon calmed them, and then the laughter was as uncontrollable as the terror had been.

What a sight it must be to see a brave regiment stampeded in the night in a panic! This happened to regiments in both armies, from less impressive causes than this instance would have furnished.

For the Companion.

MY MARGUERITE.

I look upon her brow and see
A radiant, crystal purity,
And find within her azure eyes
The loveliness of summer skies;
She is so sweet,
My Marguerite,
I fain would kneel and kiss her feet!

If she but deign one word to say,
I hold a treasure for the day.
Doth she but smile, a halo bright
Encircles all my dreams by night;
The dusty street,
Pressed by her feet,
Becomes a royal palace seat!

My life to her dear life has grown,
Till all my being is her own.
And every thought and hope her due,
Though I am forty, she but two;
And O so sweet
Is Marguerite,
I kneel and kiss her dainty feet!

ZITELLA COCKE.

UNCLE JED'S RHEUMATISM.

The constitutional grumblers who find fault with one thing if they cannot find fault with another, and are never contented unless they have something to be discontented about, were well represented by Uncle Jed Kizer, who died some two or three years ago on the Western Reserve, full of years and imaginary infirmities. His worthy widow, Aunt Myra Kizer, was reminded of his peculiarity in the course of a conversation with a friend, long after his death.

"Yes," she said, "'twa'n't no kind o' use to undertake to lighten poor Jed's load none. The ways o' the Lord wa'n't no way satisfactory to him, and they couldn't be made so.

"I used to say to him, says I, 'Jed Kizer, you're a prayin' man, but what's the use o' you prayin'? If your prayers was all to be answered, full and square, you'd grumble 'cause the measure wa'n't heaped up and run over enough.'

"Now did you ever hear about poor Jed an' his rummatism? Well, *there* was a case. You know he used to complain a sight about his rummatism, an' took, as I said, a sight o' comfort out of it.

"But one time our nephy, Myron Kizer, he come up here to get a little rest. You know he's one of the smartest doctors in Cincinnati. He heerd Uncle Jed complainin' an' complainin' 'bout his rummatism, and says he:

"'Do you know, Uncle Jed, I can cure that rummatism?' says he.

"'I want to know!' says Jed; 'can ye? If you'll do it, I'll give ye a cow!'

"Well, Myron, he said nothin', but he went to work and give Jed a lot o' medicine that he got mixed up to a drug store down to Ashtabuly, and told him to take it reg'lar, week in an' week out. An' Jed he took it.

"Well, 'bout six weeks after that Jed come int' the house late one stormy evening; he hadn't been home to supper, an' I didn't know what was the matter, except 'twas stormin', an' Jed he was crosser 'n all git out.

"'What's the matter, Jed?' says I.

"'Matter!' says he. 'It's all the fault o' that boy Myron! I've lost five o' the best ewes I've got in the flock, and that boy's responsible for the hull of 'em!'

"'Jed Kizer,' says I, 'what do you mean?'

"'Mean?' says he, mad's a hatter. 'Why, he's gone an' cured me o' my rummatism. I haint no airthly way o' tellin' now when there's a storm comin' on, and the consequence is that them sheep all got caught out in the back pastur' in a sleet storm, and five on 'em's dead!'

"'N' he never quit complainin' for two years, 'cause he hadn't no rummatism to prophesy the weather by; and then it come on him agin, bad as ever, an' he complained steady all the rest of his life 'cause he had it!"

TAKING HIS CHANCES.

On the Colorado Midland Railroad, between Cascade and Manitou, there is a very steep grade where a runaway car or train would soon attain a frightful speed. A track, known as a safety switch, has lately been built from this down-grade *up* the mountain, and the connection with the main line is constantly kept open. When a regular train comes down the road, the switchman who is always on duty at the "safety" turns his switch, and lets the train go by on the main line.

If the engineer whistles a certain signal, however, the switchman leaves the safety switch in connection with the main line, and the runaway train runs off up the mountain, and is soon stopped by the steep grade.

A frightful accident took place just below this safety switch a short time ago through the reckless indifference of an engineer, who preferred to take his chances on the main line instead of running up the mountain track.

His train became unmanageable through some defect in the air-brake, and soon attained a fearful speed. It was a freight train of thirteen cars, heavily loaded with ore from the mines at Aspen. There were four men in the caboose, which was the last car, as usual. They soon perceived that the engineer had lost control of the train, and they succeeded in uncoupling the caboose from the rest of the train, thereby saving their lives. Applying the hand-brakes, they soon brought the car to a standstill.

The rest of the train rushed on, and as it neared the safety switch, the engineer whistled the signal to let his train pass on the main track. The switchman had nothing to do but obey orders. He saw the ill-fated train dash down the grade at the rate of a mile a minute, carrying the engineer and fireman to what proved a fearful death.

Just below Cascade is a series of tunnels, seven in number, and just before reaching the first of these the train leaped the track, going down an embankment, or rather over the side of the mountain, on which the track is built.

The entire train was dashed into fragments—as one spectator expressed it, "into toothpicks." The fireman was buried under the wreck. The engineer lived to tell his reason for keeping to the track. He said:

"I preferred to take my chances on the main line. I don't believe the switch is safe, anyhow."

Yet there was not one chance in a million, so said railroad men, of his stopping a train that was running away as his train was. There is a superstition among railroad men about leaving the main line; and notwithstanding this accident, there are probably few engineers on mountain roads who would not stick to the main track and "take their chances," just as this one did.

MADAME KNIGHT'S JOURNAL.

The great respect shown in olden times by children to their parents is often commented upon for the benefit of the present generation; and the dignified reserve and absolute authority exercised by fathers and mothers in those days were hardly less worthy of remembrance. But there is "another side" to every story, and the following scene, described in "Madame Knight's Journal," written in 1725, is enough to show that human nature changes little from generation to generation.

"Thursday about three in the afternoon I set forward with neighbor Polly, a girl about eighteen years who her father said he had been to fetch out of the Narragansetts and said they had rode thirty miles that day on a sorry lean horse with only a Bagg under her for a pillion, which the poor Girl often complained of.

"About seven that evening we came to New London Ferry, here by reason of a very high wind, we mett with great difficulty in getting over.

"The boat test exceedingly and our Horses capped at a very Surprising rate, and set us all in a fright especially poor Polly, who desired her father to say 'So Jack' to the horse to make him stand.

"But the careless parent, taking no notice of her repeated desires, She Rored out in a Passionate manner, 'Pray, Suth, father, Are you deaf? Say "So Jack" to the horse I tell you.'

"The Dutiful Parent obeyed saying 'So Jack, So Jack,' as gravely as if he had bin saying Chatchise after young Mise, who with her fright look't all the Colours of ye Rainbow."

Madame Knight gives a vivid description of her sensations upon embarking in a canoe.

"The Cannoo was very small and shallow so that when we were in she seemed redy to take in water which greatly terrified me, and caused me to be very circumspect, sitting with my hands fast on each side, my eyes stedy, not daring so much as to lodge my tongue a hair's breadth more on one side of my mouth than tother, nor so much as think on Lott's wife, for a very thought would have oversett our wherry."

PAID IN COIN.

The Boston *Saturday Evening Gazette* prints an ingenious little story, which it is to be hoped is an invention rather than a record of fact, but which conveys an obvious moral in a rememberable way.

A pretty young lady boarded a morning horse-car which was otherwise occupied by business men and clerks on their way down town. Her advent was, of course, a welcome incident.

She had left home in haste, as it seemed, and was engaged in pulling on a pair of long gloves, which she presently proceeded to button by means of that indispensable adjunct of the feminine toilet, a hair-pin. She had hardly begun operations when it slipped from her fingers and fell to the floor.

It landed at the feet of the young man beside her. He picked it up, but instead of returning it to its owner, he gently took her wrist in his left hand and calmly continued the buttoning process.

All the men in the car had been watching the pretty girl, some openly, others from behind their newspapers. Now all the papers dropped; every one looked and wondered what the girl would do.

She did nothing. Not a muscle moved, and she showed no consciousness of what was going on. The young man, with a look of triumph, finished his pleasing task, and the girl, with a preoccupied air and without a glance in his direction, opened her pocket-book, took out a nickel, and placed it in his hand.

His expression changed. The color came into his face, and he murmured what was evidently an apology. She listened with a perfect simulation of innocence, and handed him another nickel.

By this time his face was scarlet, and he began another low-toned but earnest protestation.

The young lady signalled the conductor, and rose to leave the car, saying at the same time in a voice audible to all the passengers, "No, I cannot. I never give more than a dime for having my gloves buttoned or my boots blacked."

MISSED HIMSELF.

A French landed proprietor and a Colonel of Dragoons quarrelled, and a challenge to a duel followed. Blood only could wash out the insult that one had put upon the other. It was determined that the duel should be "*A l'Americain*," that is, that lots should be drawn, and that the loser should retire and shoot himself.

The next morning the opponents and their seconds met at a small café outside the town. Lots were duly drawn; the landed proprietor was the winner.

The colonel took his bad fortune calmly; he wrote a few lines upon a piece of paper, which he handed to his second, took an affectionate farewell of all, and forgave his more fortunate adversary, as a Christian gentleman ought to do.

Then, accepting the loaded pistol, he retired to an adjoining room and closed the door. The rest of the party remained breathlessly awaiting the detonation which was to convey to them the finale of the tragedy.

At last it came. Eagerly they ran to the door of the fatal chamber, which was thrown open, and disclosed the supposed defunct duellist standing on the threshold grasping the smoking weapon.

"Good gracious, gentlemen!" exclaimed he, with a bland smile. "Is it not unfortunate? I have missed myself!"

For the Companion.

CHRISTMAS PRESENTS

For Children to Make.

A Pretty Basket.

Small woven mats of grass or manilla, which can be purchased for from ten to twenty cents, make very convenient receptacles for articles of jewelry, sewing materials, or, filled with curled hair can be used for hair-pins.

FIG. 1.

This one measures seven inches in diameter, and is caught together at regular intervals with bows of ribbon, first sewing the mat with thread.

Sachet.

Take fourteen inches of China silk, fold to form a square, placing cotton wadding sprinkled with sachet powder between the silk. Turn down nicely and sew together overhand around the sides. Cover the top with artificial flowers, except in one corner where a bow of ribbon is placed, fastening with a few firm stitches.

FIG. 2.

With a green or violet silk use violets and leaves; with a blue silk, forget-me-nots. If you use violets, use violet sachet powder.

A Catch-all.

Get three baskets of different sizes, one piece of No. 1 ribbon of a pretty shade, and twelve coins or any pretty little ornaments. Cut four pieces of the ribbon, each measuring sixteen inches. Fasten one end to the largest basket a short distance from the top, then measure four inches of ribbon, and confine to the next basket, then four inches more and confine to the smallest basket, leaving eight inches of ribbon.

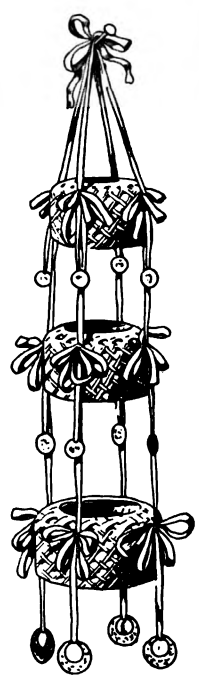

FIG. 3.

Fasten the other pieces of ribbon to the baskets in the same way at equal distances apart, around each basket. Then sew the four pieces together to form a loop by which to hang up.

Make bows of ribbon to decorate the sides, making one end long enough to hang a little below each basket, on which attach an ornament.

These baskets can be procured for three or five cents, the ribbon for twenty cents, so you see this is a very cheap as well as very pretty catch-all to hang on a gas fixture or side of bureau.

Comb and Brush Tray.

Buy one-quarter of a yard white linen duck, 1 piece twilled white cotton tape one-half inch wide,

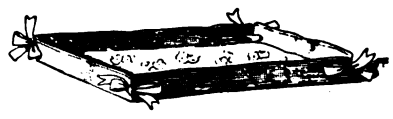

FIG. 4.

one and one-half yards No. 1 ribbon, and one skein of embroidery silk the same shade as the ribbon. Cut the duck into a piece measuring thirteen and one-half by nine inches. Cut out one inch square from each corner, bind all around with the tape, outline some simple pattern on the duck with the silk.

Make an eyelet-hole about one-quarter of an inch from each corner; turn up the edge all around about an inch; run the ribbon through the eyelets; tie together with a small bow, and you have a nice shallow box in which to keep a comb and brush on the bureau or dressing-table.

Pin-ball.

This requires two pieces of silk or satin of two pretty shades, each three and one-half inches square, seven-eighths yard ribbon one inch in width, a very little embroidery silk, two rings, and black and white pins.

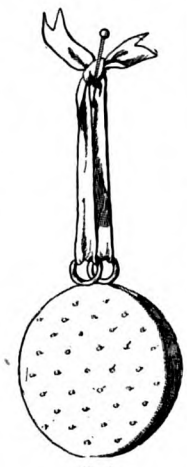

FIG. 5.

Cut flannel or other heavy material into strips one inch in width, and roll very hard until you have a flat roll three inches in diameter.

Fasten the end securely and cover with thin cloth to keep in place. Then baste nicely the pieces of satin on each side, folding a little over each edge, which is then covered with the ribbon, feather-stitched on each edge.

The two rings are crocheted with the silk and sewed one on each side of the ball, through which fasten the ribbon and tie in a small bow. On the ball stick pins, white on one side and black on the other, in rows about one-half inch apart.

Daisy Necklet.

Get three and a half yards of white satin or grosgrain ribbon a quarter of an inch wide, cut it into nine equal lengths. For each daisy take one piece of the ribbon, fold it to form eight loops, and run a draw-thread through the folds *exactly* as shown in Fig. 6 (see that the thread passes *under* the right edge of every fold and *over* the left edge); draw up the thread and the daisy will almost shape itself.

FIG. 6.

Arrange the daisies, as sketched, on a three-quarter-inch white neck-ribbon, and in the middle of each work a yellow centre with embroidery silk—like a large polka dot. Or use yellow ribbons and brown silk or chenille for centres (Fig. 7).

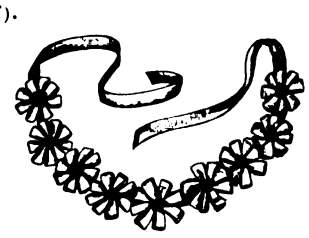

FIG. 7.

They are worn close about the throat, over a high collar, or as a border above a frill of lace on the pointed neck of an evening dress. Give one to some girl friend and she will be delighted.

Shaving-paper Case.

Take cartridge paper or fancy cardboard and mark and cut out two circular pieces, eight inches in diameter, for the covers.

FIG. 8.

On one of them paste a branch or spray neatly cut from some nice colored picture, or, if possible, paint one; lay this cover over the plain one with a thick layer of pinked tissue-paper circles, of the same size, between them. With a punch or a sharp knife make two holes,—according to the sketch,—and draw a narrow ribbon through and tie as shown.

Stand for Photographs.

Cut two pieces of cardboard (or old box cover will answer), each measuring nine inches one way and six and one-half inches the other way. Cover the outside with pretty silk or sateen, or a plain material if preferred, turning down nicely

FIG. 9.

on the edge and lining the inside with any delicate material. Sew the outside and lining overhand around the edge, then place the two pieces together and sew at the top.

Lay a piece of ribbon of a pretty shade, two or two and one-half inches wide, straight across the bottom of one side. Sew at the bottom and sides but not at the top of the ribbon, as this makes the holder into which to slip the pictures.

You can vary the other side by having the ribbon go across the corners instead of straight across. At the top of the case place a small bow of ribbon or gold thread. Inside, sew a tape to keep in place.

Burnt-Match Holder.

FIG. 10.

A very small tumbler, which can be bought for three cents, will fit into a little Japanese basket like those used in the Catchall (Fig. 3).

The illustration shows how narrow ribbons are to be fastened around the inner edge of the basket; a pretty combination is of alternate pale pink and baby blue, the ends of the ribbon finished in a point and ornamented with small coins. Add long pieces of both colors of ribbon by which to hang it to a nail or gas bracket.

Pincushion for Work-basket.

This is only the familiar little tomato pincushion, but it seems "a new thing" when made of yellow satin with narrow leaf-green ribbons sewed to the under side, which are to be passed through holes near the upper edge of a deep work-basket, drawn closely, and tied in a little bow outside. It is very pretty and handy.

Stitch together two pieces of yellow satin the size of the top of a teacup, turn and stuff with hair or wool.

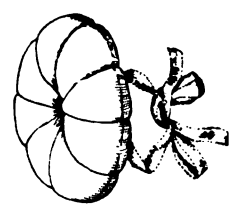

FIG. 11.

Wind coarse yellow silk four times around, draw it very closely, and confine the four threads where they cross in the middle by a tightly-drawn stitch, up and down through the centre, on both sides.

Perfumed Paper-weight.

From sheet lead cut several pieces three and a half by two inches; place one over another until the pile is an inch and a quarter thick; smooth off the corners and edges and tie in shape with thread.

FIG. 12.

Wrap perfumed wadding around it first, and then, very carefully,—as packages are wrapped in stores,—a square of bright silk, velvet or chamois, and tie with gold cord as represented in the sketch; the bow-knot is first tied, then the two loops are tied again—to prevent untying. The label, "Sweet, Weight & Co.," may be written, painted or gilded. It will be sweet and useful for a friend's writing-desk.

Hanging Penwiper.

For the shield or cover of this novel penwiper cut a seven-inch circular piece of heavy, handsome paper that is tough but flexible—gold or silver paper, tinted water-color, and cartridge are

FIG. 13.

all pretty. Double it in halves, then quarters, then eighths, then fold each side back and forth twice, like fan folds, clip a bit from the pointed end, swallow-tail the other and it will look like the figure at the right of the sketch. Crease the folds heavily and undo it.

Cut several pinked circles of chamois and flannel, a little smaller than the cover, with little holes in the centre. Sew a large button to the middle of a silk cord and slip the cord ends through the hole in each circle; then slip on the cover, tie the cord in a bow, and tip the ends with small tassels. Ribbon would do instead of cord.

This is to hang by the table or desk. The cover pushes up when in use.

FIG. 14.

Hanging Sachet.

Get one and one-quarter yards ribbon two inches wide, and one and one-quarter yards one-half of an inch wide, same shade. With the wider make five bags of equal size, stuffing with cotton, in which put sachet powder. Close the bags about one and one-half inches from the top by running together, and fringe a little at the top for a heading.

Cut the narrow ribbon into five strips, measuring thirteen, eleven, nine, seven and five inches respectively. Attach each bag to a strip of the ribbon and then join the five strips together by which to hang up.

Child's Bib.

Take a piece of fancy cotton braid, or tape, long enough to pass around a child's neck and

FIG. 15.

tie in a bow at the back; fold one corner of a pretty napkin over it, as shown by the sketch, and tack it securely at each side or corner and tack down the point.

Sew one end of a piece of the tape just above each side-corner and join the other ends to the neck-band, a little way from the neck of the bib, so they will nearly meet when the bib is tied on. They should be just long enough to hold the sides back with easy-fitting smoothness.

White or colored napkins are used or squares of Turkish toweling.

A HORSE'S WEIGHT.

Many people, even among those who frequently make use of horses, have little idea what an ordinary horse weighs, and would have hard work to guess whether a given animal, standing before their eyes, weighed five hundred or fifteen hundred pounds. Yet they would have no such difficulty with a man, and would probably be able to guess, especially if they were good Yankees, within ten or twenty pounds of his weight.

The governments of Europe have long been purchasing and weighing horses for the military service, and transferring them from carriage or draught employment to the various branches of the cavalry and artillery. The animals are ordinarily assigned according to weight.

The French military authorities find that an ordinary light carriage or riding horse, such as in the United States would be called a "good little buggy horse," weighs from three hundred and eighty to four hundred kilogrammes—say from eight hundred and fifty to nine hundred pounds.

Such horses as these are assigned to the light cavalry corps.

The next grade above, which in civil life passes as a "coupé horse," or carriage horse of medium weight, ranges in weight up to four hundred and eighty kilogrammes, about ten hundred and fifty pounds. This horse goes to help mount the cavalry of the line.

Next comes the fashionable "coach-horse" of persons of luxury, which weighs from five hundred to five hundred and eighty kilogrammes, or from eleven hundred to nearly thirteen hundred pounds. These horses go to serve the purposes of drill for the cavalry belonging to the reserve military forces.

Above these there are still two grades of heavy horses. The first are those used for ordinary draught purposes and are commonly found drawing the omnibuses of Paris. These weigh from five hundred to seven hundred kilogrammes—eleven hundred to nearly fifteen hundred pounds.

The heaviest horses are the Clydesdales and Percherons, which are oxen in size and strength, and which weigh from six hundred to eight hundred, and sometimes even up to nine hundred, kilogrammes; that is, from thirteen hundred up to nearly two thousand pounds.

None of these Percherons of the heaviest weight are employed in the military service; but some of the lighter ones are used for draught and artillery purposes.

NAMING A MOUNTAIN.

An English tourist in British Columbia says that his sophisticated and conventional mind was captivated by the freedom and heartiness of the dwellers in that country. The first friend he made was a little girl about five years old, who "seemed to be living independently of her relatives." She announced her name as Miss Jenny Lorena Wells, and gave the stranger many interesting details as to the life and habits of her doll.

Our landlord, too, was exceedingly hospitable and agreeable. By way of conversation we asked the name of the mountain opposite the door, a peak so striking in its rugged magnificence that in Switzerland there would have been two railways and a dozen hotels planted on it. With princely generosity he replied:

"You can call it what you like. Every outfit that comes along gives it a new name, and I'll be shot if I can remember what the last one was."

It was gratifying to reflect that we were now an "outfit," but at that moment we could not think of an appropriate title for the mountain.

A name occurred to us not long afterward, however, as we began to get acquainted with one of the peculiarities of British Columbian speech, namely, the various uses of the phrase "What's the matter?"

"What's the matter with some supper?" "What's the matter with the bread?"—that is, Please pass the bread. "What's the matter with skipping out of this first thing in the morning?" These and sundry other similar expressions suggested to one of the company a name for the nameless mountain, and the world will be good enough to take notice that it is to be known henceforth as the "What's-the-Matter-horn."

NOT WHOLLY COMPLIMENTARY.

A certain Mrs. Malaprop, who lives in a large Eastern city, is noted for her skill in unconsciously embarrassing other people, while she herself remains perfectly at ease. Not long ago she was introduced to two sisters, young ladies who had long been known to her by name, though she had never met them.

"Now, my dears," she said, addressing them collectively, with her usual bland smile, and regarding them earnestly through her glasses, "I have often heard of the bright and the handsome Miss Ratcliffe. Now, I am so glad to meet you both, and I want you to tell me at once which of you is the bright and which the handsome one!"

On another occasion she was dining with her nephew and his young wife, who had just set up housekeeping. The dinner did not go off quite so smoothly as the young couple had hoped, and the cooking was by no means perfect. The hostess unwisely began to murmur apologies, and her husband joined in, half-laughing, with references to his wife's youth and inexperience.

"Don't say another word, my dear children," interrupted their kind-hearted guest. "I can assure you I've eaten a great deal worse dinners than this in the course of my life; a *great deal* worse. Yes," she added, meditatively, "I've eaten some pretty bad dinners, you may be sure!"

FINE QUESTION.

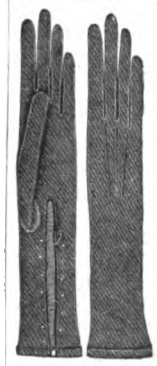
The Germans are a very philosophical and somewhat argumentative race. Two workmen in the great Krupp cannon manufactory were overheard discussing an important question.

"In your opinion, Johann," said one, "which is the more important part of a cannon—the hole or the steel?"

"The hole of course, Heinrich," said the other. "Because, what use in the world would a cannon be without any hole in it?"

"You are wrong, Johann. It's the steel that's more important; for how many men could you kill with a hole with nothing around it?"

"I AM not *generally* ill-natured," said an honest woman. "I'm *particularly* so."



Premature Loss of the Hair, which is so common nowadays, may be entirely prevented by the use of *Burnett's Cocoaine.* It has been used in thousands of cases where the hair was coming out in handfuls, and has never failed to arrest its decay, and to promote a healthy and vigorous growth. It is at the same time unrivalled as a dressing for the hair. [*Adv.*

BRAS D'OR LAKE TRAVEL.

The contrast between travelling by the inexorable time-tables of New England railways and by the steamboats which ply through the lakes permeating Cape Breton and justly giving it the bad name of "an island turned inside out," is as if one substituted fire-crackers for dynamite. A single experience is probably typical of the Bras D'Or steamboat methods.

On an evening in August last summer, two travellers had to leave Baddeck, a village most picturesquely dropped down, as it appears, in one of the lake's fairest nooks. The first information gained about the steamer's hour of leaving led the travellers to think that if they were ready by ten o'clock all would be well. They were quietly taking supper when at quarter-past seven "mine host" of the house that sheltered them remarked that half-past seven was the boat's time.

Thinking the first informant had of course been wrong, the travellers rushed to their room, threw everything into their bags, hastily paid their bill, and expected to be driven madly to the wharf. Not so; it was then admitted that though half-past seven was the steamer's nominal time, she was often as late as eight, and probably would be that night.

Her course from the stopping-place above Baddeck brought her into sight from the hotel, and the travellers were urged to abandon all anxiety, as they would be notified as soon as she appeared. One of them remarked to a boy of the village: "I suppose she'll be along about nine or after." "Yes," he said, "that's her usual time."

Here was more encouragement to believe the ten o'clock man truthful after all; yet not long before nine she was really announced. It was not conceivable that the passengers and freight of so small a hamlet could keep the steamer at the wharf more than two minutes, and the travellers hastened to embark.

Safely on board, fully fifteen minutes must have passed before the hawsers were cast off and the boat puffed out into the lake. Off at last, the travellers thought with relief; for, once obliged to leave the charming spot, they wanted to be away.

Not far from half a mile out, however, the boat began to display strange symptoms of returning to Baddeck. Yes, back she was going, and soon was safely tied up again to the wharf.

"What *is* the matter?" was asked in despair.

"Oh! a woman has left her basket."

Could that truly be all? Indeed, the purser and another man were soon seen peering behind piles of wood and barrels on the dock, unlocking and searching a dark wharf-house and at last meandering up the main street of the town. When their twinkling lights returned, five or ten minutes later, lo! the two men bore a basket between them, and very little short of ten o'clock the boat once more, this time in dead earnest, got under way.

The captain was heard to remark: "Too late now for the drawbridge at Grand Narrows." A freight train was to pass, and the custom of the region demands the closing of the draw for a full hour in the neighborhood of train-time.

The old woman had her basket, but at least fifty passengers good-naturedly endured a delay of an hour and a half to procure it. Such are the comforting ways of Cape Breton people. What wonder the island is gaining popularity as a resort for summer rest?

JAPANESE DOCTORS.

There are no doctors' bills in Japan, where the ancient idea that the practice of medicine is a labor of love still survives. Says the San Francisco *Chronicle*:

A Japanese doctor never dreams of asking a poor patient for a fee. There is a proverb among the medical fraternity of Japan, "When the twin enemies, poverty and disease, invade a home, then he who takes aught from that home, even though it be given him, is a robber."

"Often," said Dr. Matsumoto, "a doctor will not only give his time and his medicines freely to the sufferer, but he will also give him money to tide over his dire necessities. Every physician has his own dispensary, and there are very few apothecary shops in the empire.

"When a rich man calls in a physician he does not expect to be presented with a bill for medical services. In fact no such thing as a doctor's bill is known in Japan, although nearly all the other modern practices are in vogue there. The doctor never asks for his fee.

"The strict honesty of the people makes this unnecessary. When he is through with a patient a present is made to him of whatever sum the patient or his friends may deem to be just compensation. The doctor is supposed to smile, take the fee, bow, and thank his patron."

CONSIDERED HIS YOUTH.

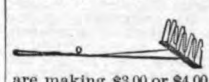
Sir John Macdonald, who was Premier of Canada nearly all his political lifetime, was noted for his art of saying things that "tickled the town." No matter where he went, no matter how short the time that he stayed, he made on some matter of current gossip some genial joke that travelled from lip to lip after he was gone.

In Toronto some years ago, a hale, rich and merry old gentleman of eighty, long an acquaintance of Sir John, became engaged to a very wealthy lady a few years his junior.

When the news "got round," the town talked of little else for a week. During this time Sir John arrived. Going to his political headquarters at the Albany Club, he found the newly-engaged octogenarian there "facing the music."

"What's this I hear, Mr. ——?" said John, affectionately laying his hand on the other's shoulder. Then, in an indulgent tone, and with a slight sigh, "Well, well, boys will be boys."

IN THE WILDERNESS.



An Englishman travelling through the wilds of British Columbia waxes facetious about the appetites of himself and his companions. Plenty of hard work in the open air is well known to be a pretty good prescription for dyspepsia, and so it proved in the present case.

Jim was an invalid when he came out, and still professed to be dieting himself with great strictness under a set of rules laid down by his medical adviser. For a long time we tried in vain to detect from his behavior what those rules might be, and at last we have discovered them:

"Eat whatever you fancy; it is the only safe rule. Drink whatever you like, so long as it is the best. Do both every time you get a chance."

Children often look pale and sick from no other cause than worms in the stomach and bowels. Give "*Brown's Vermifuge Comfits*," a simple remedy. [*Adv.*

"OUR CLIMATE."

Sometimes people boast of their own climate to visitors or strangers, comparing it with other places to the disparagement of the latter. And sometimes it happens that the boaster is overwhelmed by that unexpected bad weather which seems to be possible even in the most favored regions.

"Cousin John" and his wife were visiting relatives in the West. It was their first trip to that part of the country, and they listened respectfully and admiringly to the descriptions of the climate given by their Western host.

"There's nothing like it in the world. Why, we have days and weeks here without any moisture at night. We sit right out on our lawn until ten o'clock and never think of taking cold. We don't have fog in the morning the way you do back in New England, either. Clear, bracing air, and dry for an hour before sunrise. And then people talk about the wind in some parts of the West. I never saw any wind to compare with the east wind on Boston Common. The beauty of this climate, though, is its dry, cool, bracing atmosphere. It beats the world. Yes, sir, this is the Paradise for people suffering from lung or throat trouble."

The next morning the visitors awoke and looked out of their window. A fog or something very much like a fog, such as they were familiar with "down east," held possession of the country, and they could see nothing of the scenery.

They went down to breakfast, and the host apologized for the weather; it was the first fog he had seen for two years, he assured them, and it would lift in an hour or two.

Sure enough, it did lift, and before night it was blowing a gale. The severest wind that the "oldest inhabitant" could recollect set in and lasted three days. Several houses were unroofed and considerable damage was done to growing crops.

During the visitors' stay, several very severe rain-storms occurred. Only one or two evenings were dry enough to permit sitting "on the lawn." "Cousin John" was afflicted nearly the whole time with a hacking cough, and his wife caught cold in the head from sitting on the veranda after sunset.

The host was disgusted. "Catch me bragging again about the climate! It's as dangerous as trying to have a child 'show off.' It's sure to do just what you don't want it to. After this I don't say anything about our weather!"

CHINESE MERCHANTS.

Mr. Moule, in his "New China and Old," written after thirty years' residence in that country as a missionary, gives the native merchants an enviable reputation for integrity. Indeed, what he has to say upon this point may very well set an American reader to thinking, if not to blushing.

One general statement may be made as to the character of Chinese business men. It used to be a common dictum that the word of a Cantonese Hong merchant was worth as much as another man's bond.

Two years ago, the manager of the Hongkong and Shanghai Banking Corporation [an English house] publicly avowed that in the course of a long experience he had never known, so far as his bank was concerned, a Chinese defaulter in money transactions.

Not long ago a foreigner travelled about China, leaving with native traders quantities of his goods for sale, informing them at the same time of the name of the firm in Shanghai to whom remittances should be sent. Many of these traders were in out of the way places; but so far they have regularly remitted the proceeds of their sales. One man at Tientsin had credit to the extent of a thousand dollars. He has since then retired from business; but he regularly sends money to the Shanghai agents in liquidation of his debt.

SUNDAY IN CONNECTICUT IN 1788.

The following anecdote, which appeared in the Salem (Massachusetts) *Mercury* of August 12, 1788, shows both what kind of stories was pleasing to our ancestors, and how our ancestors thought a story should be told.

A gentleman in the State of Connecticut regularly attended public worship on the Lord's day with all his family; on the Sunday evening he always catechised his children and servants on the principles of religion, and what they heard the minister deliver from the pulpit.

He had a negro man who never could remember a note of the sermon, though otherwise smart. At last his master peremptorily told him he would on Monday morning tie him up and flog him.

Next Sunday evening, when interrogated, he had forgotten all. On Monday morning his master executes his threat so far as to tie him up.

The fellow then cried out, "O master, spare me, for I remember something the minister said."

"What is it?" said the master.

The fellow replied, "This much may suffice at this time."

The master was so pleased with his wit that he forgave him.

COWARDICE.

The extent to which everything depends upon the point of view is illustrated by a little dialogue between a boy who is a mighty hunter for his age and a lady of his acquaintance.

"A rabbit," said the young hunter, "is the most awful coward that there is in the world. My! How he does run from a hunter!"

"So you think the rabbit is a coward, eh?"

"Why, of course."

"Well, let us 'suppose' a little. Suppose you were about six or eight inches tall."

"Well?"

"And had good, strong, swift legs."

"Yes?"

"And didn't have any gun, and a great big fellow came after you who did have one. What would you do?"

"What should I do? I should streak it like a whitehead!"

"I think you would. And I think, also, that you would have your own ideas as to who was the coward."

SIMPLE CURIOSITY.

"Do you want some nice pork, sir?" said a butcher to an Irishman, who was intently regarding a side of a hog, which hung outside the door.

"No, sorr! Oi was only wondherin' whin ye was goin' to kill the other half o' that pig."—*Pittsburg Chronicle.*

THE CITY OF THE BEARS.

The name of Berne, the capital of Switzerland, signifies, according to the local legend, "the city of the bears;" and a curious story relates how the town came to bear this name. When Count Berthold of Zähringen had built the city of Berne, at the end of the twelfth century, he was greatly puzzled what name to give it. He called a council of the nobility to help him out; and not one of them could suggest a fitting name.

Count Berthold was a mighty hunter; and in this emergency, he resolved to go hunting for a name. He set out, with men and horses, dogs and weapons; and before he had chased long he encountered and slew a bear.

"A *bear* my city shall be," he exclaimed. It was accordingly called *Bär*, which is the German word for bear. In the course of time this name was extended by use into *Bären*, which is the plural of *bär*, and then contracted to Bern.

Whether or not the legend is true, the Swiss city has always borne a bear upon its escutcheon. And not only are sculptured and pictured bears to be seen all about Berne, but for an uncertain but very long time, the city has maintained living bears to remind its citizens that their patron is this valiant animal.

In all times these municipal bears of Berne have been well taken care of, but in the eighteenth century they—and their keepers, it may be added—were particularly fortunate.

Early in that century a rich maiden lady who was without any relatives save distant ones, and who had never in her life entertained any affection except an ardent one for the municipal bears, left by will the large sum of sixty thousand francs a year, or twelve thousand dollars, to be expended in the maintenance of the beloved animals.

This sum was greatly in excess of the bears' reasonable requirements; and the distant relatives of the testatrix at once began a lawsuit to break the will, alleging undue influence. The court appointed a lawyer to defend the interests of the bears.

A chronicle of the time records that this advocate "pleaded with such marvellous eloquence and pathos the innocence of the unfortunate animals, threatened with the despoiling of their heritage, of any attempt unduly to influence the testatrix, that their guiltlessness of the charge was publicly acknowledged, and the will was declared valid and of good effect."

The government of the city of Berne was constituted guardian of the bears, who were to be considered as "perpetual minors." The lady's fortune was turned over to the city, and the income devoted to their maintenance.

Twelve thousand dollars a year was a great sum of money in Berne in the eighteenth century. The bears began to live in a style befitting their wealth. They gave famous dinners to the city councillors and their particular friends. The keepers of the bears lived in sumptuous fashion, and their office became one which was very much coveted.

The bears even gave splendid balls and parties, which were attended by the nobility and the wealthy merchants and their families. The cherished animals themselves simply rolled in luxury.

But an end came to all this magnificence. In the height of their luxury the bears felt the hand of the conqueror. The French Revolution came, and the army of the new republic, under General Brune, took possession of Berne.

Three days afterward, a curious procession set out from Berne for Paris. At the head rode a large detachment of the cavalry of the French Republic. Then came eleven mules, laden with bags of gold. Then two very fat but crestfallen large brown bears waddled along as if unaccustomed to such vulgar exercise as walking. Another detachment of soldiers brought up the rear.

The mules were laden with the fortune of the bears of Berne, which had been seized in the name of the French Republic. The Frenchmen had also stolen two of the four municipal bears, and they were being led, in hopeless captivity, to Paris.

Great numbers of the people of Berne accompanied the bears a considerable distance on the road, sobbing and crying, and uttering adieux.

At Paris General Brune presented the Directory of the Republic with the keys of the capital of Switzerland, with the fortune of the bears, the principal of which amounted to two hundred and forty thousand dollars in gold, and the two bears themselves, now lean and haggard from their long journey.

The bears were sent to the Jardin des Plantes, or Botanic Garden of Paris, and there remained the rest of their lives. They were petted and pampered by the Parisians to such an extent that they had little cause to regret their capture.

Their fellows at Berne, however, fallen from riches to penury, lived a neglected and half-starved life until, a few years afterward, a subscription was raised among the people of the city to put them, as it were, financially once more upon their paws. But they saw no more of the magnificent luxury of the past.

To this day the people of Berne almost worship the descendants of these bears. In a great den an immense pair of old animals, with several smaller ones and cubs, are kept. A municipal law makes it a misdemeanor to throw anything to them save bread and fruit; but these articles of food they receive in great quantity.

Every visitor to the dens is told how, in the year 1861, an English captain fell into the den in the middle of the night, and was promptly torn to pieces by the great male bear.

ALLCOCK'S POROUS PLASTERS

Every good thing has its host of imitators; every genuine article its counterfeits. The imitators always choose the most valuable and popular article to counterfeit, so that when they claim their sham to be equal, or as good, or the same as "So-and-So's," the public may depend upon it that "So-and-So's" article is the best of the kind. The sham proves the genuine merit of the thing it copies, and never has this been better illustrated than by the imitations of ALLCOCK'S POROUS PLASTERS.

ALLCOCK'S POROUS PLASTER is the standard of excellence the world over, and its imitators in their cry that theirs is "as good as ALLCOCK'S," are only emphasizing this fact and admitting "ALLCOCK'S" to be the acme of perfection, which it is their highest ambition to imitate. The difference between the genuine and these imitations, which copy only general appearance, is as wide as that between copper and gold.

The only safe way for purchasers is to always insist upon having ALLCOCK'S POROUS PLASTERS. They are the only perfect plasters ever produced.

BICYCLES ON EASY PAYMENTS No extra charge. All makes new or 2d hand. Lowest prices guaranteed. Send for cats and save money. Rouse, Hazard & Co., 8 G St. Peoria, Ill

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

PROVISION FOR EPILEPTICS.

Sufferers from epilepsy must be accounted among the most unfortunate of human beings. An early development of the malady darkens all the patient's prospects in life. However domestic his disposition, he cannot anticipate a home of his own. He is largely shut out from ordinary occupations. He is an unwelcome visitor in the social circle, and his own sensitiveness leads him to shrink from joining it.

If he ventures upon the street, he is liable at any moment to be thrown violently to the ground; if he remains at home, he is in the same danger of falling down-stairs, or against the sharp corners of the furniture, or upon a hot stove. He lives in perpetual dread.

The number of epileptics is very large; probably there are a quarter of a million in this country. The amount of suffering endured by the patients and their friends must be incalculable.

Many epileptics, moreover, though perfectly sane at other times, show a destructive impulse during that form of the disease in which the patient does not fall in convulsions. They may attack and kill a stranger toward whom they have not even a cause of annoyance, and a few moments afterward be wholly unaware of the act.

Now, while in most parts of the United States ample provision is made for the insane, the blind, the deaf and dumb, the feeble-minded, and indeed for nearly every class of unfortunates, there is almost no provision for epileptics. True, Massachusetts has an institution for epileptic children at Baldwinsville, but they must leave it at the age of fourteen, though there is not a place in the land to which they can go.

Other countries are far ahead of us in this matter. In Germany there has been a colony for epileptics for nearly a quarter of a century, a colony which now numbers more than one thousand patients. There are similar asylums in other countries of Europe.

Every State in the Union should provide a thoroughly well-equipped institution for epileptics. The majority of the patients would be improved; not a few, whose epilepsy results from injury to the head, would be wholly cured; all would be made comparatively comfortable and happy. They could be furnished with employment such as would be at the same time conducive to health and a help toward the expense of the establishment.

Opportunity for the more careful and continuous study of the disease would be supplied, by which its treatment would be rendered more hopeful than it now is.

MAGIC GLASS.

One of the most curious inventions of this inventive age is what is called platinized glass. A piece of glass is coated with an exceedingly thin layer of a liquid charged with platinum, and is then raised to a red heat. The platinum becomes united to the glass in such a way as to form a very odd kind of mirror.

The glass has not really lost its transparency, and yet if one places it against a wall and looks at it he sees his image as in an ordinary looking-glass. But when light is allowed to come through the glass from the other side, as when it is placed in a window, it appears perfectly transparent like ordinary glass.

By constructing a window of platinized glass one could stand close behind the panes in an unilluminated room and behold clearly everything going on outside, while passers-by looking at the window would behold only a fine mirror or set of mirrors, in which their own figures would be reflected while the person inside remained invisible.

In France various tricks have been contrived with the aid of this glass. In one a person seeing what appears to be an ordinary mirror, approaches it to look at himself. A sudden change in the mechanism sends light through the glass from the back, whereupon it instantly becomes transparent, and the startled spectator finds himself confronted by some grotesque figure which had been hidden behind the magic glass.

What wonders might not a magician of the dark ages have wrought if he could have had a piece of platinized glass!

SELF-POSSESSED.

Two ladies and an invalid boy who was carried on a stretcher were the last passengers on the gang-plank of a river steamer, says the Washington *Republic*. The boy and one of the ladies were successfully embarked, and the other lady was crossing the plank, which was loose and partially drawn in, when it tipped and plunged her into the river. Several young men on the boat hastily removed their coats, and were just ready to leap into the water when she came up smiling, holding fast to her bag and umbrella.

"Now don't any one jump in after me," she called to the excited passengers; "I'm all right, and will float until my clothes become soaked with water. Just throw me a rope. There's no necessity for any one else to get wet."

The rope was thrown to her, and she grasped it with one hand and was drawn to the side of the steamer, when she said:

"Now some one lie flat on the deck and reach down and take my bag and umbrella, and then help me out."

A young man followed her instructions, and she was soon standing safe on the deck.

Requesting a porter to take her trunk immediately to a state-room, she retired, and in a few minutes returned, dry-clad and cheerful, to receive the congratulations of her fellow-passengers, and to relieve the alarm of her lady friend, who had promptly fainted at sight of the accident.

A GAME OF BALL.

Emerson's saying that the child is the true democrat is illustrated by an incident in the life of Queen Victoria. Mr. Willert Beale, afterward known as a music publisher and a manager of concerts, says that when a boy he used to walk daily with his mother and sister in the gardens surrounding Kensington Palace.

A lady and her daughter were one day walking in the same direction we were going, followed by a tall footman. We were throwing a ball about, and once it happened to fall at the lady's feet. Her daughter picked it up and joined our game for a minute or two, and then returned, out of breath and laughing merrily, to her mother's side.

The lady was the Duchess of Kent; her daughter the Princess Victoria. We renewed the acquaintance the next day and the next, and were always greeted with gracious smiles of recognition when we met.

I wonder whether Her Majesty has any recollection of that game of ball played more than once in Kensington Gardens.

BROTHERLY FORESIGHT.

Little Tom was involved in the difficulties of learning to dress himself, and regarded the buttons which had to be fastened behind his back as so many devices to torment small boys.

One morning he was informed of the arrival of a baby sister, and later in the day was allowed to steal into his mother's chamber to look at the baby as she lay asleep.

Tom regarded the small creature with much interest, and the nurse, wishing to know what his thoughts were, asked him softly:

"Well, how do you like her? Isn't she a darling?"

"I don't think she looks much good," answered Tom, with uncompromising frankness. "How soon will she be big enough to fasten my back buttons?"

ON HIS MIND.

Pat was a hod-carrier. Long practice had made him an expert at threading the mazes of unfinished buildings, but it had also made him somewhat careless in his movements.

He had just stepped from a ladder to one of the landings, and after setting down his load of bricks with a sigh of relief, he straightened up. Whack! his head came smartly in contact with a heavy beam.

When the foreman passed, a few minutes after, he saw Pat sitting on a keg, holding his head in both hands.

"Hullo, Pat," he called. "What's on your mind?"

"The whole top av me head, sir. Oh my! Oh my!"

CLEVER PIGS.

Do newspapers always tell the truth? If they do, then some animals have an astonishing amount of intelligence.

The Worcester *Gazette* says that a farmer has a sow and four well-grown pigs, which have the run of an orchard where the branches of the trees hang low, and are full of apples.

The old sow springs up and catches a limb and shakes it, and then she and the pigs devour the fruit thus shaken down. When all that can be obtained in this way has been eaten, one of the pigs climbs on the mother's back and reaches a higher limb, which it shakes vigorously, and so brings down a fresh supply of apples.

HER OWN FAULT.

How true it is that none of us ever foresee all the results of even our slightest actions!

Mrs. Suburb was in trouble with her washerwoman. "Why can't you come and work for me to-morrow, as usual?" she inquired.

"'Cause I've got ter stay at home an' mend the childers' clothes—that's why. And it's your own fault, too."

"My fault! How can that be?"

"Well, what business had ye to go an' put a barbed-wire fence round your apple orchard, I should like to know?"—*Street and Smith's Good News.*

SHE HAD HEARD SO.

What numbers of facts are still unrecorded in any book!

A teacher was hearing her class in natural history recite, and asked a bright-looking little girl:

"What is a ruminating animal?"

"One that chews her cubs," was the innocent reply.—*New Moon.*

Itching Piles.

Burnett's Kalliston is a sure relief. A quarter pint bottle by mail only for 50 cts. Joseph Burnett & Co., 27 Central St., Boston, Mass. Regular size by druggists, $1.

Nobody knows what beauty there is in wood till he varnishes it. Nobody knows how long-lived that beauty is from poor varnish.

We shall be glad to send you, free, the "People's Text-Book on Varnish," from which you will become intelligent, not on varnish itself, but on varnished things; know what to expect of and how to care for proper varnish on housework, piano, furniture, carriage, etc.; and how to get it in buying these things.

The intention is to help you avoid the losses that come of poor varnish, no matter who uses it.

MURPHY VARNISH COMPANY.
FRANKLIN MURPHY, President.
Head Office: Newark, N. J.
Other Offices: Boston, Cleveland, St. Louis and Chicago.
Factories: Newark and Chicago.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S

Breakfast Cocoa

from which the excess of oil has been removed,

Is absolutely pure and it is soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

People have no idea how crude and cruel soap can be.

It takes off dirt. So far, so good; but what else does it do?

It cuts the skin and frets the under-skin; makes redness and roughness and leads to worse. Not soap, but the alkali in it.

Pears' Soap has no free alkali in it. It neither reddens nor roughens the skin. It responds to water instantly; washes and rinses off in a twinkling; is as gentle as strong; and the after-effect is every way good.

All sorts of stores sell it, especially druggists; all sorts of people use it.

A Cup of Pure Tea

(Made individually in the Cup).

Hobbs Patent Tea Infuser.

Among the comforts of home is the China Tea Infuser. Fit any size cup.

It is a London patent, and Jones, McDuffee & Stratton of Boston, are the sole importers and distributors for the United States.

Universally approved by those who appreciate the best results of tea.

On receipt of 50 cents, sample mailed to any part of the United States.

JONES, McDUFFEE & STRATTON,
China and Glass Importers. (Seven Floors.)
120 Franklin Street, Boston, Mass.

SHICK-SHACK.

In Two Chapters.—Chapter II.

A Race For a Farm.

Their disturbed night gave the Monkton family an early start on the following day. Yet before their morning meal was over the sound of a horse's hoofs approaching the cabin drew Mrs. Monkton and all her children to the window. An arrival was a very unusual thing.

"It is that Mr. English," Mrs. Monkton said to her husband, who was unable to rise. "I wonder what he wants."

The visitor came in, a tall, thin man, with a red beard which made an unusually long face look longer.

"Mornin'!" he said. "I s'posed I'd find you stirrin', though it *is* airly. Hallo! Injuns, eh? I want to know! Fust I've seen around here, and I don't care if I never see any more. They aint purty to look at, no way you can fix it."

Shick-Shack did not seem to have glanced once at the new-comer, and not a line of his countenance altered, though he understood perfectly what the man had said.

"Good morning!" returned Monkton. "Take a chair." Dick promptly pushed one forward. "What has started you out so early this drizzly morning? Nothing wrong, I hope, in the prairie schooner?"

"Naw; we're all right in the wagon. 'T any rate, there's nothin' partic'lar to complain of," Mr. English replied, as he took the chair. "But the fact is, I'm on my way to the land-office in Springfield. I calc'lated I might get there before sunset if I got an airly enough start. I haint a minute to spare, but I just thought I'd drop in to let you know. I always like to do things square and aboveboard."

"You have made up your mind where to locate, then?" Monkton asked.

"Wa-al, yes," said the man, "I ruther think I have. I believe I'll neighbor with you on the south there."

"You mean, then, to enter the forty acres I said I'd give up to you east of the bluff?" said Monkton. "Do you take the other forty east of that, or will you run south further?"

"Nary one," said English. "I calc'late to enter the forty acres east of the bluff, and the forty acres west of it, too, unless you're prepared to enter it ahead of me."

"What!" cried Monkton, almost rising from his chair in his surprise.

Mrs. Monkton and Dick uttered an exclamation of astonishment at the same time.

"You don't mean—surely, I can't have understood you, Mr. English? The land you mention joins mine on the south. I mean to enter it myself just as soon as I can raise money to pay for it."

"If you don't enter it afore this time to-morrow, I reckon you never will," the other replied. "See here now, Mr. Monkton, I stopped in here this morning, as I said, because I wanted to do the fair and square thing by you. There's nothing underhanded about me. That 'ere eighty, if I understand rightly, is as open to me, or to any other man, as 'tis to you, and I don't see why I should stand back and let you have first ch'ice, when I've as good a right to first ch'ice as you; and what's more, have got the cash in my hand to pay for it this very day.

"That's all I've got to say," he went on, as Monkton remained speechless. "If you'll look at things from a common-sense p'int of view, you'll see there's no 'casion for hard feelin' nor rough talk. I'm bound to do the best I kin for myself, in a fair and lawful way; but I've nothin' agin you, and you'll always find me and my wife ready to be neighborly and friendly if you are."

"Of all the mean, contemptible tricks!" Dick gasped out.

"That will do, Dick!" said Monkton, sharply. "Mr. English, I think there is no more to be said."

"Just so! just so!" mumbled the visitor. "I s'posed you'd take a common-sense view of it, 'specially when you found I didn't mean to do anything underhanded. I'll push on now, so good mornin' to you all."

English went out amid the total silence of the family, and started rapidly down the road on his gray horse.

"Father," cried Dick, when the door had closed, "can't we stop him? Is there nothing we can do to prevent his getting that land?"

"What can we do?" said Monkton, sadly. "He has played us a dishonorable trick, but we can scarcely call it wrong. He has a legal right to any unentered land he chooses to buy. We all know that. I really don't mind losing the land so much as I do having so mean a man for a neighbor."

"But can't we prevent it?" reiterated the boy. "Is there no way in which we can enter ahead of him?"

"The government deals only with cash customers, as you know, and I have barely thirty dollars cash in the world."

"Is there nothing we could sell or mortgage? Might we not borrow? I am sure Mr. Phipps would lend us the money, if he has it."

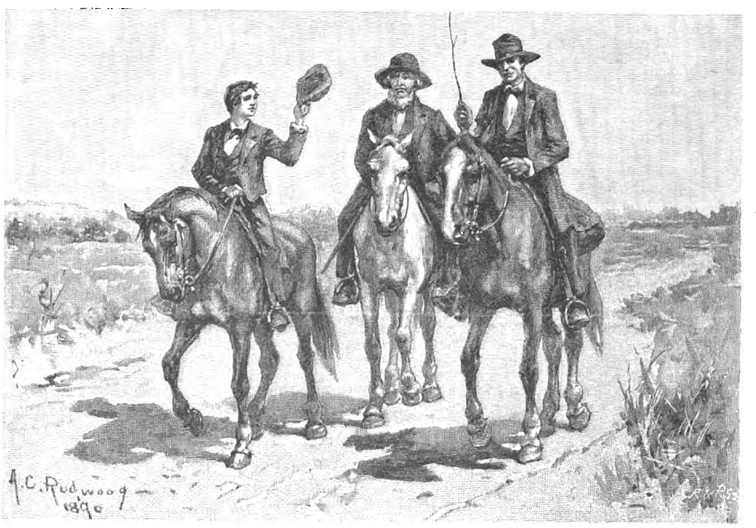
"Very likely he would," said his father, "and I am quite sure he has the money; but what good would it do us if English got to Springfield before we could? He is already on his way, remember, while I am here, a helpless cripple."

"But *I* am no cripple! I might get to Springfield yet ahead of English, and I could enter the land in your name. Let me go over to see Mr. Phipps about the money, and if I can get it, let me go on to Springfield. If English beats me, we will be no worse off than we are now; and I may get ahead of him. My little bay mare can beat that old gray draught horse of his any day."

"It would be ten o'clock before you could get off; you could not do it, lad," his father replied, shaking his head despairingly. "No man could."

"White man could not, but Indian could," said a deep voice in the background. The next moment Shick-Shack stepped forward, with a glitter of excitement in his eyes scarcely less eager than that which blazed in Dick's.

With his moccasined foot the Indian pushed forward some ashes on the hearth, and then, stooping, began to trace in it a rude diagram with his finger.



"Look!" he said. "Here Monkton's house; here Springfield; here road rascally English take to get there. He stranger here; know nothing about the country but what people tell him; he 'fraid to leave straight road.

"He go down bottom road to Gough's place; they tell him Mud Creek up so high he can't ford it; send him back to Hunter's Lane, and he follow that and come by noon to Cary's Settlement—*maybe*. Maybe he lose his way, and don't find Cary's before night. Anyway, when he get there, he bound to take State Road to Springfield; twenty-five mile yet to go, and horse tired by rough travel through the timber.

"He start; creeks all up, bridges gone; heap rain down there yesterday and day before; if English get to Springfield *this* night, Shick-Shack know nothing."

"Shick-Shack does know something," Monkton replied. "But if English can't get to Springfield, Dick can't, either. So we are no better off than we were before."

"Dick get there if Shick-Shack go with him," returned the Indian. "This Shick-Shack's own country; he know it well. In the darkest night he make his way over paths no eye can see but Indian's or wolf's. Look!"

"Good Afternoon, Gentlemen!"

He stooped to trace another path in the ashes.

"Me lead Dick this way—not down bottom road at all; off across country, southeast, like bird in the air, till we come to State Road here—only five-six miles from Springfield. Dick go on then, him alone, and Shick-Shack come back here to Al-lu-lah and boy before moon to-night."

Dick rushed over and grasped Shick-Shack's hand, too much excited to thank him in any other way. Then he cried:

"Father, you'll let me go?"

"You will let him go, Richard?" Mrs. Monkton echoed. "I do really think there is a chance."

"Be off to Phipps, then, without losing a moment," Monkton said, himself beginning to catch the excitement. "We can do nothing without the money, but if Tom Phipps has it, I know he will lend it to me!"

Dick was off before his father had ceased to speak, and in a moment was galloping down the path that led to their neighbor's. Mrs. Monkton meanwhile prepared a lunch for the travellers to take with them if Dick's efforts were successful.

Within an hour the boy was back again, gleeful and triumphant.

"I've got the cash, father, seventy-five dollars. Mr. Phipps says he'd rather make you a present of it than have that man put up his shanty in our neighborhood; but I told him he should have his money back, with good interest to boot, before we were a year older."

"Rather a rash promise," said his father, smiling. "We'll try to give him better security than that. But be off, now; you haven't a moment to lose."

A little later, with the money and his father's written application for the second piece of land in his breast pocket, Dick Monkton set out for Springfield on his bay mare. Shick-Shack, on the best of the other two horses owned by Mr. Monkton, rode by his side.

The Indian's boast of his knowledge of the country had been no vain one. Over trackless prairie and unbroken woodland, where it seemed to Dick no white man's foot had ever been set, Shick-Shack led him with unerring precision. There were several streams to cross, all much swollen by the recent rain; but the Indian knew at what points they could be forded safely.

With fair speed, and hardly an interruption to their progress, they pushed on until, when the sun stood barely half-way between the zenith and the western horizon, they emerged from the timber upon the State Road, as Shick-Shack had promised, within eight miles of Springfield.

Here Shick-Shack turned back. Dick needed no further guidance, and the Indian wished to return to his wife and child.

The journey had been a rough and wearisome one, and the bay mare was beginning to show decided signs of exhaustion. Feeling now sure of arriving in Springfield ahead of English, Dick rode at a very easy pace.

He had gone on about two miles from the point where Shick-Shack left him when his mare threw back her ears and quickened her pace. Turning about in his saddle, half-fearing to see the ungainly form of English behind him, Dick perceived two horsemen approaching him, neither of whom bore any resemblance to that person.

The strangers were on good horses, and soon overtook Dick.

"Good afternoon, my lad," said the younger of the two men.

He was a very tall and rather awkward-looking person, with a dark, homely, but honest and attractive face, with keen and kindly eyes.

"Good afternoon, gentlemen!" returned Dick, lifting his hat.

The three horsemen travelled along together. The settlers in the new country fraternized instinctively upon the road. Dick's smiling courtesy had attracted the interest of the two men who had overtaken him; and seeing this interest, he told them the story of his journey.

The younger man's sympathy was gained at once. "Are you sure you are well ahead of the man?" he asked. "He may have got over the ground faster than your Indian friend thought possible. Don't lose a moment; you ought by all means to make your application for the land before sunset; and if the agent is not in his office, you must go to his house."

"I'll push on as fast as my mare can carry me," Dick replied; "but you can see yourself, sir, she is not feeling very lively."

"That's so," said the stranger. He drew rein suddenly. "My horse is strong and fresh," he said; "suppose we change? Then you can push forward at full speed."

Dick looked earnestly into the stranger's eyes. It was no small thing to trust his bay mare to another. But he would have lost the land rather than have overridden the mare; and the thought that the crafty English, by some hook or crook, might overtake him, decided him. The honest eyes of the tall young man left him in no doubt but that the mare would be in safe hands.

At this moment Dick turned, and saw a cloud of dust far to the rear.

"Thank you, sir," he said, "I'll take your offer!"

The two dismounted, and exchanged horses. Then Dick rode away at a brisk gallop.

He found the agent in his office. His father's application was quickly entered, and the money paid. Dick, greatly elated, rode to the public square to await the coming of his friend with the mare.

Presently the two strangers rode up. Dick resumed possession of his mare, and thanking cordially the man who had befriended him, bade him good-night, without asking his name.

Not half an hour afterward, as Dick was leading his mare into the stable of an inn, he saw a gray horse come lumbering into the town, panting and covered with sweat, but nevertheless making very good speed. On the horse's back was English.

It was plain that he had not missed the road,

Digitized by Google

and had crossed the fords safely. But, in spite of the unexpected mettle of his old horse, Shick-Shack's short cut had beaten him.

Next day Dick returned home, starting early and arriving at his father's cabin before dark. Shick-Shack was still there, and Mr. Phipps had ridden over to hear the good news. Naturally there was rejoicing in the settler's cabin.

"I tell you now, Monkton," said Phipps, after listening to the story, and examining the entry papers that proved his friend's title to the new land, "you must not lose any time in getting this property of yours surveyed. English may be smart enough to get ahead of us even yet, if there is a shadow of a chance for him to sneak in a claim upon any of the land. I shall be over in Sangamon County next week; I have a little business in Salem, and if you say so, I'll hunt up a young fellow there who has done some very good work in the surveying line, as I happen to know. I'll get him to come over here at once to see that your land is all right. Lincoln—Abraham Lincoln, I believe—is the surveyor's name."

Mr. Monkton assented. The suggestion was acted upon; and at an appointed day the young surveyor from Salem made his appearance in the pioneer's cabin.

Dick uttered a shout as he saw the young man approaching.

"Why," he said, "that's the man who lent me his horse at Springfield!"

The benevolent young stranger was, indeed, Abraham Lincoln. The man who was one day to become President of the United States surveyed, with Dick as his helper, the land upon which Shick-Shack knob stands.

M. R. HOUSEKEEPER.

The End.

TRUTH'S IMMENSITY.

Pry up thy faults with this great lever, Will!
However deeply bedded in propensity,
However firmly set, I tell thee, firmer yet
Is that vast power that comes from truth's immensity.

New York Press. —*Ella Wheeler Wilcox.*

For the Companion.

PORTUGEE TONY.

Just out of reach of the highest tides, at the head of a rock-strewn gully on a rugged projection jutting into the Atlantic, perches the summer cottage of the rich widow, Mrs. Racewood. It is built about with wide verandas, and so close is it to the waves that, in a stiff on-shore breeze, the fine spray whips against its seaward windows.

Conspicuously guarding the ocean end of the gully is a wave-rounded boulder, so lodged that the sea just hides it at each high tide. It is thickly maned with rich brown and glossy amber seaweed, and viewed from the shore, bears a close resemblance to the head of a mighty lion.

Mortimer Racewood first came to the cottage, in advance of the season, with his invalid mother, his two sisters and their invited guest, Miss Edna Mayberry. He then pointed out Lion's Head to the girls as delightful sketching-ground, and at low tide they often visited it.

But the Racewoods met, most unexpectedly, with experiences that greatly lessened the delight of their trip. Immediately upon their arrival they were greeted with an insulting yell from a crowd of disorderly excursionists from the neighboring fishing-port of Bayswater, and soon afterward a volley of gravel was hurled against the windows of their reception-room. Other small insults and trespasses followed.

The motive of these attacks soon appeared. Many Bayswater people, including some of the most unruly among them, had for years camped out upon the grounds and fished from the rocks now wholly occupied or partially shut off by the Racewood cottage. They resented bitterly the intrusion of the house there, and were bent upon annoying its occupants so much that it would become an undesirable place of residence.

Young Mortimer Racewood, who, for the time being, was the only male member of the household, was kept from morning to night in a state of irritated suspicion toward all strangers.

Lion's Head Rock lay below high-water mark. This put it beyond the line of the Racewood property, though Mortimer, unaccustomed to the seashore, supposed that his mother's property extended to the low-water mark.

On the evening of the fifth day of the occupancy of the cottage by the Racewoods, Antonio Silva, a Portuguese fisher-boy of Bayswater, was planning to take, on the following afternoon, a trip to Lion's Head for rock perch, or "cunners," as all Bayswater called them. As he fastened on three extra hooks to his hand-line in the dark, lower room of his tenement home, down close upon Buzzell's Dock, he sat upon an inverted starch-box very near the low couch on which, under a worn counterpane, still gaudy in patchwork of orange, red and green, lay his wasted little mother, coughing her gentle life away.

She kept her bed now all the time. She would die before very long, the doctor had said.

While Antonio fastened his hooks, he watched and sometimes talked to the chubby twins, Joao and Jaymes, at play upon the floor. Queer, handsome little yellow children they were, with glowing black eyes and soot-black wavy hair. They were as like as two sand-peeps, but Joao was clothed in calico of a vivid pink, and Jaymes in chrome yellow, peppered with black.

They were playing with shells and pebbles, and with old bottles filled up with water, colored with odd dyeing material, such as the juice of spoiled berries from the grocers, crushed plantain leaf, yellow earth and so on, which Antonio had procured for them.

When Antonio had fastened his last hook, he picked up from among the playthings an old horse-radish bottle, filled with diluted sour milk, and began his lesson in English to the little boys.

"Vat cohlor dees?" he asked.

"Whita!" said both twins at once.

"So he ees. Vat cohlor dees?" He showed a pebble.

"Browna."

"You a-right. Dees?"

"'Ello!" said one twin.

"Greena!" said the other.

"Greena? No! He 'ello! Joao, he a-right."

Antonio was doing his best to teach the twins good English. The Silva family, from the half-blind grandmother, now knitting automatically, in a dark corner, to the funny twins, were pure Portuguese. They had come to Bayswater from the Azores a little less than seven months before. None of them spoke the harsh, new language well. Antonio spoke it best, though the father, Manoel Silva, did very well, too. He was away now on a long-shore mackerel trip.

Antonio would have been with him but that the twins and the fading little mother and the half-blind grandmother could not be left without protection. So he stayed ashore, looking to the twins, doing odd jobs, and in their season, catching cunners for the hotels and cottagers.

Sometimes the fish left over from his sales had been the only food of the family for the day. They had a hard time to live.

On the afternoon following, then, at the first of the flood, Antonio Silva clambered, barefooted, to the top of Lion's Head Rock. He had gleaned for his bait from the bases of neighboring boulders a canful of "rock-snails." Baiting the four hooks of his hand-line, he flung the line well out into the green sea depths, and soon began to haul in green and rust-red perch.

Presently there sauntered out upon the cottage veranda Miss Racewood, with her sister Mabel, a sweet-faced child of nine, Mortimer Racewood and Miss Edna Mayberry. Antonio was too intent upon his fishing to notice them.

Miss Mayberry gave a pettish stamp of her foot and an abrupt little cry.

"Just look!" said she. "There's that mulatto boy again on our rock. We can't sketch with him there."

"Oh dear, no!" said Miss Racewood. "He litters the rock all over with sharp bits of snail-shell, and he keeps tramping about."

"And his fish spatter salt water all over your dress and the sketches. Send him away, Mort," said Ella Mayberry.

The pert command was enough for young Racewood.

"Say, boy," he called out,—Antonio was sixteen, two years younger than Mortimer, and was quite short for his years,—"oh, I say, move off that rock, will you? We want to come there."

Antonio hauled in two flapping cunners, released them from the hooks, and re-baiting, resumed his fishing without a word or look of answer.

"Well," said Edna Mayberry, "that's cool—rather!"

Mortimer by this time was half-way down the gully; his face was flushed, his tone threatening. "Come, come!" he called again. "Are you deaf? Fly 'round—clear out!"

Then Antonio, still intent upon his fishing, answered quietly, but with firmness. "Ah, what you say? I r-r-right 'ere. I feesh a lon' time on dees rock. You own down 'ere? No. Anny man ar-right to feesh."

Mortimer felt the eyes of the girls upon him. He had gone too far, he thought, to "back out." Pressing violently forward over the slippery weed-grown rocks, his badly guarded feet slipped suddenly from under him, and he tumbled headlong into a hidden pool, out of which he scrambled, drenched from head to foot, in time to hear Miss Mayberry make a poor attempt to suppress a laugh.

He was furious, yet not so far beside himself that he could not see that the wiry young Portuguese, barefooted and sure of his hold on the slippery rock, could make him trouble if he came to close quarters.

Seizing, in his foolish rage, a heavy cobblestone, he blindly flung it—though without intent that it should really hit Antonio—forward to the ledge behind the fisher lad. Striking there on a facet of the ledge that turned obliquely, it rebounded with great force right against the back of Antonio's head.

The blow stunned the boy, and caused him to pitch headlong into the deep water below.

White with horror, Mortimer sprang forward to the rescue; but just as he reached the base of Lion's Head, Antonio, recovering his consciousness, pulled himself back to his place, pale, and with the red streak of a long cut on his cheek.

He swept the water from his face, and turned a look on Mortimer that kept the young cottager where he was.

"Come back, come back, Mort!" the girls cried from the veranda. "We're going to the flume; we've given up sketching. Come back. Let him alone."

Young Racewood felt degraded in his own eyes; his hand automatically sought his soaking, empty pocket, and muttering something about, "Make it all right!" he turned back to the cottage.

As he passed in, Miss Mayberry, with an uneasy laugh, cried out, "Why, the boy's fishing yet! He can't be hurt." Mortimer, from his chamber window, as he changed his dripping suit, noted that the plucky young Portuguese indeed still held to his work.

For half an hour longer Antonio kept at it, though his head ached and whirled; then, stringing for home use the pollock and sand-dabs he had caught, he filled up his bucket with the salable cunners and turned inland.

As he passed the Racewood cottage, little Mabel stepped out timidly toward him.

"Oh, please, does your head ache?" she asked.

"Ah, yes, she is ache-a some—oh yes, moshe!" said Antonio.

Moved by the gentle look and tone of the child, he stopped, and, in spite of his heavy pain, smiled back at her.

"Well, you mustn't go round in the sun to sell the fish; I want 'em all—see?"

The child held out some money. "Is this enough?" she asked.

The Portuguese lad set his buckets down, and though the action sent a spasm of pain through his head, made a quick, graceful bow.

"Ah, yes—too mannee—too moshe! T'anka!"

He would have cleaned the cunners and stripped off their rust-flecked jackets, leaving them pearly white for the pan, but Mabel stopped him, and summoned the cook to take them in as they were. Then, insisting that he take all the money she had offered him, she drew from him by simple questions how matters were with him at home; and as the lad turned away with another courtly bow that cost him a pang of severe pain and a spell of vertigo, Mabel cried out that she would come and "see his mamma" in the carriage, and bring her some "nice things."

"My mamma'll let me," said Mabel.

Antonio staggered over the hot, sandy mile and a half that lay between Racewood cottage and his poor home, and arriving there at last, dizzy and ill, threw himself upon the ragged lounge, and between spasms of pain and nausea, told his grandmother his story.

The old woman was alarmed, and brought in some of the neighbors. The news of the assault on "Portugee Tony," whom every one liked, spread fast. Through him a long-established fishing-right had been grossly invaded—an assault committed against a whole community.

The wiser of the neighbors advised consultation with a lawyer, but no one of the Silvas could take the necessary steps. What was everybody's business presently became nobody's, and for three days Antonio lay on the lounge, a wet rag bound about his head, while nothing was done to bring the case before the court.

Twice, however, the Racewood carriage had stopped at the Silva tenement, and Mabel had brought delicacies for the little mother. She had sent the doctor, too, to Antonio. Mortimer had given money to Mabel for these benefactions, and perhaps would have done more but that kind thoughts were driven out of his mind by the re-awakening of the malice of the worst elements of Bayswater against him and his.

Using "Portugee Tony's" wrongs as an excuse, the roughs of the neighborhood hung about the Racewood cottage off and on, by night and day reviling and threatening assault. When Mortimer went out with the girls for a stroll among the quaintly clustered boulders known as "The Giant's Chessmen," menacing yells rang out from behind the huddled masses; stones went humming across their path, and once, from a thicket of scrub-cedar, a huge shell-fish, covered with sand, was thrown into Mortimer's face.

At last, late on the third night after the assault on Antonio, a frightful serenade before the cottage, on pans and fish-horns, was followed by the entrance of a cobblestone through Edna Mayberry's window. Barely missing her at her toilet, it shattered the mirror in front of her. Then the family, thoroughly alarmed, resolved to quit the cottage by the first train next day.

And so the family hurriedly departed, leaving Harlow, the watchman, to close up the cottage tightly with its heavy winter shutters.

On his way to the railway station, Mortimer lodged a complaint with the Bayswater police, never guessing what was, nevertheless, a fact, that a smart young lawyer had already sought to secure from unwilling Tony evidence warranting Mortimer's arrest for assault upon Antonio Silva.

Before light, on the day following the departure, young Silva, still weak and giddy, though bettered by rest and the doctor's care, made his way slowly toward Lion's Head, again to try the fishing. Arrived at the head of the gully, he was about to creep down into it for bait, when he was stopped by the sound of heavy rumbling, followed by banging and clanking from the opposite side.

Cautiously creeping to a large rock at the gully's edge, he perceived that men, partly concealed by clustered rocks and the heavy fog, were rolling boulders from the opposite height down upon the great drain-pipe that ran from the cottage through the gully into the ocean, breaking off section after section of the pipe.

The kindness of Mabel had awakened in Antonio's loyal heart a resolute devotion to her and to all that she held dear. For her sake, he wished to put a stop to the destruction now going on under his eyes, though whether to call out, or to run to the house of the cottage watchman, a mile away, he did not know.

As he hesitated, other sounds blent with those of the drain-pipe's destruction. From the third story of the cottage came repeated blows, like those made by a tack-hammer smartly wielded. At intervals, also, and from the same spot, came the sharp tap of the common golden-winged woodpecker, or flicker: "*Pee*-uck!" "*Pee*-uck!"

Looking sharply toward the cottage through the dim light obscured by fog, Antonio at last made out the flicker, his feet hooked upon the cleating of the upper story, his spiked tail braced diagonally to sustain him, busy in drilling, with his pick-like beak, a hole through the cottage wall.

The house, as Antonio, who had watched its building, well knew, was mainly sheathed, not lathed and plastered. The upper story was unsheathed; the wall was a mere shell of wood.

Suddenly, something from the hole disconcerted the flicker, who stopped his work, dodged smartly to one side, bristled out the feathers of his head and body, and gave an angry hiss.

Again he sought to pick; again he was repelled; again he dodged and bristled, and then, comically jerking his head, uttered a ludicrous vocal mixture of sniff and sneeze.

The next moment he went pitching off, in great curves, inland; and after him, through the hole, came leaking out a misty stream which spread into a cloud of bluish vapor. It was smoke, and the cottage was on fire!

Antonio sprung to the top of his rock, crying out, aloud, to whom he knew not, in a strange medley of the old tongue and the new.

"*Fogo!* Fire! Ah—de cottage! *a casa*—she afire! *esta en Fogo*—Halp-eh! *Cia!*"

Then, from behind the boulders, came back a sinister response:

"Ha-ha! you there, Tony? A fire, is it? All right. Let it burn—there's no one here will stop it."

Antonio's form grew tense, and his eye alight with resolution.

"*I* stohp-eh," he shouted.

"You? Better not try it, Tony; the fellers in the dory down there are usin' the old monopoly ranch for a target. You'd get hit. Keep away!"

At the word there echoed up the gully, as from a fog-hidden dory, anchored but a few boats-length off shore, the sharp report of a rifle, followed by the "ping" of the bullet, and its thud and crash against and through the cottage wall.

"Ah, I go! Stop shoot-eh, you!" Antonio shouted.

For a moment longer he stood, considering his way of entrance. He was going into deadly peril, and he knew it.

The sun, coppery red through the fog, was showing eastward over Gannet Bar; the strong land-scent of wild rose, blended with a briny whiff of carrageen and sea-dragged kelp, floated about him, seeking, it seemed, in its tonic sweetness to draw him from his purpose back to safety. But with a cry under his breath to Heaven, not even assured that the mob would hear or heed his call of warning, Antonio scaled the veranda-roof, and then, by ready stages, reached the cottage ridge-pole; thence the skylight.

Breaking through this with his elbow, he dropped himself to the attic floor, unhurt. Down the narrow, open stairs he ran toward the burning chamber; the entry-way was filling with smoke, and he found the chamber door already hot to the touch. It had been forced open by the incendiaries, and then fastened with a rope and nail. Probably they wished the fire they had set kept down till they were well away.

There was a cistern overhead, and pipes led down close to the door. There were basins and pails at hand.

Setting the pipes running, Antonio guardedly pushed open the door; then came a puff of scorching, choking smoke, and sparks that drove him back. Recovering, he dashed in pail after pail of water upon what he dimly saw was the centre of the fire.

So he fought his way in and out. He was alone in a burning cottage of well-seasoned wood. The fire was sealed in by heavy shutters. To the skylight by which he had entered, there was no ready means of access from below; and those who had broken in had nailed up their entrance-way as they passed out.

Again and again it seemed that he must fall in the flames, and perish where he labored.

Holding to his work, using no time in scheming for escape, Antonio still dashed on the water, over wall and floor and furnishings, until, through slowly thinning smoke, he could make out what was once a pile of bed-slats now reduced to sparkless charcoal, sections of charred wall and floor, a fire-wrecked chest of drawers and wads of bedding turned to dripping tinder.

The fire was out. The closing of the cottage, which had been his greatest peril, had been, as well, the turning-point for safety, for if he had fought a draught from windows broken through by fire he never could have conquered.

With hair and eyebrows singed in places to the quick, clothing charred through, and limbs smarting with deep burns, he passed wearily down into the story below, to make sure that no spark had kindled there.

In the dory, now some forty rods from shore, were crowded the ruffianly crew who had set the fire, recruited by the gang whose leader had answered Silva's cry of discovery. It is not likely that Antonio's entrance of the cottage had been noted. He had been warned; his answer had not been heard attentively nor heeded. They had continued to fire every few minutes at the lower stories; and now, as they were moving off into the fog, another shot was fired, and then another.

The last ball, by ill chance, passed into the lower room with Antonio. Cutting first through a thin shutter, it struck upon a metal armor piece high up the wall, glanced off, and entered the body of the exhausted lad, who, without even a cry, dropped heavily, face downward, to the floor.

A rumor had meanwhile reached Mortimer in the city that a warrant was out for his arrest. With a short explanation to his mother, he started back for Bayswater. Arriving by the earliest train, he met, as he alighted, Harlow, the cottage-tender, looking pale and grave.

"They've broke things, up to the cottage, Mr. Racewood," he said. "I just sent ye a dispatch. I was 'round there long past midnight; they must 'a' done it early this mornin'. They tried to burn it, too; they would, I guess, if it hadn't 'a' ben for Portagee Tony."

Mortimer turned pale.

"Know him, don't you?" Harlow went on. "Yes I'd heard you did. Well, he put the fire out; but them scoundrels fired into the house, and shot him down. I found him lyin' right across the foot o' the stairs when I opened the cottage."

"Was he dead?"

"No; mighty nigh it, though; won't live, I don't think. He's spoke enough to tell what he's done. He's hit bad. I've had Doctor Whyte to him; he's layin' in your chamber, had to put him in there. Can't move him. Doctor's with him now. Better go right up. Here's Billy an' the buggy—get yer there quicker'n the barge."

The goldenrod had long been past its prime when the Portuguese lad left that room in the cottage. Through the long summer, young Racewood, with only brief reliefs, watched by his bedside. The doctor said that but for Mortimer, Antonio never would have lived.

"And but for me, he never would have lain here shot," said Mortimer.

Leaning on young Racewood's arm, Antonio, on a lovely day of early autumn, moved very slowly out of the cottage into the reviving sunlight. Poor, poor boy! His face was drawn and waxy, and his weight so slight as scarcely to be felt upon the arm that bore him up. He walked with stiffness and a painful limp. Never again might he scale Lion's Head with the old daring freedom.

But out of the trouble of Racewood Cottage had come at least a lesson for all life to Mortimer. He has taken a vow that from this time on,

Antonio—and the motherless twins, now gazing on their strangely altered brother, not knowing whether to cry, to laugh or to do neither—shall be his care for life.

TO FEED THE SNOW-BIRDS.

A seed-head uplifted
Above a waste of snow
Is reason abundant
Why a weed should grow.

Wide Awake. —*William Zachary Gladwin.*

WINTERING IN A DUG-OUT.

In Three Parts.—Part II.

The weather moderated a little at New Year's; and three days after the wolves had attempted to dig into my cow-shed, Andrew came to see how I was faring.

He surveyed my premises for some time, as he said afterward, without being able to "make head or tail" of them. He might have supposed that my cabin had blown away if he had not seen the smoke issuing from the top of the stove-pipe.

Then he walked upon my roof, and called to me. The creak of his snow-shoes overhead was the first intimation which I had of his presence. Then I recognized his voice.

I had felt a lingering resentment against him; but the sound of a human voice that I knew fell so sweetly on my ear, that I could scarcely keep from shedding tears as I dug a hole up out of my covered way to admit him.

He took off his snow-shoes, let himself down and came into my dug-out, and then he looked around and laughed heartily, until I grew quite indignant. When I told him of the tree-fall and the wolves, he became grave.

"I oughtn't to have let you stay here alone!" he exclaimed. "And now you are going home with me and Helen."

This offer I peremptorily declined. He threatened to carry me by main force; but seeing at last that I was wholly in earnest, he dropped the subject, unwillingly.

I suppose I had not fully realized how lonesome I had been; for I cannot describe how pleasant it seemed to me to hear a voice, and see some one sitting in Helen's chair on the other side of the stove. I prepared dinner, and Andrew remained nearly three hours, telling me all about their plans, and what a good time he and Helen were having; how she sang and played, and how they read stories aloud together in the evening. I was hungry to hear it all.

When he went away, I put my head up through the hole in my covered passage and watched him out of sight; and then I had to go inside and have a good, long cry before I was fit to clear up the table and resume my solitary life.

Another storm was at hand. The gray and dreary night shut down over the lonely wastes of snow. "Well, another fortnight!" I murmured to myself, and proceeded to stop up the breach in my covered way.

A little later I was surprised at hearing Andrew shout to me from outside, and I made haste to open the breach again.

"Is Helen sick?" I exclaimed.

"Oh no," he replied. "I've come back to bring you some novelettes which we have read, and my carbine—if those wolves should come round again, you know."

"Oh dear!" said I. "Firebrands are better for me, I think. I never fired a gun in my life, and I don't believe I should like it. I would not know how to shoot."

"It's as easy as pumping water," said Andrew, confidently. "Just see how I do it. All you have to do is to tuck these cartridges in here—one, two or seven of them. Then take hold of this lever, so—open up now, then replace it, see? It's all loaded. Now I will rest it out through the hole, and shoot at that tree-trunk over there. Watch me; raise the hammer, so. Take aim—so."

He discharged the piece, and I suppose, planted the bullet in the tree.

"Now, see how I throw out the empty shell," he continued, "and raise in another cartridge—so. It's loaded again. Now you fire it, at the same tree. Don't be afraid. It doesn't kick. It will not hurt you a bit."

I took aim and fired, in some little trepidation. Andrew said that I hit the tree. My eyes were shut. I do not think that he thought the piece "kicked;" nevertheless, it made a lump on my shoulder, although I did not let him know it.

I cannot say that I really wanted him to leave the gun with me; but he had determined to do so, and after some further explanation of the mechanism of a breech-loader, he gave it to me with two dozen cartridges. When he had gone I placed it safely behind my vegetable bin. I had not the slightest intention to touch it again; for he had, he told me, left four cartridges in it.

As much as six inches more of snow came during that night and the next day, and again the wind blew, and the cold was intense.

I kept quite comfortable, however. The snow no longer troubled me, for I was completely snowed under. I took care of my stock, and to pass the time read novelettes. I sincerely wished for better books. The trashy stories were far from satisfactory, and I resolved that week—and I have kept to my resolve—to begin a Chautauqua course of study.

The sixth night after Andrew had called last, I heard snow-shoes creaking once more, and had no doubt that he had come over to look in upon me again, although it occurred to me that it was late for him to call.

I was on the point of crying out, "I hear you!" when I perceived from the sounds that there was more than one person. "Is it possible that Helen has walked over with him?" I thought.

The sounds ceased for a moment, and I heard men's voices speaking in very low tones. Then something—a staff or a gun-stock—was thrust down through the snow against the boards of the roof.

A sense of sudden fear possessed me. Then it occurred to me that they were probably a party of hunters in search of shelter. If they were decent persons and in distress, I might feed them and allow them to sleep in my cow-shed.

All this passed through my mind in a moment; and again I heard the staff or gun-stock thrust down through the snow.

Mustering my courage I called out, "Who's there and what do you want?"

A moment of silence followed my hail; then again I heard low words; and a voice called down to me, "Say, old gal, is yer husband at home?"

Something in the tone of the speaker's voice gave me a thrill of repulsion. I felt instinctively that the men were ruffians of the worst sort; and a desperate determination to fight to the death rather than let them in, took possession of me.

Almost before I knew what I was doing, I had Andrew's gun in my hands, and was bent on fighting. At the same instant an idea occurred to me; I changed my tone to the deepest bass which I could summon from my throat, and in imitation of a man's voice, croaked out, "Who are you? What's your business here?"

Andrew makes a call.

My ruse did not answer. A roar of derisive laughter followed my effort, and a voice cried:

"Too thin, old lady! We want to come in and get warm. We're travellin' missionaries, we are, an' we've got some tracts for ye! You may as well show us in. Where's yer door, anyway?"

"You can't come in!" I said, in as firm a voice as I could muster. "I warn you to go away!"

They laughed brutally. "We'll see about that!" one exclaimed. They began to thrust down heavily through the snow again.

I knew that it was useless to utter another word. A feeling of desperation nerved me. I pulled back the hammer of the carbine, and holding the piece out at arms'-length, and with the barrel pointing upwards toward the roof, discharged it.

It jumped downward from my hands, and the stock struck the floor. I was nearly deafened.

The cabin was filled with powder smoke. The bullet no doubt passed through the board and the snow, and how closely it passed to their bodies I do not know.

They withdrew hastily from the roof. At a little distance they stopped and relieved their feelings by an outburst of shouting.

I pulled open the door into the covered way, worked the lever of the carbine as Andrew had shown me, and then pushing the barrel out through the snow, in the direction from which the shouts came, discharged it again. It recoiled violently, possibly from snow getting in the muzzle; but I worked it, and fired again and again.

I know now how soldiers feel in battle; it is a savage spirit that seems to rouse like a wild beast in its lair. I ran back and thrust more cartridges into the magazine, filled it full, and then stood at the door and listened. I expected that they would attack me, and I meant to shoot in the direction of any sound I heard.

But I heard nothing further from them. I now noticed that my wrists were covered with blood where, from the recoil of the carbine, the piece of iron around the trigger had scraped the skin from my hands. It was not till toward morning that I became calm enough to retire and fall asleep.

I was somewhat amazed at my own performance, and to tell the truth, a little ashamed of it. It did not seem to me that I had made a very brave or womanly defence; and yet, as it turned out, I no doubt did the best thing possible.

Toward evening the following day I again heard snow-shoes, and this time Andrew called, in haste and excitement, to get his gun.

A sheriff and party of eight men had reached his home, and summoned him to accompany them in pursuit of four train-robbers who had boarded an express car, fifty miles to the southeastward of us, killing the messenger and a brakeman. The sheriff was tracking them.

"And they passed right close by your cabin here!" Andrew continued.

"Yes," said I. "They called, or tried to call, on me."

I pointed to the powder-blackened boards of my ceiling. "I made free use of your gun, Andrew, and you will find your cartridges four short," I said.

"Well, well!" he exclaimed, in astonishment. "Did you hit any of them?"

"I don't suppose I did. I hope not," I replied.

"'Hope not!'" he cried. "If only you had stopped all four of them, it would have been the best job of the winter. I'll bring the gun back to you soon," he added, climbing out to set off.

"But what about Helen?" I called. "What will she do while you are gone?"

"Oh, I shall not be gone more than thirty-six hours," he said. "I wanted her to come over here, but the snow is too deep. So she is going to stay at our house."

I was anxious for Helen's sake all that night, the next day and the next, for I could imagine how she would count the slow hours. If I did not hear from her that evening, I resolved to go to her cabin somehow the following forenoon, if I had to crawl over the drifts.

But toward sunset of the second day Andrew came back to leave his gun with me. He appeared greatly exhausted, and I noticed that his face had a gray, pinched expression.

"Bad luck," said he, wearily. "No luck at all. We ought never to have started with only ten men."

I made him come in for a few minutes while I prepared a cup of coffee for him, and he told me that the posse had found the robbers entrenched within a log-hut in the valley of a creek.

"It will take a hundred men to get them out of it," he continued. "In their first volley at us they broke the sheriff's arm, and killed another of our party in his tracks. They laughed at us, and called out that they wouldn't fire again, we looked so cold and hungry! We were glad to take them at their word, and get away. They were so well fortified that we couldn't touch them. They gave us all sorts of chaff, and one of them shouted, 'Tell that wild woman back your way that we will see her later!'

"That was you, I suppose," Andrew added. "But you needn't be afraid. Our fellows have gone back to raise a big party and get soldiers, if need be. We will have them yet!"

I bade him go home to Helen, and tell her to give him a thorough sweat that evening, for I saw that he had taken a severe cold.

I kept the carbine loaded and at hand, and when, toward evening of the second day after, I heard a faint noise on the snow outside, I seized it promptly. I feared the train-robbers might make good their threat to take vengeance on me.

But instead of robbers it was Helen. A moment after I heard her call to me, and ran to show her the entrance into my covered way.

"You dear girl!" I cried. "What is the matter?"

"O Lottie!" she faltered. "Andrew is quite sick. Do you suppose we can get a doctor?"

"I'll go back with you, and we will see what we can do," said I. I drew the snowy, tired little woman inside while I fed my cow and made hasty preparations to leave.

"He is feverish and badly pressed for breath," she told me. "Do you suppose it is pneumonia?"

I had no medicines save a bottle of ipecac and a box of mustard. We took these and set off at once. Helen had tried to walk on Andrew's snow-shoes, but after many mishaps with them, had stood them up in the snow, and come on in the snow-shoe tracks which Andrew had made while going to and from my place. We did not break through these old tracks as badly as one might have supposed, but got on quite rapidly, and picking up the rejected snow-shoes, reached their cabin in the dusk.

Andrew was sitting up by the stove, and I found that he had been much opposed to Helen's going for me. "Why, it is only a bad cold," he said to me. "I didn't mean that she should go, but she slipped out before I knew it.

"I'm going after those robbers again to-morrow, when the big party comes along," he continued.

I noticed that his flesh was very hot, that his breath came rapidly, and that he frequently coughed in a particularly abrupt, harsh manner. I resolved, if he continued to get worse, to make an effort to send, or else go myself, for a physician the following morning.

At any rate I could probably reach our Norwegian friends on snow-shoes—the distance was only about three miles—and induce the man to make the trip for us.

Whether or not the physician could be prevailed on to come out to us was a little uncertain, but I hoped that he would come, if the weather held fair.

We induced Andrew to put his feet in a pail of very warm water, with mustard in it, and we prepared a mustard draught for his chest. He was presently sent to bed, buried under blankets, and tucked in with three hot flatirons and two hot-water bottles.

But he could not lie down. At first we thought it obstinacy, for he laughed at us a little; but I soon saw that he could not breathe while lying down. So we let him sit up in bed, bolstered with pillows, and covered him in as best we could with the clothes.

I noticed that an asthmatic, wheezing sound issued from his throat or lungs. Still, neither Helen nor I realized that he was dangerously ill.

About eleven o'clock, while Helen had gone out of the room for a moment, Andrew said to me:

"Now Lottie, if anything should happen to me when I'm off with the party after those scamps, I want you and Helen to live together, just as you did before I came, and have my things here between you. 'Twas too bad of me ever to separate you from her. I knew it all the time. You'll never forgive me for it in the world."

I protested that I had already forgiven him.

"No, you never will," said he, absently.

I cannot narrate the sad scenes which followed that night. Nothing which Helen or I could do availed to help her unfortunate husband. He sank rapidly and fainted, and the breath did not return to his lungs.

Helen could not comprehend it. I had to take her hands and tell her the crushing truth: "Helen, he is dead!"

CHARLOTTE H. SMITH.

(To be continued.)

For the Companion.

A VENEZUELAN RAILWAY.

There are few more interesting engineering achievements than the little narrow-gauge railroad running to Caracas, the capital of Venezuela, from its seaport, La Guaira. The distance between the two cities, as the crow flies,—supposing for the moment that he could fly straight through the mountain,—is only six miles; but the railway connecting them is twenty-three miles in length, and constantly twists and turns on itself.

The road runs in zigzag fashion up the mountain to an altitude of about fifty-one hundred feet above its starting point, and then descends some fifteen hundred feet in the same manner into the valley of Caracas.

Twenty-two thousand rails were used in laying the track, and of these over eighteen thousand are bent. It is jestingly said that the engineer almost died of a broken heart, because he could invent no excuse for bending the remaining four thousand. He did his best, however, and no one who has to ride over the road, and finds himself shaken at every one of the three hundred and forty-six sharp twists which the track makes, will find it in his heart to condemn the poor man for not making a perfect job.

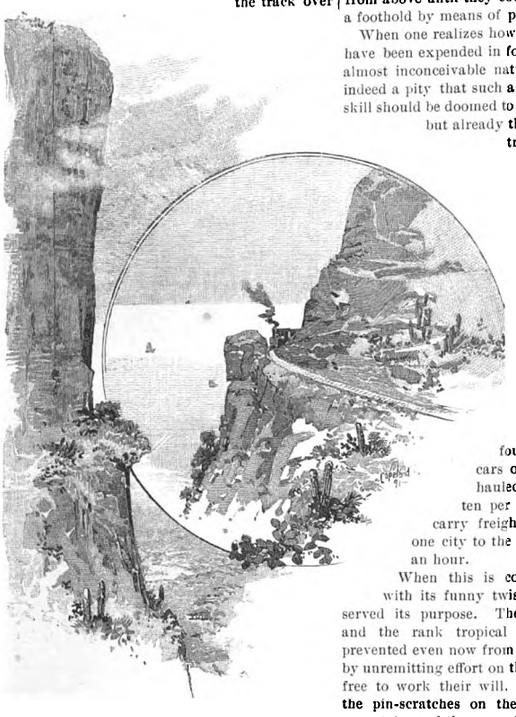
Two passenger trains each way pass over the road daily, leaving La Guaira at half-past eight in the morning, and at half-past three in the afternoon, making the journey in two hours and a half. This is a speed, exclusive of stops, of not quite ten miles an hour.

Each train consists of a locomotive, a baggage car, and two or three passenger coaches about the size of a street-car in Northern cities. The seats run lengthwise through the car—an arrangement necessitated by the narrow gauge of the road.

The fare for the twenty-three miles is two dollars and a half first-class, and one dollar and sixty cents second. The accommodations are equally bad in the cars of the two classes; the only visible difference between the two is that the first-class car is the less crowded.

The locomotive is a queer little machine, about the size of a dirt-cart. It has no bell, but the obliging engineer atones for this deficiency by keeping up an almost continuous whistling.

As we leave the little station at La Guaira, we take a serpentine course for about a mile through cocoanut groves along the sea. Why the road does not take a straight course through this first portion of the way, the constructor only knows, for the ground is perfectly level, and there are no obstructions more serious than a cocoanut palm or a banana plant.



After writhing along the beach for a short time, we suddenly make a sharp turn, and then begins the climb up the face of the mountain.

Up, up, up we go, turning now to the right and again to the left, then making what seems to be an almost complete circle, now passing through a tunnel—where we are nearly stifled by the hot air and gases from the engine, which sweep through the open cars, carrying with them cinders that burn holes in the clothes, or raise blisters where they touch the unprotected skin. Then we emerge from the hole in the mountain-side in a place where we

Digitized by Google

appear to be on the point of jumping over the precipice one or two thousand feet sheer down into the water that laps its base.

But we forget for a moment the constructor's passion for curves. We make two or three short turns, as if uncertain of our course, and then hoist sharply round, and go back the way we came. As we look down from the car window we see the track over

which we have just passed about fifty feet from us, and directly beneath us.

Suddenly we stop. We wonder what has happened, for there is no house in sight, and it would be difficult indeed for any one to find a spot on which to perch a house, so steep is the declivity. The only thing visible except trees and rocks is a large iron pipe running over wooden supports through a small ravine; and now we see that it carries water for the refreshment of our thirsty little engine.

Six times we stop in this way in our wild dance up the mountain-side, to take breath and water our engine, until we cross the highest point and begin to slide down to Caracas.

In going down the mountain on either side gravity is the only propulsive force employed, steam being kept up only to work the brakes and prevent too rapid a descent.

There is but one station, apart from the watering places, between La Guaira and Caracas, and this the railroad people have most appropriately named Zigzag. Here the trains from opposite directions meet and pass each other; and here the native passengers, who have been envying the engine its frequent potations, themselves revive their drooping spirits with brandy.

As soon as the engine has filled its boiler once more it gives one long shriek of warning, the passengers climb into the little cars, and we follow once more the giddy wake.

The scenery, as viewed from the window of our car, is grand; but in order to enjoy it thoroughly one must possess strong nerves. At our feet, a thousand metres below, we see a faint streak, which is the narrow beach on which La Guaira lies. The houses in the town look like dice, and the men and donkeys in the streets have become invisible.

Beyond, stretching away to the horizon, now vastly extended by reason of our elevation, we see the sparkling blue waters of the West Indian Ocean. A mere speck which we can hardly discern on the surface of the sea is the ship which brought us to this coast, and which left for the chilly north an hour before we began our cloudward climb.

If we turn and look ahead, we see the mountain rising up ever higher and higher until its peak is lost in the cloud that always clings to it, as if fearful of trusting itself to fly alone and without support over the distant ocean.

The air, which was so hot and sultry on the coast, is growing more and more fresh as we ascend, and it becomes almost chilly as the cloud hugging the mountain-top receives us, and draws the curtain which hides from our view the beauties of nature as well as the dangers which encompass us.

Dangerous as the ascent of the mountain appears to be, and really is, accidents are fortunately rare, owing to the constant vigilance exercised by the officials of the road over every foot of the track. Landslides do occasionally take place, nevertheless, and no amount of watchfulness can prevent them, or even give warning of their occurrence. Fortunately, they have never yet happened to strike a train.

The road-bed in many places is a mere scratch in the side of the mountain, barely wide enough to permit the passage of the narrow cars. The outer rail is often laid within a few inches of the edge of the precipice, so that in looking from the window one sees nothing but the bottom of the ravine hundreds of feet below.

While the road was building, it was frequently found necessary to lower men by long ropes from above until they could make for themselves a foothold by means of pick and shovel.

When one realizes how much labor and money have been expended in forcing this way through almost inconceivable natural obstacles, it seems indeed a pity that such a triumph of engineering skill should be doomed to an ephemeral existence; but already the freight and passenger traffic taxes the capacity of the road to its utmost, and if the present rate of increase continues, it will be but a very few years before it will be utterly unable to handle it.

Work has already been begun by an American company on a new route between La Guaira and Caracas, which is to pass under the mountain through a tunnel four miles in length. The cars on this new road will be hauled by cable power up a ten per cent. gradient, and will carry freight and passengers from one city to the other in less than half an hour.

When this is completed, the old road, with its funny twists and turns, will have served its purpose. The rains, the landslides, and the rank tropical vegetation, which are prevented even now from burying the tracks only by unremitting effort on the part of man, will be free to work their will. Nature will soon heal the pin-scratches on the face of the grand old mountain, and the crazy little railroad, in its day a mighty promoter of the commerce and prosperity of Venezuela and of its capital city, will become a memory. THOS. L. STEDMAN.

For the Companion.

A BENEDICTION.

All through the evening, like a soul in pain,
With broken sobs made moan the autumn breeze;
Then softly fell upon the suppliant trees
The tender benediction of the rain.

CLINTON SCOLLARD.

THE RUSSIAN LOAN.

During the month of October the Russian government offered in Paris a new loan of about one hundred million dollars. There are very few transactions between men that are usually governed more by hard-headed business principles, and less by sentiment, than the borrowing and lending of money; but in this case, for once, sentiment seems almost to have gained the upper hand.

The French people and Parisian bankers subscribed for seven and one-half times as much money as the Russian finance minister proposed to borrow. Yet he had offered the loan at a lower rate of interest than his country had ever before obtained.

This success in Paris had been preceded by a refusal of the bankers of Berlin to assist in putting the bonds on the German market. Some of them were disposed to do so, but the German press, during the latter part of September, had been almost a unit in declaring that no patriotic German should lend Russia money, or help her in any way to get it.

Though the Russian government sought the loan on the strength of allegations that the money would be devoted to railways and permanent improvements, the German papers professed to believe that it would really be expended on improving Russian preparations for war. They alleged that Russia is allied with France, and that German money lent to the Czar's minister would therefore go to strengthen Germany's enemies.

Not long before that time two occurrences had specially excited German feeling against Russia. The Russian government had prohibited the export of rye, and thus raised greatly the price of that grain in Germany, where it is largely consumed in making bread for the poorer classes and the army. Though the Russians founded this prohibition on the fact that a severe famine threatened her own people, the Germans seemed to regard it as an act of hostility to themselves.

They also were vexed at the enthusiastically friendly reception given to the French fleet, not long before, at the Russian port of Cronstadt.

Hence the Berlin bankers would have nothing to do with the new loan, though they had strongly supported Russian credit so long as Bismarck's policy kept the Emperors of Germany and Russia on friendly terms.

The Cronstadt incident of course pleased the French as much as it annoyed the Germans, and Paris was all the more disposed to take the loan because Berlin scouted it.

English and Dutch capitalists profess a suspicion that Russia devotes more money to military purposes than she pretends to use in that way; and they also suspect that she pays interest on old loans out of new ones, and not out of revenue. For these reasons Russian loans have not been popular in London and Amsterdam for some years past.

Nevertheless, the credit of Russia has risen rapidly of late years. She is a frequent borrower, and owes about one thousand million dollars to foreign lenders besides, it is supposed, about five times as much to creditors within her borders.

French investors are said to hold something like half of all the bonds that Russia has given for her foreign borrowings. Hence the French are materially interested in supporting Russian credit.

But there can be no doubt that their subscription to the new loan would have been of less surprising magnitude had they not desired to signify good will to Russia, and opposition to her neighbor and their own. And on the other hand German bankers would have been by no means so suspicious as they professed to be of Russian credit, if the old friendliness between the two powers had not been somewhat weakened.

WINTER IN THE SIERRAS.

A billowy unmoving sea of snow,
Glinting with stars of myriad fallen flakes;
In the white silence of the world awakes
The sound of winds, their flapping banners blow;
Gusty they speed, then heavy move and slow,
While yonder fir its laden fringes shakes.
The sun gleams silver on the frozen lakes,
And dazzles all the peaks with brighter glow.
Flashes the stream like sword half-drawn from sheath,
And every spray of pine-tree foliage hid
Lifts up a tiny snowy pyramid;
A burdened house-roof glimmers from beneath
The piling drifts; the hills and chasms deep,
Unfretted by the dream of summer, sleep.

VIRNA WOODS.

A YEAR OF PLENTY.

The good fortune of the United States during the present year, in respect of the products of the earth, appears in striking contrast with the misfortune of the Old World. With us the ground has yielded crops of unusual abundance.

It often happens that, in the same year and place, one crop is large and another small. A season may be unfavorable for maize which is very favorable for wheat, while a great deficiency in fruit may be balanced by a large yield of potatoes. In the present year, however, abundance is the rule in every crop; not one can be pronounced a failure.

In the Old World, on the other hand, deficiency is the rule. Russia, which is ordinarily a great source of grain supply to other European countries, is on the verge of a famine. The government has forbidden the exportation of rye, which is the bread-grain of the people.

British and French farmers have been disheartened and made poorer by rainy and stormy weather; their crops have been beaten down, and a fair yield prevented. Great Britain is forced to import one hundred and sixty million bushels of wheat.

In Central Europe not so bad a state of things has been reported, but in general the crops have fallen below last year's.

Meantime American abundance has been so marked that the government and private crop returns have been very interesting reading.

Though for a time corn was in many sections the most unpromising of all the staple crops, it turned out in the end above the average, and one of the largest in volume ever harvested. It is estimated that there has been raised in the country a total crop of two billions of bushels, or thirty-one bushels of corn for every man, woman and child in the country.

In wheat the abundance has been much more marked. In some parts of the country wheat is pronounced an exceptionally fine crop; in others it is the largest ever harvested; in still others an excellent average. In several of the Northwestern States extremely large yields have been reported.

The oat crop, an important one nowadays for human beings as well as for horses, has been the best since 1886, following a very bad crop last year. Rye, barley and buckwheat also yielded well.

The average yield per acre of that very important crop, potatoes, has been the largest reported for ten years; and the total crop is the greatest ever grown in the country. The potato crops of whole States have averaged one hundred and twenty and one hundred and twenty-five bushels to the acre, which has hitherto been regarded as an extreme yield, even in special fields.

For the most part the fruit yield has been large, with all the rest. In the States which are most dependent upon their fruit crop for their prosperity, the production has been most abundant. Pears, grapes and peaches have been plenty and cheap in the great cities of the East, and the poor have eaten more of these delicious fruits, probably, than ever before.

Even those spontaneous crops of nature, the nuts and acorns, have been, in a great part of the country if not in all, very bountiful, to the equal delight and profit of boys and squirrels.

One great staple crop, indeed, which used to be called the "king" of all, cotton, long promised to be deficient. Bad weather and killing frosts foreboded a loss of production. But the large arrivals of cotton in the New Orleans market indicate that the bad effect of the unfavorable weather had not been as great as was supposed; and the quality is everywhere reported high.

On the whole, it has been a year of wonderful abundance. It is likely to be followed by a prosperous time for our farmers, for the scarcity abroad, it is supposed, will prevent prices of certain agricultural products from being cheapened by plenty. On the other hand, the people who consume these products, and do not raise them, are likely to be more than compensated by the improved market for their own products and commodities which the prosperity of the farmers will create.

DREAMING AND DOING.

An American officer who went through the Franco-German campaign with the Prussian army in order to study the art of war lately told the following anecdote:

He became intimate with two German officers, one of whom was a grave, elderly man of undoubted courage and long experience in his profession. His knowledge of military tactics made him an authority in his regiment; all disputed points were referred to him by his brother-officers for decision.

The other, who was a young, gay fellow, fond of cards and dancing, held a higher rank in the corps.

The American one day commented indignantly on this fact to the older man.

"Why," he asked, "should P——, a man much your inferior, out-rank you?"

"Hold there!" said the old officer. "You mistake. P—— is not my inferior. Perhaps he has not studied the art of war as thoroughly as I have; but the little he knows he puts into practice. When you see us in battle you will understand the difference. *I* know what ought to be done. *He* does it. If a park of artillery is to be taken, while I am for a moment or two hesitating over scientific rules as to the best way to do it, he, with half of a rule dimly in his mind, takes it."

In every school, society or community there will be found men who have knowledge and ability, but who lack the power to use them effectively, and other men who, with narrower mental scope, know how to use their small intellectual capital, and to impress themselves and their purpose upon their generation.

Many a thoughtful, dreamy boy finds himself thrust aside in the race at school, just as he will be in life hereafter, for the want of this faculty. It is of course born with the men who have it largely, but it can be cultivated by very simple means.

See that, as far as possible, every seed of knowledge which is planted in your mind bears fruit. As soon, for example, as you begin to study German, begin to speak it.

Test your new ideas of architecture by the construction of the house you live in, and of hydraulics by its drains. If public speaking seems attractive to you, and you study the rules of oratory, put into practice, so far as you can, these rules. Join a debating club, or form one among your fellows, and speak upon such topics as interest you. Struggle vigorously against your wish to sit idle and to dream in a corner, even though your books are your companion.

Remember that when a house is burning it is not the man who understands scientifically how to put it out who is valued, but he who understands and—brings the water.

"TIRED OF LIFE."

Not many months ago the newspapers chronicled the death by suicide of a young woman, the daughter of educated, well-to-do parents. She left a letter, stating that she had no grief or trouble, but was simply "tired of life."

She said that she had become satisfied that her abilities were mediocre; that she would never acquire the fame and distinction for which she had hoped. The "public had rejected her," and she "preferred death to a commonplace life."

It was stated by her friends that she had great ambition; she had travelled in this country and Europe, had studied art, and sent many pictures to salons and exhibitions, none of which were accepted. Then she had deluged the editors of magazines with essays, poems and stories, but without success in securing their publication. "Disappointed in all of her hopes, eternal sleep seemed to be the only resource."

This feverish story suggests the inquiry whether, if this young girl had from childhood taken an interest in her father's home, and in the simple cares and duties of that home, she would not be living, busy and contented, now?

The change which forty years has brought in American social and domestic life is nowhere more marked than in the position which a young girl to-day occupies in her home. Her mother at twenty was almost sure to have been skilful with her needle, and ready and able to help her mother in the management and control of the household.

The young girl of to-day is rarely, in the old, simple, home-keeping sense, the "daughter of the house." She may attend a scientific course of cooking, or know how much farinaceous food each person should eat daily, or possibly be a member of charitable or scientific associations, but she is not fitted to take command in the kitchen, and send up a savory dinner if the cook takes an abrupt departure. Does she know how much coal the family use in a winter? Can she doctor an aching tooth, or dress a burn?

In the struggle and triumph of the opening of wider careers for women there is danger that the coming generation will overlook the fact that the old occupations are, after all, the most useful to the world and the noblest. A girl may or may not

Digitized by Google

be qualified to be an artist, a scholar, or to enter business life, but nature fitted every woman to be a daughter, a wife, a mother, and a home-keeper. Outside of this destiny many women do lead helpful, noble lives, but they are not less exceptions to a universal law.

Let the girl who reads this sing, or paint, or write, or teach if God has given her the ability to do it; but He always gives her the ability to make the house in which she lives a happy home, and to widen its tender, holy influence.

THE RIGHT TO PRIVACY.

Two decisions have recently been rendered by important tribunals which rebuke the tendency to interfere with the right of the citizen to be let alone. The supreme court of Mississippi has decided, in the case of a black man whose cabin was entered by a party of men who came to "arrest" him, without warrant of law, for an alleged offence, and who shot and killed two of these invaders of his house, that a man has a right to defend himself under such circumstances.

The court, in setting this man free, declared its belief that the home should have every possible safeguard thrown around it.

The other decision mentioned is in a case of a very unusual character. A certain society proposed to erect a statue of a deceased and very philanthropic lady. The members of this lady's immediate family objected, on the ground that notoriety in any form was wholly distasteful to her, and that, inasmuch as she was a private citizen, the erection of a statue of her was an unauthorized invasion of privacy.

The supreme court of New York took this view of the case, and declared that the wish of her family, representing her own known desire, should be observed, and that no public representation of her should be permitted.

It is scarcely possible to take up a newspaper without finding in it invasions of the sacred right to privacy, offences which these decisions could not reach.

Not only the private affairs of persons holding public relations are pried into and falsely published forth, but those of persons who have no public functions whatever.

This tendency is a most deplorable one, and unless it is checked it will bring about a deterioration of public sentiment, and cause deserving persons to shun public relations of every sort.

MARCO BOZZARIS.

Soon after Fitz-Greene Halleck had published his stirring "Marco Bozzaris," he repeated the poem to a lady, an intimate friend of his. She expressed great admiration of the beautiful lines, but when he was in full enjoyment of what he considered her perfect appreciation she surprised him by the innocent query:

"Who was Marco Bozzaris?"

"Well," said Mr. Halleck, despondently, "what's the use of becoming martyrs for liberty or of poets celebrating heroes, if ladies won't even inform themselves about the events of the day?"

The remembrance of another incident connected with the poem never failed to elicit a groan from its author.

At a certain dinner-party, at which he was present, it was expected that each man should sing a song or make a speech. Among the guests was a Dutch Jew, whose English was execrable, and he had been previously persuaded by a joker to commit the whole of Marco Bozzaris to memory that he might recite it for the gratification of the poet and the poet's friends.

The day came, and the Dutchman was called upon to speak.

"Shentlemans," said he, rising, "I can neither make de speech nor sing de song, but I vill deliver von grand poem."

This he proceeded relentlessly to do, and Halleck, when he heard his harmonious measures delivered in a mixture of English and Dutch, was divided between the temptation to laugh and to cry.

EQUALS.

Every incident should be welcomed which, in a country where offended "honor" must be satisfied by questionable means, tends to make the practice of duelling absurd. Many a sensible man has escaped the lifelong remorse attendant on "bringing down his man" by the simple method of throwing cold water on the person's injured sensibilities in the beginning.

One day, a distinguished notary, while breakfasting with a friend at a café in Paris, indulged in some stinging comments on the public acts of Marshal Marmont. Suddenly, another gentleman, dining at a neighboring table, rose and approached them, his moustache bristling with anger.

"Sir," cried he, tragically, "you shall give me satisfaction!"

"Are you Marshal Marmont?" quietly asked the notary.

"I have not that honor," was the reply, "but I am his chief aide-de-camp."

"Give me your card, then, sir," said the notary. "I will send you my head clerk."

THEIR REASONS.

A prominent singer who began his career in giving concerts about the country had some extraordinary experiences in towns where such entertainments were of rare occurrence. One night, when he was persistently applauded, he returned to sing a second song, but was surprised by a stentorian voice from the audience.

"Oh, we don't want nothin' new! Sing the fust piece right over agin!"

At another time, the audience was so wildly appreciative that it refused to consider the concert at an end, and clamored loudly for "just one more." It was given, and then another demanded. Patience failed the singer at this point, and he begged his manager to go before the curtain, and state that he really was unable to sing any more. And thus was the statement worded:

"Ladies and gentlemen: Mr. Martin can't sing no more to-night. He can't, honest. His wind's give out!"

A similar story comes from another singer who could not refrain from telling it although her seven-year-old niece, a fastidious little lady, pronounced it "not a very *pretty* story, auntie!"

The lady had been taken ill after eating some decoction of ancient lobster at the hotel, and sent her manager word that she really could not sing. He accordingly appeared before the disappointed audience, and announced:

"Ladies and gentlemen: Miss Merriam aint here to-night. She couldn't come. She aint in fit circumstances to sing. Her stomach's troubling her!"

Fifty Thousand Yards of Roses.

The demand for the beautiful picture, "A Yard of Roses," has been so great that the Publishers have been compelled to order another edition of fifty thousand copies.

As many of our subscribers have desired to make a Christmas present of a year's subscription to *The Youth's Companion*, and others will no doubt wish to do the same, we will in such cases send, on receipt of $1.75, the Double Christmas Number and a copy of the Yard of Roses, so as to arrive in season for Christmas, if the orders are sent to us promptly.

The subscription must be a new one. In giving *The Companion* you really give fifty-two Christmas presents.

FOR NOTHING.

The records of the Sanitary Commission, which accomplished such untold good during the Civil War, contain one story of a dear old lady who had gone to Washington to nurse her boy back to health and strength again. At length, when the invalid was really getting better, her own face grew sad, and she confessed that something was on her mind. Then it came out that her money was almost exhausted.

"I didn't think it would take so much," said she, sorrowfully. "It's farther away from home than I thought, and board here is so high that I've hardly money enough to carry me back, and by another week I shall have to leave him. I have been round to the stores to buy some little things he would eat, but the prices are so high I can't pay them, and I'm afraid if I go away, and he doesn't get anything different to eat," and the tears trickled down her cheeks, "maybe he won't—be so well."

"Come with me," said the person in whom she had confided. "We will go to a store where things are cheap."

They entered the great building assigned to the commission, and there the gentleman ordered a supply of sugar, tea, crackers, canned fruit; then jelly and wine, milk and underclothing, until the big basket he carried was quite full.

At first, the mother's face had beamed with joy; gradually it fell, and at length, she began to return the more costly articles, saying pitifully that she "really hadn't enough money."

"Hadn't you better ask the price?" said her guide.

"How much is it?"

"Nothing," replied the "storekeeper."

"Sir?" queried she, in the utmost amazement, "*nothing* for all this?"

"Have you a Soldier's Aid Society in your neighborhood?" asked the guide.

"Yes, I belong to it myself."

"Well, what do you suppose becomes of the garments you make, and the fruit you put up?"

"I hadn't thought anything about it. I supposed they got to the army *somehow*."

"Everything here, garments, fruit, milk and wine, came from your society or others just like it. Come here whenever you wish, and call for anything you need. You shall save his life yet."

And she did save his life when nothing but motherly care could have done it.

FINDING HIS BRIDE.

The custom of throwing obstacles in the pathway of the bridegroom, as a prelude to the marriage ceremony, is of very ancient origin. Mythology has its tales of suitors whose courage and skill were tested before they were allowed to take their brides; in certain remote districts, even in civilized lands, some form of such usages still exists. Says the author of "The Swiss Republic:"

In one part of the Canton of Ticino, a very quaint marriage ceremony prevails. The bridegroom dresses in his "Sunday best," and accompanied by as many friends and relatives as he can muster for the *fête*, goes to claim his bride.

Finding the door locked, he demands admittance; the inmates ask him his business, and in reply he solicits the hand of his chosen maiden.

If his answer be deemed satisfactory, he is successively introduced to a number of matrons and maids, some perhaps deformed, and others old and ugly. Then he is presented to some large dolls, all of which he rejects with scorn, amid general merriment. The bewildered bridegroom, whose impetuosity and temper are now sorely tried, is then informed that his lady-love is absent, and invited in to see for himself.

He rushes into the house, and searches from room to room, until he finds her in her bridal dress, ready to go to church. Then are his troubles over, and his state as a benedict assured.

WAR AMONG FROGS.

Many of the citizens of Vermont will remember to have seen on one-dollar bills of the Windham County State Bank a vignette representing frogs fighting. This was engraved to commemorate what is known as the Battle of the Bullfrogs.

Many years ago, when the town of Windham was newly settled, there was a very dry season. There are two large ponds in Windham, separated by a considerable strip of land. Each of these ponds was inhabited by a large number of frogs.

The smaller pond dried up, and its inhabitants started in a body for the lower and larger pond. They were met in the intervening space by a party from the larger pond, and a fierce and long-continued battle ensued between the rival communities.

The hideous clamor of the frogs during this encounter attracted the attention of several farmers, who witnessed the strange spectacle of bullfrogs engaged in a fierce and deadly battle. The contest lasted twelve hours, and nearly all the inhabitants of the little town witnessed it. The war is now one of the traditions of the place.

Good Housekeepers are fast finding out that a pure Extract made by Joseph Burnett & Co., costing a cent or two more a bottle, goes farther and makes the most delicious of dishes. Avoid goods only recommended by their cheapness. [*Adv.*

New Games for Christmas.
Illustrated Catalogue on receipt of 2-cent stamp.
E. I. HORSMAN, Publisher, 341 Broadway, New York.

OFFER OF STAMPED GOODS.

A Christmas Present
For your Boy. Nothing better than our SORRENTO BRACKET SAW OUTFIT.

With this Outfit, Brackets, Watch Stands, Easels, Match Safes, Mirror Frames, Paper Cutters, Hanging Baskets, Toilet Stands, Stereoscopic View-Holders, Pen Racks, Table Mats and many other beautiful ornaments, can be easily made.
Our First Announcement of a Bracket Saw Outfit appeared in THE YOUTH'S COMPANION of April, 1874. **Tens of Thousands** of these Outfits were obtained by our subscribers. The price asked was $1.00. To-day we offer the same Outfit to a new generation of boys and girls at a greatly reduced price.
SPECIAL OFFER. On receipt of **50 cents** and 10 cents extra for postage and packing, we will send to any person our new **Sorrento Scroll Saw Outfit** consisting of 1 Polished 12-Inch Birch-Wood Bracket Saw Frame, 12 Saw Blades, 1 Drill Point and Handle, 1 Sheet Impression Paper, 2 Sheets Assorted Designs and 1 Manual.
This Outfit will not only cultivate a mechanical ingenuity, but it will interest the boys in the adornment of their homes and also enable them to make beautiful Holiday Gifts.
THE YOUTH'S COMPANION, Boston, Mass.

"What a fascinating perfume! What is it? Where *did* you get it?" "Why, it's *Lundborg's Edenia*. I saw it advertised and sent five 2c. stamps for a trial sample."

Is "**Perfumery**" a name and does any combination of high-sounding words constitute a Perfume? These are strange questions, but think for a moment how much they suggest. There is no other one article of toilet use so gratifying and at the same time so refreshing and satisfactory, as a fine and honest Perfume, one that is rightly made, and perhaps there is no other one thing in the way of a luxury we so readily pay our money for. This is so generally recognized that it has of late led to what might be called an "epidemic" of cheap Perfumes that are unintelligently and, therefore, unskilfully made, and have little or no worth in common with real Perfumes.

Lundborg's are **real Perfumes** and are the result of a lifetime study and experiment. **Lundborg** was a most skilful botanist and chemist, and **Lundborg's Perfumes** bear the closest and most satisfying resemblance to the odors of the flowers,—they are natural and delicate. If you have not tried them send five two-cent stamps for a sample of either *Alpine Violet*, *Goya Lily*, *Edenia*, *Maréchal Niel Rose or Swiss Lilac*, to LADD & COFFIN, 24 Barclay Street, New York City, N. Y.

YOUNG MEN IN OUR CITIES.

Lodging-House Life.

It is estimated that not far from thirty thousand persons sleep in rented rooms in Boston lodging-houses. Most of these are young men and women from the country, a considerable proportion of whom are bravely struggling to live respectably on very small salaries.

The general interest felt in the manner of life of these lodgers induced the writer to seek interviews with many of them. What was told him is in part given below, and as nearly as possible in the language of the narrators.

One of the first of the young men seen, lived in a brick block on a street very largely filled with lodging-houses. He was a muscular young

Narrow Quarters.

fellow of eighteen who had recently come to Boston from the Provinces, and occupied a room which was hardly more than a closet-like recess at the end of an upper hall. He was very willing to talk, and expressed himself with great frankness.

Statements of a Young Man from Canada.

"I understand what you have come for, and I shall be glad to give you the information you seek. You see for yourself the room I have. It is a side room, about big enough for a small pantry. What heat it receives comes from the general heat of the house."

"You must be cold, then, sometimes."

"No. There's a good furnace in this house, and by leaving my door open, a good deal of heat gets into the room; besides, I'm from Canada, and something of an athlete, and perhaps do not feel the cold as a less rugged man would."

"Your room is certainly small?"

"Yes. That short mantel-bed, the little bureau, and my small trunk are a tight fit for it, as you see. There's no closet, so I use that row of pegs on the wall. But this room is quite ample compared with the one I got into when I first came to Boston.

"That was an attic room, with just enough space, lengthwise, for a small bed and a miniature dressing-case. One little chair was edged into it somehow. I couldn't find space for my trunk except by keeping it on end. To open it, I used to run it into the hall, or get it upon the bed.

"It's a fact, there really was hardly space enough in the room for the necessary motions in putting on and taking off one's clothes. I wanted to sleep in something bigger than a packing-box, so I got out of that and came here."

The young man continued: "I'm getting $6.00 a week in a wholesale store. I'm not disappointed as to the amount of my pay. I knew the big stories I'd heard before coming from home, of great wages in the States, were all nonsense; but for all that," he said, laughing, "I find it hard to keep alive. Nevertheless, I've lately been cutting down expenses so as to save up."

"To *save up* on $6.00 a week! How can you do that?"

"Well, in the first place, I have to spend $2.00 every week for this cupboard—my room, you know. Then by strict economy—and it has to be mighty strict I assure you, though my work don't oblige me to wear cuffs—I manage not to average over twenty cents a week for my laundry."

"Well, your meals must cost you from $3.50 to $4.00 a week, and then your clothes and extras —"

"Wait a moment. I don't pretend to furnish my clothes yet, so they don't count. When it comes to extras, I let them pretty much alone. My food is now costing me rather less than $2.50 a week. Breakfast and supper average together about seventy-seven cents a week, and dinner —"

"Wait. Tell me how you get breakfasts and suppers for five and a half cents each."

"By living on a loaf of bread and a quart—now and then three pints—of milk a day, besides my dinner. I've been doing that for a fortnight, and find I get on very well, though the milk don't seem to be so well acquainted with honest cows as our milk 'down home' seemed to be."

"And your dinner?"

"Well, for dinner I have a good square meal."

"What does that cost?"

"Twenty-five cents. At some dining-rooms you can get soup and fish and meat, vegetables and two kinds of dessert, besides tea or coffee for that sum. Sometimes, to average up the cost, I go to a restaurant where my sister gets her meals. There twenty-one meals are given for three dollars. I take a punch out of her ticket, and pay her the price: fifteen cents."

"You're lonely at times, I suppose?"

"Well, yes, sometimes. I go to church, you see, and sing in the church choir, and have made a few friends in that way. Then there are the libraries, and in the summer I take long evening walks, or play base-ball on the Common.

"Sometimes, though, of a Sunday afternoon I feel lonely, but I generally work the feeling off by writing a long letter home. That seems like talking to the folks, and helps wonderfully. But I tell you, sir, for a country boy who has been used to looking out on 'all out-doors,' such a cramped little box as my room is, with only a view of the grimy block across the way, is at times hard to bear. I'm not in the room much, though—thank Heaven! I shall have a 'raise' in my pay before long, I hope; then I'll go where there's more space for breathing and moving."

Sick in a Lodging-House.

Saving in food expense is sometimes hazardous economy, as the testimony of another worker shows.

"I came here," he said, "from Vermont. I was quite 'green,' and made some rather serious mistakes as to boarding and lodging. Soon after I commenced work I found that my wages were too small to meet my expenses, and I must be more careful about expenditures, or I should go to the wall; so I resolved to cut down on food.

"I made a few doughnuts answer for breakfast, a glass of milk and a few crackers for supper, and a cheap sandwich or two for dinner. Sometimes I was rash enough to buy baked beans at a cheap restaurant; that I deemed an extravagance.

"It was not long before I began to feel weak and depressed, and thought it was caused by my hard work. The depression continued, and at length I was utterly prostrated, and had to go back home for a six months' recruiting.

"I had a miserable time of it, too, in trying to cut down on lodging expense. I hired a cheap, rather dirty room in one of the old, shabby city houses that was managed by people who couldn't afford to be very particular in the selection of their lodgers.

"This was in winter time. The house was respectable, or tried to be; but it hadn't much else to commend it. The people who kept it were kind-hearted, but slack and ignorant. My room was cold as a barn. I tried sometimes to heat it by shutting the door and turning up as much of a blaze as I could coax out of the gas-jets. There was not much heat to be got that way.

"The children of the landlady at length 'came down with the mumps,' and were generous enough to give them to me. I couldn't very well have had a worse present. I was well aware that for an adult to have the mumps and a chill on top of it meant a trying siege of illness, if not death.

"Well, sir, I was too ill to go to work, and moped about that dark, dirty kitchen all day, hugging the stove. I didn't dare stay in my own room; it would have been sure death, it was so cold there.

"I couldn't eat; for a man with the mumps, as you know, can't swallow anything without, so to speak, cutting his neck in two; and the landlady didn't know enough to make me gruel or beef-tea. I certainly had about as wretched an experience as you can imagine. How I lived through it I don't know, but the mumps worked off at last.

"Oh, I forgot to tell you that when at night I'd crawl from the kitchen to bed, and cover myself up heavily to prevent a chill, I'd have what poor sleep I got broken up by a noise—really an infernal noise—made overhead by a lodger who had spells of delirium tremens. For right-down wretchedness, it seems to me there's no situation worse than that of a poor fellow, sick and alone in a cold, squalid city lodging-house!"

"How are you living now?"

"As the majority of lodgers on low wages live. I hire a reasonably comfortable room, and get my meals at dining-rooms, on the meal-ticket plan. As to the food, well, it costs $3.50 to $4.00 for 21 meals. You may say it's as good as can be expected for the price."

Another Experience.

Another country boy opens his account of the petty annoyances, and what may be called the grim humor, of life in a cheap lodging-house as follows:

"In some respects I've had a rather funny

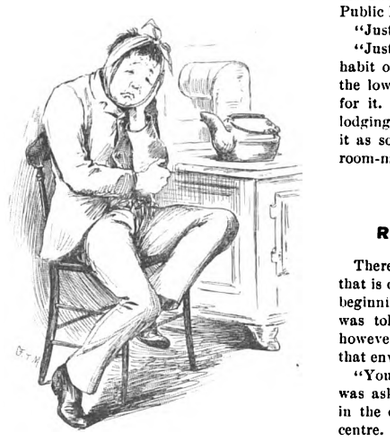
Breakfast and Supper in his room.

experience in lodgings. Funny? Well, perhaps I ought to say serious. When I tell you my story you can apply the proper adjective.

"My first place was a boarding and lodging-house that had a reputation for gentility, and a lady ran it who was said to be 'motherly.'

"It was a practice at this house to call out at meals the name of each boarder as he gave his order, in this manner:

"'Mr. Cobb's steak!'



"'A chop and coffee for Mrs. Davis!'

"At table I sat near the order-slide, and could hear much of what was said in the kitchen. As a poor young fellow, trying hard to 'find himself' on next to no wages, I naturally had the cheapest room in the house, while a few who sat at the table hired suites quite elegant by comparison.

"Well, while the lodgers who paid the most for their rooms were well and promptly served, I noticed that when the order, 'Steak for Mr. Faxon!'—my name—was given at the slide, small pieces of meat, the poorest part of the cut, were almost sure to come out. If there were soggy potatoes, I was served with them.

"Well, one morning I gave my order, and to my surprise, out came a large, juicy steak with mealy potatoes, such as I had not seen since I had been in Boston. I made up my mind that the landlady had become in reality 'motherly,' and for the first time since I entered the house, I began to feel that I was cared for and thought a little of.

"I had hardly touched the steak, when a saucer of fine large blackberries was set by me. You

Afflicted.

may be sure that I then felt as if I had been nominated for a high office. But almost instantly I heard a commotion behind the slide:

"'You've been and given Mr. Highton's steak to Mr. Faxon. Go and take it away—and the blackberries, too.'

"'I can't.'

"'You must.'

"'I sha'n't!'

"'You shall!'

"The dispute was still going on, when another waiter slipped up to me, made a movement to get my steak away, but seeing I had cut off a small portion of it, and that had better not be done, she took the blackberries, and carried them to Mr. Highton at the aristocratic end of the table, leaving in their place a smaller plate of much less attractive berries.

"Of course this incident left what the romance writers might call a 'rankling wound,' but I should have accepted it without open complaint if the very next day another disagreeable event had not happened. A maiden lady sat not far from me, who was one of the most fussy and exacting persons I have ever seen. Her chair creaked somewhat at breakfast, so what did the nervous, angry woman do but stand up and tear off its cover, and then deliberately break the chair to pieces.

"This decisive action of the maiden lady, of course, left one less chair in the dining-room. Well, that night when I entered my room, I perceived that my only chair—a neat, strong little chair—had been removed, and in its place was a rickety, soiled affair, that I almost feared would break and let me down upon the floor if I sat upon it carelessly.

"I might not have made any objection to this change had not another lodger suddenly appeared and claimed it. It was, I believe, the only chair furnished to his room. The landlady, in order to make up for the deficiency in the dining-room, had taken my chair, and to satisfy me had taken my neighbor's.

"In this case I acted promptly. Allowing the other lodger to take his property, I went to the dining-room and brought up from it, for my chamber, as good a chair as I could find.

"In the midst of the era of uncomfortable feeling caused by the chair episode, I went away on a short suburban visit. Returning after an absence of three days, I knew when I entered my room that some stranger had occupied it during my absence."

"How could you be sure of that?"

"Oh, there are always certain small displacements of furnishings from their accustomed positions that the regular occupant at once detects. At any rate, I was right in this instance. During my absence, the room, for the exclusive use of which I was paying rent, was occupied by an applicant for temporary shelter, known in lodging phrase as a 'transient.'

"My neighbor, whose chair had been transferred to my room, was kind enough to give me the facts in the case, and by the way, I have good reason to be glad of that little chair difficulty, for it introduced me to a capital fellow who has been a warm friend of mine ever since."

"Well, you left that house, I suppose?"

"I did."

"And then you found a better place?"

"You can judge for yourself. Remember that I was earning a mere pittance, and could not choose my lodgings. I wandered about the 'lodging-districts' of Boston, until I found and engaged a room that was at any rate clean and within my means. But it was a mere niche. There was no place in it for my trunk, which had to stand in the hall, and the door could only be partially opened because there was no swinging space for it.

"I hired that room at the beginning of winter, and owing to its situation, I think it was the coldest I ever was in. After business hours I had to do one of two things: either go to bed in order to keep warm, or go to the reading-room of the Young Men's Christian Association or to the Public Library."

"Just to keep warm?"

"Just to keep warm. I may have developed a habit of reading because of this, but if I have, the low temperature of that room is responsible for it. It is hardly necessary to say that this lodging-house had no parlor for its guests. I left it as soon as I could, and am managing, with a room-mate, to get on now quite comfortably."

Reckless and Fatal Habits.

There is still another side to lodging-house life that is often attractively presented to young men beginning city work. Only a small part of what was told me can be recorded here. Enough, however, will be given to show the fatal dangers that environ the homeless city worker.

"You say you have 'larks' in this house?" was asked of a young man, who hired a room in the older part of the city near the business centre. His room, like others that I saw, was decorated with theatre-posters, taken from restaurants.

"Larks? Yes. To be sure some of it's just boy's play, but then I must confess that most of us take a glass of wine or stronger liquor when we want it; and when it comes to a friendly game of cards,—well—say for small stakes, just enough to make it exciting,—why, *we're there*, you know, every time.

"As to larks; well, in boxing and in the fun that follows, we break chairs occasionally. Once the fellows injured a marble-topped table to the tune of $7.50. I paid my share. I don't think the other fellows did.

"We've smashed in the front door glass (that was paid for), and we've entered the room of a lodger we didn't like,—because she 'told on' us,—and pulled out all her bureau drawers, and scattered her things all over the room. She left the next morning. We are most of us smokers, and of course 'float the duck' when we feel like it."

"Float the duck? I don't understand."

"Why, we chip in the money and stand general

Digitized by Google

treat for something to drink. Of course some fellow drinks too much and gets to feeling *high* you know, occasionally, but the rest of us are on the lookout, as a general rule, and help him up-stairs or to bed, so as not to make too much noise."

"You spoke of card-playing—"

"Oh, yes! and shaking dice; there's plenty of that going on. You may set it down, sir, as sure, that there's little reading done in lodging-houses. I say that pretty strong. I've lodged in a great many and I know."

"Why is there so little reading?"

"Well, there's the bother with noisy chums, and jolly neighbors; and there's the cold rooms. The boys, of an evening, like to crowd together into as warm a room as any of 'em have, and then they'll send out for a pitcher of beer,—or maybe for something stronger,—and then of course we must have something to amuse us, so we take out cards and chips for a game. It's not an unusual thing for some of the boys to play steady from Saturday evening up to nearly Monday morning without getting a wink of sleep meanwhile, and only stopping for their meals."

"Let me understand you. The boys, you say, play poker and the like, steadily, without sleep, all Saturday night?"

"Yes, sir."

"And all day Sunday?"

"Yes, sir."

"And most, perhaps all, Sunday night?"

"Yes, sir."

"Without any sleep?"

"Yes, sir."

"Well, you must be in a shocking condition by Monday morning."

"Yes, most dead; that's about the size of it. We fellows who've played like that aint fit for work Monday. I've been there, and know. A fellow can hardly hold his head up or keep his eyes open of a Monday morning, after that kind of a racket. Of course it's hard work to 'catch up' to full strength during the rest of the week, so it's a dead loss and worse every way."

"Do you mean to say that this sleepless all-night and all-day playing is frequent among the boys?"

"Well, yes, with some of them. Of course there are objections raised to it—especially to the Sunday part of it—in some lodging-houses."

Another Confession.

The statements of this very frank young man were confirmed by other young men. One very intelligent clerk said:

"Yes, the 'growler's rushed' in most of the cheaper lodging-houses of Boston. Now and then there are objections made by the lodging-house keepers, and then the liquors are taken into the rooms on the sly.

"The boys soon find out when it's safe to bring objectionable persons or articles into a house. They are quick to contrive ways of evasion, and there's a deal goes on in lodging-houses that isn't known by the people who keep them."

A natural inference would be that insufficient pay—while tending to lead thoughtless young women into evil ways—would serve as a check upon vice in young men. Yet, through one contrivance and another—such as the treating and borrowing practices of the young men; the postponement or evasion of the payment of debts; the occasional pawning of a trinket or article of use; the winning of small stakes at cards—many of the young men manage to degrade themselves with cheap vice to an extent that at first thought seems impossible.

Sensible Testimony.

Of a refined and sensible young man, perhaps nineteen years old, who came from Maine into Boston lodgings, the question was asked:

"How can a young man in lodgings—a total stranger in Boston—make pleasant and elevating acquaintances?"

"Through our churches," was the answer. "If a fellow got no other good by going to church, he'd be pretty sure to get the help of pleasant acquaintances among the young people; especially if he joined the Sunday school and Young People's Society."

The young man was right, and his suggestion indicates an important work that should be undertaken by churches and by benevolent individuals. Our Young Men's Christian Associations are doing what they can to throw around these young men good influences, but their means are wholly inadequate.

The knowledge gained by this investigation is almost appalling. These bright young fellows in our cities on whom to a large extent our country's future depends, and who are now living homeless and many of them tainted lives, can be reached and saved for God and humanity by special effort, rightly directed.

What men or women, what churches will undertake this Christlike work?

For the Companion.

ABOUT BOOKS AND READING.

By Rev. Lyman Abbott, D. D.

Second Paper.—What Not to Read.

Did you ever hear of *Punch's* advice to a young couple who were about to marry, and who asked his advice? He said, "Don't." So when the young people through *The Companion* ask my advice about reading, my first advice is "Don't."

See Article—"Young Men in Our Cities."

I think there is too much reading and too little thinking. It is quite as important to know what not to read as to know what is worth reading. This article is a kind of danger-signal; like that which you have sometimes seen put up on the boards in winter in places where the ice was thin.

There are some absolutely bad books in the world; books written to make men and women worse; to make them more animal; books that leave a bad memory in the imagination; books that teach falsehood instead of truth; books that are sometimes circulated secretly in school or neighborhood circles, shown confidentially by one boy to another.

My first danger-signal, then, is against all such books. Never look at a book that a companion shows you in secret; never take a book which is lent with the injunction, "Don't tell;" never read a book on the sly—one which you would be ashamed to read alond or to have your mother see you read.

Then there are books which are not bad for older persons but are bad for younger ones, just as there are kinds of food good for adults but not for children.

There are books of science and of literature which you may read by-and-by, but which you are not yet ready for. There are books which discuss problems in religion and philosophy which you are not yet ready to wrestle with. There are books, and there are sometimes articles in magazines, that raise questions which you are not yet ready to answer; and other books and articles that revile or scoff at what you have been taught to revere.

When you are older you will be able to estimate this scoffing at its true value, to understand the answer to these questions, or to see that, if you cannot answer them, that does not affect truth, and purity, and goodness, and love, and the duty of being true, and pure, and good, and loving. Meanwhile, it is not wise for you to read such books and articles, just as it would not be wise for you to attempt to do a man's work in laying a stone wall or building a house or holding a plow.

Then there is a great deal of what we call "trash" printed. By trash I mean books and stories the reading of which can do no one any good; and what does no one any good is sure to do some harm. There are some story papers that are filled with trash; some cheap libraries that are almost wholly made of trash.

There are stories of impossible adventure, hair-breadth escapes, romantic brigands, impossibly pious youths and maidens, pictures of life such as never were and never ought to be; stories of boys and girls and men and women such as you never saw and no one ever saw.

These books and stories are bad because they are false; they are lies. A story may not be true, and yet it may not be false; it is not false if it is a story of what might have happened; a story of such boys and girls, men and women as actually exist in life. All good stories except avowedly impossible ones, such as fairy tales, are in this sense true, that they represent life as it really is, or at least as it might be and should be, and perhaps one day will be.

Stories of unreal life, impossible life, are trash. I shall not tell you the names of the papers which publish trash, for I am sure that *The Companion* will not wish to advertise them. But there are periodicals that are free from all immoral publications and all trash, and in them you will find more than reading—good reading.

Among the things not to read are the cheap stories and the cheap story papers. There is plenty of good literature, and it is more interesting than trash.

Do not spend all your time in reading even the best newspapers and the best magazines. They contain a great deal of interesting and entertaining reading, and a great deal that is instructive and useful. But if you read only in the newspapers and magazines, you will never get acquainted with the best literature; you will form a habit of desultory and fragmentary reading; you will not remember what you have read; you will have read a great many interesting and even a great many instructive things, but you will have no order or system in your reading.

You have sometimes, perhaps, put a dissected map together. You know the difference between the map when it is put together and the same map when all the pieces are thrown together without any order in the box. But a person, all of whose reading is in newspapers and magazines, has his knowledge like the pieces of a dissected map lying in disorder in the box.

He may have taken a great deal into his mind; but it is not classified, arranged, put in order.

C. L. S. C.—do you know what those letters mean? They mean Chautauqua Literary and Scientific Circle. It is a circle organized by Bishop Vincent to help people to read systematically, at home, the best things in literature and science. It prescribes for them a course, recommends to them the books, and gives them, at the end of a four years' reading, a diploma certifying what they have done.

It has done a great deal of good by helping people in thousands of homes throughout the United States to read systematically.

Now if one does all his reading in newspapers and magazines, though he select so good a periodical as *The Youth's Companion*, his reading will not be systematic. The reading in magazines and newspapers ought to "fill in the chinks." To read most usefully you must read systematically; and to read systematically you must read books.

Do not read dull books. Do not read—I said this before in the preceding article—for the sake of reading, or measure your reading by the number of pages you have read. The object of reading is to make us think; and if we do not think, the reading is of very little use.

Henry Ward Beecher was a wise reader. He told me once that he was a very slow reader; "because," said he, "I read a little way, and something in the book or magazine sets me to thinking, and I lay it down and just sit still and think."

Such a reader does not get over a great many pages in a day; but he gets a great many thoughts in a day; and that is the main thing. Do not read what you are not interested in, unless you can get interested in it for the sake of what you are learning from it.

And finally do not read too much. Youth is the time to get good lungs, good appetites, good digestion, good sleep. And the place to get these is out of doors, in the open air, in active work or active sports.

It is better to study botany by gathering the wild flowers in the woods than by reading about it in the parlor; to study natural history by hunting butterflies with a net of your own than by reading Wood's "Natural History;" to make your own adventures in the nearest woods than to read about Livingstone's.

A little reading is very good; too much reading is very bad. Reading what is worth remembering is very valuable; reading and straightway forgetting is worse than valueless. Reading what is both interesting and instructive is very useful; reading what interests only and does not instruct, or what does not instruct because you are not interested in it, is of doubtful value. Reading what you can put together and make part of your systematic knowledge may be of the greatest value to you; reading mere scraps and fragments may be of no value at all.

In a third paper I shall try to tell you what to read.

For the Companion.

CHINA-PAINTING FOR CHRISTMAS.

In order to decorate prettily some dainty little things for Christmas, it is not at all necessary to begin in the old way, with a full china-painting outfit.

The motive of the decorations to be used being simple in design and adapted to beginners, but few materials will be required. In every instance, however, the work, if well done, must prove very pretty in result, and of much practical use.

By completely finishing one article at a time, and by investing only in such material as is necessary to the decoration of that article, you will be able to test thoroughly your ability without expending much money for an outfit which would be worse than useless to you, should you find yourself unfitted for this branch of art-work.

With a little ingenuity and careful attention to the details of each lesson, you will find that you can achieve satisfactory results, though you may possess but little artistic talent; for a china decorator needs not so much to be an artist—though of course that is important—as to be a persevering and painstaking workman.

Let us begin with cups and saucers. Such seemingly endless variety of design is to be found in these articles that you may find it difficult to decide on the prettiest shape. Select an after-dinner coffee-cup with few flutings for our first attempt. Let it have a quaint little handle, and if you are fortunate enough to find it, one with three or four little feet to stand upon.

This will cost about thirty-five cents. Then buy a bottle of bright liquid gold, costing seventy-five cents, and a camel's-hair brush costing twelve cents—one dollar and twenty-two cents in all.

It is also well to have on hand a bottle of weak alcohol, to remove stains from the hands at the close of the lesson. Now we are ready to begin.

Pour a little of the liquid gold—a brown, strange-smelling liquid—into a small, clean dish; a small butter-plate will serve the purpose. Dip in the new brush and paint, as smoothly as possible, the inside of the cup, the tiny feet underneath it, the little twisted handle, and then the circular space in the saucer where the cup rests. Then put away cup and saucer in some place entirely free from dust.

Always avoid dust as you would a contagion. If there is sweeping in any part of the house, wait until afternoon for the painting. If the ash-men are holding their usual noisy carnival in the back alley, wait until they have passed beyond hearing.

Be sure, also, that the stoves and furnaces have been shaken before you settle down to work, for I have known the dust that came from a register to ruin a morning's work. If the dust is once burned into your work, its elegant smoothness is destroyed, and nothing can ever make it right.

When the cup and saucer are perfectly dry, they are ready to be fired. The firing will cost ten or fifteen cents, unless you should want the burner to put a line of gold on the edge of the saucer, which will cost a trifle more.

At times this is a great addition. The burner does it very deftly by means of a wheel; but it is too trying a piece of work for a beginner to undertake. At all events, do not try it on the first cup and saucer.

Mark your brush, "Bright gold," and never use it for anything else. Never wash it out. Each time before using, soften it in the tiny bottle of lavender-oil which now comes with every bottle of bright liquid gold; dry it carefully, and use as the first time.

Be very careful, too, that none of the liquid is on any part of your hand; for if you have the slightest particle on your fingers, a purple stain will come wherever they have touched the china. Sometimes, after firing, you can sandpaper such a stain away, but prevention is the best corrective.

The most beautiful of all after-dinner coffees is one of the Belleek cups and saucers, with cactus handle, Trenton make, costing about a dollar each. It has to be gilded, fired, regilded, and fired again to bring it to perfection, owing to its thin, shell-like texture.

You will find, however, that the result will more than repay you for all your trouble. One cup alone makes a most exquisite wedding-gift.

There is a very pretty custom now of sending a cup and saucer to a newly-engaged friend; and one of the white and gold ones would be just the thing.

If you are very ambitious, owing to the success of your first venture, try making a set of six. A half-dozen, different in shape, but similar in decoration, will make a most beautiful wedding gift.

A friend, not long since, striving for originality, gilded a set of six on the outside of cup and entire surface of saucer. The result was a beautiful brownish-looking gold, owing to the reflection; but though odd and unique, they were not quite as dainty as the white and gold of our first lesson.

C. E. Brewster.

SUGGESTIONS

DISTANT OBJECTS.

Does the color of an object at all affect the distance at which it can be seen? Why?

Why can large objects be seen farther than small ones?

Why do even the largest objects finally disappear in the distance?

Distant objects often look blue. Why?

Why are lighthouses placed so high?

THE HERITAGE.

The rich man's son inherits lands,
And piles of brick, and stone, and gold;
And he inherits soft white hands,
And tender flesh, that fears the cold,
Nor dares to wear a garment old;
A heritage, it seems to me,
One scarce would wish to hold in fee.

The rich man's son inherits cares:
The bank may break, the factory burn,
A breath may burst his bubble shares,
And soft white hands could hardly earn
A living that would serve his turn;
A heritage, it seems to me,
One scarce would wish to hold in fee.

The rich man's son inherits wants,
His stomach craves for dainty fare;
With sated heart he hears the pants
Of toiling hinds with brown arms bare,
And wearies in his easy-chair;
A heritage, it seems to me,
One scarce would wish to hold in fee.

What doth the poor man's son inherit?
Stout muscles and a sinewy heart,
A hardy frame, and a hardier spirit.
King of two hands, he does his part
In every useful toil and art;
A heritage, it seems to me,
A king might wish to hold in fee.

What doth the poor man's son inherit?
Wishes o'erjoy'd with humble things,
A rank adjudged with toil-won merit,
Content that from employment springs,
A heart that in his labor sings;
A heritage, it seems to me,
A king might wish to hold in fee.

What doth the poor man's son inherit?
A patience learn'd of being poor;
Courage, if sorrow come, to bear it;
A fellow-feeling that is sure
To make the outcast bless his door;
A heritage, it seems to me,
A king might wish to hold in fee.

O rich man's son! there is a toil
That with all others level stands:
Large charity doth never soil,
But only whiten, soft white hands—
This is the best crop from thy lands;
A heritage, it seems to me,
Worth being rich to hold in fee.

O poor man's son! scorn not thy state;
There is worse weariness than thine—
In merely being rich and great:
Toil only gives the soul to shine,
And makes rest fragrant and benign—
A heritage, it seems to me,
Worth being poor to hold in fee.

Both, heirs to some six feet of sod,
Are equal in the earth at last;
Both, children of the same dear God,
Prove title to your heirship vast
By record of a well-fill'd past;
A heritage, it seems to me,
Well worth a life to hold in fee.

—*James Russell Lowell.*

For the Companion.

FOUNDLINGS.

One of the legends of good King Alfred declares that when he and his huntsmen were one day riding through a forest they saw an eagle's nest. It was in a tree on the top of a steep cliff, and from it they heard a sound like the crying of an infant. A man was sent to climb to the nest, and in it he found a baby boy alive and unhurt. The King carried the little boy home, and he grew up in the royal family, and became one of Alfred's most heroic followers.

It is told as "a little romance" of the home life of Dinah Muloch Craik, the author of "John Halifax," that she adopted a baby that was found one morning "on a stone at the cross-roads." The child thrived under her careful nurture, and became a loving daughter and companion.

At a Mechanics' Fair in Boston hundreds looked with sympathizing eyes at little Hyman Pitonof, "picked up at the North End," and listened eagerly to the story of the poor deaf and dumb lad and his rescue.

It would surprise us to know how many children owe their lives to what has been called "charitable accident." Somebody found them—and pitied them. It would both surprise and grieve us to know how many neglected human creatures are never even "found."

But it is a significant fact that the quick eye to note the forsaken and friendless, and the quick heart to feel for them, belong peculiarly to the genius of the religion of Jesus of Nazareth.

The Christ-like love of man has in it the instinct of discovery. Christ himself came to *seek* the lost. His followers, too, are commanded to find them.

Not often will one take a Moses out of the bulrushes, or a Sir John Nestling out of an eagle's nest, but it is a Christian deed to save anybody or anything worth saving.

If we cannot gather up little castaways we may discover in a misguided neighbor or acquaintance something which can be nurtured to redeeming strength and beauty.

It is a noble thing to improve the condition of any fellow-being. The saying is older than the Roman republic, that they who plant trees are posterity's benefactors; and praise is always given to one who has "made two blades of grass grow where but one grew before."

No one is entirely without opportunities to be kind and humane, and to exercise practical religion in some sort of helpful service. But the useful moment, the point of need, becomes the babe in the eagle's nest only to him who sees it and improves it.

BISHOP WILSON.

In the seventeenth century Bishop Wilson was sent to the Isle of Man—then containing a lawless and ignorant community—with such unlimited power over clergy and people that it is a wonder he succeeded in doing good rather than evil. A tyrant did he prove, but a loving one, and all Manxmen to-day bless the good bishop's name. In time of famine he threw open his own house to the needy, and gave without stint, asking no man whether he were saint or sinner, but only if he hungered.

When his own means were gone, he begged from England, though he was, as one historian declares, "a man who would not have held out his hat to save his own life."

He never desired preferment, but clung to his own thorny road with the zeal of one who has renounced material good for the love of the highest.

"See, my lords," said Queen Caroline one day, as he approached the crowd of churchmen who surrounded her, "here is a bishop who does not come for translation."

"No, please your Majesty," said Wilson, "I will not leave my wife in her old age because she is poor."

His island was, indeed, a poor spot, but he had wedded it for life.

His loving-kindness was of a sort which inevitably begets love in return. One day in the market-place a little girl of seven years crossed his path. She was rosy-cheeked, bright-eyed, bare of head and feet, and with a rush of love, the gray old bishop patted her head, saying, "God bless you, my child!" The little maid courtesied.

"God bless you, too, sir," said she.

"Thank you, child, thank you!" said the good old man. "I dare say your blessing is as good as mine."

It was customary in those days to employ journeymen as tailors. One, Danny by name, was making a long walking-coat for the bishop, and in trying it on, he made numerous chalk-marks to indicate the place of buttons.

"No, no, Danny," said the bishop. "No more buttons than enough to fasten it. One will do. It would ill become a poor minister like me to go a-glitter with things like these."

Now Danny had already bought the buttons, and had them at that moment in his pocket. Therefore he was sore discomfited, and said, pulling a woful face:

"Mercy on me, my lord! What would happen to the poor button-makers if everybody was of your opinion?"

"Button it all over, Danny!" said the bishop. "Button it all over!"

EASING HIS CONSCIENCE.

Old soldiers are full of foraging stories, but Mr. Watkins, in his "Johnny Reb the Private," relates one of a peculiar character. With several companions he had made a raid upon a farm-house in which lived an old woman and a sick daughter. The mistress of the house treated the soldiers kindly, but they had come in search of provender, and provender they meant to have. So they drove off her only pig, killed it, and carried it back to camp.

I had a guilty conscience, I assure you. The hog was cooked, but I could not eat a morsel of it. I think it would have choked me.

Shortly afterward my father sent me a silver watch and some Confederate money. I could not rest. I took one hundred dollars, and went alone to the old lady's house.

"Madam," said I, "some soldiers were here a short time ago, and took your hog. I was one of the party, and I wish to pay you for it. What was it worth?"

"Why, sir," she answered, "money is of no value to me; I cannot buy anything that I need; I would much rather have the hog."

"But that is impossible, madam; the hog is dead and eaten, and I have come to pay you for it."

The old lady's eyes filled with tears. She declared that she was perfectly willing to give the soldiers everything she had. If the hog had done us any good, she could not charge anything for it.

"Well, madam," says I, "here is a hundred-dollar bill, new issue. Will this pay you for the hog?"

She drew herself up to her full height, and her cheeks flushed. "I do not want your money. I should feel that it was blood money."

It was useless for me to urge the matter. I helped her to catch a chicken—an old hen, about the last one she had—for dinner, went into the garden and pulled a bunch of eschalots, brought two buckets of water, and cut and brought wood enough to last for several days.

She invited me to stay for dinner, and afterward I sat down by her side, took her old hand in mine, and told her the whole story of the hog; how sorry I was, and how I could not eat any of the pork. Then I begged her, as a special kindness, to take the hundred dollars, and so to ease my conscience. I laid the bill on the table and went away. I have never in my life made a raid upon anybody else.

DIAMONDS.

The diamond, one of the most beautiful products of nature, is at the same time one of its greatest mysteries. How can the black lead of your pencil be, so to speak, own brother to the most brilliant of gems? They are both crystallized carbon, but how unlike! The chemist who could find out the secret of turning common carbon into diamonds would be able to heap up a fortune by the side of which Monte Cristo's cave of treasures would look poor enough; and there are chemists who do not give up the hope of some day discovering the priceless secret.

Of late years the scientific study of the diamond has led into a new field of investigation. Men have found out, not how nature makes diamonds, but where she makes them, and that is a great step in advance. There is strong evidence of a connection of some kind between diamonds and volcanoes.

In the South African diamond fields the gems are found in what are called "pipes," which are round or oval stems of a peculiar kind of rock, several acres in extent at the top, and running down to unknown depths into the earth. Near the surface this rock, which is rich in iron, is disintegrated by exposure to the weather, and assumes a yellowish color. It would not be exactly true to say that it holds diamonds as a pudding holds plums, but the imagination naturally forms such a simile. The precious pebbles are readily extracted from the friable rock.

Deeper down the "pipe" changes character. The rock becomes a comparatively hard, blue mass, much more difficult to work. Yet it is still sprinkled through with diamonds, lying embedded in the molds where nature made them. This blue rock has to be exposed to the weather, or treated with water, before it will yield up its treasures.

Now it is clear from the nature and appearance of the diamond-bearing rock that it is of volcanic origin, and the "pipes" are evidently the necks of ancient volcanoes, whose fires died out probably thousands of years ago. When we consider that the diamond burns and is consumed at a high temperature, we cannot think that the gems contained in those ancient pipes of rock were brought there from the interior of the earth while the rock was in a molten condition.

It is far more probable that, under peculiar conditions of pressure and temperature, they were formed where they are now found while the rock was cooling off. It remains to be learned what the real conditions of their formation were.

It is very interesting to know that this "mother rock" of the diamonds, as it is called, bears a considerable analogy to some of the meteoric stones that fall out of the heavens.

If the ancients had known that fact, they would have invented a romantic story of some celestial forge in which the gods made gems; but we more practical-minded moderns simply draw the conclusion that some of the meteorites that fall upon the earth may possibly have been ejected from its volcanoes, or from the volcanoes of some other planet, and have gone circling through space until, meeting with the earth, gravitation brought them down again.

ASPIRATION.

Fallen again! So—I give up the fight,
What boots it to strive, if forever and ever,
In spite of one's utmost of pain and endeavor,
Still to cleave to the right,
Still to follow the light,
One falls from each height?

What boots it? O better to climb and to fall,
To strive and to fail, to fight and be slain,
Than to grovel content on the soul's lowest plane.
At the spirit's clear call
Whose stirs not at all,—
His cup shall be gall!

JOSEPH B. GILDER.

AGAINST HIS OWN ORDERS.

Young Abijah Hatch was in the stable with his two brothers, Samuel and Joseph, who had been at school that day. "Bije's" schooling was finished. Mr. Hatch, who stood outside, could not but overhear his sons' conversation about the farm he-goat.

"You know," Bije was saying, "how mad it makes old Billy to shake your fist at him. You know how he puts down his head and goes for you.

"Well," continued Abijah, "this afternoon I climbed down behind the ducking-rock, where it's flat with the bank, to get a drink from the river. When I lifted myself, there was old Billy staring at me. I made up my mind to get even with him. So I shook both fists at him, and he just tore at me. When he was real close I popped down behind the rock. He was going so fast he couldn't stop. So he went right over my head into the river."

"Let's try it on him again," said Joseph.

"Yes, let's," said Samuel.

"You would, would you?" said their father, coming round the corner and looking sternly on the three.

"That was a mean trick to play on old Billy—and the water icy cold, too," continued Mr. Hatch, fixing a severe eye on Bije. "Don't you ever let me hear of your doing it again. Do you understand?"

"Yes, sir," said the three boys all at once, for their father was what is called a strict disciplinarian.

That night Mr. Hatch told his wife the story.

"Did you ever see old Billy act that way?" he asked.

"Yes; he goes headlong at anybody that shakes a fist at him."

"Curious! I'd like to see him do it," said Mr. Hatch, meditatively, as he went to bed.

Next day, Bije, on his way back from the orchard, noticed Billy tearing across the field. A large man was standing on the ducking-stone, shaking his fist at the goat. Curiosity had been too much for Mr. Hatch.

He caught sight of his son at the critical moment when he should have jumped. Dismayed at being found disobeying his own orders the stern father forgot the on-rushing Billy.

A moment more, and Abijah was running to help his father out of the river.

"Here, dad, the bank's not so steep here," was all the wise boy said.

"Thank you, Abijah. Do you think your mother was watching? I'll sell that goat this week. He's getting dangerous."

ACROSS THE REEF.

The author of "A Cruise in an Opium Clipper" entertains his readers with a surf-boat adventure in which he participated off the coast of Formosa, where it had become necessary to make a landing in a new and dangerous place. Another man—Nealance—and himself were to accompany the captain, and take what soundings they could as they went through the surf. One end of a long, light manilla line was passed into the surf-boat and made fast, so that those who were left behind could draw the boat quickly back again in case of any disaster.

Each of us had a loose life-line made fast to his person, loose enough to let us get from under the boat in the event of a capsize, but still attaching us to the boat, so that when it was hauled back we should be brought back also, though probably half-drowned.

Everything being ready, the steersman carefully counted the rollers, beginning with the heaviest one. When the twenty-seventh—the heaviest—had passed, he gave the signal, and we shot ahead into the next one. Its white, hissing top covered us fore and aft, and for a second the boat was thrown into an almost vertical position. Then she came down with a thud that would have stove any lighter-built craft.

As she touched the crest of the wave, the six oarsmen let go their oars, which for a second hung well secured alongside. Then, the crest being passed, in a twinkling each oar was bent in earnest to send her through the next wave.

Getting soundings here was no joke. When the boat was in her vertical position on the crest of the wave, it took me all my time to hold on; and when she was down in the hollow, I could barely get one cast before I was again carried skyward.

About half-way across we met the twenty-seventh sea again. I shut my teeth hard, and grasped my hold tightly, as I gazed on the gigantic, white, thundering mass. Completely swamped in it, the boat was yet carried aloft so high that for a second I imagined a somersault was to end our voyage of discovery. As the captain said, "We just saved being somersaulted by the skin of our teeth."

As we recovered from the shock and fell into the hollow, I perceived a grin of satisfaction on the dark visage of our steer-oarsman.

The men pulled with new energy, and we reached the extremity of the broken water just in time to ride safely over the next twenty-seventh sea before it curled its crest to fall upon the rocky reef. Then we pulled a little away from the reef, laid in our oars and let go the anchor, to give us all a rest and a breath before we started on our perilous journey back to the ship.

THEY FOLLOWED COPY.

In the days when merchant vessels came home redolent of spices and loaded to the brim with silks and china, a certain family, described by Miss Leslie in her "Pencil Sketches," determined to send beyond seas for a dinner service which should outshine in beauty everything thus far seen on this side the Atlantic. Original designs of fruit and flowers, arranged in the form of a wreath, had been made for it by a skilful artist, and the sea-captain who undertook the commission was charged to spare no money or pains in having it properly carried out.

Spring returned, and there was much watching of the vanes by this particular family, and the ship-news furnished the most interesting column of the daily papers. At length the long-expected vessel arrived, and when she had cast anchor, the ladies of the family could scarcely refrain from walking down to the wharf, to see the ship that held the box that held the china.

Invitations were at once sent out for a long-projected dinner-party, at which the new porcelain could be displayed.

The box was landed, and conveyed to the house. The whole family were present at the opening, which was performed by Mr. A—— himself, while the servants peeped in at the door.

As soon as a part of the lid was split off, and a handful of straw removed, a pile of plates appeared, wrapped carefully in paper. Each of the family snatched up a plate, and hastily tore off the covering. There were the flowers, glowing in beautiful colors, the gold star and golden A, admirably executed. But under the gold star, on every plate, dish and tureen, were the words, "*This in the middle!*"

The literal and exact Chinese workmen had copied this direction minutely from a very crooked line which Mr. A—— had hastily scrawled on the pattern with a very bad pen, and of course, without the slightest thought of finding it inserted verbatim beneath the central ornament.

Mr. A—— laughed, his wife cried, the servants giggled, and the daughter cried first, and laughed afterward.

The only silver lining to the cloud was the fact that thereafter Mr. A—— always had something amusing to tell his guests at a dinner-party.

CROWS IN EXILE.

The crow has no friends. Every man's hand and every bird's bill is against him. Mr. B. H. Dutcher, describing in the *Auk* an ornithological trip to Great Gull Island, off the northeastern extremity of Long Island, tells a curious story of the unhappy lot of four crows who seem to have been prisoners as truly as Napoleon was at St. Helena. Mr. Dutcher's visit was in August.

Some time in the spring, before the terns arrived, —of which Mr. Dutcher estimates that he saw five thousand,—these four unlucky crows decided to take up their residence on Great Gull Island. They may have come in search of food, or perhaps they were seeking solitude.

If the first conjecture be the true one, they must have found plenty of what they sought, for the island was well stocked with the eggs and young of the terns. If they were after solitude, they were sadly disappointed, for no sooner had the terns arrived than they fell upon the crows, and persecuted them relentlessly until, several months afterward, Mr. Dutcher and his companions put an end to their misery.

All this time it had been impossible for the crows to leave the island. If one of them attempted to rise, a horde of terns was upon him almost before he was out of the grass, and screaming, diving and dashing at the unfortunate bird, soon drove him back to earth again, and then, not content with that, continued to worry him long after he had settled down.

The crows were truly in a sad plight. The terns, not satisfied with worrying their victims at a distance, even went so far as to peck out their feathers; and between the exuvie that the terns had dropped upon them, and the light places where the feathers had been pulled out, the crows presented a rather mottled appearance.

From the upper mandible of one a piece of the sheath and bone, half an inch long and an eighth of an inch deep, had been gouged out, undoubtedly by the lower mandible of a tern.

This incessant persecution had rendered the crows so tame—or so timid—that they could always be approached within twenty-five feet before they would fly, and one of them was actually caught in the hand. It preferred to be captured by a man rather than be chased by the terns.

TOO HASTY.

Jumping at conclusions often results in embarrassment to all concerned. Perhaps nobody knows this better than a certain clerk in a Court Street law office. He was sitting at his desk, writing busily, the other afternoon, when the door opened and an old negro put in his head.

"Say, cap'n, don't yoh want yoh windows washed? Dey looks kinder like dey needs it."

"No, not to-day; they were washed only last week."

"Bettah lemme touch 'em up a leetle, cap'n."

"No, no," replied the clerk, going on with his work, "come around in a couple of weeks."

With another intimation that the windows were susceptible of considerable improvement, the ancient cleaner withdrew.

But window-washers were evidently out in full force that day; for five minutes had not elapsed when the door opened again, and another sable head popped in.

"Good aftahnoon, boss."

"Good-afternoon."

"Want yoh windows cleaned?"

"No, not to-day."

"Do it cheap, boss; bettah lemme clean 'em."

"No; just engaged a man."

Three minutes later the door opened again, and a dark face surmounted by a rather rusty hat peeped in.

"Well?" asked the clerk, looking hastily up, "I suppose you want to wash windows, too, don't you?"

It was difficult to tell whose surprise was the greater, the new-comer's or the clerk's, when the senior member of the firm hastened forward from his room, and grasping the stranger affectionately by the hand, exclaimed, "Why, my dear old father, this is the most delightful surprise of my life."

HIS LAST ORDER.

A soldier's gravestone in Cochin China bears this military command, carved after the man's name and the date of his death:

"ARMS AT EASE—REST!"

WORK PAYS.

What if the lesson be hard to learn!
The greatest tasks are not done in a day,
And always the prize that work must earn
Surpasses the prize that is won by play.

For the Companion.

Miss Piper's Tea-Party.

"O mamma! mamma!" cried little Harold, running in from his perch on the front steps. "Here is a letter for me. All for my own self. The postman said, 'Does Master Harold Gray live in this house, little man?' An' I said, 'Yes, Mr. Postman, he does; he is me.' An' then he laughed, an' here's the letter.

Mamma laughed, too, at her little boy's eager face, but she opened the tiny letter and read what it said inside:

"Miss Polly Piper requests the pleasure of Master Harold's company at Rachel Stanton's nursery this afternoon from three o'clock to six. Bring an apron."

"Goody! goody! May I go, mamma, and who is Miss Polly Piper?" cried the little boy, all in one breath.

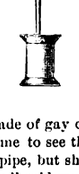
"Yes," said mamma, "you may go and find out who Miss Polly is."

So at just three o'clock Harold, with his apron under his arm, rang the doorbell of the house across the way.

Inside were a merry company; six little folks beside the baby. Nobody was late.

Rachel's mamma led the way to the nursery, and here the visitors began to see what Miss Piper's party was like.

In the middle of the room was a large tub filled with soap and water, and on the table were ever so many pipes—pipes of all kinds and sizes. Then mamma tied an apron on Molly, and they all watched her big bubble grow. Each had three trials, and Willie Stewart blew the largest bubble of all.



When every one had taken his turn, mamma tied on all the aprons, and the children had a regular soap-bubble frolic. They tossed their bubbles in the air, rolled them on the floor, blew them in each other's faces, and had a gay time till all at once a little bell rang, and every one stopped to listen.

"Come here!" called mamma. "Bring your pipes with you."

Over they ran to the table, and there they found more pipes still, a pile of colored tissue-papers, and a box of empty spools.

"This is Miss Polly Piper," said mamma, and the dolly she was holding in her hand made a low bow.

The children all laughed, for the doll was a very funny one. Her face was smooth and white, her nose long and round, and her turban and dress were made of gay colored paper. It took Harold some time to see that she was really only a soap-bubble pipe, but she was.

"Now," said mamma, "I will stick each one of your pipes into a spool, so that it will stand up, and you may choose what papers you want, and see who can make the prettiest dolly."

They all fell to work, mamma giving advice at one end of the table, and auntie at the other.

The mucilage bottle helped to hold on the tissue-paper clothes, and by the time the clock struck five there was a long row of queer dollies ready to keep Miss Piper company.

Archie made a one-legged soldier with a green cocked hat, Mollie a beautiful black cook, and Harold made a man with a hat "dus like my papa's," he said.

As soon as the dolls were done, the supper bell rang, and while auntie took the little folks up-stairs to have their sticky hands washed, mamma carried the dollies out and placed one standing beside each plate.

Every doll held a slip of paper, and when the children were fairly seated mamma took up Archie's dolly. This was Miss Polly Piper, herself, and on her paper were these words:

"I belong to the one who blew the biggest bubble,
May he always be happy and never in trouble."

Every doll had a rhyme to say. Mollie's was to the one who made the brightest bubble. Rachel's to the longest-lasting, and so on. Harold's was to the one who blew the smallest bubble of all.

The table was covered with good things to eat. "And, O mamma," said Harold, when he got home that night, "it was the berry lobliest party in all the world—Miss Piper's was."

GRACE BROWNELL PECK.

For the Companion.

"UP IN THE GALLERY."

The first time that little Charlotte went to church she was very quiet during the service. She had been told that she must not laugh or talk, and she remembered it.

Once the preacher said something rather funny, and some of the people smiled. Charlotte's papa smiled, too; whereupon the little girl tugged at his coat-sleeve, and looked sternly at him, shaking her tiny forefinger. Papa came near laughing outright, but he controlled himself. After church he said:

"Why did you shake your finger at me, little daughter?"

"Because," answered Charlotte, "I was 'fraid you were going to laugh, and would have to go and sit in the gallery."

"In the gallery?" repeated papa, looking puzzled.

"Why, yes!" replied Charlotte. "The minister puts all the naughty folks up in the gallery, doesn't he?"

CHRISTMAS SECRETS.

You mustn't look in corners,
And you mustn't hear a sound,
Because a flock of secrets
Is flying all around.

They'll perch upon the Christmas-trees
When weary of their flight,
Or they'll build their nests in stockings
In the middle of the night.

But catch them Christmas morning—
For dear old Santa sends
In every one a sweet surprise
To his loving little friends.

ANNA M. PRATT.

For the Companion.

ONE CLOUDY MORNING.

Ray stood by the window and watched the snowflakes that filled the frosty air.

It had been such nice skating on the little brook yesterday, but now —

He flattened his nose against the window-pane, and tears filled his eyes.

"It's just the time to pull that loose tooth out, little man," said mamma. "Let me see it. Why-e-e-e! It is so loose I'm afraid you'll swallow it some time if we don't pull it."

"Oh dear! Won't it hurt, mamma? Won't it hurt awful?" faltered Ray.

"Oh no, not much," smiled mamma. "And then a nice new tooth will grow in its place. Can you pull it, or will I?"

"I—I guess I will," said Ray, hesitating a little. "Why, something grates under it."

"It is the little new tooth trying to find a place to grow," and mamma went on with her sewing, while Ray worked the loose tooth back and forth for fully five minutes.

"It won't come, mamma. I don't b'lieve it ever will. Dear me! What makes loose teeth so solid and slippery? Oh! oh! It won't come out." Ray's eyes were full of tears.

"Let me see it," said mamma. "Why, it will almost drop out itself! Let me —"

"Oh! Ow! Oh! There, you only got it off of one side! Didn't I tell you it was awful solid? I don't b'lieve it will ever come out, do you, mamma?" sobbed Ray.

"Yes it will. Let me tie a string to it, and then tie the other end to the doorknob. Then you may rest while I tell you about the first tooth I ever had pulled," and mamma carefully selected a stout linen thread.

"Did you have one pulled, mamma? Didn't you cry? Was it when you was little?" questioned Ray.

"Yes. I was little, as small as you are, and I cried louder than I want you to, I expect.

"It was a little front tooth, and it was very loose. I didn't want to have it pulled out. One night I went out for some wood for my mamma, and I tried to haul a stick in with a stout string. When I opened the door, I took the string in my mouth, and when I took a step forward, that string caught around my tooth.

"I jumped and screamed, and out it came. The stick of wood pulled my tooth for me. Wasn't that funny, Ray?" Mamma was smiling, and watching the doorknob to which Ray's tooth was tied.

"Yes. I wish mine would come out so quick. Oh—oh—oh! Why-e-e-e! It *is* out. The doorknob pulled it!" for papa had opened the door suddenly, and jerked the string smartly. "I think you knew papa was coming, mamma!"

"Well, here's a broom. You can sweep the ice, and have your skating frolic, after all," said mamma. And sure enough, the clouds had all passed. It was sunshine out-of-doors, and—the tooth was out!

E. H. S.

"OH DEAR!" sighed little Sadie, who wasn't feeling well, "my head aches, an' my feet aches, an' my gin'ham d'ess aches!"

Enigmas, Charades, Puzzles, etc.

1.

RIDDLE.

I'm green and I'm white,
I'm black and I'm brown,
I'm found in the forest,
I'm used in the town;
I'm worn as a garment
When chilly winds blow,
And always aspiring
I'm often brought low.

A. M. P.

3. To disown.
4. Rehearsals.
5. To take one in every ten.
6. A tree and its fruit which is a species of orange.
7. Primitive.
8. Common.
9. To free from fear.
10. Affliction.

Zigzags.

1 to 10. The name given to the children's friend, whose festival occurs on Dec. 6th.
11 to 20. Another name given to the same.

F. S. F.

3.

EASY AMPUTATED QUOTATIONS.

Each word is beheaded and curtailed.

1. -ono- -h- -harg- -he-ad-,
-ono- -h- -igh- -rigad-,
-obl- -i- -undre-.—*Tennyson.*
2. -ro- -reenland- -e- -ountain-,
-ro- -ndia- -ora- -tran-,
-her- -fric- -unn- -ountain-
-ol- -ow- -hel- -olde-an-.

4.

LETTER ANAGRAMS.

Ex.—$\frac{C}{L}$ { C over L—clover.

Write a line in each case describing the position of the letters toward each other, and transpose the letters used in this description to make a word that will answer the definition given.

1. $\frac{S}{W}$ { A blanket.
2. G S, Small shoots of a tree.
3. $\frac{H}{T}$ { A loud, rumbling noise.
4. S H, Part of a clock.
5. $\frac{A}{L}$ { Anything lent.
6. $\frac{D}{S}$ { Weights.

5.

PUZZLE.

I'm very sure this little word
That means to join, you've often heard.
Five letters form it, and 'tis strange
That two transposed make such a change;
It joins no more and you will find
That now it tells you to unbind.

6.

CONCEALED PROVERB.

In each of the following sentences a word is concealed. When the words are rightly guessed and read in the order here given they will form a familiar proverb.

I think Mr. Corbett errs in his statement.
My uncle wanted to buy a doll at every shop in Nuremberg.
Emerson said, "Give me health and a day and I will make the pomp of emperors ridiculous."
He ran down the lane very swiftly, and caught the horse.

7.

BIRTHDAY LETTER.

My *first* is in carpus, but not in the thumb;
My *next* is in coccyx, but not in sacrum;
My *third* is in lens, but not in the eye;
My *fourth* in the lungs, but not in bronchi;
My *fifth* is in heart, but not in its beat;
My *sixth* is in ankles, but not in the feet;
My *next*, though in mouth, is not in the lips;
My *eighth*, though in femurs, is not in the hips;
My *ninth*, in papillæ, is not in the skin;
My *tenth* is in tibia, but not in the shin;
My *next*, though in socket, is not in the ball;
My *next*, in the liver, is not in the gall;
My *next*, in the cornea, is not in a tear;
While the *next*, though in concha, is not in the ear;
My *last* is in muscle, but not in the bone,
And now, I hope soon, my *whole* will be known.

Conundrums.

What rare and beautiful plants does every person possess? Palms.

If you ask Louisa for a drink of water, what battle may you name? Waterloo ("Water, Lou!").

What kind of keys are most mischievous? Monkeys.

What kind of a hood are thousands working to obtain? A livelihood.

When does land keep you warm? When you wear a cape.

When does a monk frown? When he has his cowl on (scowl on).

THE WORLD BENEATH THE OCEAN.

The depths of the sea have always fascinated the human imagination. Three-quarters of the earth's surface is covered with water, and it is only natural that man, who has found the dry land so rich in wonders belonging to all the kingdoms of nature, should desire to know what is hidden under the broad bosom of the ocean. The temptation presented by the pearl fisheries, and by the wish to recover sunken treasures, has resulted in our acquiring considerable knowledge of the sea bottom in certain localities near shore.

Some interesting facts have just been brought to the attention of men of science by M. H. Fol, of the biological laboratory at Nice. M. Fol has for several years been exploring the bottom of the Mediterranean Sea along the shore near Nice, in the search for marine animals.

During his explorations in a diving dress he has carefully studied the effect of sunlight under water, and has found that the illumination of the sea is probably much less than has generally been supposed.

The world under the ocean is not only a world of mystery, but one of twilight and of night. M. Fol found that at a depth of about one hundred feet it was difficult to discover the small animals he was in search of. When the sun had begun to decline in the afternoon, darkness would suddenly envelop him when he was in thirty-five or forty feet of water, and, rising to the surface under the impression that night had actually begun, he would be astonished to find himself emerging into brilliant sunshine.

At considerable depths he found that it was ordinarily impossible to see a rock at a distance greater than about twenty-five feet. Under the best of circumstances, with very clear water and an unclouded sun overhead, a rock might be perceived eighty or ninety feet away.

He observed that the animals living on and near the bottom would, when alarmed, flee with great consternation for a distance of a few yards and then stop, believing that they had got beyond the sight of pursuers.

One of the practical conclusions drawn from M. Fol's experiences is that it will not be possible for submarine vessels to move rapidly at any considerable depth, owing to the imminent danger of collision with obstacles that are not visible beyond a very narrow range.

But those depths are not the less interesting because they are buried in almost impenetrable shadow.

CHINESE JUSTICE.

In many respects the Chinese are a most rational and practical race, though their ways are not those of Western peoples. London *Truth* relates an incident that is characteristic of Chinese methods in government. During a recent "anti-foreign-devil" riot at some place between Tong-Tu and Kaiping, the mob destroyed a good length of the railway that had recently been carried through the district.

The local mandarin, instead of using the forces under him to quell the riot, sent the soldiers to assist in the evil work. The embankments were leveled for some distance and the rails thrown into the river, and an attempt was made to destroy the bridges. Mr. Kinder, the head engineer of the line, laid the state of the case before the Tontoi of Tientsin, who is the head director of the undertaking. The Toatoi sent for the mandarin.

"To please yourself and friends," said he, "you have destroyed the railway track. To please me you will put it back just as it was before. If, in one month from to-day, the trains are not running as before, you lose your head, and your family and ancestors are disgraced."

"Mr. Kinder estimates the damage and loss by non-running of trains at fifty thousand taels, which sum you will have to pay out of your own funds to the company.

"For labor, all your officials, soldiers and townsfolk will work as you direct, receiving no money for their labor, and all salaries are stopped till the repairs are complete. I shall appoint a Board of Punishment to return with you, with power to torture and imprison any one who makes the least disturbance or trouble."

The mandarin begged for mercy on the plea that, as the country was all under water, he could not possibly get mud and stone, wherewith to build the embankments. The Toatoi saw the force of this plea, and said he would give him a chance.

He could pull down any of his forts that he liked in order to provide material for the repair of the railway, and he would give him three months after the railway was completed to rebuild his forts at his (the mandarin's) own expense.

In less than three weeks the trains were running again, and the mandarin and his agents are now rebuilding the forts.

COMPLETING THE QUOTATION.

The late Doctor Wilberforce, Bishop of Oxford, had a keen sense of humor, which, however, he indulged only on appropriate occasions. An amusing story is told, in the September *North American*, of his quickness of repartee.

While on a visit to a country-house a carriage party was made up for a drive, and the bishop was urged to join it, but he insisted on walking, and started off on foot by himself. On the road the carriage party passed him as he was trudging along, and one of the company shouted out to him, quoting from Watts's hymn:

"How blest is he who ne'er consents
By ill advice to *walk*."

Quick as a flash the bishop shouted back, completing the stanza:

"Nor stands in sinners' ways, nor sits
Where men profanely talk."

DECEPTIVE APPEARANCES.

There is in the English navy a famous and valiant admiral, who, when he is on shore, likes to take his ease in his handsome house in Belgravia, at the West End of London.

Not long ago, on a pleasant afternoon, the admiral sat in front of his residence, in a somewhat neglected costume, smoking a pipe.

A policeman came past, and looked at him hard. The admiral paid no attention.

"Look 'ere!" said the policeman, presently. "Do you belong to the 'ouse, you know?"

"No," said the admiral; "the 'ouse belongs to me, you know!"

HENRY ABBOTT & CO., 14 Maiden Lane, New York.

DONALD KENNEDY Of Roxbury, Mass., Says:
Strange cases cured by my **Medical Discovery** come to me every day. Here is one of Paralysis — Blindness — and the Grip. Now how does my **Medical Discovery** cure all these? I don't know, unless it takes hold of the Hidden Poison that makes all Humor.

VIRGINIA CITY, NEVADA, *Sept.* 9, 1891.

Donald Kennedy—*Dear Sir:* I will state my case to you: About nine years ago I was paralyzed in my left side, and the best doctors gave me no relief for two years, and I was advised to try your **Discovery**, which did its duty, and in a few months I was restored to health. About four years ago I became blind in my left eye by a spotted cataract. Last March I was taken with La Grippe, and was confined to my bed for three months. At the end of that time, as in the start, then it struck me that your **Discovery** was the thing for me; so I got a bottle, and before it was half gone I was able to go to my work in the mines. Now in regard to my eyes, as I lost my left eye, and about six months ago my right eye became affected with black spots over the sight as did the left eye — perhaps some twenty of them — but since I have been using your **Discovery** they all left my right eye but one; and, thank God, the bright light of heaven is once more making its appearance in my *left* eye. I am wonderfully astonished at it, and thank God and your **Medical Discovery.**
Yours truly, HANK WHITE.

Queen of Storms. Sent prepaid anywhere on receipt of 50 cts., two pair $1. Keep feet and boots dry. 2½ to 8. half-sizes. We sell them cheap—to advertise our famous **French Donegola Kid Button Boots,** which we send prepaid for $1.50, equal any $2.50 boots.

Common Sense or Opera, 1½ to 8, widths C, D or E. Guaranteed O. K. or money refunded. DEXTER SHOE CO., 299 Devonshire Street, Boston, Mass.

A FLYING DUTCHMAN.

The man who boasts the loudest does not always show best under fire, writes Colonel McDowell to *The Companion*. This truth was laughably illustrated to us one day when we were encamped in New Mexico, hourly expecting an engagement with the Indians. Among the veteran Indian-fighters in our camp was Sergeant Shülter, who astonished us youngsters—I was but twenty years old then—by thrilling accounts of his daring achievements. From his talk one would have thought him equal to the task of putting a whole band of painted warriors to flight, single-handed.

My company had camped near the banks of a small brook. It was a beautiful autumn afternoon. Some of the men went in bathing, some mended their clothes, while others overhauled their guns. Strung out at a distance from the camp were a few pickets. The horses were given a chance to graze, tethered with long lariats fastened to iron pins driven into the ground.

Suddenly there came a cry of "Indians! Indians!" The men rushed in from all directions, and for a few moments wild confusion reigned. In the midst of it all we heard a series of spasmodic yells, and, turning toward the sound, beheld the fat sergeant, the bold, fearless hero of countless Indian encounters, capless, coatless, running as fast as he could toward his horse, and blowing and puffing with the exertion.

Without stopping for bridle or saddle, he scrambled upon the horse's back, seized its mane and dug his spurs into the beast's sides with all his might. Excited by the pain thus inflicted, the horse plunged forward with a sudden bound and set off at a mad gallop.

In half a minute the animal reached the end of its tether and was brought to a standstill with a tremendous jerk. And Sergeant Shülter? I verily think he was thrown forty feet over his horse's head! He came down with a thump that could be heard throughout the camp, and it was a wonder that every bone in his body was not broken.

Despite the supposed seriousness of the moment, every man of us stood still and laughed at the ludicrous spectacle. Poor fellow! His terror of the Indians had made him forget that his horse was tethered. He wasn't much hurt; and the cry of Indians turned out to be a false alarm caused by the approach of a few friendly Pawnees. Sergeant Shülter was ever after called the "flying Dutchman," a title which he did not relish.

WHAT A BABY DID IN ONE HOUR.

Uncle Will, the good-natured bachelor of the family, was left in charge of the baby one day while every one else was out, and out of curiosity he made a list of what the baby did in one hour. Here it is:

1. Yelled fifteen minutes without taking breath. (Uncle Will declares solemnly that this is a true statement.)
2. Pulled out enough hair from his uncle's head and whiskers to stuff a sofa-pillow.
3. Crocked the wall-paper as high as he could reach with the poker.
4. Broke a stereoscope by sitting down on it.
5. Swallowed six buttons and a good part of a spool of thread.
6. Emptied the contents of his mother's work-basket down the furnace register.
7. Tried to squeeze the head of the cat into a tin cup, and was scratched badly in the attempt.
8. Knocked the head off of a fine wax doll belonging to his older sister by trying to drive a tack into a toy wagon with it.
9. Fell off the edge of the whatnot, and brought down with him two costly vases which were ruined.
10. Broke two panes of window-glass with a cane which uncle let him have.
11. Fell into the coal-hod and spoiled his new white dress.
12. Set fire to the carpet while uncle was out of the room hunting up something to amuse him.
13. Crawled under the bed and refused to come out unless uncle would give him the molasses jug.
14. Got twisted into the rungs of a chair, which had to be broken to get him out.
15. Poured a pitcher of water into his mother's best shoes.
16. Finally, when he saw his mother coming, he ran out to the porch, and tumbled off the steps, making his nose bleed and tearing a hole a foot square in his dress.

And yet Uncle Will thinks that boy will make something yet!

A MOHAMMEDAN EVASION.

According to one of the tenets of the Mohammedan religion it is a sin to make a picture of any living thing. The elaborate decorations of the palaces and mosques of the East are almost exclusively made up of ingeniously interlaced geometric designs, arabesques or flowers, intermixed with sentences of the Koran.

There is a belief among Mussulmans that at the Day of Judgment Allah will demand that the artist who has made the image of a living thing shall endow that image with life, and that failing to do this the artist will be sent to perdition for his sin.

A gentleman who visited a mosque in Algiers found that the tiles with which the building is decorated, which were very old and beautiful, are adorned with flights of birds. He expressed much surprise at this, and asked if the command against such representation were a modern edict.

"Oh, no," answered the pious Algerian to whom he addressed the question. "These are not pictures of living birds."

"But they are painted as if flying across the tiles," the other said in some astonishment.

"Yes," the Mussulman replied, "but do you not see that about the neck of each there is a fine black line? That is to show that the artist painted only dead birds, and the command of the Koran is not violated."

THE EIFFEL TOWER.

A Paris correspondent sends to *The Companion* a pretty story from the Eiffel Tower, which is still one of the attractions of the city.

During the Exhibition of 1889 it was the custom of those who made the ascent to write letters there, direct them to themselves, and after tying them to little balloons, launch them into space from the immense height.

One of these letters, still fastened to its balloon, was lately discovered on an estate in Hungary, the proprietor of which put it into the post, and it duly reached the writer in Paris, who was much astonished to receive a letter written to himself more than a year before.

To break up a cold or a chill no remedy excels "*Brown's Household Panacea.*" 25 cents a bottle. [*Adv.*

Just the Thing for a Holiday Present.

"DAESTU" commends itself to intelligent and scientific minds and is destined to electrify the civilized world.
It is the ultimate development and perfection of other devices, having for their object the demonstration of the theory that thought can be transmitted by means of an involuntary medium.
"DAESTU" conclusively demonstrates this, as by its means the mind of one person can cause the hand of another to involuntarily write the answer to a question asked mentally.
For sale by dealers in Holiday Goods,
Or by mail free on receipt of $1.50.

Many a life has been lost because of the taste of cod-liver oil.
If Scott's Emulsion did nothing more than take that taste away, it would save the lives of some at least of those that put off too long the means of recovery.
It does more. It is half-digested already. It slips through the stomach as if by stealth. It goes to make strength when cod-liver oil would be a burden.
SCOTT & BOWNE, Chemists, 132 South 5th Avenue, New York.
Your druggist keeps Scott's Emulsion of cod-liver oil—all druggists everywhere do. $1.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

EARLY MISFORTUNES.

Talleyrand was the greatest diplomatist of his day. His father was a military officer, and the boy would no doubt have been educated to the same profession, but for an accident which befell him in childhood.

After the fashion of the time, he was entrusted to the care of a woman, some miles away from home. While in her charge his foot was dislocated by a fall. It was not properly cared for, and his parents did not become aware of the fact until it was too late to correct the error.

The abnormal strain brought upon the other foot soon induced a lameness in that also, and the boy thus became a cripple for life. This seeming misfortune determined a change in the plans of his parents for him, and as a result the name of Talleyrand has become one of the most familiar among the great ones of modern history.

The history of a certain American family furnishes several similar examples of the beneficent results of disabling accidents.

The young son of a farmer in a small town in Massachusetts had his hand crushed in his father's cider-mill, and being thus unfitted to gain his livelihood by farming, was sent in due time to the academy, to commence a preparation for a professional life. He died a member of the United States Senate.

A boy who belonged to another branch of the same family, in the vicinity of Boston, cut his knee badly, and was long confined to the house. His kind pastor supplied him with books, and perceiving that he had a natural aptitude for study, taught him Latin, and finally induced his parents to send him to college.

The young man graduated at Harvard, and became a minister of the gospel. One of his sons was a general in the army of 1812; another served his country in Congress.

The son who entered politics had six sons who were college-educated men, all prominent in their profession, one a judge of the Superior Court of New Hampshire, and another a professor for forty years in a New England college, and eminent as an author.

All this life of education and usefulness, extending through three generations, may be said to have started in a little boy's cutting his leg!

SPEECH IN DOGS.

In a recent number of *The Companion* reference was made to the experiments of a French man of science in teaching a dog to articulate certain sounds belonging to human speech. A dog, it was stated, had been found in Paris which was able to utter a sound approaching very nearly to the word "mamma."

A correspondent of *The Companion* writes that a dog has been observed and carefully studied, much nearer home than Paris, who pronounces the word "mamma" as nearly like the sound of human speech as it is possible for it to be uttered with the wide mouth and loose lips of a dog, and who does this with conscious effort, knowing that it is required of him.

This dog, a large black Newfoundland, a little more than a year old, is the property of a person who lives at Arlington Heights, a village near Boston. He has a long head, a prominent arched forehead, and lips which are full and large, overhanging the lower jaw a little.

The dog, when called by his young master and asked, "Stanley, whom do you love?" or simply told to "Say it," shows that he is aware that something is expected of him. He begins to look around for the bit of cake or other morsel of food which is to reward him for his attempt, and it is usually shown to him.

As an introductory performance, Stanley lies down upon the floor. He never "talks" in any other attitude; but, while lying down, he keeps his head clear of the floor.

"Now say it!" says his master, snapping his fingers. The dog begins to "work his mouth," opening and shutting his great lips repeatedly. By and by he gives out a sound which is half-way between a growl and a whine, and which is continually interrupted by the opening and shutting of the lips.

The effect is much like "maw-maw-maw-maw." The dog is told that this will not do, and that he must say "mamma." He resumes the working of his lips, and reduces the number of his syllables to three.

Once more told that this will not do, he makes another attempt. His voice seems to fail, and the vocal sound to be less broad, and at last he shortens down his speech to two syllables, and utters a sound which, heard from an adjoining room, might easily be mistaken for a human voice speaking the word "mamma."

He is apparently proud of his achievement, and says his "mamma" again and again. He is rewarded with bits of cake, and is plainly elated and somewhat excited.

At times he says his "mamma" without any preliminary experimenting with a larger number of syllables. Occasionally he approaches very much nearer the vocal sound "*ah*" in the word than he does at other times, and sometimes he whispers the word rather than "speaks" it, emitting his breath without a distinct vocal sound.

His master says that the accomplishment had its beginning in what was apparently an accident. When a young puppy the dog uttered a whine, at the same time closing his lips. It occurred to the master that the sound could be developed into the utterance of the word "mamma," and he began from time to time, as occasion served, to teach him to repeat the sound, rewarding him when it was accomplished.

TEN ANXIOUS MINUTES.

While Captain Anderson, author of "A Cruise in an Opium Clipper," was trading in Formosa, he had been to the shore with some of his men, on a wild and almost unknown part of the island, to rescue the crew of a Dutch schooner. On their way they had fallen in with a band of native wreckers, and had been compelled to fire upon them. The Dutch crew was rescued, and Captain Anderson and his men started on their return to their own ship.

Our way took us in single file through a narrow pass, and as I entered it at the head of my men, for a second my heart almost ceased to beat at the startling sight that met my gaze.

The pass was lined on both sides with ferocious-looking natives, armed with pole-axes, spears, huge knives, and many other death-dealing instruments.

Although I was taken flat aback by the sight, some instinct carried me forward sword in hand, looking to the right and left with a cool, staring eye, which seemed to curb the revengeful spirit of the natives.

On arriving at the other end of the defile, I stopped, turned round, saw all the men safely through, and then told them in unmistakable English to make a clean pair of heels for the ship, while I brought up the rear at a sharp pace as soon as I had got a little way from the entrance of the pass, so that the natives might not see us in too great a hurry.

How they let us through without touching a hair of our heads, or once making a motion toward us, passes my comprehension. A kind Providence had certainly watched over us for that time, and, shame to say, not one of us returned thanks to God for our preservation.

GREAT SEVERITY.

A very estimable widow has a son who is far from estimable. Evil companions have corrupted the good manners he once had, and the ravages of dissipation are already becoming visible. His poor mother is nearly broken-hearted. She was confiding her troubles one day to an old and trusted friend.

"I am afraid," said her friend, "that you are not firm enough with John; you are too easy with him."

"On the contrary, I am sometimes afraid that I am too harsh."

"Why, what have you ever done?"

"Oh, I haven't done anything, but I have talked to him a great deal."

"What have you said?"

"Why, I have said, 'John! John!' and other severe things."

SOMETHING GOOD.

Little Marjorie is by no means fond of going to church. She has to sit too still, and "the man" talks about things she cannot yet understand.

"What's it for, mamma?" she asked one day. "What do we go to church for?"

Mamma tried to tell her the reasons, and concluded by saying:

"And when you can't understand what the minister means, you must remember he is talking about good and beautiful things; and you must make up your mind to think of something good yourself."

That day Marjorie was very quiet in church, and her mother praised her for it on the way home.

"I did just as you told me," said the wee maid. "I thought of something good."

"What was it, dearie?"

"Apple-pie!"

TOO SLOW.

Monsieur Calino was ordered by his physician to take a drive of an hour each day, and having no horse of his own, he called a cabman for the purpose.

One day he signalled a cabman, and got in for his daily drive. The horse started up at a painfully slow gait.

"Hold on!" said Calino to the driver. "I must get another cab. It would take me all day to ride an hour with such a slow plug as that!"

INSULT NUMBER TWO.

"Faithful are the wounds of a friend," says the proverb; but then comes the question, Who is a friend?

"What's the reason you didn't speak to Boreham when he passed us?" said one man to another.

"He insulted me the other day—called me a freckled idiot."

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

What is wanted of soap for the skin is to wash it clean and not hurt it. Pure soap does that. This is why we want pure soap; and when we say pure we mean without alkali.

Pears' is pure; no alkali in it; no free alkali. There are a thousand virtues of soap; this one is enough. You can trust a soap that has no biting alkali in it.

All sorts of stores sell it, especially druggists; all sorts of people use it.

DO NOT BE CHEATED.

Chesebrough Manufacturing Co.

Which—Man or Shirt?

Has the man grown, or has the flannel shrunk? Usually, the shirt is to blame. No, not that, either—but the way it's washed.

Flannels ought to be washed with **Pearline.** If you're buying new ones, start right. Have them washed only with **Pearline** (direction on every package) and they won't shrink. As for the old ones, **Pearline** can't make them any larger, but begin with it at once and it will keep them from growing smaller. It will keep them from the wear and tear of the washboard, too.

Danger As one wash is sufficient to ruin flannels, great care should be exercised as to the use of the many imitations which are being offered by unscrupulous grocers or peddlers. Pearline is never peddled 314 JAMES PYLE, N. Y.

THE CLO'ES-POLE MAN.

"Clo'es-pole! Cl-o'-es-p-o-l-e! C-l-o'-es-po-ly, po-ly, po-ly, p-o-l-e!"

The long-drawn, melodious cry echoed down the narrow street, growing fainter in the distance, until it was lost in the jumble of peaked, wide-eaved, dormer-windowed roofs far down in the heart of the old French Quarter of New Orleans.

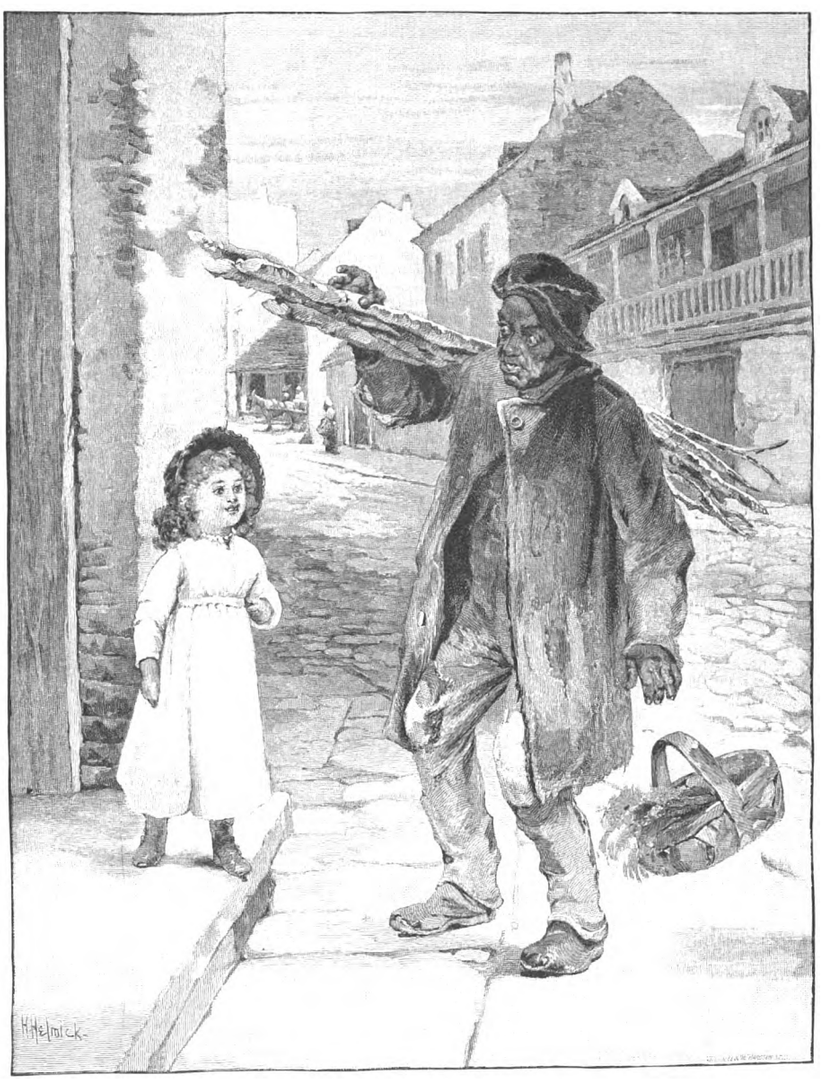
It was Christmas Day. The air was chill enough in the shadow of the tall houses to make Uncle Isr'l shiver a little in his fluttering rags; but the sunshine lay soft and warm on the opposite sidewalks; the ponderous street doors were everywhere wide open, and through the iron railings the paved court-yards were visible—gay little gardens, where banana-leaves rustled in the light wind, orange-trees in big green tubs bordered the winding walks, and honeysuckle and wisteria climbed the gray walls and festooned the overhanging balconies.

Here, too, roses and sweet-olive were abloom, their perfume rising like incense toward the clear blue sky, and children, watched by fat black mammies in high turbans and snowy kerchiefs, were at play.

Uncle Isr'l crossed over. He walked in a shambling, shuffling way, for, as he was wont proudly to declare, he was "gittin' pow'ful ole an' onstuddy on de laigs." He stooped a little, and his gray head was bent on his breast; but his eyes, beneath their shaggy brows, were keen and bright; the grasp of his knotty fingers was firm as steel; his honest black face was full of intelligence.

Over one shoulder he carried a bundle of long, rough poles, newly cut from the swamp not far from the city. These were his stock in trade, and they were much in demand. Uncle Isr'l Minor's clothes-poles were reputed the longest and stoutest that ever held up a clothes-line.

In his hand he carried a split-basket filled with fresh ferns, whose green feathery fronds set more than one care-worn passer-by that day to dreaming of moist, shady places and long-deserted wood-land nooks.



Uncle Isr'l was a familiar figure in what is known as the Garden District of the old city, where the stately houses are begirt by marvellous gardens and grassy lawns. He had pottered about there for twenty years and more, with his clothes-poles and his baskets of swamp-ferns.

His musical, prolonged cry never failed to bring the children of these great houses flying down to the gates. "Clo'es-pole, po-ly, po-ly, po-ly, p-o-l-e!" they would pipe mockingly, their little hands grasping the iron bars.

"Dass right, chillen," the old man would respond, chuckling, and scanning their faces eagerly. "Yo' Unc' Isr'l doan' keer! I knows all erbout chillen an' dey innercen' mis*cheef*, I does!"

He was also well enough known in the suburbs and the humbler neighborhoods, where his clothes-poles were in daily use; but he seldom ventured down into the French Quarter. "I ain' gwine ter fin' de chile in any o' dese ole houses dat look lak jails," he argued to himself, as he crept occasionally along the curious, foreign-looking alleys. "She gwine ter come down ter de gate fum one o' dem fine house dat look lak de gret-house at Welcome Home Plantation."

Here he was to-day, however, and it was Christmas Day. "I knows dat I ain' gwine ter sell ary one o' dese yere clo'es-pole ter-day!" he muttered, easing them down from his shoulder, and settling himself on a sunny doorstep for a rest. "I might 'a' knowed dat ain' nobody gwine ter buy clo'es-pole on a Chris'mus Day! But dey *might* 'a' tuk a shine ter de ferns! I jis' got ter fin' li'l Miss Patsy fo' I stop."

"I 'VITE YOU TO DINNER."

He shaded the ferns with his tattered straw hat, and leaned his head against the door-post.

His eyelids drooped. He seemed to be asleep; but he was only living the years over again, as he had done a thousand times before. He saw himself, "befo' de wah," a trusted head-man at the fine old Welcome Home Plantation. There was Marse Tom Minor, the master, consulting him about the horses.

"Do you think, Isr'l, that the brown filly will bear the saddle to-day?"

There was Mis' Ellinor, the mistress, asking his advice about her ferns, and above all there was the child, little Miss Patsy, following him about from morning till night, her fair hair flying in the wind, her blue eyes shining.

"Fum de minute she kin toddle," he mused, "dat chile wuz sholy de apple o' Isr'l eye. I 'members how I use ter tote her on my back down ter de Quarter ter see de black folks dance in de Chris'mus times! She wuz dat teenchy-weenchy dat I ain' hardly feel her weight!

"An' seem lak I kin see her yit, de day dat she tromp over her maw's ferm-bed! An' Mis' Ellinor ain' had de heart ter scol', caze de chile lak de ferms much ez she did."

Then the war, and Colonel Tom Minor riding away at the head of his regiment; the last good-by at the big plantation gate; the stout-hearted wife; the little girl lifted up in Isr'l's arms to be kissed by her father. "An' I done promise Marse Tom dat same day dat ef anything is ever happen ter him, I gwine ter tek keer o' Mis' Ellinor an' li'l Miss Patsy. An' de wah roll lak de cha'yot o' destruction 'cross de lan'!"

Then, the plantation trampled over, first by the blue, and then by the gray; the rack and ruin of war; the stormy night when Isr'l stole with his mistress into the garden to bury a handful of gold, the family silver, and the diamond necklace which had been Tom Minor's wedding present to his wife.

"An' de ve'y nex' day wu'd is come dat Marse Tom is been kill, an' Mis' Ellinor she saunt me fer ter try an' fotch de body home. She an' li'l Miss Patsy is follered me ter de big gate, an' de las' wu'd she say wuz, 'Unc' Isr'l, does you see dis chile?'—an' de Lord knows de chile is dat minute got her arms 'roun' my ole neck. 'Ef anything is ever happen ter me, you 'member you is done promise yo' marster ter tek keer o' de chile.'

"She wuz white ez a ghos'. An' I lif' up my han' an' swar in de sight o' de Lord an' my dead marster ter tek keer o' li'l Miss Patsy. Den I kiss de sof' han' o' Mis' Ellinor an' tu'n'd off, caze I couldn' b'ar ter tell de chile good-by.

"An' den she come a-runnin' wi' a ferm-leaf in her li'l han' an' a-hollerin', 'Tek *me*, Unc' Isr'l, tek *me!*'"

Uncle Isr'l's head sank lower on his breast; tears were running down his dark cheeks.

He saw himself again wandering about the battlefield in search of his dead master; he seemed to feel again on his brow the chill night wind, that swept over him as he dug the lonely grave. Then the receding tide of battle that had borne him irresistibly away with it.

A year later, when he came back, his beloved mistress, whose death had followed hard upon that of her husband, was sleeping in the old Minor family burying-ground. The eight-year-old child—the only child—had been taken away by distant relatives, no one knew where. One of the field-gang, who remained alone in the weed-grown and silent Quarter, said he "heerd dat li'l Miss had been tuk'n ter New Orleens."

Turning away from the grave of the mother, Uncle Isr'l had begun his long and fruitless search for the child, from plantation to plantation on the bayou, and finally about the big city.

"An' I sholy is s'arch faithful fer de chile, up an' down, high an' low. But I is gwine ter fin' her yit! An' dat's why I is always tote a baskit o' ferns, caze ef de chile sees de ferns, she gwine ter come a-runnin'! Isr'l, you fool nigger, what you cryin' 'bout?"

He shook himself as he uttered the last words half-aloud, and got up.

"I 'clar ter goodness," he added, shouldering his poles and picking up his basket, "I'se gittin' hongry! An' dey ain' so much ez a pone o' bread in de cabin yander! Law, when I 'members dem Chris'mus dinners at de Welcome Home Quarter,—spar'-ribs an' hominy an' sweet 'taters an' biscuit an' chicken gravy an' poun'-cake,—my mouf sholy do water!"

"I wish I could 'vite somebody to Chris'mas dinner!" said a fair-haired little girl in a plaintive tone to her mother, who was busy with preparations for the humble dinner.

The small room which sheltered Mrs. Ratcliffe and her two fatherless children was high up under the roof of a big house, whose dormer-windows overlooked a cobble-paved side street in the French Quarter. In earlier days, when the American District had not come into existence, and these quiet thoroughfares teemed with life and activity, some aristocratic family had probably dwelt in this roomy old mansion, for the winding stairways had carved balustrades, the doors and wainscoting were of mahogany, the quaint wooden mantels were upheld by twisted brass pillars, and the basin of the fountain in the court, green with weather-stains and long disused, was supported by marble figures.

But its glories had long since departed. A

Digitized by Google

swarm of tenants occupied the rooms, story above story. The lower floor had become a junk-shop, where odds and ends of furniture, bits of rusty iron, broken picture-frames and heaps of dog-eared books filled the recesses where ladies once trailed their rustling silks, and powdered gentlemen made their courtly bows. The wide corridor had a damp and musty smell; the courtyard was piled with a nondescript accumulation of benches, washtubs, clothes-lines, barrels and the like.

In this cheap lodging-house Mrs. Ratcliffe, drawn by dire poverty, had come in her widow's weeds, with her two children clinging to her knees. The one ill-lighted room where they lived, and where she toiled all day long at her sewing-machine, had an air of daintiness and refinement about it, in spite of its meagre and threadbare belongings.

The simple Christmas dinner was almost ready. Mrs. Ratcliffe, fragile and pale from overwork and anxiety, was hovering over the stove with the little girl at her elbow. The ten-year-old boy, who carried his mother's work back and forth, and ran errands on the street, was setting the table.

"And did you use to hang up your stocking Christmas eve at the plantation, mother?" he asked. They had been listening with never-flagging interest to the oft-repeated story of their mother's childhood.

"Yes," Mrs. Ratcliffe said, smiling, "and early the next morning I scrambled out of bed, just as you did this morning, and ran into the sitting-room to see what Santa Claus had brought me. And with the first flash of light in the great home the negroes came swarming up from the Quarter laughing and shouting, 'Chris'mus gif', marse! Chris'mus gif', mis'!'

"They crowded on the gallery and into the doorways, their dark faces glowing with delight; and when I had distributed the presents which my father and mother had bought for them, they made a rush for me, set me on their shoulders, and marched around and around the house in the gray of morning, singing."

"O mother," cried Tom; "can't you remember what they sang?"

His mother smiled again. Old memories were thronging to her brain, and with them half-forgotten snatches of song.

"There was one," she said, "that went like this:

Set de spider on de h'arth, an' hang de kittle low!
Hi, boys, hit's Chris'mus!
Tek the banjo fum de shelf, an' bresh de cabin flo':
Hi, boys, hit's Chris'mus!
Ole marse he gin de hog-meat, ole mis' she gin de cake,
Pat er juba nigger, whils' de Chris'mus dinner bake!"

The children clapped their hands gaily.

"And the dinner, mother, the Christmas dinner!"

"When dinner-time came, the big dining-room, all hung with evergreens, was lighted up; the long table shone with glass and silver; the house-girls in their white aprons were flying about under old Aun' Jane's direction. All the family from far and near was there, and if any strangers chanced to be passing my father would send me down to the big gate to invite them in —"

"Mamma," interrupted the little girl again, "I wish I could 'vite somebody to Chris'mas dinner! Can't I 'vite somebody to Chris'mas dinner like you did when you was a little girl? Can't I, mamma?"

"Why," said her mother, patting the flushed and eager little face, "we know no one, dear. Where would you find any one to invite?"

"Oh, I can find somebody!" the child said, confidently. "May I try, mamma? May I?"

Mrs. Ratcliffe reflected a moment. "Well, yes, dear," she said, slowly. "You may try, but it must be some one who is poor, like us—and hungry," she added.

The child was already flying along the narrow passageway and down the long, dark stairways. Tom followed at a little distance to see that no harm befell his six-year-old sister.

She looked critically at the few lodgers whom she met on the stairs or in the court below. They were hurrying to their rooms, their arms filled with parcels. Evidently they had Christmas dinners of their own.

She ran down the arched corridor to the street door.

"I don't see anybody to 'vite," she said, disconsolately, peering up and down the silent and deserted street.

A lady presently passed, leading a little girl by the hand. Their rich garments almost brushed the plain, dark frock of the watcher. She shrank back into the friendly shelter of the doorway.

A moment later, a gentleman walked briskly along. He carried a huge bouquet of cape-jessamines, hummed an opera-air, and twirled a dainty cane in his well-gloved hand.

"I don't reckon *he's* hungry," commented the child.

She waited patiently for some time; no one else came by. The tears welled to her blue eyes, and she turned slowly to go.

Just then the call of the clothes-pole man rang out on the still air, "*Clo'es-pole! po-ly-po-ly-po-ly, p-o-l-e!*"

Uncle Isr'l came in sight. He looked tired and dejected, and bent wearily under the weight of his poles. The hand that held the basket hung listlessly at his side.

"Ah-h!" breathed the child, exultantly, as she waited for him to come up.

She ran out and touched the old man on the elbow.

"Uncle," piped the sweet little voice, "I 'vite you to Chris'mas dinner!"

He turned at the light touch, and looked down.

"Uncle," she repeated, "I 'vite you to Chris'-mas dinner."

"In de name ob Hebben, Miss Patsy!" he ejaculated, dropping his basket of ferns in his excitement; "whar is you come fum?"

Patsy Ratcliffe looked up at him gravely. "From my house," she returned, nodding toward the door. "It's Chris'mas, an' I 'vite you to dinner."

Uncle Isr'l laid down his poles and basket. He clasped his hands and lifted streaming eyes to heaven.

"Lord of Isr'l," he cried, fervently. "Dy name be praise'! Dou has ans'ered de pra'r. De chile is foun'! De chile is foun'!"

The little girl frowned slightly. "You mustn't cry," she said, gravely; "it's Chris'mas."

"Dass so, honey," he said, wiping his eyes on his sleeve. "I ain' nothin' but a ole fool cryin' fer joy! You sees, honey, I is been a-huntin' you fer mo'n twenty-five year, an' I done foun' you so sudden-lak dat I —" he wiped his eyes again. "I is brung you dese yere ferns," he went on, cheerfully, "caze I knows you is always lak ferns."

Her eyes sparkled as she took the basket. "Oh yes, I like ferns," she said. "Why, that's where they found me when I was a baby—in a bank of ferns! I aint seen any 'cept in pots. Mamma's got one in a pot. But mamma says at Welcome Home they was a whole bank of 'em!"

"Cert'ny dey was, cert'ny!" cried Uncle Isr'l, joyfully; "down on de slope o' de bayou, todes de home-fiel'! Does you rickolek, honey, de time dat you tromp over dat ferm-bed o' yo' maw's, an' Mis' Ellinor, she —"

Patsy was hurrying him along. "Dinner's ready," she insisted. "I spec' you'll have to wait, though," she added, eying his rags doubtfully.

"Law, chile!" he chuckled, "I ain' fitten fer ter wait on de table in dese clo'es. I kin set by de kitchen fiah twel de white folks is done, an' den when de house-gals fetch out de dishes, I be boun' I gwine ter git my sheer!"

The child, leading the way for her guest, paid no attention to what he was saying. In the court where he deposited his poles he looked around with a half-stupefied air.

"Is de chile," he gasped to himself, "a-livin'—in dish yere—tum'l'-down ole place?"

As he followed her slowly and with difficulty up the long flights of dark, ill-kept stairs, his amazement and indignation increased. "An' she a chile o' Cunnel Tom Minor!" he repeated, gravely shaking his head.

Finally, breathless and exhausted, he reached the nook where the Ratcliffes lived.

Little Tom had sped before them, and bursting with laughter, was describing to his mother Patsy's queer guest. Mrs. Ratcliffe herself laughed indulgently, and came forward to meet them.

At sight of her the old man stopped abruptly; he threw up his hands; his eyes rolled wildly. "Mis' Ellinor!" he faltered; "Mis' Ellinor Minor, is you riz fum de dead an' come out'n yo' grave?"

Mrs. Ratcliffe's pale face grew a shade paler. She began to tremble. "Ellinor Minor!" she repeated, slowly, "that was my mother's name, and—and—" she made a sudden rush forward. "Uncle Isr'l, is that you?"

Uncle Isr'l, beside himself with delight, hardly listened while she explained, through happy tears, that she herself was the little Patsy whom he had sought so long and so faithfully; and the round-faced, dimpled child who had invited him to Christmas dinner was her own little Patsy.

"Hit's ernough dat de chile o' Marse Tom is foun'! Lord o' Isr'l,' he kept saying, "Dy name be praise'! Dy name be praise'! De cup o' Isr'l is full an' a-spillin'! An' de boy dar jes' de spirit o' Marse Tom de Cunnel!"

He was fumbling, as he spoke, among his rags. He unfastened from about his waist a clumsy belt, which he handed to Mrs. Ratcliffe.

"Hit's all dar, Mis' Ellinor—I mean Miss Patsy—yo' gol'-piece, an' yo' di'mon's dat me an' you is bury dat night onder de rose-bush in de gyardin at Welcome Home. I mean, me an' yo' maw. An' de silver is onder my cabin flo', yander by de eedge o' de swamp. I gwine git it to-night. An' de Lord be praise', you ain' gwine ter stay in dish yere tum'l'-down place. Not whilse Unc' Isr'l can wu'k!"

Mrs. Ratcliffe cut the coarse canvas with trembling fingers. Half-a-dozen gold-pieces fell in her lap, and a low cry escaped her lips, as the necklace of shining stones—her mother's diamonds which she remembered so well—uncoiled its gleaming length. She laid her hand on Uncle Isr'l's shoulder, trying vainly to speak.

"Shucks, Mis' Ellinor, I mean Miss Patsy," he said, "dat ain' nothin'! Hit ain' been any treble ter tote dat belt! An' ain' I done promise Marse Tom ter tek keer o' you an' li'l' miss—I mean—" he stopped and laughed confusedly. "Law, honey, I is dat mix up in my ole no-count min' dat I doan' know one li'l' Miss Patsy fum t'other!"

Little Patsy, who had stood by, wondering and silent, threw her arms around his neck. "I'm your little Patsy," she said, jealously; "I 'vited you to Chris'-mas dinner an' you brought me some ferns!"

"Dat I did, honey!" he cried, delighted.

That very night Uncle Isr'l dug up the Minor family plate under his cabin floor on the edge of the swamp.

Now he looks after the garden around Mrs. Ratcliffe's pretty little cottage in the American Quarter. He proudly calls himself her "headman." Little Patsy follows him about from morning to night, as her mother did before her.

"Ef hit hadn' been fer dem ferns," he declares, busy in the shady corner where the swamp-ferns grow, "I wouldn' 'a' foun' de chile. I done hunted li'l' Miss Patsy fer mo'n twenty-five year, *up* an' down, *high* an' low. An' las' Christmus de chile, she was a-lookin' dis way an' dat in de street, an' when she see de ferns, she knowed her ole Unc' Isr'l, an' she jes' come, *a-runnin'!*"

M. E. M. DAVIS.

For the Companion.

HOW SANTA CLAUS FOUND KATRINKA.

Katrinka was a little girl who lived in a sod-house in Nebraska. Out on the great, treeless prairies, the people who take up claims often build houses made of sods, which are cut in thick squares, and piled one above another to form walls. A few pieces of lumber are laid across the walls, and sods are laid upon these to make the roof.

Such a house is queer to look at, but when the inside is plastered and floors are laid, the sod-house is very comfortable and warm—a thing of great importance on those wind-swept plains.

Katrinka's house stood alone on the prairie. It had one large room in which the family lived, and in which was a bed for Katrinka's sister Bertha and her husband Joseph, and a smaller room which was used for a kitchen, in which a little bed for Katrinka was made up each night.

All about the house were great fields of corn, tall and green, stretching away in seemingly endless rows. There was a little space near the house which Bertha reserved for the beets and cabbages and other vegetables which the family used.

Katrinka was sometimes very lonely out on that vast prairie, with no little girl near her, and no one to play with but Lottchen. Lottchen was the rag doll. She was not beautiful, but Katrinka loved her dearly.

In summer, she and Lottchen had great fun running up and down the long rows of corn that grew high above their heads, and making the long, crisp leaves rustle. Sometimes Katrinka played that she was a pony and Lottchen a fine lady taking a ride; and she would canter and prance up and down in a very spirited fashion.

Sometimes she played she was a railway train; and here and there a place in the corn-rows, where a hill had died or was stunted, served her as a station. At such places the engine always whistled and slowly stopped.

Katrinka had the stations named. One was Germany; one was the little town in the Fatherland where she was born; one was 'Nited States, and another New York. Those were all the places the little girl knew.

The real train passed quite near Katrinka's house. She and Lottchen always watched for it when it went up in the morning, and in summer she could see the return train when it passed at about eight o'clock in the evening.

The coming of the morning train was an event in the day for Katrinka. She always laughed and waved her hand or her apron as it passed, or, if the day was rainy, pounded on the window. Sometimes she caught sight of little girls in the car, and then she waved Lottchen. The trainmen all knew her and learned to watch for her.

But she led a different life when winter came. Katrinka and Lottchen could no longer run up and down the corn-rows, playing pony or railway train, nor pretend to help Bertha in the little garden. They had to stay closely in the house; and they did not like it. Then Katrinka thought she would like to have her playmate Gretchen, and be back in the old home in Germany.

Katrinka had not forgotten Germany. Joseph and Bertha and she had come to America only the spring before. Katrinka remembered the vast ocean, and the ship and the dreadful sickness that had come over her. And she remembered the great, noisy, crowded city where they had left the ship, and the long ride in the cars across the country to Nebraska.

And now it was the day before Christmas. Katrinka stood by the window, and when the train went by, she pounded on the glass with one hand and waved Lottchen with the other.

But after it had gone, and the sound of its puffing engine had died away, a very sober look crept over Katrinka's face. She had been perplexed for some time over a very puzzling question, and as it drew nearer to Christmas she thought about it more and more and grew more and more sober.

She knew that in a very few hours Santa Claus would start out with his reindeer. How would he know where she was?

It was a hard thing for the little girl to understand. She and Lottchen talked it over; that is, Katrinka did the talking, and Lottchen listened with flattering attention.

"How will he know where I am?" she asked Lottchen. "He always found me at the village, before. I was always at the same place—even the very same house, Lottchen—every time he came. But now, when he goes to my house in the village, I shall not be there. Do you think he will ask where I have gone?

"The Herr Pastor knows. Maybe he will think I am dead, and will give my presents to my playmate Gretchen. But I should rather have them myself.

"Maybe the reindeer cannot come across the ocean. Do you think he comes to the 'Nited States, Lottchen?"

But Lottchen did not know. She could only listen gravely to Katrinka's whispered confidences.

"There were, oh, so many little girls in the great city, Lottchen! I saw them. So Santa Claus must come to New York," she said, thoughtfully. "But do you suppose he comes away out here? It would be such a long pull for the reindeer!"

At last she asked Bertha about it, and was relieved to hear that Santa Claus went everywhere, to each city and village and house that he could find.

But how would he find that one little sod-house out on the prairie, four miles from the small town that had sprung up so quickly? Even if Santa knew of the existence of the little town, he could miss the house "just so easy," Katrinka told Lottchen, for it would be night when he went by, and the little house would be dark. How was he going to see it?

She resolved to ask Bertha how Santa Claus could find her. So, dragging Lottchen by one arm over to her sister, who sat busily knitting, she said, in her quaint, serious way:

"Sister Bertha, how will the good Santa Claus know where I am?"

"Know where thou art, *mein Liebchen!*" cried Bertha, stopping the merry click of her needles to kiss the sober, upturned face. "Is it of that thou wert thinking? Santa always knows where good girls are. There, run away, dear, and bother thy little head no more about it."

But Katrinka and Lottchen were still in doubt. If there were only a way to let Santa know that a house was there on the prairie! If she could but give some signal, so that he would come to see!

All the afternoon she and Lottchen thought about it.

Suddenly an idea popped into Katrinka's head. She whispered it to Lottchen, who appeared to listen approvingly, and Katrinka was so pleased with her plan, and so convinced that the difficulty was removed, that her yellow braids of hair bobbed about in a lively fashion as she nodded her head and laughed.

Then, feeling that in her great anxiety she had neglected her duty as a mother to Lottchen, she

Digitized by Google

gathered the rag baby close in her arms and sang her to sleep.

"She has forgotten her troubles," thought Bertha, listening to Katrinka's sweet little voice. "Nothing bothers children long."

Poor Bertha! She, too, had been thinking since the snow came of the home in the Fatherland, of the quaint old village, with its crooked streets and thatched stone houses, and the friends of her youth. She was lonely and homesick for a sight of them all.

When Katrinka asked about Santa Claus, it made her heart ache, for she knew that the good saint would leave them very little from his wondrous store; indeed, she did not think he would come at all.

She had hinted to Joseph, when he had gone that morning to the town to get provisions and to sell her knitting, to buy a trifle for Katrinka's Christmas, if the money lasted. But she did not know how it would be. They were so poor, and every cent must be saved.

By and by she laid aside her knitting and began to prepare supper, for Joseph would soon be returning, and he would be hungry.

When the sound of the snow crackling under the wheels of the little cart was heard outside, Bertha threw a shawl over her head and ran out in the cold.

"Joseph!" she cried eagerly, as he jumped from the cart, and began to unhitch the old horse. "Didst thou do it—buy a trifle for Katrinka?"

But, alas! Joseph shook his head.

"There were so many things to buy that we needed," he said, "and the knitting brought so little. There, do not look so sad, Bertha. Katrinka is a great girl, now. She will not expect Santa Claus."

But in his heart he, too, was sad. He thought that if Katrinka seemed too disappointed, he would whittle her something from a little wooden box that Bertha had. Something could be invented that would serve for a Christmas gift.

Bertha could have cried with disappointment and vexation. He could have brought a single piece of candy, she thought. But there was no help for it; Joseph could not go back, and Katrinka must go without a Christmas.

She could scarcely bear to meet the eyes of the expectant child, who, still holding her doll, stood looking from the window.

"*Ach!* it's cold!" cried Joseph, stamping his feet at the door, and then coming in, and stretching out his hands to the fire. "But it has already begun to grow warmer, and there are signs that we shall have more snow. How good and warm it is in here!"

He rubbed his face and ears to make them glow.

Joseph's prophecy proved correct. It grew warmer, and snow began to fall. Then the wind sprang up; the air grew cold again, and the snow grew finer. The air was filled with white clouds of it. The wind shrieked and howled and swept the flakes hither and yon, and piled them in great drifts on the prairie.

But it was warm and cozy inside the little sod-house, and no one thought of the storm raging without save Katrinka, who wondered if the reindeer could get through the drifts.

But she rocked Lottchen to sleep again, in firm faith that Santa Claus would come, and sang her lullaby with a happy heart.

But Bertha could not but think of the little sister's disappointment on the morrow. She thought how different it had been the year before, when the "little mother" was alive, and they were in the dear Fatherland.

She knew that in the old German village even then they were making ready for Santa's visit; that the shops were trimmed and the streets were gay in honor of his coming, and that dozens of Christmas-trees were casting the bright rays from their tapers into the wintry streets to tell of the coming of the Christmas Day.

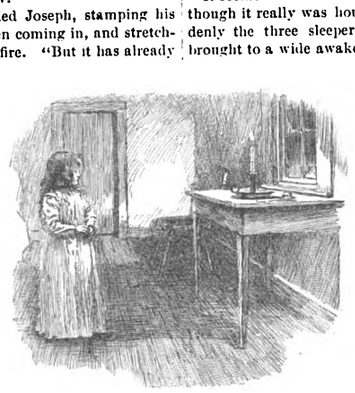
The tears came to her eyes so fast that it was fortunate she could knit without looking at her work; otherwise she would have been obliged to lay the stocking aside. When bedtime came, Katrinka was strangely wakeful. But she was quite willing to be put to bed in the little kitchen. After hearing her prayer, Bertha left her, thinking she would soon be asleep.

But Katrinka did not go at once to Dreamland. She kept wide awake, until she was sure Joseph and Bertha were sound asleep.

When she could hear Joseph's heavy breathing, she slipped out of bed, a little white-robed figure, and crept softly across the room. At every step or two she stopped and listened to be sure she had not awakened the sleepers. Then she crept on again.

It was dark, but she knew where everything was, and presently her little outstretched hand touched the box of candles. Then she found the matches. How her heart beat as she struck a light! Would Joseph hear her? He would think it a waste or at any rate very foolish. She desired Santa Claus's coming too much to let him run any risk of being unable to find the house.

Ach! how the match spluttered, and how long it was before the candle caught! And when it did catch, an unlucky movement made it go out, and so the whole process had to be gone over. This time it was successful, Katrinka holding her breath the while.



Then she placed the candle in its stick, and set it on the well-scrubbed little kitchen table, as near the window as possible.

A Letter from Santa Claus.

It was a tiny flame, but Katrinka looked at it with satisfaction. Santa would see it and come to look. With a sigh of relief, the little figure slipped back to bed again, and with a rapturous hug for Lottchen to let her know it had been done, Katrinka fell asleep at once.

It seemed as if she had hardly closed her eyes, though it really was hours afterward, when suddenly the three sleepers in the sod-house were brought to a wide awake alarm by a loud knocking against the door of the house. Katrinka's little heart, after the first jump of terror, beat hopefully. It might be Santa Claus!

"Who is there?" cried Joseph, loudly.

"Will you let me in?" came a voice from without.

"*Ach*, one moment!" Joseph cried.

When he opened the door a man stood there, white with snow that had clung to him pushing through the drifts.

"Come in, come in!" cried Joseph, heartily. "How came you to be out on such a night as this?"

"*Ach*, how warm! how good!" exclaimed the man, whose accent proclaimed him to be a German, too. "My wife is out there; may she come in?"

"*Out there!*" cried Joseph, horror-stricken; "where is she? She will freeze! we must hurry!" He was already at the door.

"Not in the snow!" cried the stranger. "She is in the train over there. We were already hours late, and now we are snow-bound. The fuel has given out, and every one is cold and miserable. When I looked out and saw the light here, I pushed my way through the snow to see if my wife might come in; for she is sick and tired with the long journey."

All this the man exclaimed hurriedly, anxious to be off. Joseph, slipping on his heavy coat, and seizing a shovel, cried, "Come! come!"

Bertha, who from the kitchen had heard the story, bustled about, preparing for the poor lady's comfort. She stirred up the fire, so that it might be warm and comfortable, and remade the bed. Then she spread a bed for herself and Joseph on the floor of the kitchen, for it was not long past midnight.

Soon Joseph and his guests appeared, the lady looking very tired and cold, and both inexpressibly thankful for the shelter. Bertha made her a cup of tea, and it was some few minutes before anything was thought about the light. Bertha, in her excitement, had not realized how queer it was that she should find a lighted candle at the kitchen window at midnight.

But when the stranger, Mr. Müller, exclaimed, "What should we have done but for that light in the window!" it suddenly came to her that it was very strange. She could not imagine how the light came there until Katrinka pulled at her dress and whispered audibly:

"I did it, sister Bertha, so Santa Claus could see the house and find me!" Then, frightened at the astonishment on Joseph's and Bertha's faces, and at the enormity of her offence, she hid her face in her sister's dress and began to cry.

But Mr. Müller caught her in his arms and kissed her on both cheeks.

"Santa Claus! Ah, yes, to-morrow—to-day—is Christmas! I had almost forgotten. God bless you, little one!"

He put her down gently, and then Bertha told her to go back to bed again.

It was morning when she awoke. Had Santa come? But the stocking was in the other room, and though she longed to run in and look, Bertha shook her head. She must wait, she said sadly, for she did not know that Santa had been there.

But soon they heard Mrs. Müller cry, "Come in, little one!" and Katrinka ran in eagerly.

There was the stocking; but alas! it was empty. It hung, limp and gaunt, in the corner where she had placed it.

Poor child, how her heart sank! Santa had not been able to find her. But maybe he had been there and left something away down in the toe, she thought with sudden hope; and she put her hand into the stocking to see.

There was something inside! She drew out a bit of folded paper, and when she opened it something bright fell out. Was it a gold penny? No; it was a gold dollar. Such a lot of money for a little girl, Bertha said, the tears springing to her eyes as she looked her thanks to Mr. Müller.

But the best part was what the bit of paper said. Mr. Müller read it to her:

DEAR LITTLE KATRINKA.—I came very near missing you. As it was, I couldn't open my pack out here on the prairie, for the reindeer wouldn't wait. So I'll just drop a trifle in the stocking to let you know I found you, and I'll leave the other things at the town for you.—Yours ever, SANTA CLAUS.

How Katrinka's eyes shone at that! She jumped up and down and hopped about on one foot, waving Santa's note in one hand and the dollar in the other.

"He came, Joseph! He did, he did! An' he's got something else! He's going to send me something else! You said he wouldn't come, and he did! he did!"

Lottchen had to be found and informed of the proceedings immediately. She did not look surprised. Perhaps she had expected it, all along; but Katrinka was radiant.

The guests remained until about ten o'clock. All the morning Bertha worked busily, baking little cakes and pies and making tea and coffee for the passengers on the train; and when, at last, the track was cleared and another engine sent to help, Bertha had a pile of dimes and half-dimes as the result of her morning's work—her Christmas present, she said, smilingly.

Mr. Müller begged them to take money for their kindness, but Joseph said, "*Ach nein!*" decidedly. They could not take pay from one who had brought a Christmas to the little Katrinka.

"Well, since you refuse this, promise me you will try to get to the next town to-day. I think Santa will keep his promise," he said, knowingly.

Then good-byes were said, after many thanks had been given, and Joseph, Bertha and Katrinka watched them take their seats in the car, and the train pull slowly off. How good it had been to see new faces! How lonely the little house on the prairie seemed when they were gone!

Soon Joseph harnessed the horse to the cart and started. It was much warmer, and he knew he could go around the deepest drifts. Besides, the old horse was tough and strong.

Katrinka and Bertha were on tiptoe with excitement and curiosity until his return. Katrinka stood at the window and watched and waited, holding Lottchen and the gold dollar very tightly. She missed the train that usually went by in the morning, for it, too, was delayed.

It seemed as if Joseph would never come. She rocked Lottchen to sleep a half dozen times and as often awoke her to read Santa's note, which she knew by heart.

At last, just when the first shadow of twilight was settling down on the waste of white on the prairie, Joseph appeared in sight. Katrinka could not stand and look patiently from the window. She had to run out of doors, and dance about with joyful curiosity until Joseph drove up to the shed and took out a box marked with her name.

And when that box was opened! It would be impossible to tell Katrinka's amazement and perfect happiness. The things which the box contained were enough to make any little girl jump up and down for joy.

First there was the most beautiful of dolls, with blue eyes and red cheeks, and the yellowest of flaxen hair. A cunning crimson hood covered these curls, and Miss Dolly's dress was also crimson.

There was a bed and a chair for her ladyship and a tiny flatiron and a wee broom and dust-pan, besides papers of candy, nuts and oranges. Lottchen was allowed to lie neglected on the floor for no one knows how long, Katrinka was so excited.

When she took the wonderful dolly in her arms to give it a rapturous hug, *it shut its eyes!* Katrinka almost dropped it, she was so surprised. Bertha was as pleased over the gifts as the little girl, and Joseph said "*Ach so!*" in true German fashion.

Down in the bottom of the box was material for pretty dresses for Bertha and Katrinka, and warm hoods for both; and a fur cap for Joseph, which he could pull down over his ears during his long rides to the town.

What a Christmas it was! Even in Germany there had never been anything like it. Bertha held up the soft folds of blue flannel and Joseph tried on the cap a dozen times. As for Katrinka, she had *her* hands full, so many things to look at and play with, and those goodies to eat.

The times she dressed and undressed the new doll and put her to bed utterly disgusted Lottchen, who sat gloomily in the new chair. But if her bran heart ached with jealousy it must have been comforted later; for when bedtime came, and the new treasures were put aside for the night, it was Lottchen that Katrinka's sleepy voice asked for, and it was Lottchen who went to sleep hugged tightly in her little mistress's arms.

MARY E. CHILD.

WORTHLESS GOLD.

An Englishwoman describing a visit to an extensive gold mine in Victoria twenty-five years ago, says that many of the workers in the mine were shareholders and very rich men. Few of them seemed to have the slightest idea of the value of money, or of how to spend it.

"Many of those who can count their money by thousands live in the same little shanties which they built on first coming to the diggings. They treat their friends on every possible occasion, and when they go to the nearest town, buy for their wives the most expensive dresses they can find. Few of them have any higher idea of the pleasure, or the advantages, or even of the comforts to be attained by the possession of wealth.

"As illustrating the characteristics of such men, a gentleman told me this story:

"He arrived at a port in Australia, and finding no one who looked like a porter by profession to take his portmanteau to the hotel, he said to a rough-looking man who was standing on the wharf, with his hands in his pockets, 'Here, my man, if you'll take this up to the hotel for me, I'll give you half a crown.'

"The man scowled at him, took a couple of

Digitized by Google

sovereigns out of his pocket, threw them into the sea, turned away without a word, and marched off with the most contemptuous expression on his face."

EARTH'S PARABLES.

The world is full of glorious likenesses.
The poets' power is to sort these out,
And to make music from the common strings
With which the world is strung.

Selected. —*Philip James Bailey.*

For the Companion.

CHRISTMAS IN A POCKET.

"Hullo, Mis' Clyde!"

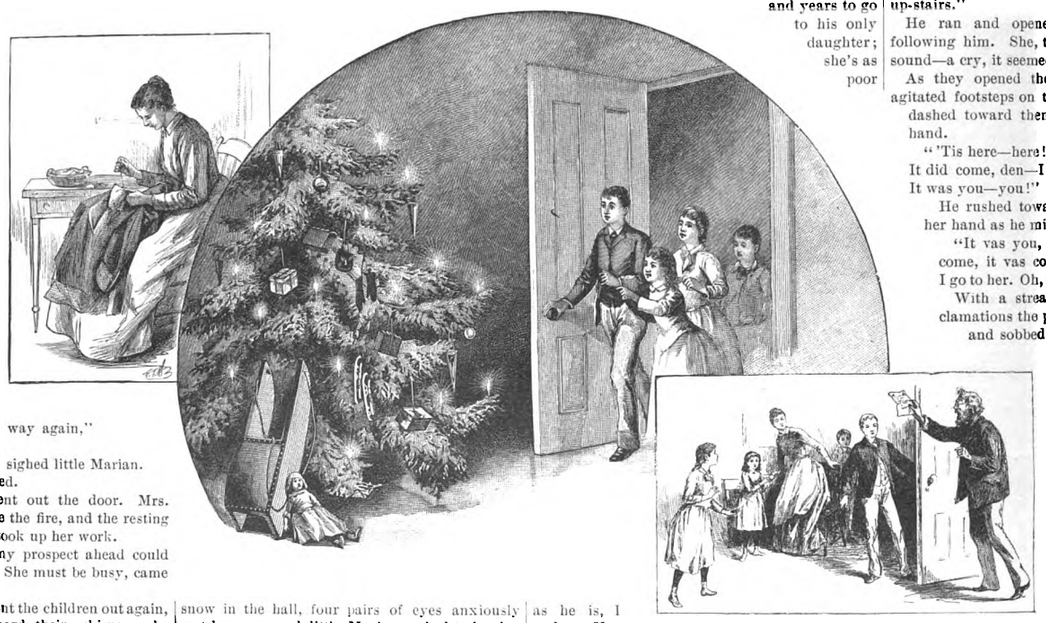
"Come in, Mrs. Grimes," said Mrs. Clyde.

"No, I can't set down. I just run in to ask you if Seth Warner paid you up 'fore he went away?"

"Is Seth Warner gone away?" asked Mrs. Clyde, turning a shade paler.

"La, yes. Didn't you know that?"

"No. I saw him yesterday morning."



"But you aint seen him since, I reckon. And you won't see him agin, for my boys says they seen him gettin' on the cars and goin' off."

"No, he didn't pay me," said Mrs. Clyde, in a discouraged tone.

"Nor me, neither, for his board. A shame, I say, for men to cheat poor folks like me and you, that have it hard enough makin' a livin'."

Fifteen minutes later three children came to the door and peeped in at mamma, who sat before the fire with her hands folded.

It was an unusual thing to see those hands at rest, but that was not what silenced the chattering children and cast a shade over their faces, as Ruth turned to Ted and Marian with a finger held up, and the three children tiptoed through the bare hall.

"She looks that same way again," whispered Ruth.

"Yes, just the same," sighed little Marian.

"Only worse," said Ted.

The tiptoeing feet went out the door. Mrs. Clyde left her seat before the fire, and the resting which was no rest, and took up her work.

The look at the gloomy prospect ahead could not be taken at leisure. She must be busy, came things rough or easy.

She knew what had sent the children out again, even if she had not heard their whisper; she knew that the hardness within had so written itself upon her face that even her own three, coming from their play to warm themselves, had preferred to go out unwarmed rather than venture in.

But she could not help it. The sight of their innocent faces added sorrow to the sorrow in her heart in the thought that for these three, for whom she would do so much, she was able to do so little.

She had promised them gifts for Christmas which she could not now procure. Her calculations had been very closely based upon receiving all which was her due. It had failed her, and she must fail them.

"No work yet, mother dear, but it's coming in time. The longer it waits, the greater'll be the surprise and the good feeling when it does come."

A sturdy, cheery-voiced boy, older than the others, came in, and busied himself about the small cares necessary to making things comfortable for the night. Every time his step was heard it gave his mother a throb of hope that he might have found work; but only again and again to be disappointed.

She had no heart to respond to his greeting. The other children came in and talked with him, but a hush gradually descended upon them.

Mrs. Clyde laid aside her work at last, and went up-stairs to set in order the room of the man who had gone away without paying for the use of it.

Some time since, widowed and poor, she had laid out her slender capital in buying the furniture of a house and letting the rooms, managing thus to do a little more than pay her rent. For other expenses she must look to her own hands, and the willing ones which Dick held ready for the work he was so eagerly seeking.

She was glad to get for a few minutes out of reach of the eyes which so pleadingly, questioningly sought hers, and she lingered until a little stir in the hall below drew her down.

"It's a letter," said Dick, picking up something which had evidently been thrown in at the door.

"Whom is it addressed to?" asked his mother.

"Oh, nobody in particular. It says, 'A Christmas letter for you and yours.'"

"Is that all?"

"It's pretty, though!" cried little Marian, as Dick held it up before her. "See—flowers and pretty leaves! Read it to us, Dick."

Dick read:

"Glory to God in the Highest, and on earth peace, good-will towards men."

"DEAR FRIEND.—This Christmas greeting comes to you with the assurance that whoever, whatever you may be, and under whatsoever circumstances placed, Christian hearts are going out toward you in loving sympathy and hearty good wishes, most of all in earnest prayer that your heart may unite in praise to the Highest, who at this time sent us His unspeakable gift, and that His peace may dwell in your heart, prompting you, as it may be in your power, to deeds of good-will to those around you.

"Think on the eternal home
The Saviour left for you;
Think on the Lord most holy, come
To dwell with hearts untrue.
So shall ye tread untired His sacred ways,
And even in darkness sing your songs of praise."

"I like it. Read it again," said Ruth.

The second reading fixed many of the words in the hearts of the listeners.

Supper was arranged by Ruth's deft little fingers, and afterward the children went out to a little meeting in which they practised singing carols for church on Christmas day.

Left alone, Mrs. Clyde again took up the Christmas greeting, with a half-formed purpose to seek its aid in a battle in her heart, in which all that was rebellious in her nature seemed to be contending against all the sweet influences of the season.

An hour later, after much stamping off of snow in the hall, four pairs of eyes anxiously met her own, and little Marian rushed to her lap with a laugh of happy confidence.

"We've had such a nice time, mamma!"

Dick poked the fire into a bright blaze, and all gathered around it.

"I have something dreadful to tell you, children," said their mother.

"What, mamma —"

"Dreadful, for Christmas?"

"I am afraid you will think so," she said, "but you are all good children, and I am sure you will bear it like little heroes. I can't get you the things I promised for your Christmas. Seth Warner has gone away without paying his rent, and your Christmas has gone with him."

There was a pause.

"Is that all?" asked Dick, bravely.

"Not any doll!" said Marian, in a half-whisper.

"Mamma," said Ruth, moving nearer to her, "will you smile and smile —"

"And not look so—so—" said Marian.

"Yes, I will—no, I won't," said mamma, pressing the darlings closely.

"Then," said Ruth, with an energetic little stamp of her foot, "I guess Seth Warner can't take Christmas away from us! Look, mamma!" she said, taking up the "Christmas letter." "We have all the glory and all the peace and good-will left."

"But can't we have anything at all, mamma?" asked Ted.

"Listen, dears," said mamma. "We can't buy any presents, and none of us have had time to make any, but we'll have the best Christmas dinner we can manage. And on Christmas eve, instead of the tree we were going to have, we'll have a merry-making without it. What shall it be, Dick?"

"Molasses candy—plenty of it," suggested Dick.

"Pop-corn!" shouted Ted. "That'll be jolly."

"And apples," said Marian.

"And sing and tell stories," chimed in Ruth.

"That will do," said mamma. "And we'll be glad and thankful —"

"That we haven't broken our legs, like poor Timmy Crane."

"And that we haven't the scarlet fever, like the Greens."

"And that we haven't run away without paying our debts, like Seth Warner," said Ruth, half under her breath.

But at this Dick doubled up his fists.

—

It was the morning of the day before Christmas eve. There was no shopping for the things so doubly delightful to the poor because in very truth they come but once a year, and not always then. Mrs. Clyde had always made a practice of getting for Christmas gifts things not quite necessary, for the necessities came somehow, and the unnecessary things so rarely.

But to-day there were no happy secrets and hidings. Mamma could not restrain a few tears as she swept the uncarpeted hall.

"De blessed Christmas is coming near," said a voice, as a step came down the stairs.

It was one of Mrs. Clyde's lodgers, who occupied a small room at the head of the stairs. He had at first taken a better room, but had soon moved into the smaller one.

He was a German—a small, slightly built man, with thin, gray hair, and eyes so blue and frank and kind that the family had always regarded him as a friend, more particularly as he never failed to have a smile or a pleasant word to the children when they came in his way.

"You never can make anything out of him," Mrs. Grimes had assured Mrs. Clyde, in the overflow of her talk. "Folks says he aint all straight in his mind, and I guess they're right. You'll hear his story of how he'd been a-savin' up money for years and years to go to his only daughter; she's as poor as he is, I reckon. You see, he'd trusted his money to Smith & Brightman to invest for him, and then, you know, that big bank in the city failed up, and that ruined them, and poor Mr. Meintz's money went with the rest. It almost broke him down, and then came the queerest part of it.

"He said he expected to get word from Germany at any time, that would set him right. He waited for months, and then his wits seemed to go astray.

"He thought he had received a letter from Germany at the post-office, and was going to read it at home; but when he got home he didn't have the letter. 'Taint likely he ever got it, is it?

"Well, it made him 'most crazy, anyway, and he had a long fit of sickness, and talked night and day about his daughter and her little children. Used to teach something or other till then, but after that he seemed to couldn't teach any longer—couldn't bring his wits to it, likely, and it would 'a' gone hard with him if some one that knew him hadn't got that little place for him to clerk.

"But folks don't believe his story about hearing from Germany. They think it's just a crazy streak he's got."

Mrs. Clyde had always felt kindly toward the forlorn-looking old man, whose wistful eyes to-day seemed to tell that his heart was almost breaking with more than its usual burthen of longing for bright faces and sweet voices, whose brightness and sweetness were not for him.

A smile lighted up his wan features as he met the children at the door.

"Goot morning, little ones! Wait —" he held Marian's hand a moment while he felt in his coat-tail pockets. Then he let it go in order to make use of both hands.

"Ah, it is old," he said, with an apologetic shake of his head, as all his efforts brought out only the ends of ragged linings. He contrived, after much fumbling, to recover a few nuts, which he distributed among the children and then went his way.

"I've never offered to take a stitch for him," said Mrs. Clyde, in self-reproach, "and he a poor old man with no one to see to his comfort!

"I wonder if I might not mend that old overcoat some time when he isn't wearing it? Perhaps he'd never notice it—men don't always realize when they're comfortable. He doesn't seem like one who would think it was taking a liberty."

It was a bright, warm day, and Mrs. Clyde observed that Mr. Meintz, on his way to Mrs. Grimes's boarding-house for his dinner, stopped and hung his overcoat on one of the hooks in the hall. Later in the afternoon she brought it into her room and examined it.

"More work about it than I thought," she said, looking half in dismay at the tattered linings. "Every pocket torn out! I wonder the man ever finds anything he puts into them."

She had little time, but a thought of the universal good-will in which she would like to be a sharer, even in such a trifle, floated through her mind as she hunted for some pieces of lining, and settled herself for a vigorous overhauling of the old coat.

"Well, well—just like a man!" she exclaimed, as she brought out a mixed mass of small stuff which had escaped from the pockets, and found its way into the tails.

There were bits of pencil, corks, a photograph of a child, slips cut from newspapers, one or two letters and other pieces of paper. Smoothing them out carefully, she laid them in Mr. Meintz's room.

She intended to tell him, as he came in, what she had done; but she chanced to be out at the time buying a few necessaries. On her return she found that Dick had come home after another unsuccessful search for work.

"What's that?" said Dick, stopping and listening as he stooped to replenish the fire in the stove. "Something's the matter with somebody up-stairs."

He ran and opened the door, his mother following him. She, too, had heard the strange sound—a cry, it seemed, either of joy or grief.

As they opened the door there came swift, agitated footsteps on the stairs, and Mr. Meintz dashed toward them, waving a paper in his hand.

"'Tis here—here! Oh, how dankful I am! It did come, den—I vas right, I vas not crazy! It was you—you!"

He rushed toward Mrs. Clyde, and kissed her hand as he might have saluted a duchess.

"It vas you, mit mein pockets! It vas come, it vas come! Oh, mein daughter! I go to her. Oh, blessed Christmas season!"

With a stream of excited German exclamations the poor man sank into a chair and sobbed. Then, seeming to gather his wits, he contrived to make Mrs. Clyde understand the wonderful thing her hands had wrought. The precious letter from Germany, which had restored him to a long-lost estate there, and which contained an ample remittance for his needs, had really arrived. In his absent-minded way he had put it in his overcoat pocket, and for long months it had lain with the accumulation of trash which had slipped down through the worn-out pocket linings.

"It never be found but for you," said the old man, as with his excitement a little calmed, he at last returned to his room.

"I should never have known it for the same face," said Mrs. Clyde, as the next morning the blue eyes beamed upon her when he hurried out, taking time to give little Marian a toss to the ceiling.

"I 'most wish I was one of the little girls he's going to see," said the child, a few hours later, as parcel after parcel was left in the hall.

Surely so many parcels had never come to the shabby lodging-house before. Mrs. Clyde looked on, with a bravely sympathetic thought for the mother and children who were to be made glad with her lodger's gifts; but she could not help realizing that her own burden was to be a little heavier, for his room would now be vacant, at least for a time.

If only she could take it for Dick! They were so inconveniently crowded below. But that could never be until he was earning his own living.

"You won't reach your daughter until Christmas is over, will you?" asked Mrs. Clyde, on one of the occasions in which Mr. Meintz excitedly bustled in and out on the afternoon of the twenty-fourth.

"Yes, I go at seven, and ride twenty-four hours. Christmas vill be dere yet!"

He turned and laughed like a child, as he caught sight of Marian peeping eagerly into a loosely wrapped parcel.

"It's a great big doll! I could just see the hair," Marian confided to Ruth, in the privacy of their own room, "and I know it's got blue eyes. And I'm not going to have any doll!"

"No," said Ruth, patting the doleful face. "And I'm not going to have any work-box, and Dick isn't going to have any books, and Ted isn't going to have a sled. But we'll have 'em all next year. And we're going to have Christmas anyway."

The short winter afternoon had closed in for an hour before Mr. Meintz had finished his running up and down-stairs. He had refused all help in his packing, and when, at half-past six, his trunk stood at the door awaiting the omnibus, his quiet knock was heard at the door of Mrs

Digitized by Google

Clyde's room. His voice was tremulous as he answered her invitation to enter.

"Merry — merry Christmas to you all!" he faltered. "It is from you—all from you—dat I go," he repeated to Mrs. Clyde. "Dis vas for you," he said, giving Dick a letter. "It is de place in de store dat I have. Dey gives it you now."

Dick broke out into expressions of astonishment and thankfulness, but Mr. Meintz did not wait to hear him.

"I leave my little Christmas for you oop dere," he said, taking Marian in his arms, and then pointing toward his room. "It is from de little ones I go to! Good-by—good-by. Merry, happy Christmas!"

Marian whimpered, and Ruth sat down and cried, while Mrs. Clyde brushed away a tear as she looked over Dick's letter, scarcely able to believe that such good had come.

"A Christmas present, in good earnest," said Dick, waving it in his hand as he danced about.

"You were mistaken when you said we shouldn't have any, mamma," said Ted.

"What was it he said about his room?" said Dick. "The dear old fellow was in such a muddle with all he wanted to say that it was hard making out anything."

"He said he left a Christmas present for Marian," said Ruth. "Oh, perhaps he has left her a doll! I'm going to see."

Ruth ran up, and the next moment had given a scream which quickly led the others after.

"Oh! Oh! Oh!"

Blazing in a full glory of waxen tapers was such a Christmas tree as these four, in the struggle with poverty which had come so early to them, had never dreamed of seeing. The blue eyes of the fair-haired doll beamed on Marian through a profusion of gifts, beautiful and useful. Dick gave one glance, and dashed down-stairs.

"Call him back!" cried his mother. "Tell him to let us just say 'thank you' —"

Dick called, but as the excited family rushed to the door the omnibus drove away. They caught sight of a face full of delighted affection, and a frantic waving of a hand, while in the street noises mingled the "Merry, merry Christmas! Gott bless you all!"

SYDNEY DAYRE.

For the Companion.

MISS MARSH AND BOOTS.

Christmas was at hand in the village of Marshdown, and every one was ready for it. That is, almost every one. Mr. Grimes himself, in at the store, wore as smiling a countenance as ever fell to the lot of man.

It was amusing to watch Mr. Grimes hastily glance over at the store-door whenever its latch rattled, and, if he did not see the head of the new-comer at a certain distance above the latch, cry out "Christmas gift!" It was necessary to do this as a protection against the small boys of Marshdown, to whom he would have been held pledged for a gift if he had not said the words before they did.

It was also amusing to witness the sheepish looks upon the small boys' faces when they were thus saluted; for they had no intention in the world to bestow a gift upon Mr. Grimes.

There were two people in Marshdown who were not ready for Christmas. Miss Marsh was one, and Boots Mooney was the other.

Miss Marsh was a very prim little old lady—the only "lady" in Marshdown. Marshdown looked up to her, notwithstanding her limited means.

It was pleasant to go into her trim little parlor and sit down within the range of her sweet-smelling flowers, and listen to her mocking-bird singing its curious songs. And when any one was in trouble, it was comforting to go then, too, though he might not have the heart either to smell the flowers or to listen to the bird. Miss Marsh was never chary with comforting words; she had seen so much trouble herself that she knew exactly how to sympathize with it in others.

But this Christmas the whole of Marshdown — that is, nearly the whole of it — was enjoying itself to such a wonderful degree, that Miss Marsh as a consoler was altogether in the wrong neighborhood.

Mrs. Wells, who lived in the big brick house which Miss Marsh's father had built when he owned all the land thereabout, was going to have a public Christmas tree. The children of Marshdown and the children's parents of Marshdown were in a genuine flutter of delight over the idea. Little trees with a few candles and candies were common enough; but Mrs. Wells's tree was intended to dazzle all eyes. The lady had not attempted to keep it a secret, and the joy of anticipation was certainly without bounds.

Miss Marsh sat alone in her pretty parlor, gazing out through her flowers at the house on the hill. Once she had had a Christmas tree there, too, ever so long ago. She had sent out into the highways and byways and gathered in all the children that could be found.

She smiled over the memory of it. How eager she had been, and how fearful that there wouldn't be children enough to consume the little colored bags of candy! And how her father had laughed when the crowd came trooping in!

There was to be another Christmas tree in the dear old room, and she was not to be there. Why, what a very foolish person she had become, to care for such a little thing as that! If Mrs. Wells had thought she wished to come—she brushed her hands over her eyes quickly and laughed tremulously. What a very, very foolish old person she was!

But five minutes later, Miss Marsh, still gazing out through her flowers, but beyond the brick house and over the hills, acknowledged frankly to herself that she did not wish to go to Mrs. Wells's Christmas tree, and that she would have refused politely an invitation. She concluded that was the reason why the invitation had not come.

Her mocking-bird began to sing wildly and gladly. Its voice filled the little room—such a little room that it never could have held the beautiful tree which she longed to set up.

Suddenly Miss Marsh's vision narrowed, and centred itself upon the figure of a small boy advancing down the road. There was an extremely indifferent air about the boy that a keen-eyed individual would certainly declare was assumed.

Once he turned and glanced back at the big house, and when he continued his leisurely gait he forgot just how a boy's face must appear when he is desirous of showing all the world how very little he cares.

Ever so long ago, it seemed to this twelve-year-old boy, he had lived in a neat little wooden house, which had since had its windows nailed up and been converted into the warehouse attached to the store.

His life had been altogether a different thing to him then. A Christmas day in that little house was the happiest of all his happy memories—that day when he found his little red-topped boots standing by the fireplace. Every one had made much of him, and then and there people had begun to call him Boots.

Boots could remember walking on the store-counter, so that all the men could see how very pretty were the red tops and brass toes. His mother had laughed at his new name, and late that Christmas night had waked him up, saying, ever so softly, "Come, little Boots, you must let me take them off."

The name was the only thing that was left—that and these. He knocked his big feet clumsily together, feeling the little feet grow hot inside. The men in Marshdown generously gave him their old boots, and he had to wear them. Every one said they were quite good enough for him, and that he ought to be glad to get them. But he was neither glad nor grateful.

Boots felt himself a very disreputable specimen of boyhood with all this weight of thanklessness upon his heart, as his big boots and his little feet shuffled along on this beautiful Christmas day.

He lived outside the village with a farmer named Mead. It was a good home, but he was not grateful for that either.

"It's Christmas day,"—this is the way Boots's thoughts were running, as he neared Miss Marsh's trim palings,—"it's Christmas day, an' I aint thankful fer that, neither!"

"Is that you, Boots?"

The boy started and gave a swallow before he answered, "Yes'm."

"Hasn't Mrs. Wells invited you to her Christmas tree?"

Boots swallowed twice before he said "No'm," and then—it must have been the look in Miss Marsh's eyes that caused the catastrophe—he put his ragged arm down on the gate-post, hid his head, and couldn't say another word.

Miss Marsh opened her hospitable gate and laid a soothing hand upon the lad's shoulder.

"My, my!" she said, putting her kind arm around him altogether and taking the wet hand away from his face. Then she half led and half pushed him straight into the pretty room, and made him sit down in one of the big chairs almost on the flowers.

After a while Boots stopped crying, but he was ashamed to look up. It seemed to him that the bird was making fun of him. He did not want even a bird to make fun of him.

"Have you quite finished, Boots?"

Boots shuffled around and tried to laugh.

"Because if you have, and you are sure that farmer Mead will not want you this afternoon, I am going to ask you to help me with my Christmas tree. Mrs. Wells didn't invite me either."

Boots said nothing. Miss Marsh had said this in what seemed to be a laughing voice, but if she were laughing at him he did not care. There was something pleasant to him in the sound of her voice.

"The first thing to do," she said, "will be to go out and find a tree,—a little one that will look well in my parlor."

"I seen one in the fence corner as I came along," exclaimed the boy, eagerly. "It goes up in a point, and touches clean to the ground."

Miss Marsh fetched her hatchet, and stood in the doorway smiling as the little feet took the big boots clipping down the road.

"And now for the next part," she said to herself or to her bird, one could not tell which. She talked as much to the bird as to herself. "It will require a good deal of courage, but my father was a brave soldier."

When Boots returned with the tree, Miss Marsh, shawled and bonneted, was waiting for him upon the steps.

"Just let it remain on the porch," she said, "until we pay our visit to Mr. Grimes."

Then she passed out the gate with the big boots almost skipping at her heels.

Miss Marsh fumbled the latch on the store door rather nervously before she went in. Mr. Grimes looked up quickly. In an instant his pleasant face grew more pleasant still; it was quite an honor, and Mr. Grimes felt it as such, for Miss Marsh to come, herself, to the village store. She paused in the middle of the floor, pressed her hands together, and then smoothed them one over the other. She did not know that her heart could beat so loud that she could hear nothing else.

Presently, with her pale cheeks flushing a vivid pink, she looked up at the bland and smiling countenance of Mr. Grimes and called out brightly, "Christmas gift!"

Just what she expected happened. Mr. Grimes blushed and smiled, and said, "Yes, certainly!" and "Thank you, ma'm;" and then asked Miss Marsh to look around and help herself.

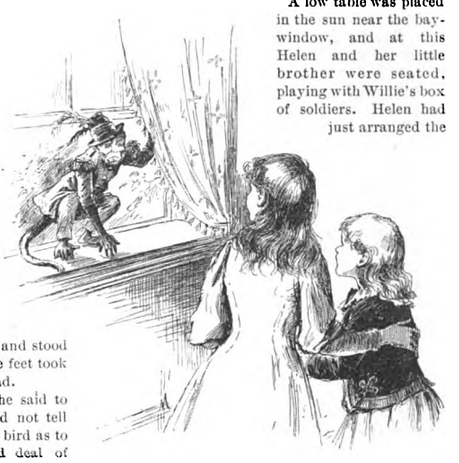
This she did, with Mr. Grimes beside her, smiling generously. She helped herself from his remaining stock of candy and toys; and when she laughingly pointed out a pair of brass-toed boots, the warm-hearted storekeeper, who was beginning to comprehend her little plan, insisted upon the other Boots sitting down and being fitted, telling her how he remembered all about the first pair.

Then he looked very kindly at the only "real lady" in Marshdown, and said that he, "for a fact," considered it a shame that "a smart fellow like Boots should have to foot it about just anywheres;" and when Miss Marsh joined him in laughing over his good-natured little joke, he asked her if she didn't think he would be a pretty good boy in a store, if he were tidied up a bit.

To this she answered "yes;" and seeing her way clear, she went on to explain quite gravely that she intended arranging matters so that she might have the boy with her. Then Mr. Grimes said in that case he should be pleased to give him a chance to show what he could do in the store after Christmas.

Such a happy Christmas as Boots spent with the little laden tree in the present, and the store filling the future!

He had a singular dream that night, though he did not tell it to Miss Marsh until long afterward, when he was a tall, stalwart young fellow of whom Marshdown was very proud—for it had not been able to keep him.



He dreamed about a large tree that could not by any possibility have been crammed into the little parlor, and yet it was there, and it was Miss Marsh's tree and his. He dreamed that a troop of angels came gliding down from Heaven, and each one found a girl and boy not in Marshdown, but around and about somewhere where they did not have much Christmas, and brought them in, and they were all pleased and happy and delightfully bewildered like himself, as they stood and looked up at the glistening branches and flickering lights of the beautiful dream-tree.

LOUISE R. BAKER.

For the Companion.

JOCKO.

Helen and Willie Marston were just getting over the measles, and though it was warm and pleasant October weather, the children were not yet allowed to go down-stairs. Their mother had been obliged to leave them in the sunny, pleasant nursery for a few hours, but Helen was so careful of her little four-year-old brother that it was quite safe to leave her in charge.

A low table was placed in the sun near the bay-window, and at this Helen and her little brother were seated, playing with Willie's box of soldiers. Helen had just arranged the soldiers in line of battle, when suddenly Willie's attention was diverted by a hand-organ, which was heard outside playing an air he recognized.

"O Helen!" he exclaimed. "It's the monkey-man! I'm sure it's the man with the little monkey he calls Jocko. I wemember the tune! I want to see the dear little monkey dance and take off his cap. Come and look out the front window."

"We mustn't, Willie, for the window is open, and mamma said neither of us must go near it. Besides, don't you remember what Katie told us? She is sure it is this very man that lives opposite her sister Bridget, for he is an Italian, and he calls his monkey Jocko; and he beats him, and treats him very cruelly to make him do his tricks. I don't feel as if I wanted to see him again."

"But *I* do!" persisted Willie. "I want to see the monkey. I don't want to see the bad man."

"Willie, dear, listen to sister. Mamma says, 'No,' just the same as if she were here; and you know papa said the other day that a good soldier obeyed orders even more faithfully when his captain was away. We are little soldiers, and mamma is our captain. Don't you want to be a good soldier, Willie?"

"Yes," Willie said, rather slowly, as he turned again to his soldiers and tried to be good. "I s'pose I do, but I do wish I could see the monkey."

Just as he said this Helen gave a sudden start, and cried out:

"O Willie, look! The monkey has come to see you!"

Willie jumped up quickly and turned to the front window. There, on the broad window-seat, where the sunlight came flickering through the leaves of a tall elm-tree, sat a little shivering black form, in red jacket and plumed hat, looking at the children with a sad and pitiful expression, as if he were saying, "Look at me! See how cold and hungry and tired I am, and take pity on me!"

The children stood still, looking at him in mute amazement. They were too much surprised to speak.

The little monkey, attracted by the warmth, came forward, politely taking off his hat as he advanced.

Just then a shrill whistle was heard outside—a sound which little Jocko had evidently learned to dread, for he fled, not away, but toward the children, and took refuge behind Helen's chair.

This was too much for the tender-hearted children. Helen took the little creature, shaking with cold and fear combined, in her arms, and sat down, and Willie began to pat the funny black face which looked so wrinkled and care-worn, and yet so baby-like.

"O Helen, how he does shake! What can we do for him?" said Willie.

"I think it would be a good plan to give him some warm milk. He seems very cold, and I dare say he's hungry," answered Helen.

"He is all dusty, too! He really ought to have a warm bath. I'll tell you what to do, Helen; we'll give him a nice bath in the little tub that belonged to Carlo. Won't that be a splendid idea?"

Carlo was a pet pug the children had owned, but he had become cross, and Mr. Marston had been obliged to give him away. His bath-tub was still in the bath-room, and his basket in the

Digitized by Google

nursery closet. Helen pondered a moment. Then she said: "Papa always says, 'Take a warm bath, and then a good drink of hot milk, and go to bed, if you have a chill.' I think this poor little thing must have a chill, he shakes so. Yes, I think we'll give him a warm bath. You hold him, Willie, while I get it ready."

Willie took Jocko in his arms, and the monkey rested contentedly, satisfied that he was in kind hands, and thankful to be warm and at rest.

Soon the bath was ready, and the tub placed near the open fire on the mat. Helen took Jocko and unfastened his little red jacket. He resisted a little at first, but she was so gentle that the bright little creature soon seemed to understand that no harm was meant. He let her remove the gaudy uniform. Helen uttered a cry of distress when his back was bare, for there, plainly enough, were the marks of cruel blows.

"O Willie," she cried, "it must be the Jocko that Bridget told about! I am sure of it now, for see where he has been whipped! I'm glad he ran away, and I'm glad he came here to us."

"We'll never, never give him up, will we?" said Willie, with tears in his eyes.

"I hope not. I'll ask papa to buy him," answered Helen.

When Jocko was put in the tub he seemed very much astonished, and at first was inclined to jump out; but as Helen softly sponged him in the warm water, he made up his mind that he liked it, and made such funny faces that the children were much entertained and amused.

Helen was a wise little nurse, and the bath was a short one. While she was drying Jocko on an old, soft towel, Willie himself put the milk in the saucepan, and held it over the fire. Almost as soon as Helen had wrapped Jocko in a blanket which had belonged to Carlo, the milk was warm.

They gave it to Jocko in a little tin cup, which he held in one of his hands. He was given a seed-cake in the other, and began to eat and drink as if he were enjoying himself very much.

If Jocko could have told them that his master had given him no breakfast because he was tired and cold, and didn't want to move out of his bed that morning, they would have pitied him more than ever; but Jocko could not make them understand, though he chattered to them in monkey language, as if he were trying to tell them how much he needed their kindness, and how thankful he was to them for it.

"Now he has had his bath and his luncheon he must be put to bed, and then perhaps he will get a nice long nap, and wake up feeling ever so much better," said Willie. "I'll fix his bed."

Willie began with great animation to bring out and arrange Carlo's basket, even warming the blanket Jocko was to lie upon. Then he put him in the basket, and carefully covered him up—all but his little black head.

Jocko was ready enough to get into the warm basket, and he settled down and closed his eyes as if he knew what was expected of him.

Helen and Willie sat by his side and watched him, keeping as quiet as if he had been a little baby they were afraid of waking. In a few moments his breathing satisfied them that he was asleep.

The children were so much entertained by their care of Jocko that they did not notice how the time passed. When the nursery door opened, and Mrs. Marston appeared, they were quite startled. They hurried toward her on tiptoe, Helen holding up a warning finger.

"O mamma, don't make any noise," she said, in a whisper, "you'll wake him up!"

"Wake up what? Your doll? Why!" she exclaimed, suddenly, as she saw a little black head in Carlo's basket. "What have you got there?"

Helen drew her mother to the basket, and carefully turned back the quilt.

"For pity's sake, child! A monkey! Where did it come from? Who brought it here?"

"Oh dear, now you've woke him up, mamma!" said Willie. "He had just got into such a nice sleep after his bath, and he's had a chill, and oughtn't to be disturbed."

Mrs. Marston turned a most astonished and perplexed face to Helen. A monkey having chills, and taking a bath, and sleeping in Carlo's basket in the nursery, watched over carefully by her children, was too much of a puzzle for her to understand at once.

"Tell me, Helen, what it all means," she said.

Helen told her mother all about the monkey's sudden appearance through the window and his evident wish to escape from his master; and when she showed the marks of blows on his back, Mrs. Marston was as full of sympathy for little Jocko as her children. She, too, declared that Doctor Marston must buy the monkey.

When the doctor came home the whole story was told again, and Katie, the cook, added her account to that of the children.

She had seen the cross-looking man, with fierce black eyes, playing the organ in the driveway. Scotty, the collie, had rushed out at him, barking loudly, and frightened both the man and the monkey so that, in the confusion, the monkey escaped, and climbed into the trees. No one could tell which way he went, for the trees lined the whole street. The man had looked for him, and whistled for him, and then gone away, muttering angrily in his own language.

After he heard the story, Doctor Marston agreed to buy the monkey, and the next day set out to find his owner. But the man was not to be found. He had suddenly left Bridget's neighborhood.

After several days a policeman gave the information that a man, answering to the description of the organ-grinder, had been engaged in a serious fight the night after Jocko's escape, and was supposed to have fled from the city.

So Jocko became an accepted member of Doctor Marston's family.

It was a cold autumn, and a trying winter followed it. Willie did not recover quickly from the measles, and, indeed, was so delicate that his parents found it necessary to keep him almost entirely within doors.

Willie himself had no desire to go out; he dreaded the cold air, and if it had not been for Jocko it would have been difficult to get him out at all.

When a mild and pleasant day came, and Doctor Marston said, "Now, Willie, you must go out in the carriage to-day and take the air, and you must wrap Jocko up carefully and take him with you," Willie would look out the window and shiver, and reply languidly:

"I don't care about going out myself, papa, but if you think Jocko needs it, I suppose I must go for his sake."

The child and his queer pet were almost always together. When the weather was bad, and Willie was confined for days together in the nursery, Jocko never left him for an hour; and when Willie was able to run about the house, Jocko followed him like a shadow, or rode around, up-stairs and down, on his shoulder, clinging with one long, thin arm to the child's neck, or holding on with his little black paw to one of Willie's curls.

Mrs. Marston used often to say that it seemed as if the monkey was sent at that particular time to amuse and cheer her little invalid boy during his tedious confinement.

Doctor Marston had warned the children that Jocko might prove a very troublesome and mischievous pet, but this did not prove to be his character. His harmlessness and gentleness surprised every one; and the quickness with which he picked up all sorts of pretty little tricks was really wonderful.

He and Willie played ball together; they knocked down ninepins, and built up high towers of Willie's blocks. When Helen gave a little tea-party in the nursery to a few of her young playmates, the chief entertainment was Jocko.

It was a comical sight to see him then, sitting up in a little high chair, dressed in his pretty blue flannel jacket, surrounded by laughing faces, and eating and drinking with the children. He knew how to pass his cup, to use a napkin, and to bow his head politely when he was waited on.

The long, cold winter months passed on, and Willie and Jocko, although shut away from the outside world, had a little world of their own within the walls of the sunny, flowery nursery. They played happily together, and never realized that they were prisoners.

But just as winter was turning to go, and spring was advancing, an epidemic broke out in the town, and Willie was taken ill.

The day after he was taken, Jocko came down with the same symptoms. The two lay side by side, Willie on his little bed and Jocko in his basket, which Willie insisted on having so near the bed he could touch it.

Once more Jocko did good service for his little master; for when Willie was obstinate and refused to take his medicine, he was told to see how well Jocko took his spoonful from the doctor's hand. Willie, ashamed to be behind Jocko in obedience, would then take his unpleasant dose.

So, too, when he was fretful and restless, and insisted on getting up, his mother would point to Jocko, lying so patiently in his basket, and Willie would put his small, hot hand on Jocko's back and lie still again, falling into a feverish doze.

There came worse days and nights, when Mrs. Marston scarcely left her little one's bed; and then the critical hour which would determine whether or not they could keep their boy.

All night the weary father and mother had watched by Willie's bed, and just as the first flush of dawn was appearing, Doctor Marston, bending over his child, turned a pale but thankful face to the anxious, waiting mother, and whispered:

"He is much better. He will get well!"

Just then Willie opened his eyes and smiled, and asked for a drink of milk. It was given him, and as he drank it, he pointed with his feeble hand to Jocko.

"Give him some, too, papa."

Jocko drank his milk with Willie. Then both fell into a sound "getting well sleep;" and both waked together, as hungry as a bear, or even a boy or a monkey, could be.

Before long Willie was out of his bed, and Jocko out of his basket, and during the coming summer the people of a New Hampshire village were greatly interested in the arrival of a new kind of summer boarder among them—nothing less than a very funny monkey, who came up with the Marston family.

ANNA H. SMITH.

For the Companion.

SAVED BY MAXIMILIAN.

In the winter of 1866-67 Company A of the —th Regiment of United States Infantry was stationed in the Eagle Tail Pass of the Tinaja spur of the Rocky Mountains, in New Mexico. The mountain defile called the Eagle Tail Pass was on the outskirts of the Arapahoe Indian country, and through it were made many of the forays of this fierce tribe upon the scattered settlements of Colorado and New Mexico.

Early in the spring of 1866 Captain Beaubien marched his company from the regimental headquarters at Fort Union to this lonely post high in the mountains. The row of log-cabins in which the company was soon comfortably housed, and the sheds in which were kept the cattle and draught animals, constituted Fort Hoven.

It stood on a moderately high hill that commanded the pass, and could easily be defended against attack.

The country about Fort Hoven was a sportsman's paradise. Crystal brooks leaped down the sides of the mountains, and excellent trout lurked in the pools. Deer, antelope and many kinds of fowl abounded, and occasionally an encounter with a grizzly bear or panther lent a spice of danger.

On one of his fishing trips Captain Beaubien found a little grizzly cub wandering in the woods as if lost. Having tied its paws, he placed the cub on his horse's back, and rode back to camp.

The soldiers received the young bear with high favor. There was a long discussion over the matter of his name, and at the close of it he was called Maximilian, after the unfortunate prince who was then usurping the throne of Mexico. A kennel was made at some distance from the end of the line of houses, and a high post was planted in front of it, to which Maximilian was fastened by a long chain, with plenty of room for exercise.

The soldiers amused themselves by teaching the bear to beg for food, to shoulder a stick, and perform other tricks. Often he was unchained and allowed to range the whole fort—a privilege that afforded him keen delight.

Among the soldiers of the company was one Trefethen, a Cornishman, who like many another Cornishman was a great wrestler. Now and then he pitted his strength with the bear, and a bout between the two always drew the whole garrison as an audience.

The bear was not proficient in the tricks and falls of wrestlers, and quickly resorted to the hug as a means of overcoming his adversary; but Trefethen was as strong as his opponent, and his skill enabled him always to bring the bear to the ground. Though Maximilian, after each defeat, crawled crestfallen into his kennel, he was always ready for a new trial.

These wrestling matches with Trefethen at last brought Maximilian into disrepute, and made him a dangerous member of the community. If any of the soldiers unwarily ventured within his reach, he would seize and hold them until he had squeezed them well.

At night, as the officer of the day made his round of inspections, he often heard a "Houf! houf!" in his ear, and found himself encircled by Maximilian's shaggy arms. He had crossed the cub's beat without giving the countersign.

It was a startling thing to be seized in this way, for even a tame bear's forbearance cannot be depended upon. Maximilian never really injured any one, but his tight squeeze was too agreeable, and some of the men demanded that he be killed; but he had enough friends to save him.

Spring dragged into summer, and summer into autumn, and there was no sign of the Indians the soldiers had come to watch. In this "piping time of peace" Maximilian grew amazingly. Berries and wild honey were spread before him.

In November the second lieutenant of the company was promoted, and the vacancy created was filled by a new "sub," fresh from West Point. The new officer arrived in the first days of December.

He was well versed in the theory of war, but not in the soldier's round of duties as they were performed at the frontier posts. The private soldiers always try the new officers to see how far they may presume to go, treating them with much less respect than they do the older officers. The young lieutenant saw that the men were secretly ridiculing him, and it made him more harsh than he otherwise would have been.

On his second tour of duty as officer of the day, as the new lieutenant was hurrying back to his quarters from his midnight inspection of the sentries, a pair of furry arms clasped him tightly about the waist and gave him a squeeze.

If he had been forewarned, he would have kept perfectly still, and then Maximilian would have released him soon; but no one had told him of the bear's peculiarities, and he kicked and pounded his captor with desperate energy.

The bear resented such unusual treatment, and squeezed the lieutenant the harder. The pair stumbled hither and thither in their struggles, and in some way the lieutenant's sword was caught between his legs, and broken in two.

By this time the guard had been attracted by the cries for help, and Trefethen, the Cornishman, who happened to be one of the guard that night, hurried forward, and quickly forced his pet to release the unhappy officer.

The lieutenant was uninjured, but his dignity had been grievously offended, and his beloved new sword had been broken. He demanded that the bear be killed, and the Captain felt that he had no right to refuse the demand. The young officer must not be made ridiculous in the eyes of the enlisted men.

So the Captain gave orders that the bear be blindfolded and shot by a file of men, exactly as if he were a condemned soldier suffering death in the regular military manner. The Captain consented, however, at the first sergeant's request on behalf of the company, that the bear should not be killed until just before Christmas, and then should be barbecued for the Christmas dinner.

It was the Fifteenth of December when the decree of Maximilian's death went forth. He would not be killed until the Twenty-third. Those eight days were the happiest of his life. He was feasted and petted to his heart's content, for the men were sorry that he was to be killed, even for a Christmas dinner.

It had been warm all the autumn. Not a flake of snow had fallen, and no frost had touched the verdure of Fort Hoven; but on the evening of the Twenty-first a sudden norther swept down through the mountains, bringing with it a heavy fall of snow. The storm continued all the next day without abating, and the night of the Twenty-second was so wild that Captain Beaubien felt justified in releasing the sentries from the requirement of walking their beats.

During all the time Fort Hoven had been occupied, no Indians had been seen. More than that, Captain Beaubien had fought the Indians for years, and knew that it was not the custom of thinly clad savages to venture out in such weather.

Under ordinary circumstances, the Captain would have been right in his judgment; the savages would have remained at home, shivering in their smoky wigwams; but among the Arapahoes was a young chief who had gone quite out of the beaten track of his tribe.

Wichito, the son of the head chief of the Arapahoe tribe, had completed a course at an Eastern college with great credit. After finishing his studies, he had returned to his tribe, full of discontent and resentment over the wrongs of his people. Although he knew the uselessness of contending against the whites, he was impelled to make even the most hopeless fight against them to protest against further injury.

Soon after his return, in September, orders were issued by the Indian Bureau that in the spring the Arapahoes be removed to a reservation. He resolved to make a bold demonstration, and to show the danger that would attend the attempt to remove his tribe from its old home.

He decided, as his first move, to attack Fort Hoven and destroy it, as soon as snow fell, and then to make an incursion against the nearest settlements, counting upon the relaxation of vigilance at the fort growing out of severe winter weather. He saw to it that the Arapahoes laid in a good store of provisions and clothing for the winter.

With the fall of the first snow on the Twenty-first of December, Wichito was ready to march, and on the afternoon of the Twenty-second the young chief and his warriors arrived at the

Digitized by Google

mouth of the Eagle Tail Pass. They could see dimly, through the thickly-falling snow, Fort Hoven standing on its hill a mile away, the warder of the plain country beyond. They encamped in the snow to await darkness.

At eleven o'clock that night, Fort Hoven was silent and dark. Every man of the garrison was asleep. But down at the end of the row of cabins sat Maximilian in the door of his kennel, wide awake. The snow was falling heavily, and the bear was so coated with white that he might easily have been mistaken for his polar relative.

Trefethen had stolen to his pet and presented him with a can of molasses, on this the last night he was to live. Maximilian was eating it, and this was the reason why he was not asleep.

At twelve o'clock the contents of the can had been finished, and the bear was about to turn over to go to sleep, when he heard a faint rustling sound, and saw a long line of men coming up the hill. The bear crept out of his kennel. Now for a frolic!

The foremost man passed near him. Up out of the snow rose the bear, and clasped the man in his arms. Involuntarily the Arapahoe shrieked at this sudden apparition from the snow. He struck at it with the long knife he carried in his hand. The bear snarled with rage, and buried his teeth in the man's shoulder; and high above the noise of the storm rose the death-yell of the Indian.

The men in the guard-house awoke. The bugle sounded the call to arms; the long roll of the drum echoed through the fort, and half-dressed, muskets in hand, the soldiers came running out and fell into line.

The command to charge was given, and the garrison bore down upon the little band of Indians that had gained the top of the hill. The attacking force had marched up the hill in single file, and only a few had yet reached the top. These were driven back upon their comrades, and in a moment the Arapahoes were in full flight.

The garrison remained under arms the remainder of the night, and when the morning broke, clear and cold, there was not a sign of an Arapahoe in sight—save Wichito, who lay dead in the arms of the dead Maximilian.

Maximilian had saved Fort Hoven. If he had survived the battle, the sentence of death passed upon him would have been revoked; but as he had been killed, the original intention was carried out, and he was eaten for the Christmas dinner.

Yes, the preserver of Fort Hoven was barbecued and eaten by those whom he had preserved!

WARDON ALLAN CURTIS.

For the Companion.

THE EXTRA FREIGHT.

To live within sight and hearing of a railroad; to have a big brother who is an engineer on that railroad; and to make trips with him whenever he will allow and school does not interfere, is a state of things calculated to please the average boy; and it did please Roy Kinsley, who was rather more than the average.

When he could sit on the high seat opposite Hal, he felt like a king, and the only thing he needed in order to make him perfectly happy was a chance to run the engine, if only for a few minutes. But that was something which Hal, who was a very careful engineer, never allowed.

Yet Roy seldom lacked occupation while on the engine; for if the bell was not to be rung nor the whistle to be blown, he could always help Jack Dunn at the fire.

One afternoon Hal came home, looking vexed.

"Roy, do you want to go up to Silverton with me to-night?" he asked, as his brother met him at the door. "Here I'm just back from my run, and have got orders to take an extra freight up the branch to-night, which means only four hours' sleep, if I get any. But that isn't the trouble; Dunn's sick, and not fit to be out of bed, much less at work. I can't get another man before morning, so you see how it is. Will you fire this trip for me?"

"Of course I will!" exclaimed Roy. "It's just what I want. Hooray!"

He rushed about to get his cap, overalls and heavy coat. Hal smiled at the boy's excitement.

"You won't be quite so chipper by the time we get to Silverton," said he. "It's hard, rough work enough when you have to keep at it steadily, even for a strong boy like you. It isn't like taking a turn at the shovel whenever you fancy."

"Well, I can go and will," declared Roy, following his brother toward the station, "and when I get too tired or lazy to work my passage, I want to be put off."

A few minutes later the freight train pulled out of the yard. There were only three cars, and Hal grumbled to himself that it wasn't worth the trouble it caused. This seemed to be the opinion of the conductor, also, who wore a remarkably gloomy countenance and appeared to be much out of humor, although he said nothing whatever.

The Silverton branch ran through an almost uninhabited country to a large mining settlement some thirty miles from the junction.

The single track was shut in by thick woods on both sides, throughout the greater part of the distance, and was consequently far from presenting any objects of interest along its way. But Hal Kinsley did not find fault with it on that score. He had no grade crossings, switches nor signals to watch, no stray cows nor reckless men to avoid running over, and no other trains to bother him.

"If railroading was always like this," he remarked at the end of a few miles, "there would be a good many less accidents, and a good many more engineers dying of old age. But still, there's always a drawback somewhere."

"I don't see any now," Roy objected, between two shovelfuls.

"You will, though, before we've gone much farther. Look at all this smoke! It means that the woods up the line are on fire, and that we shall have to run in a smother so thick that we sha'n't be able to see our smoke-stack half the time."

Just then a man came scrambling over the tender into the cab. It was the conductor, Tom Brainerd, who looked even more dejected than when they started.

"Bad night, isn't it, Kinsley?" said he, staring through the front windows down the smoky vista made by the road, now rapidly growing dim in the twilight. "That fire was working toward the line when I came down this morning. We shall run pretty close to it, I'm thinking, for it shows a light already."

He pointed to a place where, in the distance, the darkening sky was stained with a dingy red glow, which pulsated and flushed as the aurora does on a cold winter night.

"Well, what if we do?" returned Hal, indifferently. "It isn't the first time we've seen a brush fire. Don't you remember last fall, down on the southern branch, when we —"

"Yes, yes, I remember that well enough!" snapped the conductor, in an irritated manner, "but there's some difference between then and now, I can tell you. If we get through all right, it'll be because —"

He stopped short in what he had been about to say, took another long stare ahead, and then, without speaking again, climbed back over the tender, swung himself upon the first car, and disappeared.

"What's got into Tom Brainerd to-night?" said Hal. "I never saw him this way before. If I didn't know he never touches a drop, I should say he'd been drinking; but that can't be."

During the next half-hour Brainerd repeatedly appeared on the top of the car, gazing toward the rapidly increasing light ahead. The occasional glare from the furnace door showed the same anxious, alarmed expression upon his usually stern face.

The cars were so few that he had no brakeman with him. This fact might account for his restlessness, since it obliged him to keep watch of the train; but why did he come here? He could have kept watch as well from his proper position in the lookout on the rear car.

"What can be the trouble with him?" Hal asked, when Brainerd appeared for the tenth time above them. "He seems to be terribly afraid of that fire; but I can't see why he should be scared."

The train, making good time, had half finished its journey. The smoke had become so thick that nothing could be seen a rod away, and through it came the intermittent, nearing flashes of the great fire.

The air grew hot, and little drifts of ashes formed against the projecting parts of the locomotive. Sparks and dead cinders rattled against the cab windows.

"We are running right into it," said Hal, coughing and wiping his inflamed eyes upon his coat sleeve, without removing either hand from the machinery.

"And it looks to me as if it was sweeping up on both sides of us," added Roy. "Is there any danger, Hal?"

"N-no," answered the engineer; "that is, not unless the heat warps the rails, which isn't probable, for the roadway is too wide for that. We'll blister our paint a trifle, and maybe have to put out a blaze or two on the cars, but that'll be all. I've been in just such places before."

A few minutes passed, and then, as if a curtain had been drawn away, the smoke disappeared and the train plunged into relatively clear air, between two lines of flaming trees which sent up great gushes of fire under the hurrying clouds of black vapor that they rolled into the sky.

As far down the track as one could see, away to the vanishing point where the two burning fronts of the forest seemed to join, it was the same.

"Whew!" exclaimed Hal. "This is a scorcher! I'll let her out a bit, and make a rush through it."

Just then Brainerd leaped into the cab.

"What are you doing, Kinsley?" he shouted. "You're not going on?"

"Going on?" gasped Hal, utterly amazed. "Of course I'm going on. I'm not afraid of a little fire, I hope; but, by George, Tom Brainerd, I believe you are!"

"Reverse, quick, man, and back us out!" said Brainerd, in a harsh, vehement voice, seizing the engineer's arm with both hands. "Yes, I'm afraid! Reverse her, I tell you!"

Hal pushed the conductor aside with a thrust of his strong elbow. "Don't you know better than that?" cried he, angrily. "What's the matter with you, Tom Brainerd? You act like a crazy man!"

"I'll be a dead one, and you and the boy, too, if you don't back out!" persisted Brainerd. "Do you know what we've got for freight?"

Hal and Roy looked at him, half-frightened. He had certainly lost his senses, they thought.

"No, and I don't care!" said Hal. "But what is it?"

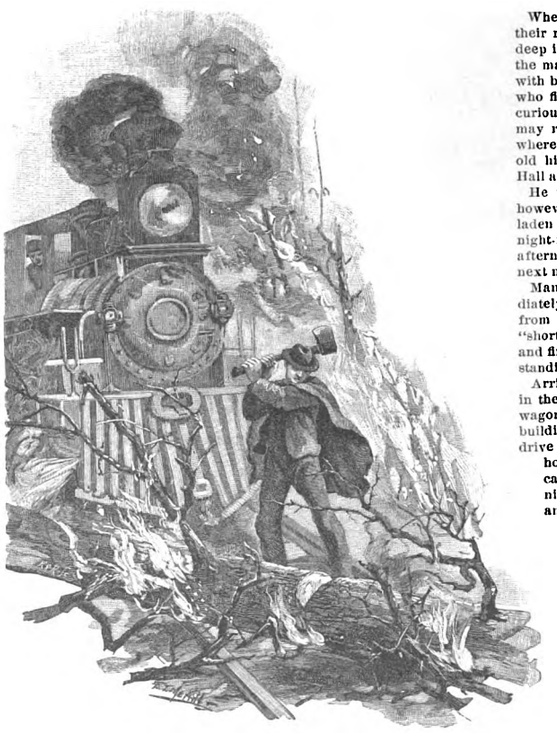
"Blasting powder!" screamed the conductor.

"What!" cried the brothers together.

"Yes, tons of it for the Silverton mines. And the handlers loosened the staves of two or three kegs when they loaded it, so that there's loose powder scattered all about the next car!"

Kinsley pulled the throttle wide open.

"Sit down, Tom!" he commanded, calmly, without looking at the conductor. "We can't go back! The fire's all along that way by this time. We must put her through. Coal up, Roy, but not too much. Quick, boy!"



When, in a position of peril, a determined, strong-willed man makes up his mind to a certain course, there is something about him which makes all others yield to his plans. Brainerd did not attempt to assert his authority over the train, but sat perfectly still, his fists clenched, his eyes set. Roy, pale-faced but steady, fed the fire-box as if he were a part of the machinery.

The engine leaped and bounded under Hal's hard driving, crashing and rattling so fiercely that the roaring flames on either side sent no sound to the ears of those in the cab.

Suddenly Brainerd sprang up, took a spare shovel, some cotton waste and a bucket of water, and left the cab. Roy, turning, saw him on the top of the freight car, scraping off the sparks and swabbing out the little fires which started upon the dry boards of the roof.

"Tom's a brave fellow," said Hal. "It was the worry and dread that made him weaken. You see he knew what this fire was, and knew what he had got to carry through it, if he met it. But he's all right from this on."

Hal had momentarily taken his eyes off the track while saying this. When he turned them back he gave a nervous start, and then, seizing the whistle-cord, signalled "Down brakes!" while with the other hand he closed the throttle.

"Roy chopped blindly on."

"Jump, Roy, and put on our brake back there!"

A great burning tree lay across the rails ahead. Even while Roy threw his weight on the brake, he was thinking, "What shall we do now?" and before he had finished turning the iron wheel he had thought.

The drag and jar behind showed that Brainerd, obeying Hal's signal, was setting the car-brakes, and soon, the reduced speed allowing it, Hal reversed.

The locomotive, sliding and grating along, came slowly to a stand some yards from the blazing obstruction.

Before the train stopped Roy had opened his knife and cut away the leather curtain which closes the back of every engine cab. Rolling up the curtain, he plunged it into the water-tank, drew it out dripping wet, threw it over his shoulders, and with an axe in his hand, jumped down and ran forward toward the tree.

Now he felt the heat as he had not felt it before, when under cover and fanned by the current of air made by the speed at which they had moved. The hot atmosphere struck through the soaked leather, and on his bare hands it was like glowing iron.

Roy chopped blindly on, and as he did so he wondered confusedly whether he could hold out long enough to finish his task, and if he could, how the ponderous severed trunk might be moved off the track. All the time he had in mind the terrible contents of those tinder-box cars, now standing motionless beneath a shower of sparks.

"It's all up with us, I guess!" he thought, still swinging the axe.

A voice came faintly to him from the rear. It was Hal's.

"Come back, Roy!"

With one final blow he felt the tree-trunk break. Then he somehow managed to stagger to the side of the engine, and his brother lifted him on board.

"I can do the rest," said Hal.

He turned on the steam, backed some distance, and then ran full tilt at the divided tree.

The pilot caught it, tossed it aside, and it fell end over end into the ditch. Once more the train flew on with wide-open throttle.

The smoke came down again; the fire receded into the woods; the scorching heat diminished. As the train, leaping out of the forest into the cleared land around Silverton, drew up at the little station, Roy, who had lain exhausted on the footboard ever since his brother had pulled him up, looked up. He saw Tom Brainerd coming in, black, blistered, and without a particle of hair, eyebrows, or moustache remaining.

"Well, boys," said he, cheerfully, "the fast powder freight's on time!"

It was ahead of time, too, but in a badly damaged condition. The engine's gay paint and varnish were peeling off in great flakes, and the bright brasswork was tarnished and blackened. The seared, charred cars were wonders to look at, especially when one thought what they held.

Tom Brainerd must have worked desperately all the time the train was in the burning forest, in order to save them.

"Well, I did jump around rather lively," Tom admitted, "but it was no more than right for me to pay for my scare somehow."

Hal was the same as ever. The only praise he gave Roy was contained in one remark, but this remark conveyed the greatest compliment he could bestow.

"You'll make a railroad man some day, sonny," was what he said.

MANLEY H. PIKE.

For the Companion.

EARLY MARKET.

When the first of the sleepy milkmen are going their rounds, and the luxurious man lies fathoms deep in one of his half-dozen morning naps, then the markets which feed great cities are teeming with bustle and interest. If the citizen of Boston who finds a comfortable breakfast on his table is curious to trace its source beyond the kitchen, he may rise at what is called "cockcrow" in places where crowing is a daily fashion, and visit the old historic market owned by his city, Faneuil Hall and also the New Faneuil Hall.

He will hardly be among the earliest comers, however, for the wagons of the market-gardeners, laden with fruit and vegetables, often start at night-fall, and sometimes at four o'clock in the afternoon, that they may be at the market betimes next morning.

Many of these men drive in from towns immediately adjoining the city; but some of them come from places lying thirty-five miles away, seeking "short cuts" that they may be first at the ferries, and first in reaching their destination and securing standing-ground there.

Arrived at the market, whether at midnight or in the morning darkness, the men arrange their wagons in short, orderly rows beside the great building, so that plenty of space is left in which to drive and walk between the groups. Then the horses are unharnessed and stabled, and the carefully covered wagons left in charge of the night watchmen,—who also guard the boxes and barrels left outside the building,—while the sleepy drivers find some comfortable corner to drowse in until the moment of action.

With the first peep of light they are back at their posts, and begin to uncover their loads, chatting together, exchanging "chaff," and talking over the probable market prices for the day.

"That yours, Johnnie?" calls one sleepy but jovial-looking man, pointing to a cabbage which has rolled from somebody's wagon into the street.

"No," answers Johnnie, with quick wit, clapping both hands to his head. "Mine's on firm. Sure 'taint yours? It's a nice green one!"

Presently appear the picturesque figures of women, with rough, uncovered hair, tattered dresses and faded shawls, each bearing a capacious basket on one arm. They wander about, hoping to pick up a discarded vegetable here and there, and waiting for the barrels of refuse to be brought out from the stalls within.

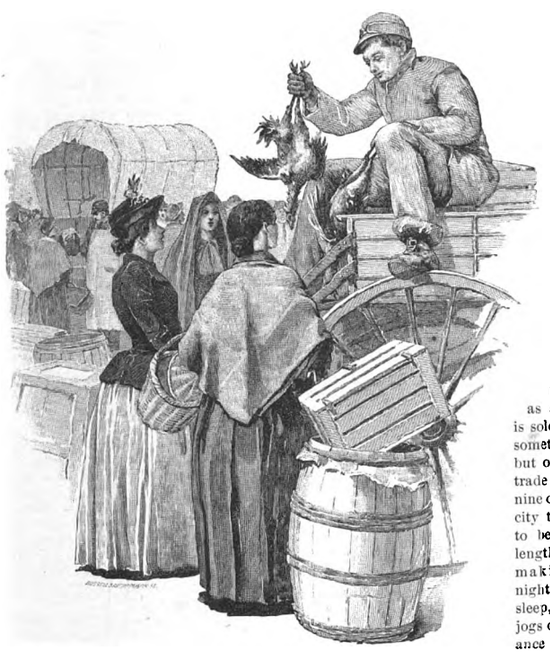
When these barrels are deposited on the sidewalk an eager search begins, and the baskets are speedily enriched with cauliflowers which show the first brown specks of decay, bunches of celery containing one or two perfect stalks, and sweet potatoes partially spongy from age or misfortune.

"Ah! it's many a fine bit ye can pick up here to put in the soup pot!" calls one woman, glancing at an observer with a knowing look which is almost a wink; and another thrifty gleaner adds, as she seizes upon a wrinkled turnip:

"Five coorses I'll have, the day, an' if Jimmie buys a bit of liver, there'll be six!"

With every increasing ray of light, come wagons from the provision stores and smaller markets of the city, to select from the waiting carts large quantities of the vegetables and fruit needed for their daily sales. The scene becomes animated; the broad street is alive with voices. On Friday, especially, the day when suburban stores send in for their Saturday's stock of provisions, it is difficult to find one's way about, among the carts, without jostling eager bargainers.

Perhaps the most interesting season to visit the market is during the summer or early fall, when thousands of berry boxes or great loads of peaches arrive daily. A few firms sell their fruit by auction, and this naturally adds a lively excitement to the scene. Groups of Italian owners of fruit-stands are on the spot betimes. One marketman says of them, "An Italian starts a stand on nothing, but in a month he comes down here and buys whole loads of fruit for cash."



It is in the fall that the market wagons are most delightful to the artistic eye. Pale green cabbages, yellow squashes, piles of celery in varied green, and golden carrots seem actually to light the air.

Meanwhile, as this fruit and vegetable traffic is going on at one side of the market, the meat has arrived on the other, and is rapidly carried into stall and cellar. Great white-covered carts, like

Digitized by Google

emigrant wagons, stand there, packed to the very top with pink and white carcasses; and men adorned by burlap mantles fastened with a skewer are busily tossing them into their destined places.

At sunrise a gong strikes, and the market proper — the great building lined with stalls flanking a central walk—is opened to trade. Then

the bustle within is scarcely exceeded by that without. Men hurry about, drawing on their white frocks and overalls, and begin to remove great carcasses of meat from the sacking which has protected them from dust through the night, or hang on huge iron hooks the meat which has just been brought in from the storehouses.

One man is assorting his stock of eggs by testing their freshness. A lighted candle is placed in the side of his egg box, and over this he holds each egg for a second, and looks through it, before passing it on into its appropriate place. The degree of clearness shown through the shell indicates, to his practised eye, the probable age of the egg, and its state of freshness.

Quite early in the morning come the stewards of the great hotels, to buy their supplies for the day; and then sets in the regular trade, from that of the young housekeeper who wants a steak, but privately wishes she knew "tenderloin" from "porter-house," to that of the boarding-house keeper, who buys in large quantities, expertly selected.

Meantime, while food of all sorts is magically appearing in such profusion, comes a smaller dealer, whose stock is fresh and sweet as the early morning. This is the watercress woman—a slight little creature, who comes in, tugging a big basket filled to the bale with bunches of cress, dark green in its freshness, and dripping with moisture. This she sells by the dozen bunches, at the different stalls.

There is something fascinating in the idea of her trade, so connected is it with damp fields and clear, running water.

Then, bringing an odor sweeter than that from "Araby the blest" to those who remember grandmother's garden, comes a young girl with a basket full of the mints,—"Catnip for your kitty, ma'am,"—and sage and sweet marjoram.

Outside the market are new phases of interest everywhere. A clear, triumphant sound breaks upon the air. It is the crow of chanticleer, and looking about, after recovering from the first surprise of hearing a barnyard echo in a city street, one notices, on the sidewalk, several rough coops containing live fowl.

Some of these are putting their red-combed heads through the slats, and gazing about in a very inquiring manner, and one is preening her feathers as if to be in gala costume for the sacrifice.

These fowls are bought by the Orthodox Jews, whose religion forbids them to eat meat killed by any but their own sect, and it is no uncommon sight to see a woman walking away from the market carrying under her arm a lively and very surprised-looking "biddy," whose legs have been securely tied together.

But where do the fish-stalls of the market obtain their daily supplies? To find an answer to that question one must walk to the wharf. There boats are coming in laden with the fish, which is bought on the spot by wholesale dealers, and not only supplied to various local markets, but also packed and sent away to other towns and cities.

The wharf itself, rather slimy with fish drippings, is made lively by men running about with large hand-carts, filled with the fish which they have just obtained from the boats.

The previous process of loading the carts is a rapid and picturesque one. Large baskets of cod or mackerel are filled on board the little boats, swung up and over the side by means of a rope, and dumped into the cart. The man who fills the basket is hardy and sailor-like, clad in a short jacket or a colored jersey, and the motion with which he spears several fish at a time on a small fork is suggestive of the hayfield.

Other boats have come in bringing clams, and these are shovelled into small baskets, dipped in water to be rinsed, and then handed, dripping, to the wharf.

Returning to the market proper, we shall find it full of bustle and interest all day long. The marketmen outside, as soon as their stock is sold, drive homeward, sometimes quite early, but often, on days when trade is slow, not until nine o'clock. Outside the city they are frequently to be met lying at full length on the wagon-seat, making up for their night's vigil by a sound sleep, while the old horse jogs on, needing no guidance on his accustomed way, and turning out to meet an approaching team as skilfully as his master could turn him.

The market itself closes at five o'clock, except on Saturday night, when it is open until nine. A gong strikes fifteen minutes before the closing hour to warn the keepers of stalls to do their daily "cleaning up;" and when it strikes again, its warning note embodies the old nursery rhyme:

"Home again, home again,
Market is done."

ALICE BROWN.

UNITY.

Lo, Death and Sorrow and Pain are sweet,
And Life and Pleasure and Joy are good;
And these are one, and as one shall meet
When all we feel shall be understood.

Selected. —*Henry Bernard Carpenter.*

CHILE AND BALMACEDA.

Early in November Jorge Montt was elected President of the Republic of Chile. He had been the principal member of the Junta or Council appointed by the Chilean Congress to wage war against the late President Balmaceda. In other words, he had been the chief leader of a successful revolution.

A week after President Montt took office the Junta resigned all its powers to Congress. Thus Chile has a constitutional government again, after a Civil War of eight months.

The origin of the war was a difference between two parties as to the powers conferred upon the President by the Constitution of Chile; the occasion of war was the attempt by President Balmaceda to exercise the large powers which he believed were placed by law in his hands, and the endeavor by Congress, which was controlled by the opposite party, to limit these powers.

A dispute not altogether unlike this between men who sincerely held opposing views as to the meaning of the Constitution of the United States led to a great and a long war. The Constitution of Chile seems to be so vague on the point in controversy between the two parties that either view might be taken by one who tried honestly to accept the true intention of the instrument.

While even the adherents of the Congressional party in Chile admitted that the Presidents had usually exercised the powers which Balmaceda claimed as his, they contended that Congress might at any time withdraw those powers from him. This, of course, Balmaceda did not concede.

In August, 1890, the Congress protested so strongly against the President's policy that he dismissed the ministers he had chosen, and replaced them by men acceptable to Congress. Then the Houses required him to approve a new election law.

This law was designed to prevent Balmaceda interfering with the process of electing his successor. He had come under suspicion of intending to tamper with the next elections in order to secure the presidency for a friend who shared his view of presidential authority.

Congress refused to vote money needed for the public service, or to pass an act necessary to continue the legal existence of the Chilean forces, unless the President would consent to give operation to the new law.

But he declared that law to be beyond the constitutional authority of Congress. Then he arbitrarily dissolved the Houses, an act which he excused on the ground that Congress had refused to grant money and pass the law necessary to the army and navy.

Upon this the Congressionalists denounced Balmaceda as a usurper, and declared that he had forfeited the presidency. He retorted by describing his opponents as revolutionists, and imprisoning some of them. At the same time he proclaimed that he would rule by military law; he suppressed the press of his opponents, and prohibited their public meetings.

With these decrees the Civil War began. As the greater part of the army adhered to Balmaceda, he might have succeeded had not the navy taken the other side. By their ships the Congressionalists held nearly all the seaports of Chile, and cut Balmaceda off from important supplies.

The navy seized those great nitrate mines of the coast from which a large part of the public revenue of Chile is derived. Thus the Junta was well supplied with money while Balmaceda could get little. Foreign capitalists would lend him none on the public credit of the revolted country.

With these advantages and a majority of the people on their side, the Congressionalists soon organized an army, and slowly beat Balmaceda back till he held only Santiago and Valparaiso. These cities fell as the result of a victory of the Junta near Valparaiso on the Twenty-eighth of August.

Balmaceda took refuge in the Argentine legation at Santiago, where he committed suicide on the Nineteenth of September.

It is to be hoped that the new government, which has become regular through the means of an election, will give permanent peace to the country.

WHEN CHILDREN SMILE.

O little one, smile and bless me!
For somehow—I know not why—
I feel in my soul, when children smile,
That angels are passing by.

I feel that the gates of heaven
Are nearer than I knew,
That the light and the hope of that sweeter world,
Like the dawn, are breaking through.

Selected. —*Ernest W. Shurtleff.*

THE FOREIGN TRADE.

The condition of the foreign trade of the United States is always an interesting subject; it is particularly so at the present time when the chief political issue between the two great political parties concerns the tariff law.

It is admitted by men of every shade of politics that the character and the amount of the foreign trade are influenced largely by the tariff. They do not, it is true, agree upon the probable effect of the several changes proposed in the tariff; but that fact makes it all the more important that every one should be informed as to the magnitude of the commerce which the law will affect.

The value of the foreign commerce of the country during the year ended on the Thirtieth of June last was greater than that for any former year in the history of the United States.

The imports were valued at almost exactly eight hundred and forty-five million dollars, which was fifty-five millions more than that for the year 1890, up to that time the year of the largest imports. The value of exports, of both foreign and domestic goods, was eight hundred and eighty-four millions, which was eighteen millions less than that of the largest previous year, 1881.

Combining imports and exports the total for 1891 was close upon seventeen hundred and thirty millions, and this was eighty-two millions more than the value of the foreign trade in 1890, which stands next to the year ended in June, in the magnitude of the foreign commerce.

Enormous as these amounts are they bid fair to be exceeded by the trade of the present year, the total value of which in the three months ended with September exceeded that for the same time last year by more than eighteen million dollars.

Where do we buy goods, and whither do we send them? A little less than one-fourth of all imports come from Great Britain; one-eighth from Germany; one-tenth from France. These three countries send us goods to the value of forty-six dollars out of every one hundred dollars imported. From all Europe we get fifty-seven per cent.; from North America nineteen per cent.; from the West Indies ten per cent.; from South America eleven per cent.; and the rest from the other continents.

Of the exports more than one-half in value are sent to Great Britain, and eight-tenths in all to Europe; but this leaves the enormous amount of one hundred and seventy-five million dollars to be divided between the other continents.

What do we buy and what do we sell? First and second on the list of imports stand the two articles coffee and sugar, each of which counts for about ninety-six million dollars, and together for more than one-fifth of all the imports. Woolen, silk, cotton and linen goods together contributed a value of one hundred and twelve millions.

The liquors, wines and tobacco bought abroad, it is satisfactory to know, were all together of a value barely one-third of that of the coffee imported.

Of our exports almost three-fourths must be credited to agriculture. First cotton, two hundred and ninety million dollars' worth; second provisions, one hundred and forty millions; third breadstuffs, one hundred and thirty millions. About eighteen per cent. of the total value represented manufactures.

Such are a few of the leading facts relating to the foreign trade, about which the country is likely to hear a great deal during the session of Congress, and the canvass for President next year. But the facts do not teach the same lesson to all men. Some of them regret to see the imports large, others think that enormous purchases abroad are a sure sign of national prosperity.

But over one feature of the trade all men can rejoice together—the wonderful crops which have given us so much more than this country can consume, and have thus left us with a huge surplus to sell at good prices to those who need bread and meat.

THE CONVICTED WIFE.

Last summer there died in a hotel in a French city a young woman, friendless and alone. The morning journals of the town briefly stated that she was a wealthy American, the widow of a man who was unhappily lost at sea while on his way to Europe with his wife. She had never returned to her native country, and was now dead from a sudden attack of pneumonia.

Beneath these bare facts lay a domestic tragedy, which has a meaning profound enough to justify its publication.

The husband of this woman was a young physician in New York; a man of scholarly habits, refined and almost morbidly sensitive. He became suddenly deeply attached to a young girl from one of the Western States who was visiting in the family of one of his friends.

He followed her to her home, married her, and they started on their wedding journey to Europe. On the steamer they met one of her school friends, a chattering, silly woman who knew every detail of his wife's girlish history. Finding herself alone with him one evening she told them all to him, as a bit of idle fun.

He listened in silence, and then sought his wife in her stateroom.

"Is it a fact," he said, "that you were the belle of the wine-suppers for two summers at Almont Springs?"

"Yes," she said, laughing gaily. "Who told you?"

"And you were known as Madcap Molly?"

"I suppose it is true—but —"

"Stop! I have been told that—that you were engaged to two or three men at once before you knew me. They have your letters full, I presume, of expressions of regard. Don't tell me that that is true. My wife? *You!*"

She began to cry, terrified at his looks. "I suppose it is true. I only did as the other girls did. I was a little wild and thoughtless; but nobody could say a word against my character."

He stood a minute looking at her, then turned and went on deck. The night was dark and stormy. He did not return. Search was made for him, but he could not be found. It was supposed at first that he had accidentally fallen overboard. His wife in her agony knew the truth.

She remained abroad living in Paris and other capitals of Europe. The "wild" life of her girlhood had prepared her for the depths of guilt which opened before her. She was a ready victim, and the friends who cared for her were relieved when death put an end to her follies and crimes.

It is true that her husband was both weak and guilty in his death. If he had not been maddened by disappointment, he would have stood by her to the end, and perhaps by his love have made her the woman he had believed her to be.

But has any woman a right to inflict such a disappointment upon a man?

Has any girl who has made her person and her love tawdry and common in the eyes of a dozen men through a series of flirtations, the right to play the part of a pure, innocent bride in a sacred marriage?

The fast girl in a village looks upon these things as "fun," but she is playing with fire which will leave scars upon her as long as life lasts.

WHAT SHALL A GIRL DO?

Two ladies were talking not long ago of the failing health of a man whose great gifts have made him widely known and widely honored. He has used these gifts too earnestly, perhaps; and suddenly, in a day, as it seemed, health and strength have failed him.

He had lived generously,—books, pictures, bric-à-brac, all these had tempted him,—and he had been hospitality's self, a host at whose table it was a delight to sit. Now, suddenly, all power to earn has failed him, and possibly may never be restored.

"I pity the three girls most of all," said the one of the ladies who knew the family best.

"There'll be a good life insurance, I suppose?" suggested the other.

"No, not a penny. Why, he was always so strong! He was just one of the men who never thought of breaking down. No; all there will be is what the pictures and books and curios will bring—something, of course; but really nothing for three girls and their mother to live on. They've always been to school, those girls, and they're no more idea of helping themselves than babies."

"Why, can't they teach?"

"No. You know teaching is a profession nowadays, and needs special training. They have only studied as girls do who have no particular career in mind. They know a good many things pretty well, but nothing thoroughly. They play a little and sing a little and sketch a little, but no one thing any better than another. It will be hard for them, though I suppose their relations will try to help them."

Digitized by Google

"Hard indeed!" thought the listener. But this state of things ought not to be. If only every girl who reads *The Companion* would think of the uncertainties of life, and resolve to do some one thing well enough to be able to depend on it if the need came, then these words will not have been written in vain.

No matter how prosperous you are, how petted you are, how fairly life seems opening before you, yet make yourself mistress of something that shall be as a strong staff in your hand to lean on if misfortune should some day surprise you.

IN THE CHAIR.

Max O'Rell declares in his latest book, "A Frenchman in America," that there are few of our countrymen who have not tact and a sense of humor. Being thus gifted with the lighter and more pleasing qualities of mind, he holds them to be admirably fitted to serve as chairmen in public assemblies, and quotes, as a most amusing introduction to a speech, an anecdote, told by the chairman of a lecture committee in New York.

"Ladies and gentlemen," said the speaker, "the story goes that last summer a party of Americans staying in Rome paid a visit to the famous Spithöver's bookstore in the Piazza di Spagna. Now Spithöver is a most learned bookworm. You must go to him if you would have artistic and archæological works of the profoundest research and learning.

"One of the ladies in this tourists' party, however, only wanted the lively American travels of Max O'Rell, and she accordingly asked for the book.

"There came a deep, guttural Anglo-German voice from a spectacled clerk behind a desk to this purport:

"'Marcus Aurelius vos neffer in te Unided Shtates!'

"But, ladies and gentlemen, he is now, and here he is!"

There are, however, some chairmen who, like certain lecturers, insist on speaking too long.

"Sometimes," said one, on attempting to introduce this humorous Frenchman, "we see clouds of misunderstanding arise between the French—between the English—between the two.

"The lecturer of this evening makes it his business to disperse these clouds—these clouds—to—to—

"But I will not detain you any longer. His name is familiar to all of us. I'm sure he needs no introduction to this audience. We all know him. I have much pleasure in introducing to you Mr. Mosshiay—Mr. —"

Then he looked at the lecturer in despair. He had forgotten his name.

The same long-suffering Frenchman says that he was one night about to speak in a crowded hall in Lancashire, England, and observed to the chairman, who was a pompous official in the city:

"What a fine house!"

"Very fine indeed," was the reply. "Everybody in town knew I was going to take the chair."

HEALTHY GIRLS.

In the preparatory school of a large women's college, which is attended by many girls from all parts of the United States, the instructor in gymnastics recently said to the pupils, as they were assembled in the gymnasium:

"I wish that the girls here who are taller than their mothers would please raise their hands."

About three-fourths of all the girls present raised their hands. The average age of the pupils was about seventeen years, though some were not more than fifteen, and in some cases these girls had not yet completed their growth; and yet a considerable majority of all were larger than their mothers.

The majority, too, were vigorous and healthy, and capable of long walks in the open air, and of sustained and active exercise in the gymnasium.

Within the memory of the older generation, it was "fashionable" for young women to be delicate, slender-waisted, pale and incapable of much physical exertion. Bodily robustness was discouraged, and such "calisthenics" as were in vogue were of a very weak and flimsy sort.

All this reacted upon the general physical condition of women, and rendered them less vigorous and well-grown.

At the present time there are many foolish fashions, no doubt, but it is no longer unfashionable for a woman to be strong and well. Suitable kinds of athletic exercise are, on the contrary, much in vogue, and a girl who can walk ten miles without serious fatigue is admired by her companions rather than looked at askance.

This is certainly one of the respects in which the world has improved. Good exercise and plenty of life out-of-doors will not only make the women of the rising generation superior to their mothers in stature, but will make them better able to support the burdens of life, and happier in supporting them.

Nor need it render them less gentle and womanly; for a healthy woman has a better basis for gentleness and unselfishness than a weak and suffering one.

THOUGHTFUL GIFT.

Prince Bismarck, the "father of the German Empire," who, though now in retirement, is very greatly admired by the German people, often speaks lightly of his absence from power. He is a man of humor, and his witty references to his enforced retirement are sometimes taken sadly to heart by matter-of-fact countrymen.

Not long ago one of his visitors asked Prince Bismarck if he desired to return to the chancellery of the empire.

"I desire nothing more in this world," said Bismarck, "but a really becoming epitaph!"

In the company of those who heard this pleasantry there was a gentleman who felt much grieved that the ex-chancellor's modest wish should be unfulfilled. He was a journalist, it is said, and to some extent a man of letters.

He set at work, therefore, to meet the ex-chancellor's desire for an epitaph. In order that Prince Bismarck might choose one which he thought really fitted him, he wrote seventy epitaphs.

Then he had them all printed in a little book at Dresden, and sent Prince Bismarck a copy, with his compliments.

AN OLD-TIME MINISTER.

Elder James Hooper, the first settled clergyman of the Baptist church at Paris, Maine, was one of the old-time ministers, eccentric, honest, fearless in his discharge of duty, and outspoken in his opinions of right and wrong. Many characteristic anecdotes are related of his pastorate of forty years. He was a man born to lead. His political views were decided, and as he voted so voted almost without exception the members of his church.

He ruled the singers with arbitrary hand. On one occasion, when desirous of having the singing better than it usually was, he read the hymn, and then, looking up at the choir in the gallery, said:

"Deacon Mann, you needn't sing; you always flat."

At one time, when supplying the pulpit of a church in a distant town, he gave out the hymn, read it, and waited for the congregation to sing. The chorister, seeing that many had failed to understand which hymn was indicated, asked Mr. Hooper to repeat the number.

The Elder paid no attention to the request, but instead announced his text, and proceeded with his sermon. At the conclusion of his discourse he opened the hymn-book, and said:

"When I begin to speak, it's time for you to begin to hear. I hope you'll understand which hymn I mean this time."

The worthy minister's reading was confined to the Bible, Watts's hymns and the weekly *Eastern Argus*. He was a strong opponent of an educated clergy. At one time he was discussing with a friend the merits of Doctor Watts as a poet, who, Mr. Hooper maintained, was the greatest that ever lived.

To this opinion his friend demurred, remarking, "Certainly Watts has written some excellent hymns, but he has likewise written many poor ones, some of which you might as well read backwards as forward."

"Exactly so!" cried the delighted Elder, as if this last acknowledgment of his opponent had clinched the argument. "Of what other poet can that be said?"

JAPANESE FLOWER SHOWS.

Mr. Lafcadio Hearn, writing in the *Atlantic Monthly* about life in Mat-su-ye, Japan, "the chief city of the province of the gods," has one suggestive paragraph about the exquisite taste of the Japanese people in the matter of arranging flowers. As you are walking along the streets at night, he says, especially on the nights of sacred festivals, your attention will be attracted to some small booth by the sight of an admiring and perfectly silent crowd pressing before it.

As soon as one can get a chance to look, one finds there is nothing to look at but a few vases containing sprays of flowers, or perhaps some light, gracious branches freshly cut from a blossoming tree.

It is simply a little flower show, or more correctly, a free exhibition of master skill in the arrangement of flowers. For the Japanese do not brutally chop off flower-heads to work them up into meaningless masses of color, as we barbarians do; they love nature too well for that; they know how much the natural charm of the flower depends upon its setting and mounting, its relation to leaf and stem, and they select a single graceful branch or spray just as nature made it.

At first you will not, as a Western stranger, comprehend such an exhibition at all. You are yet a savage in such matters compared with the commonest coolies about you. As you study the simple little show you will discover that all the flower displays you have ever seen abroad were only monstrosities in comparison with the exquisite natural beauty of those few simple sprays.

You will also observe how much the white or pale blue screen behind the flowers enhances the effect by lamp or lantern light. For the screen has been arranged with the special purpose of showing the exquisiteness of plant shadows; and the sharp silhouettes of sprays and blossoms cast thereon are beautiful beyond the imagining of any Western decorative artist.

HER MAJESTY.

Queen Victoria is known to us not only as a monarch whose reign has been unusually long, successful and brilliant, but also as the head of a model English home, and a woman full of kindness, sympathy and simplicity. An American lady visiting in London gives the following description of a glimpse of the Queen:

The Queen looked much as her portraits had made her familiar to me, but neither photograph nor painting had succeeded in conveying the agreeable and satisfactory impression which I received.

She came up the pathway to the church with simple, modest dignity, not noticeable for any manner.

The royal family occupied a cross-pew, a spacious compartment, sunk in the side of the chancel recess.

Their manner during service was like that which we have so much reason to admire in all English people at church; their attention was given to the prayer-book, and, in devout conformity with its requisitions, they sat, stood, or knelt.

I had an opportunity now of looking at the Queen more attentively, and I was so placed that I could do so without impertinence. There was an evident honesty and directness of character, in which feminine subtilty had not even its usual proportion. No one, upon seeing her, unknown, in a group of women, would have failed to notice her before any other.

An expression of settled melancholy was upon her features. She had the look of one whose life was saddened by a grief so overwhelming that it had become irrepressible. We do not need to revive the early romance of her life to understand why.

PHILOSOPHIC.

Robert Carrick, a wealthy banker of Glasgow, was noted for his frugality. One day a friend, meeting him in the streets of Glasgow, noticed his old clothes, and advised him to get a new suit.

"Every one knows me here, so it doesn't matter what I wear," answered the banker.

A few weeks afterward the friend met the banker in London, wearing the same old clothes, and again remonstrated with him for dressing so shabbily.

"No one knows me here, so it doesn't matter what I wear!" said the philosophic banker.

Use "Brown's Camphorated Saponaceous Dentifrice" for the teeth. It has no equal. [*Adv.*

Burnett's Coconine allays irritation, removes all tendency to dandruff, and invigorates the action of the capillaries in the highest degree, thus promoting a vigorous and healthy growth of hair. [*Adv.*

A Christmas Gift to Music Teachers.

To any music teacher sending address and four cents in stamps to prepay postage, we will mail *free* our *Music Teachers' Memoranda Book*, with calendar for 1892, also special information of importance to piano teachers. **The S. Brainard's Sons Co.**, Chicago, Ill. The Christmas number of *Brainard's Musical World* is ready and contains $2.00 worth of new music. Mailed for 15c.

NEW ENGLAND CONSERVATORY OF MUSIC. FOUNDED BY Dr. EBEN TOURJÉE. CARL FAELTEN, Director. **INSTRUCTION** IN PIANO, ORGAN, VOICE, VIOLIN, etc. Systematic courses in class and private lessons. Tuition, $10 to $30 for 20 class lessons. Many free Classes, Lectures, Recitals, etc. Elocution, Oratory and Dramatic Action, Fine Arts, Literature, Languages, Piano and Organ Tuning. COMFORTABLE HOME for Lady Students. Catalogue Free. **Fall Term begins Sept. 10, 1891.** FRANK W. HALE, General Manager, Franklin Square, Boston, Mass.

The late EMPEROR FREDERICK

extensively patronized the Soden Mineral Pastilles, and found great relief in them.

Dr. Klemmer, the well-known Dresden Physician, writes: "Having myself used the Soden Mineral Pastilles for an obstinate bronchial catarrh with the utmost benefit, I shall be obliged if you will kindly forward me another six boxes by return of post."

Beware of imitations. The genuine imported article must have the signature of "Eisner & Mendelson Co.," Sole Agents, New York, around each box. Price, 50 cents.

The **Daylight**

Not quite a matchless light, for you do require a match to light it; but the process of applying the match is matchless and no mistake. In short, our easy lighting device is an unsurpassed advantage.

Send for our A B C book on Lamps.

Craighead & Kintz Co., 33 Barclay St., N. Y.

GRATEFUL—COMFORTING.

EPPS'S COCOA

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

Made simply with boiling water or milk. Sold only in half-pound tins, by Grocers, labelled thus:

JAMES EPPS & CO., Homœopathic Chemists, London, England.

A Christmas Gift worth having is one that is handsome, durable and the source of unending enjoyment. Such a present would be

The EVERETT PIANO

It combines these qualities of a gift with all the requisites of a first class piano.

If not for sale by your local dealer, address THE JOHN CHURCH CO., Cincinnati, O.

"From Andante to Allegro," an illustrated pamphlet, will be sent free to any one who will mention where this advertisement was seen.

Cod-liver oil suggests consumption; which is almost unfortunate. Its best use is before you fear consumption—when you begin to get thin. Consumption is only one of the dangers of thinness.

Scott's Emulsion of cod-liver-oil makes the thin plump, and the plump are almost safe.

Let us send you a book on CAREFUL LIVING—free.

SCOTT & BOWNE, Chemists, 132 South 5th Avenue, New York.

Your druggist keeps Scott's Emulsion of cod-liver oil—all druggists everywhere do. $1.

BAILEY'S RUBBER

HEEL CUSHION

gives elasticity and ease to every step taken by the wearer. It breaks the shock or jarring of the body when walking, and is particularly adapted to all who are obliged to be on their feet. To those suffering from Spinal, Kidney, Rheumatic and Nervous Affections, it will be found a great relief. The rubber with its annular projections is as soft as velvet, thoroughly vulcanized, always elastic, leather-covered next to the foot, and can be instantly adjusted inside of the boot, directly under the heel. All sizes, 25 cents per pair, mailed upon receipt of price. At all dealers.

What People Say Who Wear Them:

"Send six pairs more; they are a grand success."
"Entirely satisfactory; send four pairs more."
"They give instant relief; send me three pairs more."

Endorsed by physicians for nervous troubles.

C. J. BAILEY & CO., 22 Boylston St., Boston, Mass.

Catalogue mailed Free. Everything in Rubber Goods.

600,000 Volumes of Memoirs **GEN'L GRANT'S**

Have been bought by the COSMOPOLITAN MAGAZINE for the use of its subscribers—probably the largest single purchase of books ever made.

The Cosmopolitan offers you the

Original 2-volume $7.00 Edition for only 70 cents,

if taken in connection with a year's subscription, $3.00, to the Cosmopolitan Magazine, which gives annually 1536 pages by the ablest writers of the world, with over 1300 illustrations by clever artists. The most popular magazine of the day; an illustrated monthly which has run up to over 100,000 copies in less than three years under its present management. If you don't want Grant's Memoirs, you can take instead,

For only 70 cents,

Sherman's Memoirs, 2 vols., retail price, $5.00.
Sheridan's Memoirs, 2 vols., retail price, 6.00.
McClellan's Memoirs, 1 vol., retail price, 3.75.
R. E. Lee's Memoirs, 1 vol., retail price, 3.75.

Express charges for Memoirs payable by receiver as follows: Gr. 46c., Shm. 44c., Shd. 40c., McCl. 22c., Lee 26c.

Or you can have Youth's Companion, the Cosmopolitan, and any one set Memoirs for $5.25, old or new subscribers. Send for free sample copy.

COSMOPOLITAN MAGAZINE,
Broadway, Fifth Ave. and 25th St., New York.

A Christmas Present

Has been well selected when it gives both instruction and delight.

Our Automatic Toy Typewriter

is of this class of presents. Boys and girls are equally delighted with it. It enables them to send a type-written letter, which is always a fascinating thing to young people; and for teaching the art of spelling, composition and punctuation, we know of nothing better. The Typewriter has an Automatic Feed and a Self-Inking Type Wheel, and will accommodate the largest-sized letter paper. As a Christmas Present for your boy or girl it has no superior. We will send this Typewriter by mail to any address on receipt of $1.15.

THE YOUTH'S COMPANION, Boston, Mass.

SUGGESTIONS

GREAT MUSICIANS.

What famous composers of music can you name?

Which of these excelled as players on musical instruments? On what instrument in each case?

Name three well-known compositions of each.

Were any of these persons famous except as musicians?

Which gained wealth as well as fame by their musical ability?

Have there been any "great" American composers?

For the Companion.

A BOY'S THOUGHTS OF LIFE.

The years have left me a boy no longer; yet boyhood lingers in breast and brain,
Dear careless boyhood, that soon must perish, and clothe its parting with tender pain!

A few more morrows, and I shall wonder how mirth and frolic so long could stay,—
From skies familiar the same sun shining, yet ah, not shining the same sweet way!

'Tis no real sadness that steals to warn me; it half is pleasure and half regret,
As though a welcome had met a farewell, and intermingled when they had met!

For while gay fancies may from the future delight and longing my spirit bring,
I'm like a nestling whose wings unfolded feel yet the nest-warmth about them cling!

This life that waits me, I yearn to know it; my heart is with it, my hope is there;
The large winds float it across my forehead, with tingle of nostrils, caress of hair!

It moves in mornings; it speaks in starlight; it lurks in sunset's fantastic hues;
I hear it murmur through swaying tree-tops; I watch it sparkle from roadside dews!

All nature tells me my altered impulse, my manhood's heirdoms to gifts unguessed;
Streams in their flowing and flowers in their blowing are rich with its prophecies half confessed!

I listen, I tremble with expectation; the secret answer I vainly plead!
To learn that answer is to have lived it;—to live it nobly were life indeed!

EDGAR FAWCETT.

For the Companion.

THE DOG OF THE NETHERLANDS.

Americans who travel through the Netherlands or the French provinces are shocked at the cruelty with which animals are treated by these otherwise humane and kindly peoples. Dogs are used by the poorer class as beasts of draught, instead of horses and mules, and it is not uncommon to see a half-starved cur, its bones almost protruding through its skin, dragging a huge cart, in which, on top of the load, sits the lazy owner, swearing and cracking his whip.

A pleasant story in connection with this custom is told in a Belgian village. About twenty years ago Mademoiselle Louise lived in this town. She was the daughter of the physician, a girl of eighteen, not remarkable for beauty, talent or wit; but she was anxious to do some good in the world.

She had at one time vague plans of going to Greenland as a missionary, but her health was not strong enough.

One day she saw a peasant named Cartier beating his dog brutally near her gate. The dog was weak and half-fed, and bleeding from his wounds; the load was enormous.

She could do nothing. The man had no sense of pity. The dog was his property, and he had a legal right to beat it to death if he chose.

But something she resolved to do. This one little wrong she would try to set right. She was a shrewd as well as a humane girl. She saved something from the little allowance given her by her father until she was able to buy a stout donkey, and have money enough besides to buy the peasant's dog. Then she bought the dog from Cartier, and offered to let him the donkey at a very low rate, on condition that the bargain should be annulled the moment he bought another dog or abused the donkey.

Her young friends laughed at her. After all she had rescued from misery only one dog among thousands. But the story was told throughout the village. It received favorable comments from both rich and poor. "Donkeys," thought the latter, "undoubtedly are stronger than dogs; has Mademoiselle P—— any more that can be hired on the same terms?"

The elders in the community, good people, and humane at heart, gave more thought to the fact that the dogs were cruelly tortured. They had been indifferent from custom. The abuse had been going on for centuries. Now that this girl had done something to abate it, why should not they join in her effort?

A year had hardly passed before several of the prominent citizens of the village had united to buy strong mules or draught horses, which were hired on reasonable terms by the laboring men, and the sense of humanity thus wakened began to show itself in kindly acts toward man as well as beasts.

The town is now the only one in the Netherlands in which no dogs are harnessed. There are in it also two asylums and a hospital, the outgrowth of the wider, deeper Christian feeling kindled by the simple acts of one earnest woman.

We may not have strength, ability or opportunity to do a great work for God in the world, but there is always a little task ready for us to take up, that is near at hand. He does not deny us that. Let us do it.

WAITING FOR THE DOCTOR.

One of the best stories in Mr. Barrie's delightful Scotch book, "A Window in Thrums," is entitled "Waiting for the Doctor." Jess, the mother of the family, a cripple who has not been out of the house, and seldom out of the room, for twenty years, had gone early to rest, and the door of her bedroom in the kitchen was pulled to. All at once she called, "Leeby!" Leeby was the daughter. She answered, "Ay," and Hendry, the father, opened the door of the bedroom. "Yer mother's no weel," he said to Leeby. Leeby ran to the bed.

In another two minutes we were a group of four in the kitchen, staring vacantly. Death could not have startled us more, tapping thrice that quiet night on the window-pane.

"It's diphtheria!" said Jess, her hands trembling as she buttoned her wrapper.

She looked at me, and Leeby looked at me.

"It's no! it's no!" cried Leeby, and her voice was as a fist shaken at my face. She blamed me for hesitating in my reply.

Jess had discovered a white spot on her throat. I knew the symptoms.

Leeby ran off for the doctor, and after a time returned panting to say that he might be expected in an hour. He was away among the hills.

Hendry wandered between the two rooms, always in the way when Leeby ran to the window to see if that was the doctor at last. Finally he sat down by the kitchen fire, a Bible in his hand. It lay open on his knee, but he did not read much. He sat there with his legs outstretched, looking straight before him. I believe he saw Jess young again.

I sat alone at my attic window for hours waiting for the doctor. About midnight Hendry climbed the stairs and joined me. His hand was shaking as he pulled back the blind.

"She's waur," he whispered, like one who had lost his voice.

His eyes were glazed with staring at the turn of the brae where the doctor must first come in sight. I put my hand on his shoulder, and he stared at me.

"Nine-and-thirty years come June," he said, speaking to himself.

For this length of time, I knew, he and Jess had been married. He repeated the words at intervals.

"I mind —" he began, and stopped. He was thinking of the springtime of Jess's life.

The night ended as we watched; then came the terrible moment that precedes the day—the moment known to shuddering watchers by sick beds, when a chill wind cuts through the house, and the world seems cold in death.

"This is a fearsome nicht," Hendry said, hoarsely.

He turned to grope his way to the stairs, but suddenly went down on his knees to pray.

There was a quick step outside. I arose in time to see the doctor on the brae. He tried the latch, but Leeby was there to show him in. The door of the room closed on him.

From the top of the stair I could see into the dark passage, and make out Hendry shaking at the door. I could hear the doctor's voice, but not the words he said. There was a painful silence, and then Leeby laughed joyously.

"It's gone!" cried Jess. "The white spot's gone! Ye juist touched it, an' it's gone! Tell Hendry."

But Hendry did not need to be told. As Jess spoke I heard him say, huskily, "Thank God!" and then he tottered back to the kitchen. When the doctor left, Hendry was still on Jess's arm-chair, trembling like a man with the palsy. Ten minutes afterward I was preparing for bed, when he cried up the stair:

"Come awa' doon!"

I joined the family party in the room. Hendry was sitting close to Jess.

"Let us read," he said, firmly, "in the fourteenth of John."

HAZARDOUS JUMPS.

An English civil engineer, Mr. F. H. Grundy, who has spent a large part of his life in work upon railways, narrates two experiences that show the danger which even the most practised person runs in boarding or jumping from moving trains. At one time, while engaged upon some outdoor service upon a railway line, he was in the habit of taking advantage of a ballast train, which slackened speed for him, though it could not stop, at a point some half-dozen miles from his destination.

One night the train overtook him as usual, as he was plodding wearily homeward, and as usual it slackened speed, and he ran to mount the engine. But for once his hand and eye were not in accord, or a loose stone upset him, and in a moment he was dragging with his foot an inch or two in front of the great driving-wheel, hopeless of any other fate than that of being instantly crushed by the iron master.

Suddenly two strong pairs of arms seized his relaxing hand, and held him where he was, giving way not an inch. His arm felt as if it would be dragged out of its socket, but the wheel did not yet devour him. How long the train was in stopping! Somehow, at last, the guard at the rear of the train suspected there was something wrong, and plied his brake.

Then the cars stopped, and Mr. Grundy was pulled upon the engine, where a fit of trembling seized him. He was in bed for three days afterward, and for years dreamed of revolving monsters.

This experience did not cure him permanently of his carelessness, however. Some years later, in order to save a walk when he was weary, he jumped from a train moving five or six miles an hour. It was dark, and the ground could not be seen, but he knew the place, and taking the customary precautions, let go his hold.

He pitched upon a heap of fresh ballast, slipped and fell, rolling toward the train, expecting instant death; but he tumbled into a hole eight inches deep, alongside of the rail, and indeed almost under it. His head, he declares, fitted into this hole as the passing wheel brushed off his hat. His body lay away from the train. Was he safe?

The first car did not touch him, though the rattle from the loosened rail joint as the wheels crossed it jarred him horribly, and struck terror to his soul. Clank, clank, clank, the coupling-chains passed over, and the leading wheels of the second car shook him again as they rolled over the loose joint.

Then he began to feel safe; but anon he remembered that a hanging coupling or a dragging tarpaulin would be fatal to him. He listened painfully for the jangle of a loose chain, but before half-a-dozen cars had passed, he was unconscious of everything but the great fact that the footboards were travelling three inches or less above his head, and travelling, oh, so slowly! Would they never be past?

A horrible desire to raise his head took possession of him. He felt that he must raise it, even though it were to be sliced in two the next instant. He clenched his teeth and fists, and tried to pray that he might have strength to resist the infernal temptation.

Just when that temptation was becoming positively agonizing, and he was on the point of succumbing to it, he saw a red glare above his head. It was the "tail lamp," and the train had passed! But not for him; it was all going on just the same. More cars, more and still more, seemed to be rolling above him, and at last he lifted his head.

"As I live to write this," he declares, "I lifted it with a sort of wonder as to what it would all feel like soon where I was going. Nothing touched me! I stared wildly round, and then fainted."

The air revived him, and he staggered home. That night he started up shivering, rattling the very bed with his shaking, his teeth chattering, and his heart beating in terror. Brain fever set in, and it was long before he left his bed.

DECEMBER.

Bleak wintry gales and cold, gray, sullen skies;
A landscape sere;
An echo of farewell in hurried cries,
As some belated traveller, feathered, flies
Across the mere.

A soughing sound among the poplar-trees;
Death's footsteps near;
A blight upon the lonely, frozen leas,
A maid'ning rush of tender memories;
The dying year.

A longing for the touch of one dear hand;
The festive cheer;
A bond of brotherhood throughout the land
Uniting close Christ's happy little band;
December's here!

NELLIE TALBOT KINKEAD.

OLD-TIME PREACHING.

Modern congregations, which often feel themselves free to criticise and condemn their ministers for very slight offences, would be ill at ease, no doubt, if the old-time authority of pastors over their flocks were restored. In the old-fashioned days, two centuries ago, it was the custom for the minister to criticise and sometimes to harass his congregation, instead of permitting himself to be harassed by them. Some stories told of an eccentric divine in Bristol, England, illustrate this.

This clergyman was given to preaching very long sermons—so long that his congregation finally made a formal remonstrance. He assured them that he would take the matter into consideration.

Next Sunday, when the hour came for the sermon, the pastor announced that he would give them a "short subject." His text, he said, was from Luke xviii, 8—"Nevertheless."

He began to preach, and the sermon had already been half an hour longer than usual when he said:

"And now I know you are all fretting and grumbling because your dinners are spoiling at home, but *nevertheless* I shall go on."

At last complaint was made to the bishop against the clergyman's "ridiculous manner of preaching," and the personal remarks which he often introduced into his sermons. The archdeacon and the bishop's chaplain were directed to go secretly to the church, and bring a faithful report to the bishop of what they heard.

The clergyman, in spite of their secrecy, got wind of their presence and errand, and preached from Genesis xlii, 9: "Ye are spies; to see the nakedness of the land ye are come."

The sermon, it is said, was so ingenious and forcible that a good report of it was carried to the bishop, and for that time the pastor triumphed over his enemies.

Finally, however, matters went so far that the clergyman one day came to blows with several of his parishioners, and conquered them all, giving them a severe drubbing. Next Sunday he took for his text Nehemiah xiii, 25:

"And I contended with them, and cursed them, and smote certain of them, and plucked off their hair."

His sermons were not always long, for, having on one occasion to preach a funeral sermon on a very cold day at a long distance from his parish church, he took for his text, "Man that is born of a woman is of few days and full of trouble," and thus addressed the audience:

"My brethren, the weather is cold, the nights are long, the roads are bad, and we have all a considerable distance to go; wherefore I shall sum up my discourse in a few words, which you may easily bear in your memories.

"Let us, then, from the passage read consider, First, man's ingress into the world; secondly, man's progress through the world, and lastly, man's egress out of the world.

"Firstly of the first: Man's ingress into the world is naked and bare;

"Secondly: His progress through the world is with sorrow and care;

"Lastly: His egress out of the world is nobody knows where.

"To conclude: If we live well here, we shall do very well there;

"And I could tell you no more, if I preached a whole year."

HURRICANES AT WAR.

We all remember Virgil's vivid description of the Cave of the Winds where King Aeolus sat on a lofty throne of rock, and with the waving of his potent sceptre calmed the fury of the imprisoned tempests, roaring impatiently round and round to find a place of escape from their confinement, until at the command of Juno he let Eurus and Notus and Africus and Aquilo—the southeast wind, the south wind, the southwest wind, and the north wind—loose to roll up the sea from its very bottom, and overwhelm the ships of Æneas.

This personification of the winds was universal in ancient times, and curiously enough, the modern science of meteorology seems to furnish some justification for it. There actually is a kind of individuality in winds and storms, and sometimes they contend with one another in a manner that would naturally induce a lively imagination to liken them to struggling giants of the air.

A striking instance of the aversion occasionally manifested between two great circling storms was furnished at the end of last summer by the terrible hurricane which devastated the island of Martinique on the Twenty-eighth of August, and another hurricane which, having on the day before passed Bermuda, spent its fury in the middle of the Atlantic Ocean.

The ordinary course of a West India hurricane is toward the northeast, up along the United States coast, but it was noticed that the Martinique storm abandoned the usual track, and moved off in an uncertain manner toward the northwest, finally dying away in the Gulf of Mexico without getting out into the Atlantic.

This extraordinary conduct, and ignominious ending, of a hurricane that had started with almost unexampled strength and fierceness, is now explained by the fact that, in attempting to move along the regular course toward the northeast, it came into collision, so to speak, with the other hurricane, that had passed east of Bermuda and was just crossing the usual track of the West India tempests.

Forming two great eddies in the atmosphere, these storms, with their flying clouds and canopies of streaming vapor, repelled one another, and the result was that the Martinique hurricane, as if baffled and weakened by the Bermuda storm-giant, retreated into the Gulf of Mexico, and there ended its career.

What a word-picture of such a battle royal in the atmosphere Virgil would have given us!

A HOT POTATO.

At an alumni dinner during the past summer a professor in a Massachusetts college told a laughable story of his boyhood. His father was president of a college, and the Commencement dinner was always held at his house. It was a grand affair, with many distinguished guests, and the little boy had to wait until they had finished dinner and returned to the parlor before he was allowed any chance at the good things of the table.

For days previous to the event there was baking and brewing, and the whole house was filled with savory odors. On the morning of the Commencement dinner there seemed no place in the house for a small urchin like myself. I was sent from the pantry, from the kitchen, and from the dining-room. So I wandered about disconsolately, growing hungry with every whiff of the roasting meats and the spicy pies and puddings.

At length dinner was ready, and Jane, one of the hired girls, went to the parlor to announce the fact, leaving the dining-room door ajar. I was in hiding under the hall table, and here was my opportunity. I rushed into the dining-room to see what there was good on the table. Alas, the only thing within my reach was a dish of hot baked potatoes!

Father and the company were approaching. I seized a potato, jammed it into my trousers' pocket, and made a rush for the door. I managed to scramble past father, who led the way with a lady on his arm, and blundered full into the Governor of the State.

The Governor laughed, and picked me up in his arms while I struggled for freedom.

"Ah, what a fine boy, Mr. President!" said his Excellency, as he held me firmly against his side. "But he's a rogue, I see, for he has stolen his father's chin."

"I didn't steal father's chin, either!" I gasped. "'Twas only a potato! And oh, it's burning me!" With that I gave a ringing scream, and, to the horror of father and mother, struck the Governor in the face with my hand.

Then it all came out. That hot potato had burst under the Governor's hug, and steaming through the thin linen trousers, had made a great red burn on my leg. And so it came to pass that, until I entered college, I never had anything for dinner on Commencement day but one baked potato.

"That is to help you remember to keep your pockets clear of stolen goods," father used to say, "for one never knows when he may meet the Governor."

MRS. BEECHER'S RING.

In her paper, "Mr. Beecher as I knew him," published in the *Ladies' Home Journal*, Mrs. Beecher tells the story of her engagement to Mr. Beecher, and of how he earned his engagement ring. He was seventeen years old when he asked her a very important question and was referred to her parents.

"Why, you are a couple of babies!" answered the angry father. "You don't know your own minds yet, and won't for some years to come!"

But the boy won the angry father's consent. One day, not long after, Henry walked from Amherst, where he was at college, to Brattleboro, Vermont, to give a temperance lecture—his first public address. After speaking, he walked back, using the money given him to pay his fare to buy books and to purchase a simple gold ring.

"That ring," writes Mrs. Beecher, "worn out by hard labor while at the West, and mended time and again,—the mending paid for by sewing at night while others slept,—was so thin by the time we came to Brooklyn, that it could only be mended by lining. It was worn long after that until, after a quarter of a century's use, it could no longer be repaired. To-day it rests close to me as I write—sacredly kept as the result of Henry Ward Beecher's first earnings by public speaking at the age of seventeen!

"I once heard a young lady say, showing her engagement ring: 'There! I always said I would never be engaged if I could not have a diamond ring.' And then I thought of the old worn ring, so carefully treasured, which half a century ago cost eighty-five cents, and questioned if there was on earth a ring more precious."

CHINESE MAILS.

An English missionary, long resident in China, has a good word to say for the postal system in that part of the Empire where he was stationed—the neighborhood of Hang-chow and Shanghai. The mails are generally carried in foot-boats, so called because they are propelled by a single long oar which the boatman works with his feet.

The postal system is not a governmental enterprise, and so far as I know the different private offices which conduct its operations receive no official subsidy. Yet money and valuables can be entrusted to these offices, and the letters are, as a rule, delivered with great regularity.

In Hang-chow, where a purely Chinese system is in operation, there are two deliveries every day, and twice also the postman calls most obligingly for letters. Newspapers and parcels arrive a post or two later, but letters are delivered within three days between Hang-chow and Shanghai or Ningpo.

These private offices are more liberal—perhaps more audacious—than the Postmaster-General of Great Britain.

A bank draft for five hundred dollars, let us say, is sent by post. The sender writes on the outside of the envelope the amount of the draft; he pays double postage, one hundred and twenty cash—about twelve cents,—and the office holds itself responsible for the whole amount.

WHAT HE COULD AFFORD.

There is a moral worth heeding in a bit of talk which passed not long ago between two Harvard students. One of them inherited much money, and gives the best energies of his life to spending it in somewhat ostentatious fashion.

The second student, his townsman and cousin, is a steady, straightforward fellow, manly and gifted, and not in the least ashamed of the fact that he is poor.

The talk on the train, when the boys were starting together for Cambridge this fall, happened to turn upon the subject of winter clothing, and the wealthy youth said, with a little air of patronage:

"I always have my clothes made by Blank. It is true he is the most expensive tailor in Boston, but he is the best. I suppose," he added, with unconscious rudeness, "that you can hardly afford to patronize Blank."

"No," the other answered, quietly, "but then I can afford not to patronize him."

His cousin was not too dull to see the point, and the subject was dropped.

TWO LITTLE BOYS AND TWO LITTLE SLEDS.

Two little boys had two little sleds,
But neither enjoyed his treasure,
For each one thought that his brother's sled
Would be much more to his pleasure.

They exchanged their sleds, changed back again,
And quarrelled for days together,
Till on Christmas morning the sleds were gone—
All in the snowiest weather.

Then the two little boys grew grave and sad,
When papa said, "I have sent them,
By Santa Claus, to some boys so good
That the simplest things content them."

The lesson was hard, but they learned it well,
And Santa Claus brings a present
This year of two fine sleds to the boys
Who have grown to be kind and pleasant.

TOTTY'S CHRISTMAS.

They call me Totty, because I am small. I had a funny Christmas, and mamma said I might tell about it.

I have the scarlet fever, and I live all alone with my mamma in her room. Nobody comes in 'cept the doctor, and he says he sha'n't come any more to see a girl who feels as well as I do.

Mamma wears a cap and an apron, and we have our own dishes, just like play, and she washes them in a bright tin pan, and then I have the pan for a drum, and beat on it till she says she shall fly.

I always stop then, for I do think I should be frightened to see mamma fly. Besides, she might fly away.

Well, yesterday was Christmas, and I could get out of bed and sit up in a chair; it was the first time.

So I sat up to dinner, and it was a partridge, but we played it was a turkey. There was jelly and macaroni, and for dessert we had grapes and oranges. Mamma made it all look pretty, and papa gave her roses through the door, and she put them all over the table.

When she had washed the dishes, she turned the big chair round so that I could look out of the window, and Hal and John came out on the lawn and made a snow man for me to look at.

It was a fine man, with two legs and two arms, and they kept playing he was the British, and knocking his head off.

Mamma told me I mustn't turn round till she said I might, but I didn't want to, anyhow, the man was so funny.

I heard papa whispering at the door, and I *did* want to see him, but I knew I couldn't, 'cause the other children haven't had the fever; and then I heard things rustle, paper and something soft, like brushing clothes.

They went on rustling, oh, a long time! and there was jingling, too, and I began to want to turn round *very* much *indeed;* but I didn't, of course, 'cause I said I wouldn't.

At last mamma came up softly and tied something over my eyes, and told me to wait just a minute; and it really didn't seem as if I could.

Then she turned the chair round, and took the thing off my eyes, and—*what* do you think was there?

A Christmas tree! A dear little ducky tree, just about as big as I am, and all lighted with red and blue candles, and silver stuff hanging like fringe from the branches, and red icicles. (No! Mamma says they are glass, but they look real. They are in a box now, and I can play with them.)

And everything on the tree was for me. That makes a rhyme. I often make them.

There was a lovely doll, all china, with clothes to take off and put on, and buttons and button-holes in everything. I have named her Christine, 'cause that's the most like Christmas of any name I know.

And a tin horse and cart, and a box of blocks, and a *lovely* white china slate to draw on, and a box of beasts, not painted, all carved just like real beasts, and a magnet-box, with three ducks and two swans and four gold-fish and a little boat, all made of tin, and lots of oranges and a lovely china box full of cream candy (the doctor said I might have it if Aunt May made it, and she did), and a box of guava jelly, and a little angel at the top, flying, all of white china.

And *everything* will wash, except the things to eat, 'cause everything I play with has to be burned up, unless it can be washed, so they all gave me washing things.

Even Christine has china hair, and all her clothes are white, so they can be boiled, and so can she, and mamma says it won't hurt her at all.

So I never had a nicer Christmas, though of course I wanted the other children; but then, *I* had mamma, and of course *they* wanted *her*, poor dears!

And nobody need be afraid to read this story, 'cause it is going to be *baked in the oven* before it goes.

LAURA E. RICHARDS.

For the Companion.

BABY ALICE.

It was just a few days before Christmas, and Baby Alice wanted to give little sister a candy dog. So papa bought one for her to give on Christmas day.

When the time came, she was not willing to part with it, and said, "No, no, me have it, me have doggie."

Then she began to eat it to make sure of it.

So Alice herself ate the Christmas present which she was to give her sister. But she was so little she did not know any better.

When Christmas came again, Alice was a year older, and had learned many things.

She was pleased to spend her pennies in buying presents for papa, mamma and sister.

When these were wrapped up, and she saw nothing for herself, she said, "But where's my p'esent to me?"

"Oh," said papa, "we do not give presents to ourselves."

"But," said little honest heart, "I want to give me a p'esent, papa; 'cause I like me better than I do *anybody else.*"

She could not be satisfied without seeing a present to herself put with the other three packages.

So her papa bought some blocks of sugar, and the little girl wrapped them up herself, with papa's help. He wrote on the package, "Alice's Present to Herself."

In the morning, when the gifts were distributed, she was as much delighted with that as with any she received.

MRS. F. H. HAZELTINE.

THERE is a street-lamp near Edna's home, and she often used to stand at the window and watch the shadows of people passing by. On Christmas eve she stood there for some time, and her mother asked her if she was watching for Santa Claus. "Yes, mamma," she replied. "I shall see the shadow of his walksteps when he comes."

For the Companion.

A CHRISTMAS SECRET.

"I know a secret," said little Belle,
"A beautiful secret, but I sha'n't tell!
You'd like to know it, I'm sure you would!
And if you'll be very, very good,
P'raps I will whisper it in your ear,
Just to make certain nobody'll hear.
I've knitted mamma some slippers—oh,
The loveliest color! There, now you know!
And don't you b'lieve she'll like them as well
As a thousand dollars? But don't you tell!"

For the Companion.

CHRISTMAS CAROLS.

Sturdy Jack and little Ned listened eagerly, as mamma read them a story of the sweet, quaint custom of children in other lands—how they go from house to house on Christmas eve, and sing their Christmas carols of "Peace on earth, good-will to men."

"Wouldn't that be just splendid?" breathed Jack, after mamma had tucked them into bed.

"Splendid!" echoed Ned.

The house grew still as they talked it all over, and the lights went out one by one.

Pretty soon they crawled out of the warm bed.

"Let's only put on our stockings; then we can get into bed quicker," chattered Ned.

Then they opened the door, and stood shivering a minute upon the mat in the hall.

"Don't make a mite of noise!" commanded Jack.

So, hand in hand, they went softly down the hall to mamma's door.

"I—I—guess we won't go out under the window," whispered Jack. "'Cause, 'cause we aint dressed, you know, Ned, and it's awful cold out there. I guess this will be just as well. Sing now, Ned. Sing 'I want to be an angel.'"

How quickly mamma's door opened, as their young voices rang out in the dark, silent hall!

"You blessed children!" she cried, as she drew them into the warm room. "You *naughty* boys! What does this mean?"

"Christmas carols!" said Jack, winking hard to keep back the tears—for he was a big boy, you know; *he* was eight years old!

"Christmas carols!" echoed Ned, who *always* echoed what Jack said; but he was only six years old, and so he *did* cry.

"You will be angels sooner than we want you to be, if you run around this way," laughed mamma, with tears in her own eyes. "Don't you know that you'll both have the croup?"

"Yes'm," said Jack, meekly.

"Yes'm," echoed Ned.

"Then run back to bed this minute," said mamma. "To-morrow you shall put on your coats and mittens, and sing carols under the window as long as you like."

And Jack and Ned, standing knee-deep in the snow under mamma's window, with the warm sun bright around them, were sure that it was the nicest way, especially when mamma gently raised the sash, and showered peanuts and candy into their caps.

"Do you know what makes wheels go so fast?" asked a five-year-old boy. "'Cause they have so many legs," meaning the spokes of wheels.

The 7, 8, 6, 1, 2, 12, 11, 9, 14 is having no equal.
The 31, 3, 4, 65, 22, 10, 24, 19, 20 is original.
The 16, 61, 34, 5, 64, 80, 42, 48, 26 is to defeat.
The 81, 40, 13, 51, 54, 95, 46, 97 is an electric message.
The 33, 56, 17, 59, 60, 62, 15, 25 is a short, broad, crooked sword.
The 50, 83, 38, 18, 23, 84, 41 is much loved.
The 21, 73, 63, 37, 93, 92, 32, 103 is one who forms a plan in painting, etc.
The 68, 27, 43, 28, 47, 104, 88 is a fire made for joy or triumph.
The 29, 66, 35, 39, 30, 74, 109, 44 is sacred.
The 36, 85, 72, 53, 76, 49, 110, 58 is starved.
The 45, 102, 101, 90, 91, 99 is a petrified plant.
The 86, 87, 98, 52, 70 is courteous.
The 89, 96, 55, 71 are natives.
The 78, 69, 57, 75, 67, 77 is to conclude.
The 79, 107, 94 is away.
The 106, 82, 105, 108, 100 is an arrangement of leaves around a common centre, upon the same plane.

FRANK SNELLING.

3.

RIDDLE.

(For very little folks.)

I'm a most mysterious person,
Some say I do not exist;
But if I'm away on a certain day
Just notice how much I am missed.

I am fat, big-hearted and jolly,
And I love little children well,
To them I bring joy, with many a toy,—
Now what is my name? Can you tell?

4.

DOUBLE ACROSTIC.

The *finals* spell a decoration used at the season of the *primals*.

Cross-Words.

1. Habitual practice.
2. One of the West Indies.
3. Large streams of water.
4. Meaning.
5. A writing formed into a roll.
6. A quick, sharp noise.
7. A place for buying and selling.
8. The god of music.
9. That from which anything proceeds.

5.

ANAGRAMS.

Good Books for Christmas Stockings.

Tottri Gill's White Toads, by Hulda Collins Mounteroe.
Ella Trip's Quince Trees, by Anne Seacroft.
Darte Dodray, the Rough, by Tom P. Galpyn
Walter DeToft's Election, by Peleg Ashon Matson.
Boston Way, by Elisha Lowe Mandwill.

Christmas Conundrums.

When is a Christmas goose like a pincushion? When it is stuffed.

Why should large dealers in cattle and sheep beware of Christmas eve? Because so many stockings (stock kings) are hung then.

What claws never scratch? Santa Claus (claws).

What young ladies are always welcome at a Christmas festival? Christmas belles (bells).

What is the wisest thing about the Christmas roast turkey? The sage.

CARELESS SANTA CLAUS.

From north to south speeds Santa Claus his Christmas-crowded sleigh;
He does a wonderful amount of labor in a day;
And so, although a pity, yet perhaps it is not queer
That in his haste he chanced to make some sad mistakes last year.

It happened in a town that lies not distant from our sight—
The name I will not mention here, but if I would I might—
He passed expectant, loving friends by tens and maybe scores,
And left the presents meant for them at other people's doors.

The gloves he brought for Ella Green he gave to Emma Gray,
Who had a dozen pairs from Paris just received that day;
The doll that sickly Lulu Lane had hoped for half a year
He gave, with seven finer ones, to small Estella Greer.

The drawing tools requested by ambitious Tommy West
He sent to idle Philip Jay, who let them rust in rest;
The muff intended Hester's needle-roughened hands to hold
He gave the banker's daughter—and the sewing-girl caught cold.

None needed more than Mrs. Brown a china dinner-set;
And Santa brought it for her, but it went to Mrs. Brett;
And Mrs. Brett, who boarded, crowded it upon a shelf,
Where no one else could see, and where she seldom looked herself.

Penalian Vane, the bachelor, society's delight,
Had three fine silk umbrellas, with handles gleaming bright;
And only one was meant for him, one for the widow Moore,
And one for Jones, the coughing clerk at Irwin's trimming store.

Now you may think the riddle was not very hard to read,
That those who had too much would soon discover who had need;
But though indeed remarkable 'tis true which here I say:
Not one of them has dreamed of the mistake until to-day.

It is too late to mend it: dolls broken, gloves out-worn,
A pretty muff moth-eaten, umbrellas lost and torn;
But don't you think that all of us had better watch this year,
Lest Santa Claus should err again, and make the blunder here?

CATHARINE S. HOLMES.

MATE OF A SANDAL-WOOD TRADER.

By Chas. Wm. Kennedy.

Late Commander White Star Steamer "Germanic."

In June, 1850, I arrived at the island of Erramango, one of the New Hebrides group, as chief mate of the schooner *Red Rover*. Our object was to obtain a cargo of sandal-wood. The natives of the island were among the most treacherous and bloodthirsty in the Pacific.

The schooner could approach no nearer than a mile from the shore, and we left her there in charge of the second mate.

Our small boats were lowered. The Captain took charge of one, and assigned the other to me.

My crew of four men consisted of two white men and two black natives of Aneiteum, six of whom were shipped as sailors on board the schooner. The men were all armed—the whites with small rifles and short, heavy swords, the blacks with tomahawks and clubs. Besides our rifles, the Captain and myself carried in our belts a brace of pistols and a small tomahawk.

We drew near the breakers that were surging upon the beach and dropped anchor. One white sailor was stationed in the bow to guard the rope, for the natives would have cut it at the first opportunity. The other kept his eyes fastened intently on me while I was delivering the trading goods.

As we threw out our anchor, I saw the beach swarming with black, naked, hideous-looking objects; their faces and bodies painted red and black.

The logs were floated out to us, a few at a time, by three of the natives; we permitted no more than that to approach the boat together. They plunged into the surf, pushing the wood before them until it came within our reach. Then it was hauled in and stowed away in the bottom of the boats by our blacks.

I then paid the natives on shore the price in goods agreed upon by the missionaries. They appeared perfectly satisfied with it.

The weather continued fair all day so that we were able to do a brisk trade; going back to the schooner with each load as it was finished, and returning to the shore for another.

The following morning operations were resumed. Towards noon the sea began rising and rolling in from the northwest.

At four o'clock the Captain had gone on board the ship with his last load. Mine was not yet completed.

In the meantime a heavy bank of black, threatening clouds was approaching rapidly, and we knew that a squall was near at hand. At last, loaded nearly to a level with the water's edge, we set out for the schooner.

Before I could reach the vessel the squall caught us. A deluge of rain poured down, completely shutting out the schooner from our view. An enormous wave, breaking over us, almost swamped our boat; and I was compelled to throw out half my load in order to save ourselves.

The squall lasted but a few minutes, and then passed over. Looking for the schooner I saw, to my horror, that she had been drawn by the heavy sea and wind in shore of us, and was lying very dangerously near the rocks. Every sea drew her closer on.

I made for her as fast as the men could pull. We succeeded in making a rope fast to the doomed schooner and tried to tow her out, but in vain. At last we were compelled to cut the line to save ourselves.

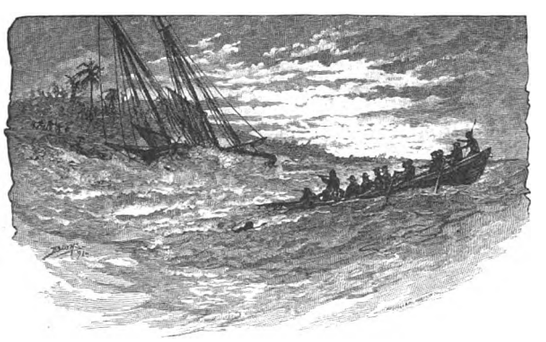
We were just in time. A huge wave which surely would have engulfed us if we had kept our hold, broke just clear of the stern. The same wave lifted the ill-fated schooner high on its crest and dashed her with a terrific crash broadside on the rocks.

Daylight had nearly disappeared. Just sufficient remained for us to see her go. Then darkness settled down over her and hid her from our sight.

The Captain and the remainder of the crew were still on board the schooner.

It was high water when the ship went ashore, and two hours later the sea appeared smoother. One of the sailors swam to the shore with a message to the Captain, informing him that at the first break of day I would be ready to take him with the others off the wreck.

When the squall came up, the savages had dispersed far into the interior to their huts. We knew, however, that the earliest rays of the sun would find them on the beach.



At the first glimmer of dawn, I heard a whisper from the water just at the stern of our boat. I at once recognized the voice of the native sailor whom I had sent to the Captain the night previous.

He told me that all were alive on the schooner, and that I was to draw as near to the ship as possible. I had already thrown overboard the remainder of my load, and was prepared to receive them.

The savages would now very soon make their appearance, and we loaded our rifles for their reception. Fortunately we had a large supply of ammunition.

As daylight broadened, I could distinguish the men moving about on board the schooner, evidently making preparations to leave. We accordingly pulled up as near to her as we could with safety, and waited.

Some of those on board immediately caught hold of the ropes hanging from the stern, and with one hand swung themselves off into the water and swam to the boat. They brought with them pieces of salt meat, closely secured in oil-skin to protect them from the sea-water.

Wrecked among Cannibals.

At this moment a fearful, blood-curdling yell rang out on the air. Turning around I saw that the rocks seemed alive with savages.

In the full paraphernalia of war-paint, their naked bodies presenting a hideous spectacle, they leaped from rock to rock, brandishing their spears and tomahawks, and howling and shrieking like so many demons. But their fear of our firearms kept them away from the ship.

As the Captain and remainder of the crew were about to lower themselves into the sea, I gave orders to my crew to be in readiness with their rifles, and fire the instant I gave the word.

It required a great deal of nerve and courage to accomplish what the poor fellows on the schooner were about to do; and I sat with my hands on my rifle anxiously watching them.

They had scarcely let go the ropes, when the savages with one of their horrible yells scrambled down the rocks, and plunged in after them.

The men struck out rapidly for the boat. At the same instant we raised our rifles and fired.

Two of the savages fell; and their fate caused the others to beat a retreat.

Under cover of our fire, all the men, with but one exception, reached the boat and were hauled in. When almost within our grasp the old cook's courage deserted him. Losing his strength, he was lifted high on the crest of a large roller, and as he was being carried backward towards the shore, a huge savage, seeing his helpless condition, attacked him with his tomahawk, and the old man's fears and troubles were forever ended.

At the same time, bringing my rifle to my shoulder, I fired. The cook's assailant fell back and dropped lifeless into the water.

As we pulled away with all possible speed, the schooner blew up. The Captain had set fire to her close to a small powder magazine.

Our force now consisted of the Captain, myself, second mate, four white sailors, and six blacks. The white men were all well armed and provided with plenty of ammunition.

Our blacks carried tomahawks and short, heavy clubs Nothing whatever could induce them to touch a rifle.

What course to pursue was the next thing to be considered. To attempt to land in the vicinity was madness. We should surely be overpowered, killed, and eaten by the natives. We decided to run down to the lee side of the island, with the hope of sighting some vessel on the coast.

Steering along the coast for several miles, we came to a part of the island that was apparently deserted. As we had eaten nothing since the day previous, and had only raw salt meat and a keg of water with us, we decided to go on shore, make a fire, and cook our dinner. We had nearly reached the shore, and were on the point of jumping from the boat, when our attention was arrested by a slight rustle in the bush.

In a flash our pistols were in our hands. Looking in the direction from which the sound proceeded, we saw four natives, two men and two women clothed in European costume, coming towards us.

We at once surmised that they were missionaries; and such indeed they proved to be. Addressing us in very fair English, they informed us that a few weeks since they had been landed there by a schooner belonging to the missionary society. We also learned that just before their arrival, a powerful inland tribe had made a descent on the natives who had lived here, killed nearly all the men, and carried the remainder, with the women and children, into captivity.

Finding that we could land with safety, we all went ashore. Two of the men were ordered to prepare our food. Yams and cocoanuts were kindly supplied by the missionaries.

We were cautioned by these good people against remaining for any great length of time in the vicinity. But it was impossible for us to attempt to reach Aneiteum in our small boat until the wind changed to a more favorable quarter, and we decided to wait a few days at least.

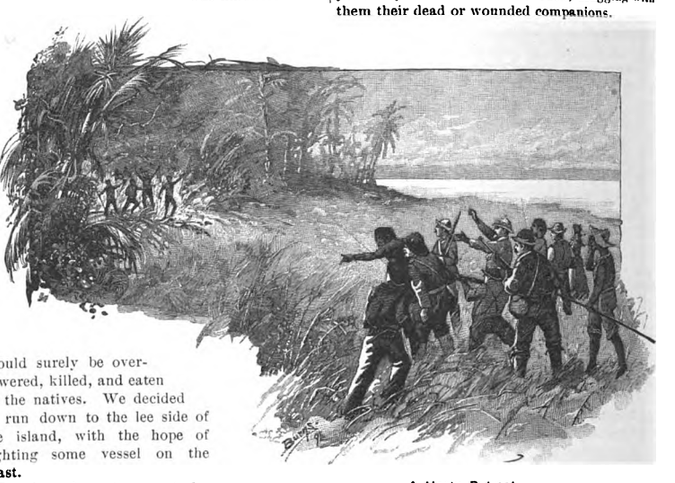
A short distance from the shore we found a deserted hut, and immediately took possession of it. Our rifles and pistols were carefully kept loaded. Our boat was drawn up in the bush. Our food consisted of yams, cocoanuts, and the salt meat brought from the wreck.

On the afternoon of the fifth day, while sitting outside our hut, we heard, in the bush, voices drawing near our camp. The crashing of branches and tramping of feet indicated that the number of visitors was by no means small.

Springing up, we seized our rifles and made preparations for action.

In a few moments a dozen armed and painted savages burst through the bush, and appeared before us. Instantly our weapons were raised, and pointed at their heads. This quickly brought them to a standstill.

Making signs that they had no evil intentions, they informed us that a large tribe was advancing to make an attack upon us; adding, that unless we stopped them at a certain pass in the valley, a short distance off, we should be overpowered and killed.



A similar report had been conveyed to us by the missionaries, and, feeling that there might be some truth in what they had said, the Captain determined to send a part of our force with the savages to the place designated.

Our party was then equally divided, and I was accordingly sent with the savages at the head of one party, while the other remained at the hut.

We had scarcely proceeded a quarter of a mile, when, upon looking for our conductors, we found that they had disappeared as if by magic.

Realizing that we had been deceived, I gave the order to return to camp as rapidly as each man's legs could carry him. We rushed and tore through the thick bush and foliage as fast as we could push our way towards the hut. We had just sighted it, when we saw our treacherous guides appearing from another quarter.

As they came into full view, without waiting for an explanation I ordered my men to fire. We raised our rifles, and sent a volley of bullets among them. With their customary shrieks and yells they retreated into the bush, dragging with them their dead or wounded companions.

A Hasty Retreat.

We were now convinced that the time had come for us to leave the island. The missionaries had brought us the information that on the night following, a grand religious festival would be held, at which every member of the tribe must be present.

We determined to avail ourselves of this opportunity. Under cover of the darkness, we stole softly down to the place where our boat was concealed, laden with cocoanuts and a small keg of water. On these we must subsist until more could be obtained, but from whence it was to come, it was impossible for us to say.

We got in and took our places. The Captain was at the stern to do the steering; the blacks manned the oars. The remainder of our party held our rifles, ready to fire at an instant's warning.

The order was whispered to the men to give way at the oars, when a yell came from the bush, accompanied by a perfect shower of spears, arrows and stones, proving that the savages had discovered our escape.

They had doubtless been to the hut, and, finding it deserted, had rushed down to the shore, hoping to head us off before we reached our boat.

Several of the arrows came near hitting us, but fortunately did no harm. The men stopped pulling, and, raising our rifles, we fired in the direction of the lights that were seen moving about in the bush. The shrieks of rage and pain that followed, proved that some of the bullets at least had not failed to hit the mark.

We loaded and fired twice; then hoisting the sail, we were soon fairly embarked on the open ocean on our way to Aneiteum. Our feelings of relief and thankfulness were beyond description.

For four days and nights we sailed and rowed, making but little progress. Our food was now nearly exhausted, and we began to feel the pangs of hunger. Much has been said and written of the horrors of being in an open boat in mid-ocean, but the half has not been told, nor ever can be.

At the dawn of the fifth day there came a cry of "Light on the larboard bow!" We all started up and strained our eyes in that direction.

There it was; clear, bright, shining across the expanse of ocean, and sending into our hearts such joy as only those can feel who are reduced to the extremity that we were. There was no land in that quarter; and we knew it was a ship's light and that we were saved.

With strength and courage renewed we pulled towards her, and when within hearing distance, fired one of our rifles. Our signal was heard, and shortly after a voice reached our ears, calling to us to pull for the ship.

We needed no urging, and were soon alongside. Catching hold of some ropes we climbed up on deck, and found ourselves on board the *Intrepid*, of Hobart Town, a whaler, bound for the island of Tanna.

We received a kind and hearty welcome from the Captain and crew, and were soon seated at a table enjoying a delicious breakfast. Our boat was passed astern, and secured.

On learning that we were anxious to reach Aneiteum, the Captain kindly offered to beat

Digitized by Google

landward, and drop us under the lee of the island about five miles from the trading station.

This he accordingly did, and at daylight of the following morning we were in smooth water, and at our destination.

My enthusiasm had by this time considerably abated, and I made up my mind to avail myself of the first opportunity that offered, and return to Australia. However remunerative the trade in sandal-wood might be, I discovered that I had a decided preference for an occupation attended with more tranquillity of mind.

For the Companion.

VENETIAN PIGEONS.

Every one in Venice feeds the pigeons. The gondoliers, as they eat their frugal meal on the quays, drop a few grains of *polenta*. The school-boy turns his pockets inside out, and watches the birds as they pick up the crumbs of his lunch. In early morning the birds flock about certain windows, long before the shutters are opened, as if they had reason to expect charity there.

At two o'clock they are fed from one of the royal palaces, but the amount of grain thrown to them daily is little for so many. Before the clock strikes, the pigeons cluster around the window, as the Venetians collected about the royal palace on great festival days in the time of the Doges. When the food is thrown, there is a fluttering and scuffling truly Venetian, after the manners of the people when the Doge threw handfuls of gold and silver amongst them as he passed to embark on the *Bucentaur*.

The Venetians tell you some one left a legacy to feed the pigeons daily, but who this some one was, and when he lived, they cannot tell. In truth, the few handfuls of golden corn thrown amongst the birds are only symbolical of the donats and oecile distributed by the ancient Doges in largess.

None but strangers feed the pigeons liberally. When they first arrive in Venice they find it an enjoyable novelty to do so. As men are always about the piazza offering paper cornucopias filled with maize for a few soldi, the pigeons fare well during the travellers' season.

The first handful of corn thrown, or even a gesture as of throwing, brings a cloud of birds down from their perches on the neighboring buildings. They settle at the feet of the giver in such numbers that the individual birds are scarcely distinguishable in the mass of agitated feathers.

The boldest of the flock light on the head and shoulders of their benefactor, and eat from the outstretched hand, but not unless it be held perfectly still. The pigeons, like the people, though they have the appearance of being bold, are really shy, timorous, and always on the alert.

Soon the stranger becomes familiar with the ever present pigeons, the novelty of feeding wears off, and he forgets all about them as he becomes interested in other things. But luckily for the birds, there are always fresh arrivals, and always men anxious to sell little packets of corn.

Many persons who have fed these birds never forget them. A Venetian, living in a distant land, sends each winter a small sum of money to a friend in Venice, with the request that it may be expended in feeding the pigeons in St. Mark's Square on Christmas day.

When and how the pigeons of Venice acquired veneration and were taken under the protection of the authorities, is still an unsettled question.

There is a tradition often repeated in the guide-books, that Admiral Dandolo, when he was besieging Candia at the beginning of the Thirteenth Century, received intelligence from Venice, by means of carrier pigeons, which greatly facilitated his conquest.

"He then despatched the birds back to Venice with news of his success, and since that period their descendants have been carefully tended and highly revered by the citizens." So says tradition.

There are two points in this legend difficult to understand. It may be true that the Admiral received intelligence from Venice by means of carrier pigeons." But that he "despatched the birds back to Venice with news of his success" will be doubted by any boy who has a dovecote.

A double voyage is too much to expect, even of well-bred carriers. The messenger birds fly by instinct to their homes, after having been carried away confined in some cage for the journey. They will not carry a message away from home any quicker than a rat will bring back a bell that has been tied to his tail.

Again, the Venice pigeon of to-day does not resemble the carrier pigeon. It is the rock or moon pigeon—as familiar on our public buildings in America as on the palaces of Venice. Naturalists, indeed, say that all varieties of pigeon have been developed from the common rock, and will revert to that form unless bred under human direction.

Nevertheless it is not easy to believe that the pigeons of Venice are descendants from carriers of the Middle Ages.

Another tradition purports to explain why the birds are held sacred:

On the festival of Palm Sunday, so runs the legend, the Doge made the tour of the piazza accompanied by all the officers of State, the Patriarch, the foreign ambassadors, the silver trumpets, all the pomp of ducal dignity. Among

A Friend of the Pigeons.

other largesses of that day a number of pigeons, weighted by pieces of paper tied to their legs, used to be let loose from the gallery where the bronze horses stand, above the western door of the church.

Most of the birds were easily caught by the crowd and kept for their Easter dinner; but

some escaped and took refuge in the upper part of the palace and among the domes of St. Mark's. The superstition of the people was easily touched, and the birds that had sought the protection of the saints were henceforth dedicated to the patron of Venice.

Whether this explanation be true or false, the pigeons are carefully guarded by the municipal authorities, and add much to the gaiety of Venice. As there are no other animals roving about, excepting a few dogs and cats, the fluttering flocks give needed life to the quiet place, and help to furnish and decorate the city of forty islands.

A person found guilty of capturing or killing one of these birds is not only fined but sometimes condemned to imprisonment—seven months' imprisonment, the people tell you. Last winter a man was arrested for poaching within the city limits.

Before the magistrates he insisted that, as the pigeons were public property he, being one of the public, had a right to help himself to his share. But the judge locked the man up for three months to digest his pigeon pie.

Notwithstanding the severe penalty, many of the pigeons get into the pot and the butchers go unpunished.

Not long ago a commotion was occasioned on the Riva by a boy who accidentally knocked down a bird. Having a stick in his hand he had thoughtlessly struck at a flock that went flying past. No policeman was in sight. An old gondolier picked up the victim, showed it to the crowd that quickly gathered, and threatened the culprit with a beating.

The frightened boy made his escape while the gondolier, having spoken according to his duty as a citizen, pocketed the pigeon and went his way. Let it be hoped he invited the boy to supper.

Going home one evening through one of the side squares, I found a wounded pigeon, entangled with a piece of cord that looked much like a snare. The bird was stiff, cold, and unable to move after I had released it from the cord. Not liking to leave it a victim for some prowling cat, I took it home.

It was late when I let myself in. No one was awake except my dog, who seemed to believe I had brought the pigeon home especially for his amusement.

I knew what would happen if I kept the bird in my room, so, much to my Skye terrier's disgust, I left it in the long entry where it could safely perch and have plenty of air.

Next morning when the servant brought my hot water, I asked:

"Did you see my pigeon in the hall?"

"No, signor. What pigeon?"

"What pigeon? Why, the one I brought home last night, wounded."

"Oh! was that signor's?"

"Certainly. Where is it?"

"Wait a moment." The old woman slipped out, and quickly returned holding up a plucked pigeon.

"Is this the one?"

"Yes," I answered as boldly as if one could identify a plucked fowl. "Why could you not let the bird live?"

"You see," explained the servant, astonished at my anger, "you see, we did not know how it came in, and being a pigeon—we plucked it."

How my dog did enjoy those bones!

HENRY BACON.

For the Companion.

REMINISCENCES OF A VIOLINIST.

By Julius Eichberg.

In the winter of 1830 the Rhine was frozen over for miles, and I, with other small boys of my age, took a keen delight in crossing the river on the ice, peeping, occasionally, into the cosy cabins of the vessels that were frozen in, hard and fast. Among these vessels were several freighters from Holland.

Our favorite among these vessels was the *Fine Anselmus*. She was almost as broad as she was long, and was on the way, with a full cargo of Dutch cheeses, to some city far up the Rhine, when she was frozen in. The master, a kindly and grave Hollander, was always smoking a huge meerschaum pipe, the bowl of which was artistically carved in the likeness of a Harlem tulip.

Sometimes the Captain gave us permission to clamber on board, where his wife, who was always darning very large stockings, treated us hospitably to hot baked potatoes and tea. Their little cabin was a model of neatness. The single table in it, as well as the few chairs, was brilliant with hard rubbing. In every corner were pots of struggling tulips, placed so as to catch their share of the pale rays of a winter's sun.

Quite early in life I was sent to an elderly musician, a member of our theatre orchestra, to take my first lessons in violin-playing. My music-master was a very poor man. He occupied, with his wife and large family, a little tenement of three small rooms at the top of an ancient, high-gabled house.

Poor as my master was, he was perfectly contented with his lot. He often told me that, since even the great Mozart had been often in want for the commonest necessaries of life, no musician had a right to complain, but should submit patiently to hardship and privations.

My master had three friends, also members of the orchestra, who came regularly to see him every Sunday afternoon, and brought their stringed instruments with them. I was sometimes permitted to listen. They played quartets by Haydn, Mozart, and the earlier ones by Beethoven. I do not know whether they played well or not, but I know that I looked forward to these Sunday afternoons with delight and impatience.

I went to a day-school kept by a veteran whose left leg had been shot away at Waterloo. He was quite an expert with the rattan, as several of my old fellow-scholars remember to this day. He taught us nothing in particular, and did not like, in teaching us this, to be interrupted by questions.

He was, however, very fond of reading to us, from a well-worn volume, all sorts of stories and adventures of travel. Among the number was one called "The Sailor and the Shark," which, although we had heard it read dozens of times, delighted us still at every repetition.

One day, after he had re-read this famous story, a timid little fellow—I am not sure but it was I—raised his hand and said, "Mr. Teacher, what is a shark?"

For an answer, the little searcher after knowledge received a severe flogging, and was sentenced to write the word "shark" fifty times upon his slate.

It was about this time—in 1832 or 1833—that the celebrated French violinist, Alexandre Boucher, was expected in Cologne to give a concert. A friend of our family took me to that city to hear this noted artist. We spent a whole night in the post-coach on the way, and when we arrived I was almost benumbed with cold, in spite of the fact that an old lady, a fellow-passenger, had successfully resisted any attempt to open a window for a little fresh air.

By special favor we were present at the rehearsal for Monsieur Boucher's concert. Quite a number of people were scattered through the room, and when Boucher advanced to try his concerto with the band, he was received with great applause.

His celebrity was due, as I afterwards learned, as much to his wonderful resemblance to the first Napoleon as to his talent as a performer. He affected to pose in the French Emperor's well-known manner, walked like him with his head bowed forward, and took snuff from a golden snuff-box given him, so he said, by Napoleon, after he had offered to take the Emperor's place on board of the English man-of-war that was to convey Napoleon to St. Helena.

Boucher's playing astonished me in the highest degree, although he moved about, while playing, in a most comical and startling manner.

Our return trip to Düsseldorf that night was enlivened by a sharp altercation between the same old lady and an irascible old gentleman, who, upon the lady's persistent refusal to allow a window to be lowered, broke one of the panes, which gave us plenty of fresh air during the

Digitized by Google

night. But when we arrived, the window-breaking passenger had to pay a fine of half a thaler for damaging a mail-coach of His Royal Prussian Majesty.

I met Boucher some fifteen years later at a musical soirée in Frankfort-on-the-Main. During the evening we were favored once more with his impersonations of the great Corsican, with bent head, snuff-box and all.

The next violinist of celebrity whom I heard was Lafont. Singular to say, Lafont was far more proud of his singing than of his violin-playing. At the concert of which I speak his playing electrified the audience. He was called out again and again. The musicians in the orchestra cheered him to the echo. Lafont received this homage in a dignified manner, like the high-bred Frenchman that he was.

A moment later he reappeared upon the platform, leading very courteously an elderly French-woman to the piano to accompany him in some sentimental French romances. The lady took no little time to adjust a pair of large silver-bowed spectacles to her nose, after which Lafont began to sing, in a thin and nasal tenor voice, several songs which had been fashionable under the first Napoleon.

It was a sad sight to see one of the greatest living masters of the violin exhibiting his weakness to an audience which he had delighted a few moments before with his unrivalled playing.

The story of Lafont's first meeting with Paganini—who was then but little known outside of Italy—will be new to many readers. Lafont, arriving in Milan on a concert tour, learned that Paganini was in town. He called upon him, and met with a very friendly reception.

Paganini accepted with alacrity Lafont's invitation to perform, with him, a duet for two violins and orchestra, by Viotti, saying that he felt greatly honored to play with Lafont. When the Frenchman offered to send him the music so that he might make himself familiar with it, Paganini declined with thanks, and promised to be at the rehearsal the next morning.

The rehearsal was to begin at nine o'clock. Half an hour later Paganini arrived. He borrowed a violin from one of the orchestra violinists, and the performance began. A long and brilliant solo was to be played, first by one of the two violinists and then by the other. Lafont began, and acquitted himself of his task with grace and purity, being loudly cheered at the end by the orchestra.

Then Paganini followed, and it must be said that his playing did not do him much credit. He stumbled repeatedly, committed several errors of time and intonation, and at last had to begin his solo again, to Lafont's surprise.

At night, after an overture by the orchestra, Lafont and Paganini advanced upon the platform to play their concertante. Lafont was in the gold-laced court uniform, which he wore as first solo violinist to the King of the French. Paganini came on with his livid face and ungainly, shuffling gait, his long, dark hair hanging in disorder down his back.

Lafont played his solo admirably and took the audience by storm. Then Paganini began. He had played only a few notes when a sharp crack apprised the audience that his *E* string had broken; but the general hum of disappointment was quickly hushed to an amazed stillness, when Paganini was seen performing the difficult solo upon three strings only, with the utmost ease and in an absolutely masterly manner. The roar of applause that followed this exploit was acknowledged by Paganini with his usual modest grin, and, we may suppose, with a more or less sardonic side-glance at his discomfited rival.

A few years later I heard two artists as widely different in their playing as in their musical tendencies. Louis Spohr was at that time not only the greatest German violinist and orchestra conductor but also, during the interregnum that took place between Beethoven's death and the advent of Mendelssohn, its greatest dramatic and symphonic composer.

My violin teacher, an enthusiastic admirer of Spohr, came to me one morning in a very excited condition. "Spohr has come! Spohr has come!" he exclaimed, "and you are to go at once with me to play before him. He is willing to hear you."

It took us but a few minutes to reach the mansion of Baron von Sybel, whose guest Spohr was. As we ascended the stairs leading to his rooms, we heard some one playing on the violin in so full, noble and grandiose a manner, that I had to listen with all my mind and ears.

It was wonderful playing. I had never heard anything like it. The violin seemed to sound by itself, without the intervention of the bow; at least it produced that effect upon me.

Then my teacher took me by the hand and knocked at the door. Near a window, holding a violin and bow, stood an unusually tall and stoutly-built man, who advanced toward us, greeting my teacher very pleasantly, and asked him, "Is this your young pupil who is going to play to me?"

He looked so kindly that all fear left me at once, and I played a part of a concerto by Rode, not too badly. Then Spohr took his violin and began to play to us. The splendor and tenderness of his tone haunts my memory even now, after having heard all the great violinists of the last fifty years. It was perfection.

He permitted me to come every morning to hear him practise, and I need not say that I was the punctual. As long as Spohr remained in the city, his counsel and advice did not fail me.

At this period, Spohr occupied the position of Musical Director at the court of the Prince-Elector of Cassel, a worthy descendant in every way of that wicked prince who sold his subjects to the English to use in their wars in America.

The next noted violinist I heard was Ole Bull, who gave a concert in Elberfeld, a large manufacturing city some fifteen miles from Düsseldorf, while I was there on a visit. I well remember the sensation caused by a small negro boy, who carried Ole Bull's violin case upon the platform. Most of the audience had probably never seen an African before.

Certainly Ole Bull's execution was extraordinary. If we add the fact that he was very handsome, young, tall, straight as a pin and with an abundance of light hair, his prodigious success is easily explained.

The audience grew quite frantic over his playing, and called him out several times. After he had withdrawn from the stage, the little African reappeared to carry off the violin case, and got quite an ovation, the report having spread that he was an African prince kept out of his kingdom by a usurping uncle.

When I was about ten years old, a young musician and most distinguished composer, Norbert Burgmüller, took some interest in me, and asked me to visit him at his rooms near our theatre. Burgmüller, who had formerly been a fine violinist, had been compelled by an injury to his right arm to give up this instrument, and became one of the viola players in our orchestra. He was a man of true genius; and had he lived longer, he would have taken rank among the greatest composers of the century.

About this time Mendelssohn was appointed musical director of our symphony concerts and of our opera. My teacher, who was the leading violinist in our orchestra, spoke of me to Mendelssohn as a tolerably good reader, and in consequence I found myself installed as one of the second violinists.

The musicians did not receive me cordially. No one seemed to care to play from the same music-stand with so small a boy as I was, and at last I obtained a stand of my own, to my great satisfaction.

I have a very vivid remembrance of Mendelssohn as he looked then. No picture that I have ever seen does him justice. He was of a slight frame and of middle height. His face, which was one of almost ideal beauty, was surrounded by a fringe of black whiskers. His intensely black hair half covered his lofty forehead. His eyes were dark and luminous, and he had a way of half closing them when talking or looking at an object.

One afternoon a great number of musicians and lovers of music went to the Church of the Franciscans, where the well-known Chevalier Neukomm was to give an organ concert. I found a place quite near the organ, and saw Mendelssohn talking with the organist. After Neukomm had finished his playing, several musicians asked Mendelssohn to play. At first he declined, but a little later he began to improvise upon a theme by Neukomm quite marvellously, to Neukomm's evident discomfort.

Our orchestra was not a very good one, being in part composed of amateur players. At the same stand with my teacher, who was the concert-master, an old gentleman played. He was not less than eighty years old, and could under no circumstance be made to play in time. He had an unhappy mania of imitating the chirping of little birds upon his violin.

Our first oboe-player had a little dog, Fido by name, which generally accompanied its master to the rehearsals, and had been trained to give the A when it was required. As the director asked the oboist one day to sound the A, this little dog, incited, I suppose, by some wag among the musicians, gave it in a shrill whine that convulsed the orchestra, and caused Fido's instant expulsion from the hall.

At the occasion of a musical festival in Düsseldorf I witnessed a scene that produced a general and not unjustifiable excitement among those present.

It was on the occasion of the last rehearsal of Beethoven's ninth or choral symphony, and the great hall was filled with people from near and far, anxious to hear the then but little known work. While the orchestra played the first movement we all noticed a dark-bearded, spectacled, middle-aged man in the audience, who had a score before him and was gesticulating wildly, being evidently very much dissatisfied with the performance. Suddenly he rose, advanced toward the orchestra and began to shout:

"This is all wrong! It is not thus that my immortal friend, Beethoven, wanted his masterpiece to be played. You ought to play it much slower, and in this way."

He began to beat time vigorously to the astonished musicians, entirely ignoring Mendelssohn, who conducted the symphony. At this moment several people forcibly ejected the disturber from the hall.

The man was the well-known Professor Anton Schindler, Beethoven's constant friend during the last years of his life, and the author of a "Biography of the Master."

PAST BELIEF.

In Mr. Herbert Barry's account of things as he saw them in Russia, during his residence there, he remarks upon the simplicity of the peasant character as it appears in "quiet, self-sufficient little villages, whose inhabitants never wander far from the place of their birth, and scarcely know the name of the nearest town." One such village he used to visit on occasional shooting expeditions after bear and elk, which were to be found in the neighboring forests.

I always stayed at the house of one Starosta, a very old man, whose wife was still active and lively at seventy years of age. She used to interest herself vastly in the conversation that passed between me and her husband.

This man, a forester, was a remarkable character. By intelligent industry and perseverance he had raised himself from the station of a common serf to the management of woods greater in extent than many a German principality.

He had given his son a liberal education, and was himself a man of inquiring disposition, anxious to get information on all sorts of subjects. Our long discussions of things in general, and the world's recent history in particular, were highly amusing, if a little perplexing, to the old lady who sat and listened to them.

One morning I was sitting before the stove, talking with the forester about the British Constitution, and happened to mention our gracious Queen. At that moment the old lady broke into the conversation.

"You will excuse me," she said, "that I do not speak English. I hear you always talking about your Queen Victoria; now, I want to know what does she do for our Emperor, because of course she lives at Petersburg?"

"At Petersburg?" I said. "No, she lives in her own country,—my country,—England."

"What part of Russia is England?" asked the old lady.

"England is not in Russia at all. It is another country by itself."

But I could not convince her of that. She had never heard of any other country that was not Russia, and nothing would make her believe in its existence. She could not get over it for a long time, and continually repeated to her husband: "Only fancy, the Barrin trying to tell me there is another country beside Russia!"

MISTAKEN PLEASANTRY.

"In selling goods," said a successful canvasser, "you must not be content with selling to the people who want them; you must persuade the rest to want them also." Many a crafty salesman feels that the secret of success lies in describing his goods so that they shall seem "all things to all men," and woe be to the innocent and jocose buyer who brings down upon himself the flood of such a man's pertinacity. Says a traveller in Malta:

Going to the quay, we made our passage, by energetic pushing, through the lines of venders of cigars, tobacco, lace, oranges and sponges. One man, with canaries in cages, stopped us at the water's edge with:

"Want a canary, sir?"

"Are they for eating?" I asked him, to get rid of his importunity, and in a spirit of Mark Twain jocosity.

"No, no! They are for singing."

"Ah, if that's what they're for we don't want them."

A brilliant thought struck the man, and he bolted after us, shouting, "Yes, yes! They are for eating. Very good pie! Buy the lot!"

Leaving his cages in charge of an assistant, he made off to tell the canary-venders that here was a man who ate canaries, and might buy all there were in Malta, and a fine time we had with cages until we steamed away.

STRANGE THINGS IN THE AIR.

When a flash of lightning darts through the air, it vaporizes any minute particles of floating matter that may be in its path. By examining the light of the lightning with a spectroscope, the nature of these vaporized substances may be determined, because every known element in nature shows in its spectrum certain lines that belong to it alone.

By studying the spectrum of lightning in this way, Mr. W. E. Wood, of Washington, has recently been able to show that sodium, which is the element from which common salt is formed, exists in the air.

He suggests various ways of accounting for the presence of sodium in the atmosphere, one of which is particularly interesting, and that is that it may have come there from interstellar space.

It is known that meteoric dust is continually falling upon the globe from beyond the atmosphere, and if it should turn out that microscopic particles of sodium are included in this strange, unending shower with which the heavens salute the earth, it would be only another proof of the unity of composition that extends from the earth to the sun, and from the sun to the stars.

FOUR CLASSICS.

A name or a thing not at all ridiculous in itself may be made so by being put in some false position. Mr. Barrett Wendell, in his "English Composition," says:

"Some years ago a gentleman died hereabouts, whose literary style was much admired by the friend who wrote an obituary notice of him.

"'His English,' ran the sentence, which I have remembered for years, 'was purified by constant study of the best models: the English Bible, Shakespeare, Addison and Fisher Ames!'"

THEIR PUNISHMENT.

What is learned at home comes out at school, as in this case reported by the New York *Tribune*.

In the infant class the lesson was about disobedience and its penalties.

"Little children have to mind, or they are not nice," said the teacher. "Older people have to obey laws or be punished. Do any of you know how older people are punished?"

"Oh, yes, I know," answered one little girl. "The husbands scold their wives and the wives scold their husbands."

Housekeepers Should Remember

The great success of the Royal Baking Powder is due to the extreme care exercised by its manufacturers to make it entirely pure, uniform in quality, and of the highest leavening power. All the scientific knowledge, care, and skill attained by twenty-five years' practical experience are contributed toward this end, and no preparation can be made with a greater accuracy, precision, and exactness.

Every article used is absolutely pure. Chemists are employed to test the strength of each ingredient, so that its exact effect in combination with its co-ingredients is definitely known. Nothing is trusted to chance, and no person is employed in the preparation of the materials used, or the manufacture of the powder, who is not an expert in his particular branch of the business.

As a consequence, the Royal Baking Powder is of the highest grade of excellence, always pure, wholesome, and uniform in quality. Each box is exactly like every other, and will retain its power, and produce the same and the highest leavening effect in any climate, at any time.

The Government Chemists, after having analyzed all the principal brands in the market, in their reports placed the Royal Baking Powder at the head of the list for strength, purity, and wholesomeness; and thousands of tests all over the country have further demonstrated the fact that its qualities are, in every respect, unrivaled.

All chemical tests to which I have submitted it have proved the Royal Baking Powder perfectly healthful, of uniformly excellent quality, and free from every deleterious substance

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

MALIGN PASSIONS.

The most prominent of the malign passions are anger, hatred, envy, jealousy, moroseness, selfishness and avarice. All of them tend to social disorder and individual demoralization. The seat of the affections is in the brain, and the harm done by evil passions is first upon the brain itself. It is not confined there, however, since the brain controls the other organs.

Outbursts of anger disturb the action of the heart. Many an angry person has fallen dead in his rage, as did one of the greatest medical experts of England. The character of the secretions may be changed under its influence so that the mother's milk may become poisonous; or the process of secretion may be arrested, causing the stomach to lose its digestive power.

Envy and jealousy often give rise to anger with all its bad physical results. They kill out the healthful influence of the benign affections, and permanently disfigure the "human face divine."

Avarice, long indulged, destroys the normal balance of the brain, and at length shrivels it up by concentrating nourishment on the part which is concerned with getting and holding. Its final result is that wretched being, a miser.

Moroseness is often worse in the home than an occasional outburst of violent anger. The one expends itself in the act; the other tends to perpetuate its evil influence indefinitely. Its effect on others reacts on itself.

A home with a morose mother is worse than one with a morose father. The father may get rid of his ill-humor in the outdoor sunshine, or in the excitement of business, or under the influence of his associates. At all events, he takes it away with him. A morose mother, on the other hand, enshrouds the whole house in gloom from morning till night.

Such moroseness is often the effect of disease, but when it is not, it tends directly to produce disease, especially by its action upon the liver and digestive tract.

All the passions are strengthened by indulgence, and at a late stage are exceedingly hard to overcome. Hence it is very important to begin gaining mastery over them early. A strong will, backed by a strong moral purpose, is equal to the task. Mothers should seek to cultivate in their children the opposites of the malign emotions—patience, cheerfulness, charity and beneficence.

"DEAR OLD BESS."

The storekeeper of a little country town in Connecticut, writes a correspondent, drove a nondescript colored mare whose peculiarities of gait and figure were a source of constant merriment to the village people. "Old Bess" cared nothing for their talk, however, though her master often declared that "she knew what folks said about her" as well as he did. "But then," he used to add, "she has too much horse-sense to mind that sort of thing!"

Opposite the store, across the road, was a steep ascent leading up into a farm-yard, where was a shed under which Bess was in the habit of standing when not actively employed. Up to this shelter she was in the habit of going alone when the wagon had been unloaded at the store door, and Mr. P——, her owner, had accustomed her to come down again at his call; or rather, as he said, "She took up the notion herself; I didn't teach her to do it."

The whole manœuvre was somewhat complicated. She had to back the wagon out of the shed, turn it partly round, pick her way carefully down the rather steep decline, cross the road, and then come up and turn again to bring the wagon into proper position before the door. It was a constant pleasure for us boys to witness the performance, and we often lingered for that purpose when we heard the well-known call, "Come, Old Bess, it's time to go to work!"

One day the call was again and again repeated, and still she did not come. We could just see a part of the rim of the hind wheels, and at each call we saw them push out an inch or two, and then draw up again, as if Old Bess had started and then changed her mind.

At last, after loud and impatient calls, Mr. P—— went over to see what was the trouble. We followed, and there, standing directly in front of the wheel with her hand on the shaft, stood little May, Mr. P——'s three-year-old daughter.

Poor Bess, divided between her duty to her master and her concern for her master's daughter, was irresolutely drawing the wagon forward and back, as far as she could without lifting her feet, evidently conscious that any further movement might involve danger to the little one.

"Dear Old Bess!" said May, and "Dear Old Bess!" echoed Mr. P——, with tears in his voice, while Bess, with a whinny of relief, no sooner saw him take the child in his arms—she was looking back at the child when we came up—than she proceeded to back out and go down to the store, just as if nothing had happened.

There the small boys patted her fondly, while the larger ones, some of them with strange lumps in their throats, after a timid glance at the tears still to be seen in the father's eyes, silently turned away to tell at home the story of Old Bess's "knowingness."

ALMOST DROWNED.

Mr. F. H. Grundy, an Englishman, who afterwards had plenty of adventure at home and abroad, tells us how near he came to missing them all. He was a small boy, and with his brother and another mate, was playing upon the seashore. They were on a sandbank, and knew that the incoming tide would fill the lower levels behind them before the bank itself would be covered.

We knew, but heeded not. We heard distant shouts, but did not turn. Between the ever rising water and the dam of sand the battle waged. Something startled us—we looked round—lo! a great sea shut us off from the main land!

A crowd upon the farther side was shouting at us. My two sisters stood at the water's edge, fast becoming desperate. A mounted man, far away, galloped furiously toward us over the sands.

My brother, with that presence of mind in danger which makes each Englishman a hero, started off at once by himself, and was soon far ahead. Tom Royle, my senior by three years, with the brave, hot blood of a Welsh gentleman, dashed after him. I, with the sight of these gallant actions before me, cried and followed. I saw my brother, the water to his waist, cross safely.

Tom Royle jumped in with a run and disappeared; he had fallen, but was out again directly. I passed him meanwhile, and was in the water.

How far it looked to safety! The water rose to my neck—I swayed to and fro—but that I had held on to my spade, I must have gone over.

Surely I am in the middle now—I cannot stand much longer or any deeper. I am lost! No! I see my jacket button. The horseman dashes up to me and stoops to lift me; I wave him on, saying, "I am safe; go to Tom!"

Another step or two and I am out. The horseman brought Tom Royle over, but it was a close thing.

NOT ON THE MAP.

The word "Christmas" brings such a crowd of associations to almost every English-speaking person that it seems difficult to credit a story recently told in a German periodical, which proves that to at least two people in the world "Christmas" had no such meaning as we attach to it.

They were two old people living in a little German village. Their daughter had gone to the United States, or as they said, to America, to seek her fortune some months before. They had waited in patience to hear from her, and at last, at Weihnachts (Christmas) time, they received a pretty card bearing the words, "A Happy Christmas." On the back of the card the sender had signed her name with a loving word or two, but gave no address.

To the minds of the simple old couple, however, she had given address enough. They took the card for an advertisement or notice of their daughter's employer in this country, and forthwith sent a card of thanks,—not to be outdone in politeness by an American,—which they directed to "Herr A. Happy Christmas, America."

It is needless to say that the card never reached this country. It is preserved in a German city among the "curiosities of the post."

SAFE TO REMAIN.

The fact is not stated, but this little occurrence, reported by the New York *Sun*, must have taken place in the good old times when ministers were more eloquent, or congregations more patient, than is the case at present.

A stranger entered the meeting-house in the middle of the service, and took a seat in the back pew. Presently he whispered to the man at his side, evidently one of the old members:

"How long has he been preaching?"

"Thirty or forty years, I think," answered the elderly man. "I don't know exactly."

"I'll stay, then," said the stranger. "He must be nearly done."

HER HEART'S DESIRE.

There comes a time once in every year, when children may without impropriety give their loving friends a hint in season.

Uncle William was talking with Lucy, his best little niece, about Christmas. He wished to know her mind upon a certain highly interesting subject, but preferred to get at it indirectly.

"Now, Lucy," said he, in a casual manner, "if I were going to buy a doll for a little girl, what kind of a one do you think she would like?"

"O Uncle William," answered Lucy, with undisguised interest, "there is nothing like twins!"

POMOLOGICAL.

Wise men are not above asking questions, and often pick up valuable information in places where it would be least expected.

Stranger: This tree seems to be loaded with apples.

Rural Miss: Yes, sir, papa says this is a good year for apples.

Stranger: I am glad to hear that. Are all your trees as full of apples as this one?

Rural Miss: Oh, no. Only the apple-trees.—*Street and Smith's Good News.*

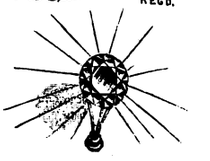
THE LOVELL SAFETY.

A New Bicycle Which the Public Likes.



While thousands within the last decade have enjoyed the sport of cycling, the fact is nevertheless obvious that many thousands more have been deterred from enjoying it in consequence of the high prices demanded for a really good wheel.

It remained for the John P. Lovell Arms Company of Boston to change this state of affairs. It was last year that the public first became aware that there was a new low-priced safety bicycle on the market, a wheel strictly high grade, and equal in every particular to any manufactured in America or Europe. As previous to this all manufacturers had charged a very large price for a first-class wheel, the John P. Lovell Arms Company is therefore the first house that has ever offered the public such a wheel at a price that does not place it beyond the reach of the average person's purse. The company that manufactures this wheel (the Lovell Diamond Safety) is one of the oldest of all the manufacturing and mercantile houses in New England, having been established in 1840.

Besides being now one of the leading bicycle firms in the United States, the John P. Lovell Arms Company is and has been for years a well-known manufacturer and dealer in firearms and sporting goods of every description.

On June 13 of last year, the firm celebrated its half-century anniversary. The founder of this enterprising house, Mr. John P. Lovell, although over 70 years of age, is still an important and active member of this world-famed house.

The Sumatra Gem. REG'D.

Introduced this season to the American public by Messrs. Albert Lorsch & Co., New York, has proved an instant success. This stone, which is cut precisely like a diamond, has its fire and prismatic colors, and is the closest imitation to the real diamond that has ever been discovered.

It is being mounted in fine settings by the leading manufacturers, making fascinating jewelry, easily mistaken by the uninitiated for genuine diamond jewelry. *The resemblance is really marvellous.* **For sale by all leading jewelers. Ask to see it.**

The Sumatra Gem, REG'D.

Complexion Powder

Is a delicate and refined preparation that the most fastidious ladies do not hesitate to use.

It is fragrant and refreshing and is never unpleasantly noticeable. The test of time is perhaps most assuring, and Pozzoni's Complexion Powder has steadily gained in popularity for thirty years Try it.

For Sale Everywhere.

COCOAS
MADE BY THE "DUTCH PROCESS"
are "Treated with Carbonate of Soda, Magnesia, Potash or Bicarbonate of Soda."

To partially supply the loss of natural flavor and color caused by this treatment, fragrant gums and dyes are used.

DR. SIDNEY RINGER, Professor of Medicine at University College, London, and Physician to the College Hospital, perhaps the greatest English authority on the action of drugs, states in his "Handbook of Therapeutics" that "the sustained administration of alkalies and their carbonates renders the blood, it is said, poorer in solids and in red corpuscles, and impairs the nutrition of the body." Of ammonia, carbonate of ammonia, and spirits of ammonia, he says: "These preparations have many properties in common with the alkaline, potash, and soda group. They possess a strong alkaline reaction, are freely soluble in water, have a high diffusion-power, and dissolve the animal textures. . . . If administered too long, they excite catarrh of the stomach and intestines."

For more than One Hundred Years the house of Walter Baker & Co. have made their Cocoa Preparations ABSOLUTELY PURE, using no PATENT PROCESS, ALKALIES or DYES.

DORCHESTER, MASS.

CORTICELLI
Wash Embroidery Silk.

This is the best way to buy your Wash Silk. The spool keeps the silk clean, prevents shopwear, and saves your time. This is also the best size for most kinds of fancy work. Buyers should look for the size EE and the brand "Corticelli" on one end of the spool; on the other the words "Wash Silk—Fast Color" should appear. "Florence Home Needlework" for 1891 is now ready. It teaches how to make from Corticelli or Florence Silk, Crocheted Slippers, Scarfs (3 new styles), Belts, Beaded Bags, Macreme Lace, etc. 96 pages fully illustrated. This book will be mailed on receipt of 6 cents. Mention year.

BURT COLBY'S ASSISTANT.

Down in the great tobacco region of North Carolina the people will tell you that a tobacco-grower is born—not made. John Colby must have failed in natural qualifications, for his life was a miserable failure. He had sacrificed everything to one idea—the purpose of raising tobacco, "curing it yellow," selling it at a high price, and thus retrieving his fallen fortunes, which, ever since the war, had steadily declined.

Year after year Colby planted neither corn, nor wheat, nor potatoes. Year after year his stock decreased, and his orchards failed. His land was mortgaged to buy expensive flues and fixtures for curing tobacco yellow, and year after year the patient old mule transported to the nearest market town, to be disposed of for a pittance, the poor, half-cured crop that represented all Colby's toil and dreams.

When he returned, to be jeered at by his neighbors, the look on his face melted his wife's heart. She could see, if no one else could, through the pitiful weakness of his nature the love and unselfishness which redeemed it.

"Next year, when I sell the crop," he would say, "you shall have a silk dress, and the boy shall go to school, Margaret."

But that year never came, and the silk dress ceased to be mentioned. The boy's schooling, however, was never forgotten, and one day, when, after a worse crop and a smaller sale than ever, Colby came home, sick and despairing, to die, it was remembered.

"The boy shall go to school, Margaret," he said suddenly, with a solemn brightness in his face and a ring of decision in his voice.

When the old mule had been sold to pay the funeral expenses, there was nothing left but the wretched household furniture, and the few dollars which the last crop had brought.

"What do you think of doin'?" one of the neighbors asked the widow, when she had returned from burying her husband.

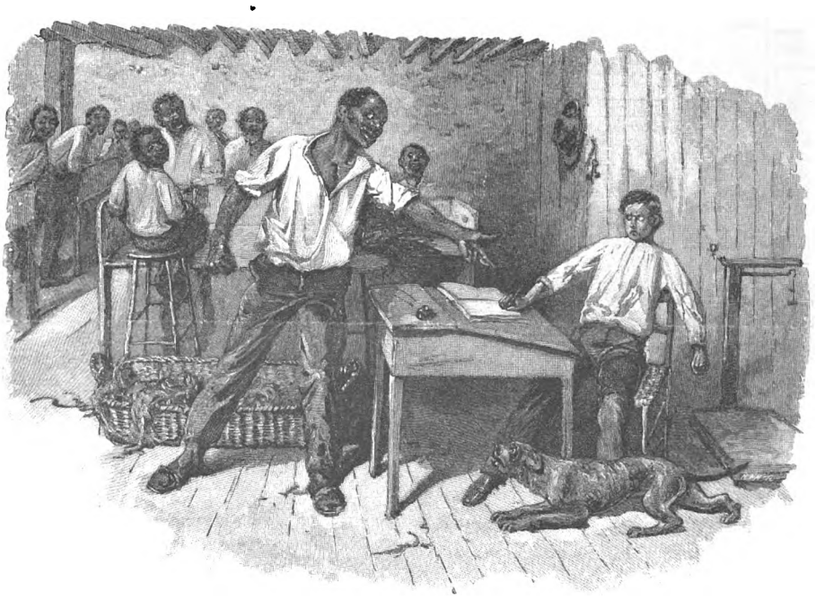
"I had thought some of going to town," she said, slowly. "I might find something to do there, and Burt could go into the factory. He isn't strong enough yet to farm it, and he's all I've got."

She looked over, with a dumb anguish in her eyes, at the boy, who sat in a distant corner wiping his tears away with the sleeve of his jacket.

An old dog, the last animal on the place, crouched close at his side, licking his hands with an occasional whine. The man's cold eyes followed her glance.

"Yes, Burt is puny," he said. There was a kind of contempt in his way of utterance which stung the boy. "Still, he might do something, I reckon. I'll go to town to-morrow, as it's Saturday. If you get your truck together, I reckon I can take it in, with you an' the boy."

So Burt Colby and his mother went to town.



As the wagon rolled away from the door of the empty hut, the old dog trotted out from the pine thicket that sheltered her master's new-made grave, and took up her station under the vehicle. When night came, and a one-roomed house had been found and rented, and the few household goods arranged with some degree of order, old Jule, stretched out before the fire, seemed trying to give an air of comfort to the strange surroundings.

"She's a faithful creature," the widow said, stroking the dog's massive head. "Your father always allowed she had good blood in her,—a little bloodhound, maybe,—and he said her broad mouth, and yellowish hair streaked with black, showed a mastiff strain. I could always trust you with her when you was little, and she loved your father to the last. She's all we've got now; poor Jule! poor Jule!"

Mrs. Colby crouched down beside the dog, and gave way to such bitter weeping that the boy sprang up frightened.

"Don't, ma, don't!" he cried, putting his arms around her neck. "Don't you know I'm going to work for you? Look at the folks that make a living in the factories! I'm going to get a place early Monday morning; now see if I don't."

Very early Monday morning Burt was out, full of ambition and hopefulness. Already everything was astir in the great tobacco mart. The summer season was just beginning. Swarms of negroes were hurrying through the streets to their work, while the bells far and near clanged out a warning to the tardy. It was all so confusing and bewildering to Burt, fresh from a quiet farm, that he knew not which way to turn.

Big Jim threatens Burt.

Borne along by the shifting crowd, he found himself before an immense brick building. Burt had learned to read enough so that he could make out "Clayton Bros., Factory 49," painted in white letters over the entrance.

When the crowd of hands entered the building, the boy stood back, fearing that he had no right to go in, yet half-resolved to try to seek employment here. As he hesitated, a tall man, with a dark but kindly face, walked up briskly on his way into the factory. Burt gathered his courage with a sudden resolution, and taking off his cap as the gentleman came up, said:

"Can you tell me, sir, where I could find Mr. Clayton?"

"What do you want of him?" said the man. His keen eyes searched the boy narrowly, going from him to Jule, who stood stiffly at her master's side.

"I wanted work," Burt faltered, his heart beating violently.

"I am Mr. Clayton, but I have no use now for green hands."

He was about to go on, but the despairing expression in the boy's face—or perhaps it was the sudden sympathetic droop of Jule's tail—stopped him.

"Look here!" he said. "Do you know anything about tobacco?"

"I used to help drop plants," the boy said, with a gulp, "and worm it and cut it, and when 'twas curing I kept the fires going." His eyes glistened with eagerness.

Mr. Clayton smiled.

"But you know nothing about it after it is cured?" he asked.

Burt shook his head.

"Well, come in here, anyway,"—Mr. Clayton led the way into the building,—"and we'll see. Here, Mr. Brown!" he called, to a young man with a round, good-natured face, who was crossing the great space within. "Here's a raw recruit. See if you can't find something for him to do, will you?"

So it was under young Mr. Brown's direction that Burt commenced factory work. The "something" for him to do proved to be many things. All the morning he ran errands, clumsily and falteringly, about the factory, and helped carry tobacco-baskets, and waited upon Brown, who was a book-keeper.

The weeks passed. Burt went daily to the factory, and almost always the old dog went with him, curling up in a corner and keeping out of the way.

Burt learned quickly, and Brown, who had but lately been a stranger in the place, took a liking to the lonely boy.

When, at length, regular work in the "rolling-room," with regular wages, was given him, Burt's joy was great. He felt that he was beginning to lift his mother's burdens, and every day she looked at him with growing love and pride.

But one thing constantly weighed upon their minds. Burt was supporting his mother, but he was not getting the schooling which his father had so much desired for him.

One evening after work hours, when Burt, as he often did, went into the office where young Brown sat at his desk, with his beautifully kept ledgers before him, the boy, seeing some of Brown's handsome writing, said, with a sigh:

"Father meant me to have some schooling if he'd lived. I can read and write some, and cipher a little, but that's all."

The eager look in his face recalled to Brown the first day he had seen him.

"Here, Burt," he said, kindly, pushing a pen and some paper toward him. "Sit down there, and let me see what you can do." Then and there Burt's "schooling" began. It was very irregular, and young Brown was a somewhat eccentric teacher, though by no means a bad one.

First, there was a course in arithmetic, and Burt developed a marvellous taste for figures. Brown labored verbally to mend the boy's English, and give him some idea of grammar. Then he found a spelling-book and a United States history, and occasionally there was a dip into book-keeping.

The lessons were sometimes given at noon, and sometimes in the little hot office after the factory was closed. Sometimes they were given by word of mouth during the long, delightful evening rambles in the country which Brown took with the boy, while old Jule followed close at their heels. Never was there a more studious pupil; never a more earnest teacher.

But Burt had many troubles from which even Brown's friendship could not protect him. His youth, poverty and "greenness" were all against him. He was for a time at every one's bidding. The foremen scolded him, and he was often made the scapegoat for offences of which he was entirely innocent.

Worse than all, the rough "hands" used him as the butt of their hostility and ridicule. The majority of the employees were of this rough and ill-disposed sort, much inclined to be turbulent and even rebellious in their work.

From these black men Burt received many insults, and narrowly escaped rough treatment. He was now in his second year of factory life, but he still held an inferior position, side by side with his tormentors. His growing intelligence and manliness, and his consciousness of superior skill, made endurance very hard; but he was wisely determined to stick to his place.

"Never mind, Burt," Brown would say. "If you mean to make a man of yourself, now is the time. There's nothing like hard knocks for shaping a fellow up, and you'll have to be disciplined before you can discipline others. If there's anything in you, Mr. Clayton's keen eyes will see it; and if he thinks you deserve something better, you'll get it, sooner or later, you may be sure."

Burt never saw his employer unless he was sent to his office upon an errand. It was to deliver a message that he tapped at the door one morning. Mr. Mott, the foreman of the rolling-room, was ill, and there was no one to fill his place.

"How long have you worked in the rolling-room?" Mr. Clayton asked, when the message was delivered.

"This is my second year, sir."

"Do you understand the work pretty well?"

"I think so, sir," the boy answered.

"Very well, I have heard good accounts of you. Here, Wilburn,"—Mr. Clayton turned to a waiting employee,—"go back with this young man to the rolling-room, and introduce him as Mott's substitute for the day."

There was a peculiar smile on his face as the bewildered boy followed Wilburn from the room.

Burt was too much astonished to utter a protest or even to think; and it was not until he found himself at his new post, with Wilburn uttering a few words of explanation, that he realized what was before him. Then the mocking surprise of the fifty black faces turned toward him recalled him to a sense of his position.

It had not been an easy place, even for Mott—a cool fellow, and a good disciplinarian. If Mr. Clayton had meant to see what stuff the boy was made of, he had chosen a severe test.

As Burt faced the defiant glances that met him on all sides, the quiet courage of his nature asserted itself.

There was no open outbreak among the employees. At first they made no demonstration at all. Talking was forbidden, and the hands needed a leader, and a precedent if they were to be insubordinate. The routine of the work kept them busy for the time being, and at the same time quieted Burt's nerves.

But, as the morning wore on, Burt noticed their growing impatience. The most skilful workman in the room—a man known among the hands as "Big Jim"—was the most disorderly. Given to drinking and rebellious conduct, he had been discharged many times, and as often reëmployed on account of his skill, and his remarkable producing capacity while at work.

He had been one of Burt's chief tormentors. He was of almost gigantic size, with a well-made frame, and small, restless, bloodshot eyes.

The morning passed, with no marked trouble

Digitized by Google

When the noon bell rang, the hands, instead of quietly filing out, as usual, broke into disorderly groups; and when they had passed out, and Burt happened to glance up, he saw Big Jim stop to grin defiance at him through an open window, as if mischief were meant.

At noon he went to see Brown, but learned that he had been sent into the country, and also that Mr. Clayton had left the office. Burt must face the situation alone.

As he returned to the empty rolling-room and sat down, the place appalled him. To give up meant cowardice, and perhaps the loss of the one chance of his life. If he faced it—for a moment the boy grew dizzy. He could hear nothing, in the wide, hot room with its discolored, begrimed floor and empty work-benches, but the sick throbbing of the blood in his temples. The hot air, filled with floating clouds of tobacco dust, stifled him.

He threw up one of the sashes, and looked up into the fierce Southern sky. As he did so, he remembered that a Father dwelt in that wondrous space; and a prayer went out from his desperate, boyish heart, "O Lord God, help me!"

He could think of no other words, but these seemed to cover all his needs. Somehow the simple repetition of them calmed him.

He did not know how time was passing. Presently Jule crept in, and looked up in his face and licked his hands; and when the bell clanged out, crept behind his desk and lay down, with a long sigh.

When the hands came trooping in, Burt saw that Big Jim was not among them. As they settled to their work in an orderly manner, he felt that they might be controlled without their leader.

But about the middle of the afternoon, the door was burst rudely open, and Big Jim entered. As he swaggered up the room, and threw himself noisily into his seat, Burt saw that he had been drinking. He took no notice of the man's tardiness, except to turn to the day-book before him, and enter it upon the pages.

A derisive laugh from Big Jim, which was echoed by a few of the hands immediately around him, greeted this action. As the offenders met the boy's steady eye, they quieted down, but Big Jim was not to be awed. He had come to make trouble. He laughed and talked in defiance of rules, and openly invited his companions to disorder.

As Burt's patience ebbed, his courage rose steadily. When at last the man gave up all pretence of working, and leaned back in his seat, with his arms defiantly folded, Burt said, firmly:

"Get to your work, Jim, or leave at once. You are docked already."

The negro leaped to his feet, and sprang toward the boy.

"I'se docked, is I?" he panted. "I'll show yer how ter dock hands! You take de dockin' off er dat book, or I'll break every bone in yo' po' white trash body!"

As he towered above the boy, his hot breath upon his cheek, and one brawny arm stretched toward the day-book, there was a moment in which Burt faltered. As he did so, there was a rush behind him, and a low, threatening growl. The negro fell back terror-stricken.

Burt turned, and saw old Jule crouched for a panther-like spring, with her lips drawn back from her glittering teeth, and every nerve in her body quivering.

"Down, Juley!" he shouted. "Don't stir, Jim, or she'll kill you!"

He threw himself before the dog, but Jule had given him an advantage which he meant to keep.

"Get to your work at once, or leave," he repeated; and as the negro backed to his seat, Jule growled another warning.

Big Jim was conquered. There was perfect quiet as he set at work, and the hands had never been more quiet than they were when, at the ringing of the bell an hour afterward, they filed out of the room.

As they reached the door a "halt" was called; and as they faced about, they saw Mr. Clayton's keen, stern face looking in upon them from a side entrance.

"For the rest of the season," he said, quietly, "this room will be managed by Mr. Colby, instead of Mr. Mott, who has resigned on account of illness. If any one among you is dissatisfied with this arrangement, and feels that he cannot obey all of Mr. Colby's orders, he had better leave my employment at once, and report at the office for the wages due him."

There was a moment's silence, and then the hands filed slowly out.

When the last footstep had died away, Mr. Clayton turned to Burt, who sat, white and totally unnerved, upon a seat beside him.

"Brace up, my boy," he said, kindly. "This has been a little trying for you, I know. If the dog hadn't been so prompt, I think I should have come to the rescue myself, for I happened to be passing a window and saw the affair. What do you say to your new position, with Juley as assistant?"

"I can't begin to thank you, Mr. Clayton," Burt began.

"I shouldn't begin to try, my boy; but I have been thinking, after what Mr. Brown has told me, that you would be well worth a course at some good business college. When the fall comes, I suggest that you resign your position for the time being. I will undertake to arrange the matter for you; you shall go to the school, and you shall not be asked to accept a charity. We shall need you in the factory as soon as you have finished the course; and you can pay back the cost out of your wages after you go to work again."

When September came, there was an odd-looking group on the platform at the station, one bright afternoon, waiting for the north-bound train—Mrs. Colby, happy but tearful; Burt, radiant in a becoming suit of new clothes, with a valise in his hand; and Juley, who pressed closely to her master's side.

As the boy took his seat in a car, a black face looked in at the open window, and its owner's hand was thrust toward him.

"Good-by, Marse Burt; you don' bar me no ill-will, I hope?"

The smile on Big Jim's face was a sincere one.

"Indeed I don't, Jim. You've turned out a good hand—the best one I've had this season. I couldn't have done without you. And Jim, drop around, once in a while, won't you, and see if mother wants anything done? You sha'n't lose anything by it, and look after Juley, too—don't let anything happen to her."

"I won't, Marse Burt, I won't!" The negro laughed long and loud at the thought of the dog being left to his care. "Bless yo' life," he said, "I won't let nothin' happen to Juley!"

As the train moved off, and Burt strained his eyes from the car window, he saw Jim speaking respectfully to his mother, with his hat in one hand, and the other resting upon Juley's friendly head.

SALLIE PATE STEEN.

THE KEYBOARD.

Five-and-thirty black slaves,
Half-a-hundred white,
All their duty but to sing
For their queen's delight,
Now with threats of thunder,
Now with dulcet lips,
While she rules them royally
With her finger-tips!

For the Companion.

ON THE TOWN.

Mrs. Knapp was standing before her molding-board making some of the mince-pies for which she was famous throughout the village.

She had just taken three of them from the oven, and the spicy, savory odor rising from them filled the spotlessly clean and cozy little kitchen.

"There aint quite enough left to make another whole pie," said Mrs. Knapp, as she deftly pinched together the edges of the one she was making. "I believe I'll make a nice little turnover, and take it to poor old Nancy Gregg. Well, if there aint Nancy herself coming in here! She can take the turnover home with her."

Nancy was always slight, and she was growing old. She seemed smaller than ever, and her age was more evidently telling on her, as she came hurrying up the frozen path.

The wind blew her garments about her thin form, and locks of iron-gray hair straggled under the shawl thrown over her head.

"It's too cold to stand on cer'mony," she said, as she hurried up to the shining kitchen stove and spread her hands out over it. "I declare if I aint 'most froze. It's awful nice and warm in here."

"Come round here and set down in this rocker, Nancy, and put your feet up before the grate. I was just saying to myself that I'd take this mince-meat I've got left and make you a turnover."

"I'm obliged to you, Mary," replied the old woman, as she took the proffered rocking-chair. "If everybody had been as good to me as you've always been, I shouldn't be miserable as I am now."

Her voice had a plaintive note, and a tear stood in her eye.

"You haven't heard the news, have you, Mary Knapp?" she asked suddenly, with averted face.

"No, I don't know as I have, unless it's about their having the diphtheria over to Deacon Baxter's."

"No, it isn't that. It's about—me."

"You, Nancy?"

"Yes, me. I'm—I'm—Mary Knapp, I'm on the town!"

"Why, Nancy!"

"I am, Mary, I am!" The old woman leaned forward in her rocking-chair, her elbows on her knees, and her face in her hands.

Then she lifted her head and said, in a choking voice, "Think of it, Mary Knapp! Think of being the first of your name to come on the town! None of my folks ever had such shame put on 'em before. It doesn't seem to me that I can bear it. I don't know what to do."

"I'm dreadful sorry for you, Nancy; but if I were you now, I'd try to make the best of it. It's one of those things that can't be helped, and you know the old saying, 'What can't be cured must be endured.' I've heard that Mr. and Mrs. Bates are real nice folks, and that they're real kind to the—the—"

"The paupers, Mary!" cried the old woman, with a wail and a sob. "You might as well say it right out; I'm a pauper now!"

She drew her old shawl up about her face, quivering and trembling with emotion, while Mrs. Knapp wiped the tears from her own eyes.

The villagers who chanced to be at their front windows at about ten o'clock the next morning saw a sorrowful sight. It was the poor-farm wagon rattling along over the frozen streets, and in it was Nancy Gregg and her few poor belongings—an old bedstead, a rocking-chair, a bundle of bedding, a hair-covered trunk and a pine table.

Ezra Bates, the keeper of the almshouse, was driving, and by his side sat poor old Nancy, a picture of humiliation and despair.

It was still very cold, and the old woman was bundled as she had been the day before; but to-day a black crape veil was thrown over her bowed head, and no one could see the tears running down her cheeks, or note the tremulous quiver of her thin lips.

As the wagon was passing Mrs. Knapp's house, Nancy's old friend Mary came running out, a shawl thrown hastily over her head, to speak a word of comfort and cheer. "Do you see?" said Mrs. Gregg, touching the dingy crape of her veil. "I'm in mournin' for Nancy Gregg. Her useless old body still 'cumbers the earth, but her heart and her spirit are dead. I'm going to her funeral."

Time was when Mrs. Gregg had not known the need of a dollar, and when a husband and sons had stood between her and want. She had seen them die one by one, and, a few years later, had seen the savings they had left her swept away in a moment by the failure of the business in which they were invested.

For years she had led a hand-to-mouth existence, supporting herself by weaving rag-carpets, piecing quilts, knitting stockings, and even going out by the day in house-cleaning times.

But she no longer had the strength required for the work of weaving carpets, her sight had failed her, and her sewing days were done. She could not support herself by knitting, and at last there was nothing left for her to do but to be supported at the expense of the town.

From the time of her arrival at the poor-farm, Mrs. Gregg seemed to be a woman without hope, and yet there were times when she felt that the shame of being a pauper might be taken from her.

Those times were when she took from her old hair-covered trunk a worn leather wallet of a kind not often seen now.

The wallet contained nothing but a small piece of writing paper, yellow with age, and almost ready to fall to pieces along the creases where it had been folded and unfolded again and again.

The poorer old Nancy had become, the oftener had she taken this limp and folded bit of paper from the purse that was once her husband's, and the oftener had she read and re-read what was written on it. And this was what she always read:

One year from date, for value received, I promise to pay to Jason T. Gregg the sum of one thousand dollars, with interest at eight per cent.

FRANK M. WARE.

The note was dated January 10, 1855, and it was on the tenth day of January, 1885, that Mrs. Gregg, in the secrecy of her cold and cheerless little bedroom at the poorhouse, took out this note and read it for perhaps the thousandth time.

"I don't know why I don't throw this into the fire," she said. "It's outlawed long ago, and Frank Ware, even if he's living, has proved that he is not the man to pay anything he isn't forced to pay.

"I've hoped for years that I might finally get something from this note, given for money my husband and I earned and saved dollar by dollar, but it's no use to hope so any longer. I've written to Frank Ware again and again, an' I tried to collect it by law before it ran out; but he had nothing to pay it with then, and now, when he could, he won't pay it.

"I've heard that he has got property now, and I think he ought to pay me at least enough to keep me from being what I've do need to be if I had my own.

"I might as well burn the note, and stop hoping for what can never be—no, I'll send it to Frank Ware, and tell him I'm on the town as a pauper, an' he can keep the note an' put it where it'll remind him of my shame and of his dishonesty every time he looks at it."

Filled with this new determination, she went to Mrs. Bates, and asked for writing material.

"I haven't written a letter for three or four years," she said, "and I never expect to write another. So, if you'll let me have a stamp for this it'll be the last time I shall ever ask for one."

"Oh, I'll give you as many postage stamps as you want, Nancy," said the kind-hearted matron.

During the first ten years of married life, Nancy Gregg and her husband had through unceasing industry and self-denial saved one thousand dollars with which to buy a small farm.

Not intending to use this money for a year or two, they had been induced to lend it to Mr. Ware, who was then a prosperous village merchant. He wanted the money to increase his business. The investment seemed a perfectly safe one, but before the year was done Ware had failed so disastrously that there was nothing left for his creditors.

He had then gone West, and many were the letters sent to him by Mrs. Gregg in the days of her poverty and widowhood; but for years no reply had come to her letters.

"And this is the last one I'll ever trouble him with," she said, as she slowly wrote the following lines with a cramped and trembling hand:

MR. FRANK WARE.—*Dear Sir:* I send you this from the poorhouse, where I have been brought to end my days, which I don't think will be many, and I send this to you, to let you know that I am here because you don't pay your just debts. I send you your old outlawed—

Mrs. Gregg laid down her pen while she sat for a moment in silent reflection, her elbow on the table, and her chin in her hand.

There was an old, leather-covered Bible on the table at which Mrs. Gregg sat. Her eyes rested on the book when she put down her pen. She drew it slowly toward her, and opened it at the sixth chapter of Matthew. One of her fingers ran up and down the yellow page until she had found the twelfth verse. She bent low over the book, and read:

"And forgive us our debts, as we forgive our debtors."

Nancy Gregg said the words over again and again, slowly nodding her head to and fro. Then she softly closed the book, and leaned forward, her face in her hands. Her gray head dropped lower and lower until it at last touched the book, and her tears fell on its cover.

Finally she took up her pen again, and drew it many times across the last lines she had written, so that it was impossible to read them. Then she wrote:

To let you know that I have no hard feeling against you now, though I have had in the past, especially when I first came on the town. But it's all right now, and in this, the last letter I shall ever write to anybody, I freely forgive you everything, and wish you well. So no more till death,

NANCY GREGG.

Folding this letter she put it and the note into an envelope, and asked Mrs. Bates to "back it" for her. When the letter had been sent to the post-office, Mrs. Gregg said to herself:

"I'm glad I didn't write what I set out to. Any one old as I am ought not to hold spite against anybody."

Three weeks passed, and no answer had come to the letter. Mrs. Gregg expected none. She had determined to dismiss the whole matter entirely from her mind, and had almost succeeded in doing so, when one cold and snowy afternoon, Mrs. Bates came into the cheerless sitting-room of the poorhouse, and said:

"Nancy, there's somebody to see you down in the parlor."

"To see me? Who in the land has come to see me on such a day as this? Not Mary Knapp or any one from the village?"

"No; it's some one I never saw before."

"Why, I can't imagine who it can be."

She went hastily down-stairs to Mrs. Bates's parlor, and there came forward to meet her a tall, broad-shouldered and manly-looking young fellow of about twenty-two or twenty-three years. He had an honest, kindly face, and a friendly smile as he came forward with outstretched hand.

"Is this Mrs. Gregg?" he asked.

"Yes, sir; that's my name."

"I am very glad to see you. My name is Sydney Ware. I received your letter."

"What letter?" asked Mrs. Gregg, in a tone of bewilderment.

"The letter you sent to my father. He has been dead several years, Mrs. Gregg. I am his only child. I advertised for all claims against his estate to be sent in at the time of his death, and yours would have been considered with the others, old as it was.

"I never knew anything about it until your letter came with that old note in it, and I want to thank you first for the kindly and generous tone of your letter. I have come to pay you every dollar due you on the note, and to tell you how sorry I am that the money was not paid long ago, and how sorry I am to find you here."

"Well, I—I—I'm sure you're real good," said Mrs. Gregg, still bewildered. "But of course I have no legal claim on you. I know that."

"But you have a moral claim on me, Mrs. Gregg, and that is more binding in my estimation than any legal claim could be. I would pay you if it took every dollar I have."

He drew out a purse as he spoke, and took from it the faded and yellow scrap of paper Mrs. Gregg had sent him.

"The note," he said, "is for one thousand dollars with thirty years' interest at eight per cent., making a total of thirty-four hundred dollars, and I think I'd better put in another hundred for good measure, making it an even thirty-five hundred."

Again the villagers saw the poor-farm wagon rattling down the street, and again its occupants were Ezra Bates and Nancy Gregg.

But old Nancy held her head high now, and the old black veil was gone. A smile was on her face, and her dim eyes were shining.

Again Mrs. Knapp came running out with outstretched hand.

"I've heard all about it, Nancy," she said, "and I'm so glad for you. I've just been up to the little house that young Mr. Ware has rented for you, and you've no idea how nice and cozy everything is up there, and I'm coming up again pretty soon to help you get settled. You look real happy, Nancy."

"I am," said the old woman, with a childish little laugh. "It'll be so grand to be in a home of my own again; an' I'm so glad to know that

there's some honest folks in the world yet. If there wasn't, Mary Knapp, I'd still be—be—a pauper."

WINTERING IN A DUG-OUT.

In Three Parts.—Part III.

A Wet Spring.

The pioneer, in the presence of death, is not surrounded by friends whose sympathy is in some measure a consolation. The calamity must often be faced alone.

There was no one nearer than the distant Norwegian settler to whom Helen and I could look for aid. We were alone with the dead, confronted with solemn duties which we scarcely knew how to perform. I had these things to think of as I strove to calm and comfort my heart-broken companion during those strangely silent hours of the waning night after Andrew's death.

Never did a colder, grayer, more desolate morning dawn. The sternest necessities of life seemed to be closing in around us.

Toward noon a large party of armed men passed the house at a little distance on snow-shoes. They were the avengers, in pursuit of the train-robbers.

One of them came down to the door and rapped loudly—a stern-visaged frontiersman, girt about with cartridge belt and revolvers, and with a carbine in his hand.

"Where's Phillister? Is he ready to go?" he asked, when I opened the door.

"No," I replied, with downcast head. "He cannot go with you."

"But he must! He's pledged!" exclaimed the man, with a trace of excitement in his voice.

"Come in and see," I said.

He followed me briskly in. I opened the door of the little inner room, and pointed silently to the bed. The man started, gazed fixedly for an instant, and then, with a movement that appeared to be wholly instinctive, pulled off his cap, and turned his face toward Helen and me with a glance of genuine compassion.

"That's hard on you two women folks," he said, briefly. Then, after a moment's thought, he added, "Hadn't I better carry him out for ye? There's only one thing that we can do in such a case out here. We have to put the dead in the snow until we can get a coffin."

"Oh no, no, no!" sobbed Helen.

"Well, I wish I could help ye," said the man, compassionately. "If we come back this way, and I'm alive, I'll look in and do all I can for ye."

With a short "Good day!" he went out and hurried on after his fellow-regulators.

It was a cold, bright afternoon, and after attending to the wants of the horse, the cow and poultry in the little stable, I took Helen with me, and went back to my home to look after my animals. The walk in the fresh, cold air was good for her. Her mind rallied somewhat from the paralyzing weight of her grief as we walked over the frozen snow.

We prepared supper at my dug-out, and remained till evening, intending to return by the light of a nearly full moon which had risen, and shone brightly on the snow.

But as we were setting out, we heard the howling of wolves, and did not dare face them. We retreated indoors. The hungry creatures came about the place, yelping wildly as they dug once more at the frozen walls of my little stable. I frightened them away by discharging the carbine.

As we sat beside my little stove that evening, we took our circumstances under calmer consideration. I wrote a letter to Andrew's parents, who lived in West Virginia, telling them of his death, and of the wish which he had expressed during the last few hours of his life, that Helen should have what he possessed in the way of property.

As soon as we had returned to Helen's house the following forenoon, and had attended to the animals, I put on Andrew's snow-shoes, and taking a part of our money, set off to walk to the cabin of the Norwegian settler. I had but one thought—to make arrangements for a proper and seemly funeral.

It was my first experience upon snow-shoes. The tracks which I made would probably have disqualified me, *prima facie*, for admission to any Good Templars' association. I had left Helen silently weeping; but months afterward she confessed to me that, as she watched my surprising antics, she had difficulty in refraining from laughing outright.

The Norse settler, whose name was Bjornson, had great difficulty in understanding what I wanted, but finally I made him comprehend, as I thought, and concluded a bargain with him to take our letter to the next town, and ask the clergyman who resided there to come to us if possible.

I entrusted ten dollars to Bjornson with which to purchase a coffin, and then returned to Helen.

We waited in much distress for two days and three nights before Bjornson came to us. Then, in his broken English, he endeavored to tell us that he had been to the town and posted our letter, but that the clergyman was absent from home, and that, worse still, some rascally fellows whom he met there had lured him into a building and robbed him of the money. Probably he told us the truth.

Bjornson certainly posted the letter, for I may here add that during the following June a reply was received from Andrew's old mother, in West Virginia, expressing a mother's grief for her boy, and declaring that she wished that his property should go, as he desired, to his wife, whom she would like dearly to see.

Compelled by necessity, I took down a part of one of the partitions inside of the house, and with Andrew's tools constructed a coffin. In a secure place outside the house we left Andrew's remains to the care of the kindly frost until spring, and then we buried them in a shady spot under one of the oaks near my cabin.

The exigencies of our rude life again resumed their sway over us. The winter was snowy and cold beyond all precedent in Dakota. The snow-drifts were so deep that I could not drive my cow to Helen's cabin, or her horse and cow to mine. In midwinter, therefore, we had to care for two claims, separated by two miles of well-nigh impassable walking.

Every day a trip must be made from one place to the other, although sometimes, during storms, the poor animals went without water for two or three days. We left water in tubs where they could reach it, but often the water froze. It was easy to place sufficient fodder from the stacks where they could eat their fill, but this, too, was attended by much waste.

"Where's Phillister?"

We tried to make the trip every day, when the weather permitted, and for a long time we passed alternate nights at each place. One forenoon during the first fortnight we were caught out in a furious snow squall,—almost a blizzard,—and were so near to losing our way that we were greatly frightened. To obviate this danger in part we cut bundles of sticks and branches, which we carried along our beaten path and stuck in the snow at distances of about forty feet apart, to guide us in case of sudden storms.

These constant trips added greatly to our hardships, but both Helen's health and my own continued good, though we became somewhat weather-beaten from facing the winds so much.

The frontiersman who had promised to "look in" upon us, on his return, never appeared. We learned afterward that the robbers were pursued in the direction of the Montana line, and that two men were killed and several wounded. The man who called on us may have been one of these victims.

Another source of anxiety and excitement with us was "Nero," Andrew's horse, a young animal which had never been well broken either to halter or harness. Our attempts to care for him were attended by stirring episodes.

The poor creature tired of his stall; and I, fearing that some harm would come to him from inaction, often attempted to lead him out. I quite expected that he would disable me before spring, and I wonder that he did not. He bit my arm one day, through my dress sleeve, in a most painful manner. In fact, it was the last of a long series of bites which he had habitually given me.

February and the greater part of March passed by, the weather continuing steadily cold for the most part. Then came a great rain-storm and general thaw of the snow. During this downpour, equipped in rubber boots which we had been careful to bring with us, we made the trip from Helen's house to my cabin, where we passed the night.

It rained all night. Next morning we found that my covered way had fallen in, and that the snow had settled surprisingly and grown very soft. My roof leaked badly, and as my dug-out had not been constructed with a view to the careful exclusion of water, a puddle had gathered beneath the boards of the floor.

Still the rain fell in floods. It seemed useless to attempt to return to Helen's. Toward evening, however, the water came into my dug-out to such a depth that we began to wish we had done so. With much difficulty we hoisted the floor, and placed blocks beneath it.

Our heads now touched the low roof. As much as two feet of water had collected in the hole beneath the floor.

By daylight next morning we were literally drowned out; not more than four feet of space was left between the submerged floor and the roof. We escaped out of doors, from our damp bed, with some difficulty.

Fortunately the weather continued warm, and the rain had now ceased. The clouds were breaking away, and the ground was bare in spots. The air was very refreshing.

We hurriedly fed old Spot and the fowls, and leaving the doors of the shed and the poultry-house open, set off for Helen's.

I had remained behind for a moment; but as I emerged from the oaks, following our now icy old path, I saw that Helen had stopped short.

"Just look at the water!" she exclaimed to me. "How are we ever to get across?"

Down in the hollow beyond, the little creek, previously mentioned, was swollen to a veritable river, which roared as it rushed along.

We went slowly forward and gazed upon it in great perplexity. Where two days before we had crossed on the snow, with scarcely a thought of water beneath, there was now a yellow, snow-clogged torrent fully sixty feet in width.

For a mile or more we ascended the hither bank, looking in vain for some narrower place, where possibly the ice still spanned it; but nowhere did we find a passable spot. There was little prospect that the waters would subside for several days, and yet we must cross it.

I set at work to build a raft. I cut two logs, each about eight feet in length, from the fallen cottonwood tree, and these we dragged down to the creek with my clothes-line.

The logs were green and heavy; but they served as frame for the floor of the raft, which we laid on them, using the boards and joists of the floor of my dug-out, which was now afloat.

At last we completed a float which I was sure would sustain our weight. Then, providing ourselves with two narrow strips of board, each about ten feet in length, to use as paddles, we put off.

The raft moved without difficulty, and we soon gained the middle of the creek. There the current proved too strong for us. Helen, growing frightened, sat down suddenly, and clutched the sides.

I was dizzy myself; for the raft revolved two or three times, and was carried swiftly down stream. Something—either the rotary movement, or the sight of the banks and bushes, gliding past us—rendered us both actually "sea-sick."

I think we were carried down a hundred yards or more, still turning around. Recovering my head a little, I then made a vigorous effort to pole the raft ashore, and so far succeeded that I ran it upon a bunch of submerged brush, ten or a dozen feet from the bank, on the side of the stream toward Helen's claim.

Then the raft canted suddenly over with a very tipsy movement, and spilled us both off into the icy water. It is quite likely that we screamed; for although the water was not more than three feet deep there, it was terribly cold. I had seized Helen, and we scrambled to land, gasping for breath.

Helen declared that she would "never go on that horrid thing again." But I still had hopes of it; and as I was as wet already as I could be, I again waded in, drew the raft ashore and secured it.

We had crossed the creek, although not wholly in the manner that we had anticipated; and with chattering teeth we now ran to Helen's house, where we hastened to change our clothes, kindle a fire, and prepare a warm breakfast.

I feared that we had taken severe colds, but neither of us experienced any ill effects from the adventure. Hardships had inured us to such exposures.

Later in the day, after I had recovered my courage a little, I went back to the creek, tied a stone to the end of my line, and threw it across the stream several times, until I succeeded in lodging it amidst the brush on the other bank. Then, making the hither end of the line fast, I pulled the raft across the creek by aid of the line.

Thus I established a sort of rude rope-ferry, which answered our purpose very well. We crossed and recrossed by it twenty times during the next two weeks.

Spring had now returned. My "winter in a dug-out" had ended. Much more might be told of my subsequent experiences as a homesteader, but by far the worst of my troubles were over.

The season which followed was a very favorable one, and Helen and I did our best with our poultry, our dairy products and our garden.

The wheat crop which we raised from twelve acres of land returned scarcely ten dollars above the expenses of cultivation; and we learned that we could not make money in raising wheat on so small a scale.

The ambition to possess a large wheat farm still possessed us. Not only did we resolve to retain both our claims, under the Homestead Law, but we took steps to preëmpt each a quarter section of the land which lay between these claims.

Availing ourselves still further of the generous land laws of our country, we entered each a claim, under the Timber Culture Act, and thus obtained possession of all the available land lying between our two original claims, uniting the whole tract into one farm.

In fact, three years were required to make a beginning in wheat. Fortunately for us, our first wheat crop, on a larger scale, was a good one. It set us on our feet.

Last year we had three hundred acres in wheat. We have to hire several laborers, but I can truly say that we are doing well. At present I see no reason why we may not realize the plans and the hopes which led us to seek a home in the Northwest. Meantime, there are many settlers about us, a railroad and a post-office near, and we are very comfortable.

CHARLOTTE H. SMITH.

The End.

For the Companion.

ROCKY MOUNTAIN BURROS.

Stupid, sleepy and slow-moving as he is, the Mexican donkey, or "burro," has been an important factor in the development and growth of many mountainous districts in the West.

He has anticipated the service of the railroad train and the stage-coach in the transportation of freight and supplies to the most remote mountain camps. He is one of the most patient and faithful of all beasts of burden, although he is seldom promoted above the position of a common drudge.

His slowness and sureness of movement enable

him to go up and over the loftiest mountain summits, around the sharpest, rockiest curves, on the narrowest of trails. He plods sleepily along at the very edge of the most frightful precipices without once "losing his head," or making a single misstep. He goes fearlessly along where his bigger brother, the mule, could not go, and where his other relative, the horse, would not go if he could.

He is never "skittish;" his temperament is too phlegmatic for that. He is serenely indifferent to the things that affright the soberest horse.

At his very first sight of a locomotive under full headway, the donkey might prick up his ears slightly, and the sleepy look in his eyes might give way to one of mild curiosity; but all the puffing and screeching it could do would not make him run away.

But this calm indifference is, I fear, more the result of stupidity than of courage.

The traveller to the remote mining camps of the West is likely to meet many burro trains going up long, steep and winding trails, heavily laden with merchandise of every kind, or coming down with bags of ore strapped to the animals' backs.

It is surprising to see under what heavy burdens these little creatures can plod along. The one shown in the illustration has the greater part of a cord of wood on his back. I have seen a family moving from one town or camp to another with all of their household goods on the back of a single burro, and these effects included a small cook-stove, a bedstead and bedding, two chairs, a grindstone and frame, and many pots, kettles, pans and dishes.

At the top of this prodigious pile was a baby, snugly and securely fastened to the mattress of the bed.

Thus heavily and clumsily burdened, the patient little donkey stepped meekly along, seemingly indifferent to the lowliness of his estate, or quite satisfied with it.

Nothing but actual necessity ever induces the traveller, or any one else, to ride the burro from one place to another. The little animal's usefulness

Digitized by Google

in this direction is greatly impaired by his diminutive size, and his unalterable determination never to go faster than a slow walk.

Indifferent alike to blows, kicks, threats and pleadings, he plods slowly along even on the best of roads. His gait is so tedious that the man who mounts him is soon glad to dismount, and go farther and faster on his own legs.

The Stubborn Burro.

A tall man makes himself especially an object of ridicule when astride a burro. His feet barely escape the ground, and he is likely to hear many amusing but mortifying comparisons and remarks.

"How do you find the walking to-day?" is the ordinary satirical salutation to a long-legged man thus mounted.

Children, however, do not seem at all out of place on burro-back; and some of the Rocky Mountain boys and girls, with plenty of time for such modes of locomotion and childhood's capacity for enjoying it, find great pleasure in riding over mountain roads or the streets of mountain towns on the backs of these queer, stupidly submissive little animals.

Some years ago, at the close of a summer day, I was riding on a stage-coach toward a new mining camp. Within a mile of the camp we suddenly came upon three noisy, rollicking boys, of from ten to twelve years of age, astride a single little mouse-colored burro.

The little animal seemed to have come suddenly to a realizing sense of the fact that he was being imposed upon, and was flatly refusing to take another step with such a load upon his back.

The burro was in the middle of the narrow pass directly ahead of the coach, which had to come to a standstill until the obstinate animal could be made to move on.

"Come, come, get out of this!" called out the driver, by whose side I chanced to be sitting.

"He won't get out!" replied one of the three riders, as he beat the donkey about the ears with his fist.

"Lick him up," retorted the stage-driver, briefly.

"We've been licking him an hour!" replied the boy.

"Well, now, see here," said the driver, in a tone of decision, "you've either got to make that little jackass carry you out of the way, or else you've got to get off and carry him out of the road. If you don't do one or the other, I'll have to run over the whole lot of you!"

Then the three riders began to belabor poor Jack with their legs and fists, while they shrieked out, "G'lang! g'lang! Get up! Go on out o' here!"

But the burro would not "g'lang" nor "get up." He stood perfectly still with half-closed eyes, wagging his ears to and fro, a comical picture of calm and dignified firmness.

"We don't want to get off an' give up to him!" called out one of the boys, obstinately. "We've been sitting here about two hours, and we'll sit here all night before we'll give up!"

"No, you won't!" retorted the driver. "This is Uncle Sam's coach; it's got the mail on board, and that gives it the right of way over this road. See? Now you hop off that Jack instantly."

He spoke so sharply that the boys silently obeyed. The moment they touched the ground the burro slowly walked along ahead of us until it came to a little turnout in the road. Then it stepped to one side, and we drove on ahead of it.

I looked back as we turned a curve in the road, and saw the three boys again astride the burro, which was standing perfectly still. I never knew which side yielded the palm of stubbornness to the other, but I am inclined to think that the donkey came out victorious.

"Shaggy" was the name given to a very small burro which was something of an anomaly among his kind. He was very black, with rough, shaggy hair like a bear. He was fleet of foot, tricky, treacherous and unwilling to work.

"Shaggy" belonged to a train of burros used in carrying freight to a mining camp fifty miles from a railroad. He did not have the sleepy eye of his mates; he had a sly, comical way of looking out of the corners of his eyes, and his driver declared that there were times when Shaggy "laughed right out loud."

He was always biting or kicking some of his mates, shying from the road, racing madly on ahead, or lagging lazily behind, or doing something else to bring upon himself the lash and the reproaches of his master.

He made so much trouble, and his influence on the rest of the train was so demoralizing that Shaggy was finally disowned by his master, and turned out to shift for himself in one of the gulches through which the train was passing.

The children of a miner living in the gulch adopted this incorrigible animal, and it is to be hoped that, under their gentler influences, he reformed at last.

Docile and sluggish as he commonly is, the burro rises to great heights of wrath and activity when engaged in battle with one of his own kind. Then his dull eyes flame, his ears lie back, all his shining teeth are revealed; his hoofs fly up and out, and he fights valiantly.

These combats do not often occur, however. At other times the burro is one of the meekest and most faithful little burden-bearers in the world.

For the Companion.

HUMILITY.

Behold the narrow sphere, but half illumed,
That yonder candle fills. Yet without shame,
Unenvious of the stars, it lends its flame,—
Content to serve until itself consumed.

Mathew V. Flail.

THE CZAR'S CHARACTER.

A good illustration of the different points of view from which men observe the same question or condition of things is afforded by some recent utterances by well-informed writers on the present situation in Europe.

These writers, while believing a general European war to be probable at no distant date, differ as to which of the European rulers is the most likely to begin it. A well-known correspondent of the London *Times* declares that the issue of war hangs upon the life of the Emperor Francis Joseph. Should the Emperor die, he would be succeeded by his nephew, who is represented as a vicious and incompetent prince. His accession, the correspondent thinks, would be likely to result in the disruption of the Austrian Empire, and a consequent scramble by Germany and Russia for various portions of it, from which war would result.

An eminent London editor believes that a European war depends upon the caprices of the young German Emperor. At present that restless potentate is strongly inclined to peace, but he is subject to frequent changes of mind, is fond of the science of war, and may any day alter his policy to a warlike one.

Still another writer, not less well known, is strongly of opinion that the maintenance of peace or the initiation of war depends upon the will of the Russian Czar.

He asserts that as long as the Czar keeps a check on his ambitious soldiers and statesmen no collision will take place between the powers. When an event so momentous as a general war depends upon the life or will of any man, or of two or three men, the personal qualities of those men become a subject not only of deep interest, but of much public importance.

The Czar of Russia has long been more or less of a mystery to the world in general. His life is so secluded and apart that even his own subjects can know but little of him. He is only seen in public when he drives hurriedly through the streets to his palaces or the railway stations.

A recent description of the Czar by one entitled to belief in his accuracy presents in a somewhat new light the character of this mighty ruler, who holds sway over so many millions of his fellow-beings, and by a word could plunge Europe into war.

The contrast between the Czar and his remote cousin, the young German Emperor, is a very strong one. The Kaiser shows an almost morbid activity of mind and body. He seems never to be at rest. He is constantly travelling, speaking, reviewing, issuing proclamations, devising policies, and working at important State problems. He clearly desires to appear as a broad statesman, an effective orator, and as a skilful warrior.

The Czar, on the other hand, is described as being very "slow-minded." His mind works with difficulty upon the State questions which come up before him. He finds it hard to make his way through the mass of business which his ministers submit to him from day to day; he is said to work at his papers often until two or three o'clock in the morning, without having finished his task.

Alexander the Third did not receive the special education usually given to heirs to the Russian crown. His elder brother Nicholas, who was the heir, did not die until Alexander had reached young manhood. Probably, if Alexander had been specially trained to fill the throne, he would have found his work less difficult.

One aspect of the Czar's character which will inspire the respect and liking of Americans is his undoubtedly deep and devoted affection for his family. His happiest hours are those which he spends with his wife and children, and he is always relieved when his royal tasks are done, and he can return to his domestic circle.

The marriages of princes, which are usually dictated by reasons of State and not by mutual affection, are by no means always happy ones, and it is gratifying to see so powerful a ruler as the Russian Czar presenting to his people an example of domestic happiness and fidelity.

TO AN OLD CLOCK.

Ancient timepiece! nameless years
Mark the hours since first you stood
Rich in mellow, inlaid wood,
Ready to tell off the life
Of ancestral man and wife.
Was the life you ticked away
Better than the life to-day?

—*Portsmouth Journal.*

THE TEMPERANCE UNION.

"The home against the saloon" was the animating principle of the great convention of the National and World's Women's Christian Temperance Unions which was lately held in Boston. This convention, which represented more than ten thousand local unions in America alone, with a membership in this country of more than one hundred and fifty thousand, was attended by delegates from all parts of the world. Not only were England and other European countries represented, but also Canada, Australasia, Japan, China and India.

The objects of the Women's Christian Temperance Union, as stated in the resolutions adopted by the convention, are diverse, but they group themselves about the central purpose to use the influence of women, through the home, the church, and such public functions and relations as women possess or may obtain, against vice, and chiefly against the vice of drink, which the members regard as the central vice of all—the "sum of all villanies."

Few great conventions have ever met which showed so complete an absence of disagreement, and yet, as we have said, the programme of the Union is a very extensive and varied one, which must provoke sharp discussion unless the members were practically of one mind.

This programme demands, first of all, total abstinence from alcoholic drinks for the individual, and legal prohibition of the manufacture of and traffic in such liquors for the State. In order that women may work more effectively for these things, they are formally advised by the Union to use every practicable means to obtain the ballot and secure "equal governmental rights."

The local unions are given leave to render any assistance which they deem best to any political organization which is acting in harmony with the principles of the society. In several ways in its resolutions the National Union commits itself, and urges its members, to work along the line of politics.

In one of its resolutions it protests against license or leniency toward lotteries, and condemns various public manifestations of vice and immorality.

Following its purpose to pursue its objects through as great a degree of influence upon legislation as it can exert, the general convention of the Union petitioned Congress for several things. One of these is the ratification by the Senate of a treaty which was proposed to the governments of civilized countries by a Congress of Nations held at Brussels last year, and which has for its object the exclusion of intoxicating liquors from large parts of Africa, and the more complete stamping out of the slave-trade there.

Congress was also asked to appoint two commissions, composed of men and women, one to investigate social vice, and one to make inquiry into the alcoholic liquor traffic; and to settle all difficulties, at home and with foreign countries, by arbitration.

The convention also memorialized the commissioners of the World's Fair of 1893 at Chicago to close the gates of the Fair on Sunday, and to prohibit the sale of intoxicating drinks on the grounds.

The influence of the Women's Christian Temperance Union upon public affairs has already been considerable. Largely through its efforts, in thirty-five States of the Union special instruction with regard to the physiological effects of alcohol has been introduced into the public schools. It is estimated that thirteen millions of children have come under the influence of instruction of this sort.

But the great mass of the work of the Women's Christian Temperance Union is not along the lines of public agitation. There is, besides this, a great deal of direct benevolent and evangelistic work. Many neglected children—the majority of them, no doubt, neglected because their parents love drink better than they do their children—are cared for and put upon the right road. In many ways the members of this great body continually work to protect society at large against drunkenness and vice, or to repair the ravages caused by them.

The delegates to this great convention were earnest and manifestly united in their purpose. Their deliberations were of a calm and systematic sort, though they were at the same time characterized by a great deal of enthusiasm.

JOHNSON'S SUCCESS.

A great funeral had just passed through the city streets. The city councilmen had taken part in the ceremonies for the dead man, who, in addition to his other honors, had recently been elected Mayor.

"I have known Johnson since he was a lad," one of them said, as they drove back from the cemetery. "Did you ever hear how he got his first step upward?"

"No," said his companion, who happened to be the doctor who had attended Johnson for years.

"He and his brother kept a little shop in a village on the Jersey coast. Wright, the broker, was sent down there one summer for the sea-bathing, and lodged with them. He noticed that while one of the young men ate and slept like other folks, took part in the affairs of the village, and had no higher aim apparently than to earn enough to buy a little farm and to marry, James, the other brother, was always busy until late at night, and up again before day at work over his books. During the day he developed plans for making money.

"It is true that the field in which he worked was narrow and the profits small, but Wright saw that he had strong mental qualities, and that his ambition was enormous. He watched him closely, and at the end of the summer offered him a position in his office. That was Johnson's first start. It was the reward of his own efforts. No 'luck.'

"Once in town, he pushed his own way. He gave himself up to business. He wanted first fortune, and then position. He was wealthy when he died, and he had held every office with which his fellow-citizens could honor him; but he was as industrious to the last as when he was a poor lad. That man, sir, was in his office at work every day long before his servants or clerks had left their beds."

"He will be greatly missed, I suppose?"

"In business, yes; but he has no children, as you know, and he was an unpopular man. The fact is, he had no time to make friends, or to do good to others."

"Do you know his brother?"

"No. I have heard he was a farmer in New Jersey."

"I know him," said the physician, thoughtfully. "He has taken life simply and leisurely; has married and brought up a family of honest, happy men and women. He has had no inordinate ambition, and has done no excessive work; but he has paid his debts and helped his neighbors. He never will be rich, nor probably hold an important office, but he is alive, sound and healthy, and his influence for good has been a blessing to his townsmen, while Johnson, worn out, lies *there*. After all," he added, after a moment's silence, "which was the successful man?"

"Johnson would have been preëminently so had he used his wealth for the benefit of others," said his companion. "As it was, his nature was not enlarged. That which was the highest and the best in him—that would have made the world richer in noble thoughts and deeds—was not developed.

"He worked for himself. His ambitions were selfish, and his heaps of gold are left for others to squander in idleness and folly. He did his work like an intellectual machine, and his soul, shrivelled and undeveloped, has gone to its reward. In the best sense his life was not a success."

MARRYING A TITLE.

Not long ago, a young man of elegant manner and appearance arrived at a Western city, and registered himself at a hotel as the Prince de C— from Florence.

He spoke English with a foreign accent, dressed simply but richly, and spent money freely. It soon became rumored that he had vast possessions in Italy, including a palace on the Arno.

Fashionable men called upon him, and introduced him to their families, and dinner-parties were thought to be honored by his presence. When it was known that he was not averse to marriage with an American, young girls took care to appear before him with all the advantage which dress or luxurious surroundings could add to their beauty.

The Prince proved to be an ignorant man, and babbled foolishly when he talked. But an Italian palace and the rank of a princess were strong temptations to be blind to these defects.

In two months from his first appearance in the city, he married the only daughter of a man of wealth. One of the wedding gifts was a check for a large sum from the father of the bride.

Two days after the wedding satisfactory proof was brought to the family of the young girl that her husband was not a prince, but a barber in an Eastern city, who, having come into possession of a sum of money, resolved to use it and his personal attractions as capital to earn a fortune by marriage. The father of the bride followed them to New York, and succeeded in buying her release from the sharper, who already had begun to treat her with indifference.

These miserable facts are not given to warn our girl readers against marriages with foreign noblemen, real or pretended. They probably have already a belief that a bargain and sale is always implied in such unions; the American girl paying her money for the title which she receives.

Like all popular prejudices this is unjust. There is no reason why genuine affection should not be

Digitized by Google

the motive of a marriage, however great the wealth of the wife, or high the rank of the husband.

Nor is it only wealthy women and foreign noblemen who make in this country a trade of marriage.

When the little chambermaid accepts the baker at the corner for whom she has so affection, that she may escape work and "have a house of her own," she sells herself.

When the proud, refined daughter of a poor professional man brings her beauty and accomplishments before the notice of a man whom she neither loves nor respects, simply because he is worth much money, she brings herself into the market as absolutely as any ware that is offered for sale in the shops.

Marriage is at the base of all society, and when that base is so often a false sham, ought we to wonder if the whole structure becomes fraudulent and unstable?

DUTIFUL.

Moore, the poet, was devoted to his mother, a plain and almost uneducated woman. He wrote to her his first letter, and ended it thus:

"Your absence all but kill endure,
And none so ill as—THOMAS MOORE."

Even when his songs and poems had made him famous, and his society was sought by England's highest and best, he used to write to her twice a week. At his death she possessed four thousand of his letters.

He told her of everything that interested him, from the purchase of a pocket-handkerchief to his introduction to the Prince of Wales, subsequently George IV., and his visit to Niagara Falls.

"You, dear mother, can neither see frivolity nor egotism in these details," he writes at the conclusion of one letter, knowing that nothing is uninteresting to a mother that concerns her boy.

Mr. S. C. Hall, in his monograph on Moore, says that the poet had given him a small manuscript volume of early poems, which he had written out for his mother, and prefaced by these sentences, among others:

"For her who was the critic of my first infant productions, I have transcribed the few little essays that follow. . . . The critic praises from the heart—the mother praises from the heart. With one it is a tribute of judgment; with the other it is a gift from the soul."

"TURN OVER."

"Great minds think alike," yet it is singular that two Lord Chancellors of England should have made the turning over of a sheet of note paper a device for executing their neatest joke.

Lord Chancellor Eldon, having been asked by a clerical friend to give him a certain living, wrote on one side of a sheet of paper:

"DEAR FISHER. I cannot to-day give you the preferment for which you ask. I remain your sincere friend, ELDON.

"Pray see."

[On the other side:] "I gave it to you yesterday."

Sir John Sinclair, who had done much for the agriculture of England and Scotland, thought the nation should present him with a testimonial, and wrote to Lord Chancellor Erskine, inviting him to subscribe to it. On one side of a sheet of paper Erskine replied:

"MY DEAR SIR JOHN. I am certain there are few in this Kingdom who set a higher value on your services than myself, and I have the honor to subscribe—

[On the other side the note concluded:]

"Myself,

"Your obedient, faithful servant, "ERSKINE."

CICERO.

Cardinal Newman was a master in the art of writing English. In one of his published letters, he expressed the following opinion:

"As to patterns for imitation, the only master of style I ever had is Cicero; I think I owe a great deal to him, and so far as I know, to no one else."

Bishop Wordsworth of St. Andrews, another masterly writer of English, says in his autobiography:

"So far as I have derived benefit from any one in the matter of composition, it has been from Cicero.

"I do not underrate the advantage of a combined study of authors such as Addison, Swift, Bolingbroke, Johnson, Burke, Hume, Gibbon, Macaulay, and I may add Horace Walpole; but I must repeat that I believe I got more good, not only in writing Latin but for writing English, from reading Cicero, and learning him by heart, than from any other source."

FOR THE LOVE OF IT.

At a recent county fair in New England there was, according to the reports in the local newspapers, a continual crowd around one agricultural exhibit, which excited a great deal of substantial, and was the occasion of many remarks.

The exhibit was marked, "Raised on an Abandoned Farm."

The articles shown were grown by a man who had formerly followed another occupation, upon a farm in a rough hill town, which he owner had found an undesirable piece of property, and had practically deserted.

The exhibit included twenty-two varieties of potatoes, several varieties of wheat, oats, barley, rye and beans, onions, pumpkins, squashes, melons, beets, carrots and turnips.

"It was such a display," the local paper says, "as might be made by a carefully attended farm, with all the advantages of cultivation."

The people kept the proprietor of the "abandoned farm" busy explaining how he produced such wonderful results. His reply was that he took delight in farming, and did the best he could.

"Oh yes," said one bystander, somewhat contemptuously, "he's farming for the love of it."

"And I imagine," said another bystander, "that if the farmer who had the place before this man took it had farmed a little more for the love of it, he wouldn't have had any occasion to go off and leave it."

There was sound philosophy in this remark. Many an "abandoned farm," if its true history were known, would be found to be deserted simply because the owner did not enter with zest upon the work needed to make it profitable. He did not know how, and was too indolent to learn; or he knew, and was too indifferent to adopt the means necessary to ensure success.

An enthusiast might make a rocky pasture yield him a living, while a lazy man might starve upon the richest soil.

Prizes Awarded

For the Best Folk-Lore Stories.—Competition of 1890-91.

In competition for the Prizes offered one year ago for the best Local and Folk-Lore Stories, more than two thousand stories were offered. After a careful examination of them the prizes have been awarded and paid as follows:

First Prize, One Thousand Dollars, to Miss Marie Louise Whiting, Knoxville, Tenn., for her story entitled "Slow Joe's Freedom."

Second Prize, Three Hundred Dollars, to Mrs. Rose Terry Cooke, Pittsfield, Mass., for her story entitled "Mother's Doughnuts."

Third Prize, Two Hundred Dollars, to Mr. Albert Hervis, Boston, Mass., for his story entitled "The Silver Tankard."

USE OF A PASSPORT.

"Mine is rather a hard case," said a discouraged graduate of a young ladies' seminary. "I can't get a position as a teacher because I haven't had experience, and if I am never allowed to teach, how am I to get my experience?" A somewhat similar paradox was perpetrated by a German officer, mentioned by Mr. Henry W. Wolff in "The Country of the Vosges." This traveller had been wandering about Metz, asking questions and seeing the sights, and he says:

On my return to the station, I found a surprise awaiting me. The German police had found me out, not a difficult task, since I purposely went about quite openly.

The fact, as it appeared, made no difference. There, at the entrance to the station, stood a Prus-sian gendarme, all on the alert, looking very ferocious with what the German song calls the moustachioed air." He was on the lookout for me, and he knew it, and said:

"Have you a passeavolant about you?" he asked, rather gruffly.

"Sir, no; but do I want one? Am I not entitled to travel in my country without a passport?"

He looked angry, eyeing with disgust my "Murray," which here, all too plainly, upon its cover the title "Prusse."

"Then, sir, I suppose you have been about the town looking at things and asking questions."

"It is true; that is what I am travelling for."

"I must see your passport."

"What? In defiance of the Emperor's regulations?"

"Do you not understand," said he, pompously, "that I must see your passport in order to be able to judge whether or not you are entitled to travel without one?"

This was logic, but logic which, however feeble, must be heeded. I produced my passport, and after having studied for a terrible interval, he gravely announced that I was fitted to travel without one.

HOW HIGH IS THE ATMOSPHERE?

One would hardly think of looking to the moon for information about the height of the earth's atmosphere. Yet it is in just that way that evidence has recently been obtained that the atmosphere extends much higher than has commonly been assumed.

Observations of lunar eclipses made at the Lick Observatory, on Mount Hamilton, in California, have shown that the amount of heat received from the moon, which best is, of course, merely reflected sun heat, just as moonlight is only reflected sunlight, begins perceptibly to diminish several minutes before the shadow of the earth reaches the moon.

The inference is that the earth's atmosphere partially cuts off the sun's heat as it comes between the moon and the sun ahead of the edge of the earth's shadow, and that during the whole length of time during which the line of heat from the moon is felt before the eclipse begins, indicates that our atmosphere reaches a height of at least one hundred miles above us.

How different this is from the height usually stated may be seen by consulting a popular school-book on physical geography, published within a few years, in which it is affirmed that beyond a height of forty miles the amount of air remaining would be too small to affect the sun's rays perceptibly in any way.

So in the most unexpected, and sometimes unlooked for, ways we are continually learning something new about this time-worn globe on whose surface we dwell.

CONSIDERATE.

The Chicago *Tribune* says—perhaps truly—that a solicitor lately paused in the midst of his discourse, evidently determined that for once the more thoughtful of his hearers should not suffer for their good behavior.

"There were five or six persons in the congregation," he remarked, "when I began, but when I got here each one of them left. I'll wait now. For their benefit I will state that the sexton has just informed me that the purpose of which I am a solicitor is for the benefit of the church, to secure a cushion over one eye. I remark, fourthly, that this clause in the text," etc.

FOREIGN ENGLISH.

The difficulties and dangers of using a foreign language are exemplified anew in a paragraph quoted from *Notes and Queries*.

In a hotel not a hundred miles from the top of the Rigi, the following notice is posted:

"Misters and venerable voyagers are advertised that when the sun him rise a horn will be blowed.

"After that the visitor is sufficiently prepared for to see the sun him rise.

"In this hotel the wines leave the travellers nothing to hope for."

For an ache, pain or cramp, internal or external, use *Brown's Household Panacea.* "A superior remedy. Last. leave it."

For the Companion.

LORD SHAFTESBURY.

His Work among the London Poor.

By Archdeacon F. W. Farrar.

During Lord Shaftesbury's lifetime, in speaking at gatherings of the working-classes or of poor children, I used sometimes to ask my humble audiences whom they regarded as their greatest living friend? The answer always used to come promptly and heartily, "The Earl of Shaftesbury!"

If the question were to be asked in these days, a different and by no means unanimous answer might be given by assemblages of artisans; and schools of children would probably remain dumb. It is not, indeed, the case that Lord Shaftesbury's example has fallen fruitless into the soil of our national life. It would be disheartening and distressing if such lives left no imitators and followers. But self-sacrifice is always fruitful, and as some one has said, "It is astonishing how much goodness goodness makes." The most precious thing about unselfishness is that it is so prolific to multiply itself. When the disguised prince in Tennyson's "Princess" mourns over the failure of human endeavors, Ida answers him:

"And let me tell you, girl,
Howe'er you babble, good deeds cannot die;
They, with the sun and moon, renew their light,
Forever blessing those that look on them."

The ideal of life which Lord Shaftesbury worked out for himself has become the ideal of life to multitudes of blessed toilers who are lifting their strong arms to bring heaven a little nearer to this, our earth. Cowper wrote years ago:

And we can boast, in these degenerate days,
Of one who wears a coronet and prays.

He was alluding, I suppose, to Selina, Countess of Huntingdon; but in these times the number of those who wear coronets and pray is perhaps as large, relatively, as the number in any other class. Not a few of the rich and the noble have been led by the records of Lord Shaftesbury to see that

Kind hearts are more than coronets,

and that the happiness which we win by doing good is incommensurate with, because it infinitely transcends, the happiness which men vainly imagine that they can derive from the selfish hoarding or the luxurious squandering of wealth.

There are two ways in which men can help mankind—by giving and by serving. Something may be done by charitable gifts, by public-spirited munificence and ready contributions to the furtherance of good.

If men can do—or think that they can do—no direct, immediate work by which their neighbors or their race may be made proportionately better and happier, then it becomes overwhelmingly incumbent on them at least to set aside some portion of their substance for other than selfish ends.

Lord Shaftesbury was far from being a rich man, but he gave what he could spare of his income, and in doing so he was blessed.

Carlyle describes how, when he was a little Scotch child in the hut of his peasant father, one wintry day a poor, ragged beggar came shivering to the door. Moved by the divine instinct of pity, the child climbed up to the mantel-piece where stood the little earthen jar—the "thrift-pot," as it used to be called—in which was stored the little treasure of his pennies and halfpennies. "I emptied it," he says, "into the hands of the beggar, and I felt at that moment what the bliss of heaven was like."

Yet the bliss to be derived from any form of personal service for the good of our fellow-men is far greater than that of mere almsgiving. To the delight of giving, it adds the delight of sympathy and conscious self-sacrifice. We are apt to pity the great heroes of unselfishness; to bewail the persecutions to which Adoniram Judson was subjected, the hardships borne by John Howard, the leprosy of Father Damien, the premature death of Coleridge Patteson. But the selfish are far more deserving of pity. God's faithful workmen may be "destitute, afflicted, tormented," but they are rarely unhappy.

Lord Shaftesbury was not habitually cheerful; he was often deeply depressed and disheartened. Nevertheless his life was a very happy one, for

The high desire that others should be blessed
Savours of heaven.

It is interesting to notice how many great careers have sprung from some strong impression made in childhood, or from the vow of a boy's heart. The slave-trade was practically doomed, the first stroke of the hour of emancipation had sounded in England, when the youth Thomas Clarkson sat down on the hillside on his way from Cambridge, and made up his mind that, if the slave-trade was evil, it was his duty to devote his life to the struggle against it.

Abolition in America practically became a certainty when the youth, William Lloyd Garrison, living on bread and water with one negro lad in an ink-stained garret, issued the first number of the *Liberator*.

Most persons have heard the incident which decided the destiny of Lord Shaftesbury. He was a schoolboy at Harrow-on-the-Hill, and as he stood on the hill he noticed, with disgust and generous indignation, the brutal levity with which some low undertakers were conducting a pauper's funeral:

Rattle his bones
Over the stones;
He's only a pauper whom nobody owns.

Early teaching, aided by the grace of God, had instilled into the boy's mind a deep sense of the awful sacredness of man as man. In every human being he had learned to recognize the gift of immortality, the potential grandeur of eternal holiness, the infinitude of capacities which might hereafter be developed. In the poorest and humblest he saw a soul for whom Christ died.

Then and there he vowed a vow that he would

Lord Shaftesbury.

dedicate and consecrate his life to the service of his fellow-men, and above all, of those who needed his service most. Something taught him that a true Christian must follow the example of his Saviour Christ, who loved those whom none had loved before, and loved them as none had ever loved before.

The distinctiveness, the divine originality of the love of Christ, consisted in this, that He not only loved the lovable but also the unlovely. He not only loved sweet little children and men of tender and generous and candid natures, but also the ugly, the blind, the halt, the maimed, the fallen, the corrupted. He was the friend of publicans and sinners, and Samaritans. He stooped to save not only priests and Pharisees, but

Every soul now dragging through the slime
Of some corrupted city, his dim life
Blighted with famine, swoll'n with luxury.

Lord Shaftesbury understood this element in the divine example as it has been understood by others of the world's purest and sweetest benefactors. He knew the meaning of the words, "They that are whole have no need of the physician, but they that are sick."

This large-heartedness of sympathy brought him into contact with men of all classes, and so created in him a wide and invaluable experience. Hence his boyish vow must ever be reckoned as an era in the history of philanthropy.

I will mention first some of the good works in which I witnessed his activity, and then the general characteristics of his labors for the world of sorrow, poverty, and sin.

We used to have in Westminster a little society called "The Window-gardening Society." It was intended to encourage the poor in the habit of brightening their rooms and houses with plants and flowers. Cuttings of plants were largely given away at the proper season, which the poor were to keep and care for; and towards the close of the summer our Abbey Garden was thrown open, and prizes of some value were given to all the poor and to the boys and girls who could produce the best and most flourishing plants.

On these occasions superb shows of roses and hothouse flowers used to be sent by ladies of wealth and rank to decorate the tents in which the humble geraniums or carnations of the poor were ranged. All St. James's, in silks, used to come to meet all St. Giles's—or rather all Westminster—in frieze. The band of some Boys' Refuge used to play, and the little waifs and strays and street Arabs of the neighboring lanes and purlieus were admitted free into the garden, a privilege of which they availed themselves in hundreds, and which they hugely enjoyed.

The object of the society was to encourage in the poor a sense of beauty, a love for the works of God, and a desire to brighten and beautify their dingy and squalid homes.

Year after year Lord Shaftesbury used to come to that distribution of prizes, and year after year, even when the rain was falling, the ragged and the indigent gathered in crowds around him, to hear the kindly words of wisdom which none knew how to utter so well as himself. And, generally speaking, I may say that whenever I heard Lord Shaftesbury speak at any charitable gathering, he not only spoke weightily and to the point, but generally said something better worth remembering than any other speaker, even when other speakers surpassed him in eloquence.

I was once asked to a supper given to London thieves and others—the lowest of the low, the most wretched of the miserable, nay, even the criminal and depraved. Lord Shaftesbury was to address them, as well as myself. His speech struck me as chiefly remarkable from the depth of its sympathy. He gave to those poor, fallen, despairing people good advice, but he gave it in the kindliest way; in the way least likely to pain their susceptibilities, and to touch their hearts and consciences.

He did not preach at them; he did not denounce them; he did not speak to them with irritating condescension; he did not adopt the tone of a Pharisee and a superior who stepped down to them out of a higher atmosphere. He spoke to them courteously, genially, never forgetting their dignity as human beings, and as sharers with him of the common mysteries of life and death, of corruption and immortality.

Among other things he amused them with the story of a friendship which he had struck up with a crossing-sweeper, who one day stopped him as he crossed the road, and, with some apologies, gave him an invitation to be present at his wedding.

"Of course I will come to your wedding," said Lord Shaftesbury. "I should think myself a very bad sort of fellow if I refused."

So the great Earl, the descendant of many earls, whom ignorant and malevolent detractors described as "the proudest man in England," went to the crossing-sweeper's wedding, and by doing so probably received a great deal more happiness than he conferred. But here lay the secret of his power. He could feel genuine sympathy. He honored men as simply men, and not for adventitious circumstances and extraneous honors.

I more than once invoked his assistance in the endeavor to do good. When I first came to work in London, in 1876, I was specially struck with the almost total absence of any provision for the care of the youth in our great cities.

I incessantly called attention to this neglect. I pointed out that the nation spent millions of pounds on the education of the children, and then turned them loose at the age of fourteen or fifteen to survive or perish, as the destinies might decree, in the burning, fiery furnace of temptation in the streets. I even ventured to summon a meeting of eminent men—representative laymen and clergymen—to consider whether something could not and should not be done to remedy this strange neglect.

It was a cause which I have incessantly pleaded, and I feel it a privilege to have been permitted to take my share in the formation and support of the Diocesan Council for the benefit of young men, of the London Sea-side Camp for boys, of the Finsbury Polytechnic, and of various youths' institutes which have gone far to remedy the old state of things.

The meeting of which I speak was summoned in the famous Jerusalem Chamber of Westminster Abbey—the room from which have proceeded the Authorized English Bible, the Revised Version, the Westminster Confession, and the last form of the English Prayer Book. I asked Lord Shaftesbury to take the chair. He consented willingly and at once, for neither age, nor weariness, nor the incessant demands upon his time, were ever allowed to stand in the way of his efforts to do good.

In his opening speech he made a remark of the utmost importance. He said that he was frequently led to consult the police in order to avail himself of their experience. He had learned from them the striking fact that, with scarcely an exception, every criminal career begins between the ages of fifteen and twenty. Let the church or the State or the exertions of private influence get hold of the youths of a nation during those perilous years, and, though crimes might of course still be committed, yet the existence of a well-known class of professional criminals would be eliminated from Christian communities.

I have often repeated that remarkable testimony, and it has had its weight in stirring up the efforts which are now, happily, being made on all sides to promote the welfare of our growing boys.

It used to be said that we provided for the people schools and churches, but left it to the devil to provide their amusements. That reproach is not wholly removed, but it is less true than once it was.

It would take me too long to describe Lord Shaftesbury's noble and almost numberless efforts on behalf of missions, home and foreign, for the protection of climbing boys, for the suppression of the opium trade, for poor curates, for homes for inebriates, for idiots and the insane, for prisoners, for the blind, for needle-women, for railway servants, for cripples, for shoe-blacks, for costermongers, for cabmen, for early closing, for the Saturday half-holiday, for orphans, for the temperance movement, for destitute children.

His was an all-embracing charity. What man ever received, as he did, such homely presents as slippers worked by indigent boys, and a donkey driven by struggling costermongers? Of what other man could it be said that two such benefits to the poor as the liberation of women and children from the horribly degrading slavery of mines and factories, and the foundation of ragged schools, which led ultimately to compulsory national education, owed everything to his exertions?

Westminster Abbey has witnessed many glorious and pathetic spectacles; but probably it never presented an aspect so dear to angels and the King of Angels, as when the representatives of the sick, the suffering, and the destitute—the alleviators of every form of human misery—were gathered under its "high, embowed roof" to witness the funeral service in Lord Shaftesbury's honor.

Jeremy Bentham wrote of his friend, John Howard, and it may be written even more truly of Lord Shaftesbury, "For departed kings there are appointed honors, and the wealthy have their gorgeous obsequies. It was his nobler fortune to clothe a nation with spontaneous mourning, and to go down to the grave amid the benedictions of the poor."

For the Companion.

"KEEPING UP."

"When I was a young girl," said Aunt Sabrina, "I was vain of appearances, as a great many young girls are." She glanced over the rim of her spectacles in the direction of her two nieces. "And of all things, I was most afraid of being laughed at.

"I was passing the store corner one winter day. The walking was very treacherous. Dry snow had fallen over ice, and it was hard work to keep up. Some people whom I knew were standing in the store porch talking, and just as I bowed to them one of my feet slipped, and I started to fall.

"Now probably it would not have hurt me much if I had fallen. There was enough snow over the ice to prevent a contusion, and nine times out of ten, in falling, it is better to let one's self come down easily than to strain one's self in trying to keep up.

"But there were all those people! I thought I should rather die than fall. So I gave a great wrench, and just saved myself.

"Perhaps the people in front of the store did not see that I had slipped at all. But presently my back began to give me very sharp pain, and by the time I had reached home I was suffering intensely.

"Well, there's no need to go into particulars; but the upshot of it was that I was in bed all winter, and mother had to take care of me, besides doing all the rest of her work and mine, and to this day, if I turn myself about too suddenly, I'm reminded of that slip.

"As I lay on my back all that winter, I did a deal of thinking—especially on the nights when I couldn't sleep. And I made up my mind, very firmly, never again to hurt myself by a foolish attempt to keep up.

"The next winter father died, and mother and I were left alone, with barely enough money to keep us. Then the philosophy which I had pondered on my sick-bed came to my aid. I said to my mother:

"'Suppose we just keep house in the sitting-room this winter, mother, and have a fire in the cook-stove only. We could move the drum that is over the kitchen now and my little bed into the room over the sitting-room, and sleep there. It would be warm enough with the drum.'

"I could see that she didn't like the plan, but she thought it over and saw the wisdom of it. We carried it out, and did it honestly, too. We didn't scramble to light the parlor fire when we saw company coming, and then freeze our guests in a shut-up room. We just took them in where we lived, and as we took care of the rooms carefully, things were always neat and clean.

"By spring we had put by a little money, and

Digitized by Google

had been well and as comfortable as if we had kept three fires burning.

"That was the first time I tried 'letting myself go easy,' instead of wrenching myself to keep up; but I've tried it many a time since, and always have been glad that I did.

"When I have had to choose between a new winter bonnet and new flannels, I always took the flannels. When we've had to give our company plain food or else half-starve ourselves after they were gone, we have let them share with us. When the parlor sofa and the sitting-room lounge both gave out in the same year, we bought a nice new lounge, and made a chintz cover for the sofa.

"I couldn't tell you all the things that wrench in my back has helped me to—and from, but it's a good thing, my dears, when folks don't need to wrench their own backs to learn the lesson. I didn't tell you this by accident."

The girls looked at each other, laughing and blushing; but that afternoon they came home from a shopping expedition and rushed up to Miss Sabrina's room with their parcels.

"We've been buying our winter things, aunty," said Belle, the older one, adding, with a meaning smile, "Of course you didn't know anything about it; but instead of the black silks we each got a nice merino and a pretty brown worsted for mornings, and some good woolen underwear. Just feel!"

She pulled out of her bundle the soft, warm garments, adding, "Father could spare us only just so much, you know, and we thought we'd let your wrench answer for us, too!"

"I've never been able to say that I was wholly sorry I did it," said Aunt Sabrina, "and now—well, I declare if I'm not glad!"

Aunt Sabrina's Story.

For the Companion.

CHIEF GOOD THUNDER.

By Right Rev. H. B. Whipple, Bishop of Minnesota.

I made my first visit to the Lower Sioux agency in June, 1860. One day the head chiefs, Wa-lea-sha (White Dog) and Wa-ke-an-washta (Good Thunder), came to see me. I still can see their earnest faces as they told me the story of their wrongs. They said that they had sold to the government eight hundred thousand acres of land, in order to obtain help to become like white men; that they had waited three years and had not received one penny. Under their old treaty they were to receive two thousand dollars a year for schools; but not one Indian child had learned to read.

Then Wa-lea-sha added, "White men would not have a Great Father who is a thief and a liar. I suppose that he has sent the money; but the cars go very fast, and it must have been shaken off. Ask him to send men to look it up, for his red children are weary waiting for it."

They urged me to send them a missionary and a teacher. I sent them the Rev. Samuel D. Hinman.

Good Thunder was very earnest in pleading for a school. He had a beautiful little girl, ten years old. She was one of the loveliest children I have ever seen. Her hair was black as a raven's wing, her eyes gentle as a fawn's, and her face of clear brown, with just a blush of pink.

Good Thunder said, "I want my child to become like the white man's daughters. Will you take her to your home?"

At Faribault we had an Indian school, named Andrews Hall, after the first missionary to the Mohawks. Here we took the chief's pretty daughter, whom we named Lydia Sigourney, after the gentle poetess whose heart went out in pity to the Indians.

None of our Indian children grew more rapidly in grace and wisdom than Lydia. But in the spring of 1862 the child was taken very ill, and we wrote to her father. When the wild Indians heard this news they came to see Good Thunder and called him a fool. "You let your child go to a school where there are children of our enemies, the Ojibways. They have poisoned her, and she will die. You see what comes of trusting the white man."

The poor Indian came to Faribault with a sad heart. He came to my house and repeated to me the story the wild Indians had told him. I said, "Good Thunder, go and see your child and ask her if she has been poisoned."

He saw Lydia. She heard the story and said, "Father, these Ojibway children are my sisters. There are no enemies among those who love Jesus. Do you see these flowers and these berries? They brought them to me."

Chief Good Thunder.

It was evident that the child could not live long, and upon my advice her father took her home. In June Mrs. Whipple and I visited the Sioux Mission. We found the child near her other home, and on the second day of July she died. I never saw a more beautiful death-bed.

The death of Lydia made Good Thunder a Christian hero; and all through the dreadful Sioux massacre, which came on August 18, 1862, he and his friends faced death and the fury of their savage kindred to save the lives of the white women and children who were prisoners.

Good Thunder, Paul Ma-za-kute, and others were threatened with death if they resisted the other Indians. They threw back their blankets and said, "Shoot me! You can't keep me from speaking the truth or doing right." It was due to these friendly Indians that over two hundred women and children were saved and delivered to General Sibley at Camp Release. Good Thunder became his chief of scouts, and no soldier of our army has a nobler record.

I have often been asked if our Indian scouts can be trusted. I have never heard of a single instance where they proved faithless.

After the massacre of 1862, and when General Sibley had driven the hostile Indians across the Missouri River, the General stationed camps of scouts, twenty miles apart, along our Western border. He told these scouts to shoot any Indian who came into the State to murder white people.

A party of seven Indians murdered a family of whites near Mankato. Three of these seven marauders were captured by whites and hanged. One of the others was killed, one escaped, and one was brought a prisoner into a camp of Indian scouts.

The captured Indian's own uncle was chief of scouts in that camp. The young man said, "My uncle, I am glad you are here; you will save my life." The chief said, "Do you see my uniform? I am not your uncle. I am a soldier, to kill men who commit murder. Soldiers obey orders."

He took up his gun and shot the young warrior with his own hand.

Nearly eight years ago Good Thunder bought eighty acres of land near his old home in Minnesota. He came at once to see me, and said, "I cannot live without the Tipi-Wakon (the church). I want to bring here all of the friendly Christian Indians who are living in Minnesota. I will give you all of my land if you will build me a church."

I refused, but he repeated the offer again and again, until at last I accepted twenty acres of his land for the erection of a church, school and parsonage.

At the laying of the corner-stone of the church, Good Thunder handed to me a paper signed by all the Indians. "We were once heathen wild men," it said. "We are now Christians. It is you who brought this new path to us. You have been our Father; your wife has been our Mother. Will you name this Tipi-Wakon, this sacred house, for her—Saint Cornelia?"

Soon after the Sioux outbreak of 1862, some white settlers in Blue Earth County, Minnesota, named their village Good Thunder, in honor of this brave Christian chief. In the summer of 1889 the people of the town invited him to celebrate the Fourth of July with them. He accepted. Meantime, a man who had no love for Indians told the people of the town that the original Good Thunder was dead, and that this man was an impostor, who had stolen his name. The statement was made so positively that the people believed it, and wrote to the chief withdrawing their invitation, stating the reason.

Good Thunder came to my house—a journey of one hundred and fifty miles—and told me his trouble. I said, "We will prove to these people that you are the real hero."

General H. H. Sibley and myself sent letters to the people at Good Thunder, and told them that we had known the chief thirty years, and that this was the brave hero who saved so many captives. They then sent another invitation and a committee to welcome their Indian guest.

The village outdid itself in generous hospitality. Good Thunder rode with his wife in a separate carriage, and had the seat of honor at the banquet. Asked to address the people, he rose and said:

"My friends, I thank you for the honor you have given me. You have named your town Good Thunder. Perhaps, some day, when we are all dead, some one will ask, 'Why did these white men give their village this name?' They will hear the story of an Indian who did not forget the kindness of white men, who in the time of trouble saved their women and children.

"I am glad. We do not like to be forgotten. My name will live. But, my friends, if this is a town where people go to saloons and not to church, where they swear and do not pray, where they live bad lives, I do not think it will be any honor to have your town bear my name.

"I hope you will be good people. I have done."

Good Thunder pays his old bishop a visit every year, and not one of my friends has a warmer place in my heart.

IN OLD TIMES.

In the older and smaller New England towns, where everybody's affairs are known to everybody else, a courtship, even to-day, is a matter of hardly less than universal interest. As a result many amusing traditions of odd courtships are handed down for the entertainment of the young people of to-day. Some of these lovers seem to have been characterized by more fidelity than ardor.

It is related that in one village there was a couple whose courtship lasted for forty years. During this long period, Obed, unless in rare cases of sickness or family troubles, never failed to go every Saturday evening, carefully arrayed in his best, to call on Maria.

Maria, on her part, never failed to respond in person to his knock, and hold the front door open a crack with one hand while the other grasped her knitting. Their dialogue, which never varied by more than a word or two, ran thus:

"Evenin', Maria."

"Evenin', Obed."

"I kinder thought I'd call. I thought maybe you was lonely."

"Well, I aint lonely, Obed, so you better go right home agin!"

Then the door and the conversation closed. But at the end of forty years the two were married, Maria giving as her reason for consenting that she was so tired of Obed's ridiculous behavior she thought she had better marry him to be rid of him.

Of a younger but scarcely less placid couple it is related that the wedding day having come, the guests assembled at the bride's house, and the bride herself made her appearance. All was ready for the ceremony; but the bridegroom did not appear.

It was a wild and stormy winter night and the country roads were bad. He might have been thrown from his carriage and injured, or else he had been seized with sudden sickness. Two of the guests at last started in search of him.

On reaching his home they were told that he was within, and were shown to his room. There he sat, his shoes and stockings off, and his feet soaking in a tub of hot water!

He looked up in great surprise at their entrance, and when asked why he had failed to come and be married, replied that the weather was so all-fired bad, he thought of course the wedding would be put off. He was assisted to make a hasty toilet and hurried away to the wedding.

For the Companion.

HOW TO CURE FURS.

By an Old Trapper.

First catch the animal. After its death take the skin off as soon as possible unless the creature was drowned. In that case wait till the fur is dry.

Hold the animal up by the hind-legs. Stretch them apart and make a cut from each hind-foot along the top or back of the leg to near and under the tail. Leave the tail uncut with the back of the skin.

Work the fingers under the skin around and over the back near the tail. Pull this out of the skin by placing a split stick on the tail, while the other hand holds the body.

After the tail fur is pulled off the inner stump, pull the skin off whole from the hind-legs toward the head. Do not cut down the belly. On coming to the fore-legs work around them with the fingers and pull them out of the skin.

Then work the skin off to the tip of the nose. Cut this off so it will hold on or over the end of the board, to keep the skin stretched properly.

At the beginning cut carefully around all the natural openings of the skin, so as to save all the fur and not tear the skin. Work off the hide with the fingers, using the knife as little as possible. Thus you will keep the skin white.

To stretch the skin. The best way is to use a board. Cut it a little longer than the stretched skin is from the tip of the nose to the tip of the hind-leg. Make the board as wide as can well be pushed into the skin. The board should be not more than three-eighths of an inch thick in the middle, and tapered to a thin edge at each side.

Most of the small animals are one-third head, or one-third forward of the fore-legs. Make the board tapering slightly, narrowing from the hind end to the fore-legs. Then cut it in the shape of a tapering flatiron to the tip of the nose.

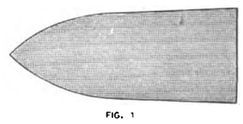

FIG. 1.

FIG. 2.

FIG 3.

FIG. 4.

Pull the skin on the board fur inside. Then take off all grease and flesh possible. Make two "swords," or strips of wood as long as the board. Run one under the skin down the middle of the back, and the other down the belly side. Thus the skin is raised from the board and stretched.

FIG. 5.

Catch the under lip on the end of the belly sword, so as to draw it well up to the nose. Pull the hind-feet back tight and tack them in place to the edge of the board. Pull at the roots of the tail with one hand and at the same time rub the skin backwards with the other, so as to stretch it without tearing. Tack it to the sword, and tack the edge of the belly side likewise.

To cure the skin. Hang the skin up by the nose in the shade. It should not be near a fire nor any other object. Fresh air should be all around it.

These directions carefully followed will give the best-ventilated, least-tainted, dryest and whitest skin possible, of any given kind. No chemicals being used, the peltry will bring the highest market price.

These directions are for animals from the size of the beaver down, except as to otter tails, which must be split open, spread out and tacked on a board to prevent tainting. Fold the skin of the otter's fore-legs across the chest and tie so that they will dry flat.

The illustrations show some forms of boards and swords commonly used. Fig. 1 is a plan of a board for the skin of a musk-rat or other short animal. Fig. 2 represents the "sword" or strip of wood which goes with it. Fig. 3 is the board needed for the skin of a mink or other slim animal, and Fig. 4 is the sword which must accompany it.

Fig. 5 is an end view or section of the board and swords, with the skin stretched upon them.

WILLIAM BELL.

SUGGESTIONS

PHASES OF THE MOON.

In what part of the sky do you first see the new moon? Are its horns towards or away from the sun?

At what time does the full moon rise? Why?

On which edge does it begin to wane?

Does the old moon rise before or after the sun?

To a person on the moon would the earth have phases? Would they be like the moon's?

For the Companion.

ELODEA.

[The Marsh St. John's-wort.]

Comest thou once more my sight to cheer,
Elodea?
Along the fairy-like morass,
Mid rushes small and withering grass,
Thou dost thy crimson signal rear,
Elodea.

Thy myriad clusters far and near,
Elodea,
In the long sunbeam's slanting ray
Glow with sweet color, quaintly gay,
Tho' Autumn's breath makes all things sere,
Elodea.

Still art thou fresh, thy blush burns clear,
Elodea.
Prim as some pretty Puritan,
When Summer's flowers wax pale and wan,
In smooth green robes thou dost appear,
Elodea.

When winds grow cool and skies austere,
Elodea,
Like some New England maiden's grace
Thy radiance gladdens all the place,
Though Autumn sits by Summer's bier,
Elodea.

Dear humble friend! Lend me thine ear,
Elodea!
Listen—I love thee better far
Than golden-rod or frost-flower's star,
Thy beauty crowns for me the year,
Elodea!

CELIA THAXTER.

For the Companion.

HER ARROGANCE.

Helen Fitzhugh on her nineteenth birthday became a member of the church to which her mother belonged. When the service was over, Mrs. Fitzhugh lingered at the church door. Her heart was full, and she longed to touch her child's hand, and feel that henceforth they would walk together under God's eye in company; but Helen escaped from her, and went home through the fields alone. She wanted, she said, to give part of this day to self-examination.

The sermon had been on the subject of "the sin which doth so easily beset us."

"I wonder what mine is?" thought Helen, as she walked home.

Mrs. Fitzhugh was a widow who had brought up her four children on somewhat straitened means. Helen had just returned from boarding-school, and had already concluded that it was her duty to reform the habits of her somewhat disorderly home.

She was neat, composed, and orderly in her dress, conversation and thoughts. She never was angry. She was sure that all her opinions were correct. In church she listened to the hymns and the sermon with pleasure, which pleasure she mistook for religious devotion.

On Monday morning following the Sabbath she began, therefore, her work of reform.

"Mother," she said, "let us have done with these American meat breakfasts. I approve of the French plan: a roll and a cup of coffee in the morning, and a heavy meal at eleven."

"That might suit you, Nell," said Joe, who worked on the farm. "It would not do for me, who often plow a field before you are out of bed."

Helen reiterated her opinion dogmatically. Joe replied, and at last left the table in anger.

"He should control his temper," said Helen, calmly. "It is easy to see *his* besetting sin."

"I suppose," said Jem, who was a pert school-boy, "you see all of our besetting sins quite plainly?"

"It is easy to see that yours is a want of truthfulness," replied his sister, coolly.

"O Helen!" exclaimed her mother.

Jem's face grew fiery with rage.

"I heard him tell Lucy a story last night, which I am sure was more than half a lie," said Helen. "I intended to reprove him for it."

A silence fell upon the group around the table. James, in a moment, laid down his fork and without a word, but with fury in his heart, went out.

The oldest son, Walter, who was at home from college on vacation, shook his head meaningly.

"You certainly do not lack courage to fight sin, Helen. But as for discretion —"

Helen looked at him steadily. His face was flushed, and his eyes dull. "Do *you* fight sin with courage," she said, "or discretion? I am afraid not, Walter. Oh, for shame! For shame! I did not expect to find my brother a slave to a brutal taste for liquor!"

Walter sprang to his feet with a smothered oath. Helen regarded him with cool contempt, and then went calmly to her own room.

Her brother looked after her with a bitter laugh. "If that is Christianity, I will have none of it!" he said, as he went out slamming the door after him.

His mother stood stunned and almost despairing. She knew well Joe's fierce temper, and Jem's habit of untruthfulness, and Walter's love of liquor. She had talked to her children alone with tears and tender love, and with prayers to God to help them. Each of the boys was fighting against his sins. Some day, with God's help, and with a mother's hopefulness and love, she knew they would conquer them.

"But how will Helen conquer hers," she cried, "when she does not see it—when she holds it as a virtue?"

CHARITY BEFORE BUSINESS.

Prescott, the historian, was a man of exceptional kindness and generosity. Not only did he give away money,—which ought to be no very difficult task for one who has inherited a fortune,—but he could put aside his own comfort, and even his own pressing occupations, for the sake of doing a charitable deed. Mr. Robert Carter, his private secretary, says that one bitter cold day Mr. Prescott was at work upon two long and important letters, which he was very anxious to have finished in season to go by that week's mail to Europe. There was barely time to prepare them. They were about half-done when twelve o'clock, the historian's hour for exercise, arrived.

Mr. Prescott was so anxious to get the letters off that he did what I had never known him to do before; he relinquished his walk, and kept at his writing-case, telling me to go out and stretch my legs, but to be sure and return at one o'clock, when he would have the letters ready for copying.

I offered to remain and copy as he wrote, but he said there would be time enough if I came back at one o'clock.

I strolled about the city for half an hour, and on my way back, passing through Broad Street, met one Michael Sullivan, whom I knew. He seemed to be in trouble, and I inquired what ailed him. He said he had been sick and out of work, and his family were starving with cold.

I went with him to the den where he lived, and found his wife and three or four small children in a warehouse loft, where they were lying on the floor huddled in a pile of straw and shavings, with some rags and pieces of old carpet over them. The mercury was below zero out of doors, and the dilapidated apartment was not much warmer than the street.

I had no time to spare, and the detention, slight as it was, prevented me from getting back to Mr. Prescott till a quarter-past one. His manuscript lay on my desk, and he was walking about the room in a state of impatience, I knew, though he showed none, except by looking at his watch. As I warmed my hands over the fire, I told him, by way of apology, what had detained me.

At once he took a scrap of paper and told me to write an order for a ton of coal, to be delivered without delay to Michael Sullivan, Broad Street. He then went to his bell-rope, and gave it a vehement pull. A servant entered as I finished the order.

"Take this," Mr. Prescott said, "as quick as you can to Mr. ——, and see that the coal is delivered at once. What is the number of the house in Broad Street?"

I had neglected to notice the number, though I could find the place readily myself. I therefore suggested that, as there were probably twenty Michael Sullivans in Broad Street, the coal might not reach the right man, unless I saw to it in person, which I would do when I went to dinner at half-past two o'clock.

"Thank you! thank you!" Mr. Prescott said. "But go at once; there will be time enough lost in getting the coal."

I reminded him of the letters.

"Go! go! Never mind the letters. Gayangos and Circourt will not freeze if they never get them, and Mrs. Sullivan may if you don't hurry. Stay! Can the man be trusted with money, or will he spend it all for drink?"

He pulled out his pocket-book. I told him that Sullivan could be trusted. He handed me five dollars.

"See that they are made comfortable, at least while this cold spell lasts. Take time enough to see to them. I shall not want you till six."

CHINA'S EMPEROR.

The Emperor of China, who has been in some degree the object of recent riotous demonstrations in that country, is the representative upon the throne of the Tartar conquerors of China. The conquest of the country was made more than two hundred and fifty years ago, and the Tartar conquerors have in that period become thoroughly assimilated with the Chinese; but the emperors are still really, as well as nominally, of the Tartar blood. Their wives are chosen from among the daughters of the Manchoo Tartar nobility, and the strain of blood is thus kept measurably pure.

The present Emperor of China is named Kuang-Sii. He is twenty years old, having been born August 15, 1871. His person is treated with the utmost respect. No self-respecting Chinaman ever speaks flippantly of the person of the sovereign. Outwardly at least he is regarded as the vicegerent of Heaven, and the earthly interpreter of divine decrees.

In official documents he is sometimes styled merely the "most august Emperor," but his formal and official title is the "Son of Heaven." The common people, even though there are signs that they are beginning to turn against the Tartar rule, often are found to regard the Emperor as an incarnation of divinity.

For this reason he is called "The Lord of the ten thousand years," and is saluted by those who appear before him, with the words, "O Emperor, live forever!"

The Chinese Emperor is the source of all authority and honor in the empire, the head of the religion, the nominal author of the laws, and the dispenser of all pardons.

All the empire is his property; and yet he must not venture to govern as a cruel despot. He is himself subject to what may be called the immemorial constitution of the empire. He is powerless to destroy the ancient customs and institutions of the realm. Some of these customs have almost a republican character. The Emperor is himself a subject of these ancient regulations.

The crown is inherited in the male line, but the Emperor may choose his successor from among his children or his near relatives. Sometimes it is not known during the life of the Emperor, or until his last moments, who his successor will be. Naturally all his male relatives are rendered, by this uncertainty, very anxious to serve him.

The life of the Emperor of China is supposed to be arranged upon this routine: He rises, winter and summer, at three o'clock in the morning. He takes a very light collation or lunch, and goes to pray in one of the imperial temples. Afterward he reads the reports of his high functionaries.

At seven he breakfasts, and then receives, in a sort of levee, his ministers and the mandarins who may be called the heads of the departments of the government.

At eleven o'clock he visits the women's apartment, or takes a walk in the gardens. He dines at three in the afternoon, and then retires to his cabinet or private room, where he often writes steadily until bedtime, which is always the hour of the setting of the sun.

The Empress is, after the Emperor, the most important person of the court. She is called the "mother of the State." In recent times a custom has grown up under which there are often two Empresses of equal rank, each one occupying a wing of the palace. They are called, according to the portion of the palace which they occupy, the Western Empress and the Eastern Empress respectively.

The life of the Emperor of China is one of the most monotonous which it is possible for a man to live. He is practically a prisoner in his palace, and is denied the wholesome recreations and pleasures which are open to the poorest. The few journeys which he takes are for the sake of visiting the tombs of his ancestors, where he is supposed to spend hours in solemn meditation.

Sometimes, indeed, the Emperor of China has gone hunting; but on these occasions his enormous suite must go with him, and all the formalities and reserve of the court must be adhered to. Hunting, under such circumstances, is likely to be so much a vexation and a weariness that it is not surprising that few Chinese Emperors ever seek relaxation in the chase.

For the Companion.

A NAMELESS ROSE.

Nobody knows this little rose,
It might a pilgrim be,
Did I not take it from the ways,
And lift it up to thee.

Only a bee will miss it,
Only a butterfly,
Hastening from far journey
On its breast to lie;

Only a bird will wonder,
Only a breeze will sigh;
Ah! little rose, how easy
For such as thee to die!

EMILY DICKINSON.

DISCIPLINE TRIUMPHANT.

The commandant of a certain division of the British army in India, some years ago, having a very considerable degree of authority vested in him, and perceiving that his command included many men who were illiterate, issued an order that one of the younger lieutenants should be detailed in each regiment to teach soldiers who could not read or write. In each regiment, therefore, an officer was duly detailed for this purpose. In the Two Hundredth, the man assigned to this duty was Lieutenant Beacham, a young officer who had just joined the regiment.

After taking the introductory steps as regimental schoolmaster, Beacham came to the Colonel one day with a significant smile on his face.

"I have to report," he said, "that there is not a single illiterate in the Two Hundredth. Every man has been to school in England, and every one of them can read and write perfectly well."

The Colonel, who was an unbending old martinet, frowned severely.

"No matter," said he. "Orders are orders, and must be obeyed. You must teach the illiterates of this regiment."

"But there are no illiterates!"

"Never mind! You will organize some at once."

"But how am I going to make them —"

"No further questions, Mr. Beacham. I shall issue an order to the captains of Companies A, B and C to detail five men from each company to act as illiterates, and you will give them daily instruction in the alphabet."

The Colonel's order was issued at once. Fifteen soldiers of the Two Hundredth were detailed as illiterates. Once a day they were marched out upon the parade, with "partners" in their hands of the same sort from which they had studied in school many years before, and were gravely taught their letters by young Lieutenant Beacham, though the alphabet was as familiar to them as it was to him, or to the commanding general himself.

The soldiers of the regiment gathered about and enjoyed the scene.

After this pleasing farce had been going on for several days, the Colonel strolled up one day to the place where "Beacham's babies," as the regiment called the "illiterate detachment," were reciting their lessons.

"Mr. Beacham," he asked, "is your class making favorable progress?"

"Very favorable, indeed," said the Lieutenant, saluting.

"The men are now able to read and write?"

"Perfectly well."

"You are able to report, then, that your duty is fully accomplished?"

"I am."

"Then an order will be issued terminating the detail, and returning the men to their duty."

Thus the "illiterates" of the Two Hundredth were no longer called upon to take daily instruction in their A, B, C's; but it was many months before their comrades ceased to rally them in quarters upon their school-going.

IN A BALLOON.

The unprofessional aëronaut might doubtless own, if he would, to many an unpleasant sensation on the occasion of his first ascent in a balloon. One such daring adventurer is honest enough to avow that she felt decidedly "queer," and would fain have been elsewhere than "up above the world so high." She says, writing to the London *World*:

We were off. Ballast was thrown out just as we came crashing on to the top of a pagoda, among the electric lights surmounting its summit. I thought we were killed, but we swept on, and dashed through another electric wire. After that we flew away over the Thames, quite steadily, without further accident, but I must confess that I was terrified by every movement made by the other occupants of the car.

When we were at a height of four thousand feet, and going at the rate of thirty miles an hour, Mr. Spencer, the aëronaut, said he would come into the car, from the ropes above, where he had been busy. How I wished he would stay quietly where he was! However, I could not say so; I only begged him not to shake the car more than he could help, and I made room for the other passenger on the little seat where I had been placed.

Then, as we were gliding serenely along, another dreadful thing happened, and my terror reached its climax. The end of the seat suddenly gave way, but I thought the bottom of the car had gone, and we with it. It was a horrible moment, but it was the climax of all feeling; after I was assured that nothing terrible had happened, I began to feel more settled, and had it not been for the uncertainty of landing, I should have been almost happy.

We sailed away from London into the country, and as we began to descend toward the earth, we could see cows creeping over the green meadows, and tricycles, like little fleas, bowling along the dusty roads. The descent now became rapid, and we searched for a desirable landing-place. I looked with longing eyes at a large field of corn, and wished myself safe in the middle of it, but as my fears sprang to life again as we passed it, we floated over woods, lakes and homesteads.

It now began to grow dusk, and we saw ahead of us a large, open heath. Mr. Spencer evidently approved of this, and pulled a string, which opened a valve and let out the gas in short puffs that sounded like the crack of a pistol.

As we flew swiftly over the heath, my spirits began to rise, but they soon fell again when I saw that what had seemed level ground was in reality made up of gorse bushes, gravel pits and pools.

Then came a good bump, and we rose again; the grapnel caught, and pulled us down. Men and boys who had been rushing from all quarters at sight of the balloon were told to hold the car, and the moment it stopped, I stepped on its edge and jumped, safe and sound, into a bank of heather.

"SHIRT-SLEEVE" CHRISTIANS.

It was Wednesday night—the regular night for the weekly prayer-meeting—and the lecture-room was uncommonly full. The pastor had taken for his subject the necessity of Christian work, and he grew more than usually eloquent over his theme. He exhorted his hearers to put the same earnestness and force into their spiritual labors that they did into their business.

"Why," he continued, "when I come round to see you in your working hours, in your offices and shops, or on your farms, I don't find you with kid gloves on. No, your hands are bare, and your coats are off, and sleeves turned well back out of the way; you're working then. Now we want the same thing in the church; we want more shirt-sleeve Christians."

Having reached this climax, the homely force of which made a visible impression upon his hearers, he called upon good old Deacon Shepard to lead in prayer.

The Deacon, as usual, sat in the front row, and his long, spare form rose slowly and with characteristic dignity. The seat was near the big wood stove, and the fire was a hot one. He thought it wise, therefore, before beginning his petition, which was always of liberal length, to remove his heavy overcoat.

But as the Deacon's overcoat was too small, while the undercoat was too large, it was easier to take off the two garments than the outer one alone. The Deacon knew this, and was accustomed to button the inner coat before removing the other.

Unfortunately, on this occasion he neglected the precaution. The congregation was waiting. He gave a quick tug at either sleeve, closed his eyes and began to pray.

Some irreverent boys whose eyes were open quickly observed the Deacon's strange conduct, the smiles became broader and more audible, and presently the minister himself glanced up and saw that the soberest and most dignified officer of the church had taken him literally at his word, and was standing up before the whole house, on a cold winter night, praying in his shirt-sleeves.

"JACKO."

"Jacko" is a tame rook, whose owner, a lady, writes to the London *Spectator* that she had kept him for five years, when one afternoon she noticed him march by her two or three times with a stick in his mouth. He was hard at work on the foundations of a nest. For a fortnight he worked almost without cessation all day long.

I really felt sorry for him, and sometimes tried to help him by holding up sticks one at a time, which he took from my hand as he wanted them. When at last the nest was finished he often had his afternoon nap in it.

There is a small rookery here, and this year, instead of building on his own account, Jacko tried to help the wild rooks. He followed them about with a twig in his beak, and kept with them all day, often running after them on the lawn with some of his dinner in his beak, wanting to feed them as he feeds the tame jackdaw, between whom and himself there is a strong affection. But they snubbed him dreadfully.

One day poor social Jacko must have thought he had at last found a responsive companion, for I found him bowing and cawing to the rook in the looking-glass! And more than once since then he has been seen going up-stairs with some delicacy in his beak evidently intended for his shadowy love.

Once while I was calling on a friend, a lady whom I did not know came in. She owns a rookery, and my friend told her of mine, adding that I was fond of rooks.

"Ah," said she, "so am I. I often say that through the season we almost live on rook pie."

When I suggested that I should not like seeing my rooks in a pie, her really delightful answer was, "No, some people prefer them stewed."

THE BORDER-LAND OF SCIENCE.

A great deal of interest has been awakened by some remarks made at the last meeting of the British Association for the Advancement of Science by Professor Oliver J. Lodge. Professor Lodge holds a high rank among men of science in England. Whatever he says is, therefore, entitled to respectful consideration.

Speaking of the limitations of man's knowledge of nature, he referred to the phenomenon known as "thought transference," and after recalling the fact, which of course everybody knows, that a thought can be transferred from one mind to another either by the agency of sight, as in writing, or of sound, as in speaking, he uttered these remarkable words:

"Is it possible that an idea can be transferred from one person to another by a process such as we have not yet grown accustomed to, and know practically nothing about? In this case I have evidence. I assert that I have seen it done, and am perfectly convinced of the fact."

Professor Lodge, who has devoted particular attention to this subject for a number of years, suggests that the ether which pervades space and conveys the waves of light, electricity, and so forth, may serve as a medium of communication between mind and mind. In this way many mysterious and apparently miraculous phenomena could be explained without resorting to supernatural agencies.

COLLEGE EXPENSES.

In these days of newspaper enterprise educational intelligence is not to be looked for exclusively in educational journals. Here, for instance, is an item clipped from *Texas Siftings*:

Mr. Manhattan Beach has just been paying sundry bills contracted by his son, a student at Yale College.

"I had no idea," said the old man to his son, "that studying was so expensive."

"Oh yes, it costs money," replied the young gentleman, "and I didn't study so very much, either."

CHRISTMAS TIME.

Christmas is a merry time,
Merry time!
Full of rhymes and full of chimes,
Full of toys and full of joys!
Merry time!

Christmas is a festal time,
Festal time!
Full of wreaths and glittering trees,
Bright surprise and sparkling eyes,
Festal time!

Christmas is a holy time,
Holy time!
Full of lays and full of praise,
Full of songs by happy throngs,
Holy time!

M. J. H.

nursery, Frank and Beatrice and all the rest of us rushed after Kitty? Sure enough, the ribbon stopped behind the sheet, at one of the nicest pianos you ever saw. It was just what Kitty had been wanting, and it was Aunt Katharine's gift. Of course there is a grand piano in the music-room, but Kit wanted a small one all her own, and she was so delighted.

I found lots of crimson ribbons, and they led me to beautiful things; but the very best of all went right out of the kitchen window. The window was low, and I went out with the ribbon, and what do you suppose I found? The prettiest pony alive! How Aunt Katharine knew just what I wanted most, I don't see. But I believe she knows everything.

After everybody had been to the end of his ribbons, papa whispered to me that he wanted to borrow my bow, and then he pinned it on Aunt Katharine's shoulder, and told her to "follow her color." He had fastened my crimson ribbons to all her presents, and we had such fun running all over the house after her, for papa had put them in such queer places. She found a beautiful oil painting in the attic stairway, and the cape that Kitty had knitted for her was in the nursery closet; the paper-cutter from Frank was in the dolls' house, and in her own room was a china dinner service from papa and mamma. I knew that meant that Aunt Katharine is going to a home of her own soon, and I don't like to think of that time. She is the loveliest aunt that ever a boy had, and I never thought so more than on Christmas eve, when she gave us all so much pleasure by her new way of arranging our presents.

For the Companion.

A CHRISTMAS WISH.

"If you could make a wish, my dear,
And make but one," said I,
"Just one sweet wish, for all the year,
What should it be? now, try."

She thought a minute, gave a twirl,
Her eyes began to shine;
"I'd wish that every little girl
Could have a doll, like mine."

ADA C. H. STODDARD.

THEY were talking of the coming holidays in Edie's class, at Sunday school. "What do you remember last Christmas by?" asked Miss Lane. "What was the nicest thing about it?" Edie is a very little girl, but she does like good things to eat as well as anybody. She put up her hand. "I know," she answered, quickly; "plum-pudding."

For the Companion.

"FOLLOW YOUR COLOR."

That is what Aunt Katharine said when she pinned the little ribbon bows upon our shoulders.

We had been waiting in the parlor while Aunt Katharine arranged the Christmas tree in the sitting-room. We had all helped to hang on the apples and oranges and bananas and grapes and bright-colored bags of candy, that were to be distributed after it was all over with the presents; but not a single gift was in sight then, and Aunt Katharine had charge of them, as she said she had a new way of arranging them. Everybody had given their presents for everybody else into her keeping, except those intended for Aunt Katharine herself, and papa said he would manage about them.

Well, Aunt Katharine finally came into the parlor, and said that the tree was ready, and she pinned a bow of ribbon on everybody's right shoulder, and told us to follow our colors.

The color of my bow was crimson; Kitty had blue; mamma's was olive; little Stanley's was yellow; everybody had a different color.

Oh, you don't know how pretty that tree looked! There were dozens and dozens of ribbons, of every color imaginable, suspended from the branches, and leading out of the room through the open doors. Some were tied to packages in the hall, some to bundles on the dining-room table, and some led up-stairs. All we had to do was to find a ribbon of the same shade as our bow, and to follow it to the end.

A sheet had been hung across one corner of the nursery since the day before, and we had longed to know what was behind it. But papa had told us that we were not to take even a peep, and we had not. Do you wonder, then, that when one of Kitty's blue ribbons led straight into the

WINNIPEG.

Daisy is a little brown-haired, rosy-cheeked girl scarcely five years old.

Her real name is Winifred Marguerita Westmoreland, for her two grandmothers; but this is such a very long name for such a very short little girl, that nearly everybody calls her Daisy.

Her mamma calls her Winnie, and her papa calls her Peg, but brother Charley calls her Winnipeg, and when she cries, which she sometimes does for very trifling causes, he always names her Lake Winnipeg.

Daisy doesn't mind the Winnipeg, but she thinks Lake Winnipeg is just awful, so she has learned to think that the wisest and best thing a little girl can do when she is hurt or angry or frightened is not to cry.

She has the warmest and tenderest heart in the world, full of love and pity for those in trouble.

Winifred Marguerita, or Daisy, or Winnie, or Peg, or Winnipeg Westmoreland, whichever *you* may choose to call her, is the daughter of an army officer living at a post in Indian Territory.

Last Christmas the wives of the officers determined to celebrate the day in grand style.

A hall was decorated and lighted, and everybody assembled in it Christmas eve.

The little Indian children were invited, and came with their mothers.

There was music on the piano, and singing and recitations, to all of which the little Indians, huddled in a corner, listened with perfect quiet and stolidity; but when Santa Claus appeared through a trap-door with a sack of toys on his back, they all took fright and stampeded like a herd of young broncos.

The squaws, their mothers, followed them, herded and drove them back, and made them go up to Santa Claus to get their presents. But they did it in great terror, hiding their faces with their arms and scanty clothing.

Daisy was sitting in her papa's lap, cuddling a lovely wax doll, which Santa Claus had just given her, when she saw the tiniest Indian of them all, holding tightly with both hands to her mother's dress, while two great tears stood in her frightened black eyes.

Slipping from her papa's knee, she ran over to the little Indian, laid the doll in her dusky arms, and tenderly wiping the tears from her eyes, said:

"There, little Indian! Take my boo'ful dollie to love and to keep. And don't you cry. If you do, Charley will call you a lake, and that is perfetly dreffful."

MEDDY is a very inquisitive boy, especially at Christmas times. "Mamma," he asked, "was Santa Claus a little boy, once?" "I think so!" answered mamma. "Just like me?" "Very much like you, I shouldn't wonder, dear."

"Well, then," burst forth Meddy, after a moment's study, "who filled his stocking for him?" Mamma couldn't answer that question. Can you?

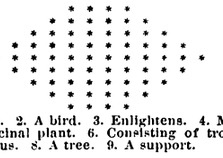
Enigmas, Charades, Puzzles, etc.

1.

DOUBLE LETTER ENIGMA.

In "Christmas," with its joys so bright;
In "Holiday," filled with delight;
In "Mistletoe," hung in the halls;
In "Holly" fine, to deck the walls;
In "Ladies" fair, with satin gowns;
In "Gentlemen," all free from frowns;
In "Children," who sweet carols sing;
In "Mothers," who rare pleasures bring;
In "Characters," which we perform;
In "Snowflakes," mingling with the storm;
In "Candles" that are placed o'erhead;
In "Chapters" from the Bible read;
In "Youngsters," loath to go to bed;
And now a certain time please name,
Though different words, they mean the same.

2.



RIDDLE.

I am nearly nineteen hundred years old, and I visit the world once every year. I come to bring happiness where there is sorrow, and peace where there is strife. I am greeted with many sweet-sounding instruments and songs of praise. All Christian nations are glad because of me, and there is mirth and feasting and joy wherever I go.

HIS BLUE BAG.

Dr. Frank Buckland, the naturalist, was one of the men about whom it is natural for anecdotes to cluster. Wherever he went he carried an umbrella and a blue bag. Of the bag he used to say that the greatest honor it ever had received was when Lord Grenville once insisted on carrying it; and the worst disgrace it had ever suffered was when its owner called upon Sir Humphry Davy three or four times in one day, and always found him not at home. At last Sir Humphry said to his servant, "Has Doctor Buckland not called to-day?" "No, sir," answered the servant, who evidently believed himself a judge of human nature; "there has been nobody here to-day but a man with a bag, who has been here three or four times, and I always told him you were out."

The foregoing anecdote is related in Doctor Richardson's biography of Thomas Sopwith, and Mr. Sopwith himself, in his diary, relates another.

Soon after the opening of the Great Western Railway public attention was called to the inclination of the Box Tunnel, which was said to be nearly in the same direction as the bedding of the strata. The thin, wedge-shaped edges of the stratified rock were liable to scale off, it was thought, and there was danger that the vibration which accompanies the passing of the train might bring them down upon the carriages.

On this subject Doctor Buckland made some observations at a meeting of the Institution of Civil Engineers, and this was followed by comments in the *Times* and other papers.

Shortly afterward an elderly gentleman was travelling in a first-class carriage between Bristol and the Box Tunnel, which latter place the train was approaching. Several persons were in the carriage, and the conversation turned on the alleged insecurity of the roof of the tunnel.

A smart young gentleman, who sat opposite the gentleman already mentioned, said there was no danger, and freely ridiculed the nonsense which Doctor Buckland had uttered and written about it.

"So ignorant is the doctor about the matter," said the young man, "that he does not even know the shape of the tunnel, for he wrongly describes it."

"You appear to be well acquainted with the subject," remarked the elderly gentleman.

"Yes," was the reply, "I certainly ought to be, for I am one of the engineers employed on the line."

"Is this, then, the shape of the tunnel?" asked the elderly gentleman, at the same time exhibiting a drawing of it on one of the pages of a memorandum book.

"Oh, dear, no!" said the youth, "nothing like it. That's the shape Doctor Buckland has described, and he is all wrong; he knows nothing about it."

"Well," said the elderly gentleman to the listening passengers, "I suppose we must pay great deference to this young gentleman, as he is an engineer on the line, and perfectly well acquainted with the tunnel. At the same time let me say that I am Doctor Buckland, and that this sketch was drawn for me this morning by Mr. Brunel."

Mr. Brunel was at the time the greatest engineering authority in England!

OUT OF SIGHT.

Harry is a ten-year-old boy who indicates a disposition to become an artist. In this he is assiduously encouraged by his father. The lad has a "box of paints," brushes, pencils, and plenty of rough paper. Harry's father is devoted to the theory of realism in art and literature, and occasionally lectures his little boy on the duty of trying to represent things just as he sees them.

"If you are always accurate, faithful, true to the fact, if you try to give in miniature a representation of what your eyes really behold, you will be always in the right way. Do you understand what I mean, Harry?" said the father, recently.

"Yes, papa, I think I do."

Not long afterward Harry invited his father to come and see his picture of a mountain. It consisted of a considerable quantity of sand and gravel shovelled around and upon the projections of a rough boulder in the back yard.

"You have not quite caught my meaning, Harry, though you are certainly very conscientious," said the father, jocularly. "It's magnificent, but it's not art. You should not use the materials of your original in copying it. That would be to make a model. You must try to draw a picture of what you see; draw it with pencil and paper, and colors, too, if you like. Don't draw anything you don't see. I dare say that is the easiest way of telling you the sound artistic rule."

Soon Harry came back with his drawing pad.

"Here's a picture of a pigeon, papa."

"Pigeon! I don't see any pigeon. Why, there is nothing but a straight up and-down line, and two others meeting it at right angles."

"Well, papa, that's the corner of the fence. The pigeon went around the corner just when I was going to begin. You told me not to draw anything I couldn't see."

LITTLE MAN.

The Boston *Transcript* prints an anecdote of a gentleman who was given to making friends with children wherever he met them, and who one day tried to scrape acquaintance with a little fellow-passenger in a street-car.

The child wore a crimson plush cloak, and had long yellow curls, so the gentleman began with much confidence:

"How do you do, little girl?"

"I'm not a little girl," was the shy response.

"Oh! Aren't you? Well, then, how do you do, little boy?"

"I'm not a little boy," was the unexpected answer.

"Indeed! Who are you, then?"

"I'm my papa's little man," said the youngster, with perfect dignity.

DESERVED A MEDAL.

Mr. Richard Redgrave, the artist, records in his diary this amusing recommendation from an Irishman appointed to examine students competing for medals:

I should also recommend Margaret —— for a reward. Being very young, she naturally missed the point of *all* the questions in the papers, but her answers were so ladylike that I think the medal should be given to her.

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

DONALD KENNEDY Of Roxbury, Mass., Says: Strange cases cured by my Medical Discovery come to me every day. Here is one of Paralysis — Blindness — and the Grip. Now how does my Medical Discovery cure all these? I don't know, unless it takes hold of the Hidden Poison that makes all Humor.

VIRGINIA CITY, NEVADA, *Sept.* 9, 1891.

Donald Kennedy — Dear Sir: I will state my case to you: About nine years ago I was paralyzed in my left side, and the best doctors gave me no relief for two years, and I was advised to try your Discovery, which did its duty, and in a few months I was restored to health. About four years ago I became blind in my left eye by a spotted cataract. Last March I was taken with La Grippe, and was confined to my bed for three months. At the end of that time, as in the start, then it struck me that your Discovery was the thing for me; so I got a bottle, and before it was half gone I was able to go to my work in the mines. Now in regard to my eyes, as I lost my left eye, and about six months ago my right eye became affected with black spots over the sight as did the left eye — perhaps some twenty of them — but since I have been using your Discovery they all left my right eye but one; and, thank God, the bright light of heaven is once more making its appearance in my *left* eye. I am wonderfully astonished at it, and thank God and your Medical Discovery.

Yours truly, HANK WHITE.

BREAKING A BRONCO.

A loose, sandy spot is chosen for the breaking of the "bronco," the name by which the wild horses of California and Arizona are known. Squealing, struggling, biting, kicking, bucking, rolling in the dust, and a double back somersault—these are parts of the grand performance whenever a bronco is broken to the saddle. Captain Bourke describes in his book, "On the Border with Crook," the fun and excitement associated with breaking "broncos" by a troop of United States cavalry.

The animal was first thrown, blindfolded, and then the bridle and saddle were put on, the latter girthed so tightly that the horse's eyes started from the sockets. Then, armed with a pair of spurs of the diameter of a soup-plate and a mesquite club big enough to fell an ox, the Mexican "vaquero" got into the saddle, the blinds were cast off, and the circus began.

There would be one moment of doubt as to what the "bronco" was going to do; now and then it might seem for a few seconds as if a really mild-mannered steed had been sent to the post by some mistake of the quartermaster's department. But this doubt never lasted very long. The genuine "bronco" can always be known from the spurious one by the fact that when he makes up his mind to "buck," he sets out upon his work without delay, and with a vim that means business.

If there were many horses arriving in a "bunch," there would be lots of fun. The men would mount, and amid the encouraging comments of the lookers-on would begin the task of subjugation.

The bronco nearly always looked around and up at his rider with an expression that was benignant; then he would roach his back, get his four feet bunched together, and await developments. If the rider foolishly listened to the suggestions of his critics, he would always mistake this temporary paroxysm of docility for fear or lack of spirit.

"Arrah, thin, shtick yer sphurs int' him, Moriarty," some foolish bystander would call out. No sooner did the rider heed this evil advice and strike the bronco's flanks with his rowels than the air would be filled with a revolving mass of mane and tail and flying hoofs, while the Irishman would shoot like a meteor into the sand and plow it up with his chin.

HARD TRAVELLING.

It is not to be expected that men should fully appreciate comforts to which they have always been accustomed. In America, for example, people get from one part of the country to another with so much ease and convenience that it all seems a matter of course. But if one undertakes a journey in China he is likely to set a new value upon carriages with springs, and some other every-day mercies of a kindred sort.

In North China, according to an English missionary, you may perhaps have your choice of three methods of travel. You may, if you will, take your place in a springless Pekin cart, a kind of box or cage, with no seat. The passenger is obliged to squat on the floor cross-legged, or to sit with legs stretched out at right angles with his body, and as the cart jolts over great stones or through the deep ruts in the road, he is liable to be bruised black and blue.

If such a cart looks uninviting, you may conclude to try a mule-litter. This consists of an oblong box slung between two mules, which never keep step, and not infrequently quarrel, and the swaying, unsteady motion is as bad as that of a ship in a heavy squall. Or, once more, you may prefer to ride a donkey with a backbone like a razor, and probably with no saddle, and a single rope for bridle.

As for travel in Southern China, some of the tribulations of it may be gathered from what the same author says of his own experience as he approached a great city.

"The tide was out, and we had to avail ourselves of buffalo-carts in order to reach the ferry-boat. These carts are most rickety and unstable vehicles. You sit leaning forward on the broad rail to avoid a jerk backwards. A Chinese in a cart near the one I rode in, entranced by the sight of a foreigner, incautiously turned to gaze, and in an instant he was on his back in the mud, and was greeted with a roar of laughter from his unfeeling compatriots."

ABSENT-MINDED.

A very absent-minded man was Lord X——, who prided himself upon being very indulgent and considerate to his servants. His coachman had been suffering from a light attack of lung fever, but returned to work during the prevalence of some rough weather.

"Do you think, James," said Lord X——, "that you are well enough to drive me to-day?"

"Oh, yes, your lordship, if I wrap myself well."

"Ah! Well, I will tell you what I will do, James. I intended to go out in the victoria to-day, but, in order that you may escape the exposure, I will go in the coupé instead!"

So he drove out in the coupé, which, although it was a covered vehicle for himself, left the unfortunate coachman as much out in the rain as if he had been driving the victoria.

But Lord X—— had the complacent air, as he drove, of doing a very kind and merciful thing.

IOWA CORN.

The extraordinary crops of the past season throughout the greater part of the West have been matters of constant mention in the newspapers, and have inspired some funny man with the following tale, as reported in the Washington *Star*:

A man recently from Iowa says that he saw a farmer standing at the foot of an enormous cornstalk.

"How big is your corn?" asked the stranger.

"I don't know," answered the farmer. "I sent one of my boys up to see a little while ago, and I'm worried to death about him."

"How so? Can't he get back?"

"No; that's the trouble. The cornstalk's growin' up faster than he can climb down."

"MARY could not go to school this forenoon," read the teacher from the pile of notes left on her desk, "because her mother has broken her leg and I hope she will be excused for it.—HER FATHER, J. SMITH."

Itching Piles.

Burnett's Kalliston is a sure relief. A quarter pint bottle by mail only for 50 cts. Joseph Burnett & Co., 27 Central St., Boston, Mass. Regular size by druggists, $1.

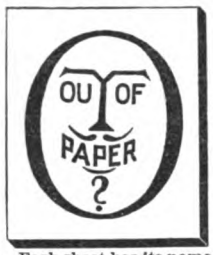
A gift which pleases and benefits is the best. We will send **FREE** on application a Catalogue of Exercising Apparatus, Gymnasium Goods, Bicycles, Cameras, Foot-balls, Skates, etc.

Dr. Cyrus Edson says of our Exercising Machines: "The best for the Health made."



MERWIN, HULBERT & CO., 26 W. 23d St., N. Y. City.

How to have a fresh skin—It grows from within and is worn off and washed off outside. A proper skin is neither too old or new; if too new it is red and tender; too old, it is worse, it is dead and corpse-like.

Active people easily have good skin, they *have* to wash; but people of leisure sometimes grow sallow because the skin is not washed enough.

What is wanted is a soap that does not affect the live skin underneath, but washes off the dead outside. Can't use it too much or too often. That is Pears'.

All sorts of stores sell it, especially druggists; all sorts of people use it.

BOSTON RUBBER SHOE COMPANY.

Digitized by Google

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

DIPHTHERITIC PARALYSIS.

Paralysis, more or less extensive, is one of the most common sequels of diphtheria. The parts oftenest affected are the palate and pharynx. The paralysis generally comes on only some weeks after the beginning of convalescence. In moderate cases it shows itself in a nasal tone, some difficulty in swallowing and the regurgitation of liquids through the nostrils.

The paralysis sometimes affects the muscles of the face, rendering articulation difficult, and suction and gargling impossible. It may affect the muscles of the eye, causing a squint and preventing the adjustment of the eye to varying distances.

The effects may extend to the muscles of the limbs, especially the lower, either on one side or on both. Indeed, the paralysis may be general, and, in rare cases, says Flint, it involves not only all the extremities, but also the muscles of the face, throat, mouth, neck, trunk, and certain of the involuntary muscles.

Formerly diphtheritic paralysis was regarded as due to an extension of the inflammation to the nerves. This view is now abandoned. It was found ten years ago that the diphtheritic poison gave rise to a degeneration of the spinal nerve-cells, but this injury is temporary and susceptible of repair.

It is now believed that diphtheria is not caused directly by microbes, but by a poison secreted by them. For this reason the paralysis does not generally occur at the same time as the diphtheritic membrane, but even after the disappearance of the microbes, and after the poison has had time to alter the constitution of the blood.

The poison acts first on the nerves nearest the point of inoculation, and is often limited to this region. "But," says the Boston *Medical and Surgical Journal*, "we have to do with something more than a mere local impregnation with poison, as, in the majority of cases, we see the paralytic symptoms diffuse themselves progressively. It is certain that the poison acts exclusively on the nervous system by determining [giving rise to] functional, rather than destructive, modifications."

Hence diphtheritic paralysis may be expected to pass away with time and care, and this is what we see.

COMETS' TAILS.

The tails of comets are evidently composed of finely divided matter driven off from the bodies of the comets, perhaps by the effects of evaporation or of electrical repulsion, as they approach the sun. From the kind of curve that the tail describes inferences have been drawn as to the nature of the substances which the comet contains.

Sometimes a comet has a long, straight tail pointing directly away from the sun, and almost at a right angle to the path in which the comet travels when it is near the sun. Such tails are believed to be composed of hydrogen which, on account of the lightness of its molecules, would be driven off by the repulsive force with great velocity.

Other comets have splendid sword-shaped or scimetar-shaped tails, bending gradually backward on the side away from the sun. It is inferred that the particles composing such tails are driven off with a smaller relative velocity, as would be the case if they were the molecules of carbon combined with hydrogen. Many combinations of carbon and hydrogen are known to chemists, so that the constitution of such comets presents, in some respects, a likeness to things familiar to us upon the earth.

Still other comets have short bushy tails bending sharply backward from the direction of the comets' motion. These tails, it is thought, may be composed of the molecules of iron. Probability is lent to this view by the fact that meteorites are largely composed of iron, and there is an undoubted connection between meteors and comets.

A few years ago a comet appeared whose tail presented such a peculiar curvature that it seemed to be composed of particles heavier than the molecules of iron, and it was suggested that, in this case, gold was the element concerned! A golden visitor from the mysterious realms of space, shining for a short time in our skies while it paid its respects to the sun!

Quite recently a new line of inquiry into the nature of comets has been pointed out by Mr. Barnard, of the Lick Observatory. He has called attention to the fact that comets of short period—that is those which travel in comparatively short orbits, and appear again and again in the neighborhood of the sun after only a few years' absence—bear a striking resemblance to one another, and differ in appearance from other comets.

They are large, round and diffuse, becoming very gradually brighter in the middle but possessing no decided nucleus, and they have no tails. Recently upon the appearance of a previously unknown comet which possessed these peculiarities he predicted that it would prove to be a comet of short period, and so it has turned out.

Comets are subjected to forces that gradually scatter their substance as they swing time after time around the sun, and in this way they are eventually changed into swarms of meteors. The peculiar appearance noted by Mr. Barnard in short-period comets may simply arise from the gradual disintegration of those bodies, which, in the course of ages, may disappear and never again be seen by man, unless perchance a meteoric fragment that once formed part of their substance should encounter the earth, and fall upon its surface.

OPERATING ON A TIGER.

Dr. Haughton, the Curator of the Dublin Zoölogical Society, discovered that one of the tigers was lame. Upon examining its paws through the bars of the cage he found that a claw was growing inwards into the ball of the foot, causing the poor brute great agony whenever it tried to walk. The doctor determined to cut out the claw.

Five keepers assisted him, three in front of the cage and two behind. The tiger was lassoed and, much against his will, tied down, the five keepers firmly holding the rope. The doctor then raised the bars, entered the cage, and began operating.

But he had forgotten to guard himself against the tigress in the cage adjoining. She managed to reach him with one paw and knocked off his hat. The keepers, seeing this, took fright, let go the rope and fled, leaving the doctor at the mercy of his patient. The tiger jumped up and prepared to spring, but the doctor jumped through the raised bars and pulled them down. Against them the tiger dashed, gnashing and foaming with fury.

The doctor called the keepers together, and reprimanded them for their cowardice; then he locked the doors, put the keys in his pocket, and said:

"I intend to perform this operation whatever happens. You will fix the lasso again, and if you let go the rope this time, I can escape and you will be left with the tiger."

The men behaved bravely, the troublesome claw was successfully removed, and was afterwards worn by the doctor as a scarf-pin.

From that time, whenever the tiger heard its friend's footstep it would throw itself on its back, purr, roll about to attract his attention, and would never be satisfied till he approached and recognized it.

PATRICK'S HIGH STANDING.

Patrick O'Reilly is one of those men who achieve greatness at an early period in life; at least, so said his sister.

"Oh, Brother Pat's doin' well," announced she, as she scrubbed away over the tub, and entertained her employer. "He's just doin' illigant. Why, when he went up to Boston, he had just one shirt to his back, an' me sewin' till twelve o'clock to make him another for a change.

"Oh, but he's the bye for luck! And now from bein' a newsbye he's jist rollin' in money, and he sends me a tidy bit besides. He writes to me, too, an' tells me about his horses an' what colors they be."

"Horses, Bridget? Does he keep horses?"

"'Deed, thin, he does, ma'am; he's a driver on a car. They think a lot o' Pat up there, they do. Why, what did they do but put his pictur', foine as life, in the paper."

"I *am* surprised!"

"Surprised ye may be, ma'am, but it's true. There it was, and over it Pat's letter, signed wid his own name, sayin' how he'd been cured of his cough by Bilkins's Balm."

HE TOOK PRECAUTIONS.

The phrase "quicker than lightning" has commonly been understood hyperbolically, but here was a boy who took it in a literal sense.

Anxious Mother—What in the world did you do during the terrible thunder-storm?

Little Dick—I got under a tree.

Mother—Horrors! Don't you know that the shade of a tree is the most dangerous of all places in a thunder-storm?

Little Dick—Oh, yes; but I jumped out every time it thundered.—*Good News.*

WELL SAID.

A certain well-known truth has perhaps never been more neatly and pointedly expressed than in the following instance, reported in *Harper's Magazine.*

A youthful Harvard graduate was arguing with a hard-headed, self-taught man of business, and it is fair to suppose, was getting the worst of the argument. At all events, he was driven to saying: "Now, as a matter of fact, Mr. ——, you don't know half as much as I do."

"That's so," said the business man; "but then, as far as that is concerned, neither do you."

AT LAST.

Perseverance and devoted affection sometimes have their reward, in spite of croakers.

Tom—Why, Charley, how beaming you look to-day! What has happened to cheer you up so?"

Charley—I've been courting a girl for a long time, but she would never admit that she loved me. She would only say that she respected me; but last night she confessed that she respected me no longer—that she loved me.—*Exchange.*

To prevent trousers from bagging at the knee, always get up and give the lady your seat.—*Boston Herald.*

Throat Troubles commence with a Cough, Cold, or Sore Throat. "*Brown's Bronchial Troches*" give immediate relief. Sold only in boxes. 25 cents. [*Adv.*

Yes, Vanilla is expensive, and when one buys an Extract at a low price, do not be disappointed if it is poor or disagreeable in flavor. For absolute purity, we recommend Burnett's Extract of Vanilla. [*Adv.*

A Splendid Article for Home Decoration.
"RAINBOW" ENAMEL.
A paint in all colors. Bottles 25 cents and 50 cents each. Positively the best enamel made. **Try it.**

WHAT PIANO?

If only to furnish a room, any pretty case will do; don't waste a good piano.

But *musically*, it is of immense importance what piano you buy.

Its life will be twenty years perhaps. These years are to make or mar your musical life. Then don't make the mistake of a choice that you will spend years regretting.

In the Ivers & Pond Piano you will not only get what you want, a first-class instrument; you will also get all that you pay for.

We will send a piano on approval and pay the freights out and back if it fails to suit; or we will direct you to the nearest dealer who can supply you. Write for Catalogue.

IVERS & POND
Piano Company,
BOSTON.

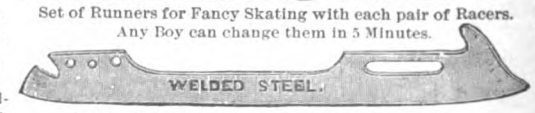
THE CHRISTIAN HERALD
AND SIGNS OF OUR TIMES
Published every Wednesday at 91 to 96 Bible House, New York, at $1.50 a Year. Louis Klopsch, Publisher.

A HOLIDAY GIFT FROM DR. TALMAGE.

THE CHRISTIAN HERALD, Edited by Rev. Dr. Talmage is the Brightest, Breeziest, and Best Illustrated Religious Newspaper in the Country. It enters the Home like a Ray of Sunshine, full of Comfort and Good Cheer. There is not a dull, stupid line in it. Every Week it Contains a PIECE OF MUSIC and words Selected by Ira D. Sankey. 1,000 Pages a Year. Full of Pictures. Subscribe at once.

FOR $1.50
We will Send THE CHRISTIAN HERALD for One Year—52 Issues—and in Addition we will Send a GENUINE
Oxford Teachers' Bible,
Containing, 1450 Pages, and measuring open, flaps included, 7x11 inches.
FREE! FREE! FREE!

It is Leather Bound, Gilt Edge, Overlapping Edges, and Contains ALL THE HELPS, including CONCORDANCE, 40,000 References, Subject Index 16,000 References, Twelve COLORED MAPS, and Other Valuable Helps.



FOR $2.00
we will send you "THE CHRISTIAN HERALD" every Week, for One Year and, in Addition, A BEAUTIFUL SECTION OF
Genuine Olive Wood
from the MOUNT OF OLIVES, and Polished to Perfection by Native Workmen in JERUSALEM.
These Beautiful Sections are Nearly one Inch Thick and About
TWELVE SQUARE INCHES
Surface Measurement. In Refined Oriental Homes they are Used as Mantel Ornaments. Each Section is Complete and Entirely Surrounded by the Fragrant Olive Bark.
A MORE BEAUTIFUL AND APPROPRIATE HOLIDAY PRESENT cannot be Conceived than a Section of Olive Wood from Sacred Mount Olivet, where the Master Taught His Disciples the Lord's Prayer, and at the Foot of which the Garden of Gethsemane, Blossoms as it did in the Days of Him, the Anniversary of Whose Birth all Christendom Celebrates this Month.

ADDRESS,
T. De Witt Talmage
91, 92, 93, 94, 96 BIBLE HOUSE, NEW YORK CITY.

Raymond Extension Double Runner Speed Skate.
Made in 3 qualities of the best steel and fully warranted.
40 MILES AN HOUR.
FINEST SKATE IN THE WORLD.

Set of Runners for Fancy Skating with each pair of Racers. Any Boy can change them in 5 Minutes.

This Skate can be Adjusted to Fit all Men and Boys.

No. 1. A. $2.50.
No. 1. B. $3.50.
No. 1. C. $5.00.
B & C quality Nickel-Plated and Polished.

If your dealer does not keep them, send direct to us. Will be sent Express paid on receipt of price. Catalogue free.

Single Copies, Five Cents.

For the Companion.

THE LAST OF RAVENSHOE.

Until within the last year Ravenshoe Grange was one of the principal landmarks of the Norfolk fens—that part of the North Sea coast of England which is so much like Holland. Built on a narrow island that lies between the Raven's Broad and the sea, it was visible for miles in every direction.

Since the beginning of the present century it had been in the tenacious grasp of the Court of Chancery, and as nobody could be induced to live in such a desolate place, everything about the old country house had fallen into decay.

The great lantern tower where, in Elizabethan days, a Spanish prince was imprisoned, fell forward into the marsh fifty years ago, and carried with it much of the east wing. The other sides, the building was quadrangular, were left to the bats and owls, and to every wind that blew; for nearly all the mullions had given way, and save for a few drooping lattices loosely fitted with diamond-shaped panes, every window left a wide and lofty means of entrance.

To the inhabitants of Barnborough Regis, the village whose Saxon spire just overtops the firs on the shore, the Grange had a somewhat evil repute. Smugglers had dwelt there once, and by getting themselves up as ghosts had originated such terrible legends that even in the heat of mid-day no fisherman could be induced to land his boat on the "spit," as the island was called.

So the Grange was entirely renounced to the elements, and never visited except by inquisitive tourists, who were under the necessity of rowing themselves over to wander alone through the untenanted rooms. Moreover, it was possible to land only at high tide, for between the waves and the terrace walls lay what had once been a garden, but was now a dark and ill-smelling mud-flat, covered by the water for half an hour only.

On an oppressively hot June evening, when the Raven's Broad was veiled with a thin web of silver mist, and the declining sunlight so powerful that even the birds had not sufficient energy to sing, a gaily painted boat, whose name—the *Swan*—was inscribed in gilt letters, rocked beside the small private jetty that belongs to Barnborough Park—the manor-house. Two lads stood together on the planks, looking down into the clear waters of the Wennet, a slowly moving stream that passes through the Broad.

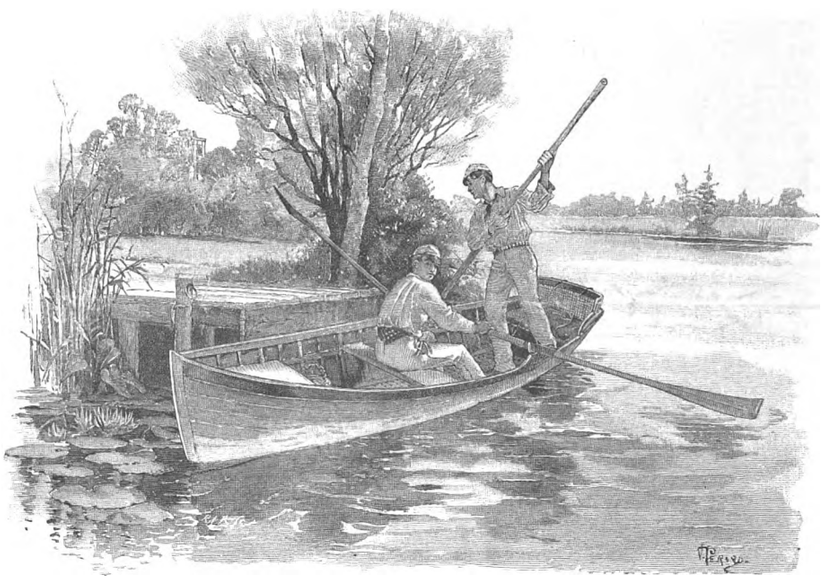
The taller of the two, Jack Loughton, was about fifteen—a pale youth, with blue eyes and curly light brown hair; the other, Austin Holderness, a year older, slighter of limb and dark-complexioned.

They were the son and nephew of Squire Loughton, the lord of the manor, and had been bosom-friends and mates from early childhood.

This evening, to judge from the rather furtive look on their faces, they were setting out upon some expedition which their consciences did not altogether approve. Squire Loughton and his wife and daughter had gone the day before to attend a wedding party at a distance, and the boys, thrown on their own resources, had resolved to carry out a long cherished plan to spend a night at Ravenshoe Grange.

"I say, Austin," Jack said, as he thrust out one foot to steady the boat, "do you think there's really any harm in going there when they're all away? There seems something not quite open about it."

"Come!" his cousin cried. "I really believe you're getting afraid of the idea! Uncle never objected to our doing it. I am sure when he hears of our pluck he'll be as pleased as —"



Here he paused for want of a simile. He was right in saying the Squire had never forbidden their visit. Such an idea had never entered his head. But if he had known of their trip, he would have forbidden it decisively.

"Well, I'm ready," Jack said, rather reluctantly. "You take the rudder. I'll row. Are you ready? Off!"

So they began to glide down the wide, sleepy current. The Broad was nearly a mile long, and was rendered quite invisible from the highway that led to Barnborough Regis by a sloping plantation of firs and maples.

Soon they reached a sharp corner where stood a thatched cottage. Jack rested his oars just as they came in sight of it.

"You're sure Cranberry told you that he was going to the goose-market?" he inquired. "He might make us trouble if he saw us. You remember how he grumbled about those decoys we altered."

Setting out for Ravenshoe.

Cranberry was Squire Loughton's keeper. He was an old, very tall and lean, and very crusty bachelor, who did all his own housework, and was wont to declare that no woman could either wash or bake half so well as he. He had the management of the decoys,—long wicker tunnels into which wild fowl were lured by dogs,—and some time before Austin, by attempting to improve the mechanism of one of these, had incurred the old man's extreme displeasure.

"I'm quite sure he said he was going. Whew! There he is!"

While he spoke the keeper's bent figure issued from the doorway. Instead, however, of looking in their direction, he threw his gun over his lank shoulder, and turning round the cottage, was soon out of sight.

As soon as he had disappeared, Jack began to row more vigorously, and before many minutes had passed they had reached the terrace of Ravenshoe Grange, and had steered through a gap in the wall to the broken stone-work of the portico.

Here they disembarked. The cargo consisted of a small spirit stove and kettle, a luncheon-basket filled with provisions, and several travelling rugs, all of which they had taken out of the manor without informing any one.

After fastening the boat to an iron stanchion in the door-post, they deposited the stores on a window-seat, and began to roam from chamber to chamber.

Since the garden embankments had given way, the sea had entered every room at high tide, rotting the panelling, and covering the broken oaken planks with wrack and shells. Up-stairs some of the chambers were in comparatively habitable condition.

Meanwhile black clouds had gathered in the west, and the hot air grew more oppressive. A numbed whistling crept through the deserted rooms. The place was so hollow and so empty that it murmured like a shell at the least sound.

After a while a few heavy drops of rain fell.

"It looks as if we were going to have a bad night," Austin said, as he stood peering out from the central window of what had once been the picture-gallery. "The sea is as choppy as it can be, and there isn't a smack in sight."

Jack looked grave. "We'd better get the boat higher, then," he said. "We should be in an awkward fix if she were to be swamped."

They descended together to the hall. To their great surprise the *Swan* was no longer where they had left her. The rope by which she had been fastened had evidently become loose, and before long they discovered the tiny boat about thirty yards away, quite out of their reach, half-filled with water, and being carried out by the retreating tide.

Austin turned to his cousin with a scared face. "How are we to get back to-morrow?"

"Oh," said Jack, very encouragingly, but a little weakly, "there are sure to be plenty of fishermen we can signal to in the morning. Let's lose no more time, but look again for some place to sleep in. You take the rugs. I'll carry the provisions."

Up in the octagonal turret they found a room which was called the "Lady's Oratory," and had been used in former times for devotional purposes.

The windows here were still glazed, and contained much ancient stained glass which depicted scriptural scenes.

An elaborately carved reading-desk was fitted into the wall. The ceiling was parquetted with designs of roses and crowns—the badge of the Ravenshoes—and the seven lattices commanded all the points of the compass.

Jack lighted the spirit lamp, and filling the kettle out of a large stone bottle they had brought, proceeded to boil the water for tea. It was now almost dark outside, and the rain was pattering on the roof. The tea was exceedingly strong, and as cream and sugar had been forgotten, it was drunk unalloyed.

Neither of the boys did more than make a pretence of eating; for although they would not have confessed it under any penalty, the loss of the boat had unnerved them.

Two candles were lighted and fixed on the mantelpiece. Their dim, quivering light only served to make the gloom more weird. The storm was beginning to rage with violence. There is nothing in the world so indescribably wild as the whistling of the wind through an old ruin; and more than once the boys were startled by pieces of stone that were dislodged, and fell cracking loudly on the large, open hearth.

Unrolling the rugs, they spread them on the floor and lay down.

An hour passed in vain seeking for rest. The boys were silent, and probably would have remained so had not a wonderfully brilliant flash of lightning rent the sky from end to end; then after an ominously short pause, a loud peal of thunder followed. Before it had ceased reverberating, they were at the window looking seaward. The now flowing tide was angrily perturbed. Enormous billows, flecked with long white plumes, were beating against the terrace wall.

A few sea-gulls, whose glittering wings shone through the blackness, were swooping over the surface as though hunting for carrion. Loose clots of sea scum were caught by the wind, and dashed furiously against the windows.

The cousins sat on the step of the reading-desk, and gazed into each other's eyes. Each one saw in the tremulous candle light that the other's face was ghastly.

Another fork of lightning rent the outer darkness, and simultaneously with it came a deafening crash of thunder.

Jack drew Austin more closely to him.

"I say, Austie," he whispered, going back to the name he had used in childhood, "do you—do you think it struck the place? It looked exactly as if it had cut the wing in two!"

"Nonsense!" Austin replied, with parched lips. "Let us lie down again. It only upsets one to look out on such a fearful sight. We'll try again to get some sleep."

They returned to their hard couch. Jack, who was now thoroughly exhausted, soon fell into a heavy slumber; but Austin was unable to close his eyes, and lay watching the bright flashes and listening to the sullen roar of sea and skies.

Before many minutes had passed he was alarmed by a sort of glare in the room that was more steady and less brilliant than the lightning. He rose quietly, and opening the door, looked into the corridor. A strong smell of burning wood met him there, and at the furthest end he saw a thin tongue of flame licking the panelling.

He ran back to his cousin, and kneeling beside him shook him roughly.

"What's wrong? Is it time to get up?" Jack muttered, drowsily.

"Be quick and waken, for heaven's sake!" Austin cried. "The lightning has struck the place! The east wing's on fire! We shall have to get down the staircase as quickly as we can!"

Without a word they passed hurriedly along the corridor. The fire was burning openly now in the old wood-work, and the many draughts made the flames strong and hungry. When they reached the first landing Austin gave a sudden exclamation.

"It's wet here! The tide must have come right up. Just strike a light—you have the matches."

The match was struck. The storm had driven the waters much higher than their wont, and inside the immense hall was a foaming current which found outlet in the many side passages.

The fire was beginning to crackle in the room overhead; and as the tempest was lulling the noise grew more and more distinct.

The fear upon both deepened. There seemed no possible means of escape, for the boat was gone and the tide could not yet be at the full.

"Well, Austie," Jack said, quietly. He looked up. The roof was glowing above their heads. "Well, Austie, if we have to die here we'll die together. Don't loosen your hold of my hand;

Digitized by Google

let's keep close. I'd sooner die with you than —" The sentence was never finished. A curious, measured, thumping sound fell on the boys' ears. Just outside the open doorway, they saw a tall, very thin figure dimly defined in the flickering light of the fire within. As they looked, the figure seemed to be standing upon the surface of the water, and yet to be gliding toward them.

"What's that?" the boys gasped together, clutching each other's hands more tightly.

The figure moved slowly toward them. Then the shape of a boat was defined underneath it, and as it came into the light, the boys saw that their extraordinary visitor was none other than Cranberry, who was forcing his way in with his fowling boat into the flooded entrance, thrusting his oar now and then against the stones below.

"Hi!" said he; "here you are." His face was purple with exertion.

"It's been a hard job to get here, young gentlemen," he went on, "but maybe you'll row me back. Get in quickly; there's not a minute to lose. I saw you a-comin' but I didn't let on, for I thought you might get into what mischief you pleased; but when I saw th' fire I couldna rest without comin'. The tide's on the turn, and this old rookery's nearly tumblin'! It's a grand sight at th' other end—nought but a sheet o' flame."

They were in the open air before he had finished speaking. It was a comparatively easy matter to reach the Broad, and once there, all danger was over.

Cranberry wished very much to pause and view the burning Grange, but the boys had had quite enough of it. Nothing could induce them to rest their oars until they had reached the little jetty at Barnborough Manor.

Squire Loughton, who returned that day, could not find it in his heart to rebuke the boys too sharply.

"I think they've been punished enough for their disobedience," he said, and never referred to the subject again.

As for Cranberry, he is made so much of that, to quote his own words, he "scarcely knows whether or no his head's on his shoulders."

R. MURRAY GILCHRIST.

For the Companion.

"SPIEL!"

Nowhere have I found the German devotion to music more marked than it was in a town largely settled by people of that race in central Minnesota, where, several years ago, I went in the autumn to shoot prairie-chickens and water-fowl. Music seemed the one passion of the people. In every dwelling was a flute, a violin, or a clarinet, and in several houses there were pianos of good make.

I lodged with a well-to-do old farmer, whose large family of grown-up sons and daughters filled the big farm-house with music of some kind from one week's end to another.

One evening my host led me down to the great cellar-kitchen, where a dozen or more of the boys and young men of the neighborhood had met to organize a brass band, and to practise for the first time.

The young men gathered about the long kitchen table, upon which were spread sheets of printed music, and at the word "*Spiel!*" from their leader, each blew a blast upon his instrument.

The result was somewhat startling. I had never heard such a discordant strain before. It lasted but a moment, however; then all the players dropped their instruments, and laughed long and heartily at the outcome of their first effort.

"Neffer mind, poys!" said my host, encouragingly, speaking in English in my honor. "Der vas vorse music as dat, und py und py you blays vary fine."

Turning to me, he added, "Mine frient, dat vas terriple, eh? Vell, it vas shust such music ash dat vot safe dis settlement from pein' scalluped py der Inchuns. Shust you gome up-shtairs now, und I tells you about it."

Seated before a cheery fire of oak logs, at one side of which the good wife played a merry tune with her knitting-needles, my host told his story. I will relate it in my own words, and not in the German farmer's faltering English.

Just before the Civil War a colony of about a dozen well-to-do families came from Bavaria, bringing with them many household goods and their beloved musical instruments, and established a settlement upon the Minnesota River. Tempted by the rich lands along that stream, they pushed up the river beyond existing settlements, and finally selected a site near a large grove on the southern bank.

The Sioux had been very troublesome through the section. Fearing their depredations, the German settlers at Zeigler's Bend, as the place came to be called, built a strong block-house of logs on the bank of the river, large enough to shelter all the families, and surrounded it by a palisade of logs set endwise in the ground as closely as possible.

This completed, each family proceeded to erect buildings upon its own land round about the grove, using the block-house as a common residence in the meantime, and reserving it as a general storehouse and rendezvous in case of attack.

The settlers worked all summer without being molested by the Indians. Now and then detached parties strayed through the place, but they committed no acts of violence. Meanwhile, however, the Sioux were in a very unquiet state, and were meditating vengeance for what they regarded as encroachments upon their land.

Quite separated from other white settlers, the Germans knew nothing of this threatening state of things.

No precautions had been taken in the little settlement. The cows and other stock were allowed to graze upon the prairie to the southward in one large herd, which the boys of the different families took turns in seeking out and driving home at night. As the season advanced, the grass became short for some distance around the grove, and the herd sometimes wandered several miles in search of better feed.

On one warm September evening the task of bringing home the cows fell to Hans and Carl Zeigler and Fritz Tohmer. They were all boys from twelve to sixteen years of age. Their fathers had built their houses close together on the outskirts of the settlement.

It was an hour before sunset when the boys started off across the prairie to drive home the herd. The stock had wandered farther than usual, and the sun had set when the searchers, guided by the tinkle of the bells, found the cows in a deep swale four miles from the river.

"Spiel!"

It was impossible to hasten the milch cows, and before the boys were half-way home darkness set in.

Probably it was the coming of darkness which saved their lives, for when they reached the top of a low ridge a mile from the grove, the blaze of burning buildings and savage yells, mingled with the crack of rifle-shots, told them too plainly that the Sioux had descended suddenly upon the settlement.

"It's the Indians!" gasped Hans, the eldest of the three.

"Yes, and they've killed everybody at home!" sobbed Fritz and Carl, as they clung to Hans in the darkness. "They'll kill us too, Hans! What shall we do? What shall we do?"

"No, they haven't killed everybody," replied Hans, manfully trying to choke down his own fears for the sake of the younger boys. "They're not all killed, or there wouldn't be so much shooting. Some of the folks must be in the block-house fighting the Indians back; and there must be a good many of them, too, to do all that shooting. Come, boys," he shouted, "follow me, and be quick! We must get around the cattle, and turn them back before the Indians hear the bells. If we don't, they'll catch us, sure."

Hastily heading off the cattle, the boys drove them back over the ridge and far out on the prairie. Then the boys went back toward the settlement, moving very cautiously, to reconnoitre.

The blaze of the burning buildings, by the light of which they could see the Sioux dodging about from tree to tree, served to intensify the surrounding darkness, rendering it quite safe for the boys to creep up close enough to get an idea of the situation.

"See that!" whispered Hans, as half a dozen flashes lighted up the loop-holes in the upper story of the block-house, and a sharp volley rang through the grove. "They're there yet, and enough of them to keep the Indians off for one while!"

"So they are!" said Fritz. "Can't we do something to help them, Hans? Let's run down the river for help!"

"It's too far," replied Hans, "and we should be too late. But we must do something, or all will be killed and scalped, for they can't hold out much longer."

"Why can't they?" asked Carl.

"O Hans!" gasped Fritz, as a sudden thought struck him. "I know what you mean. It's the powder! It's almost gone! That's why you didn't take your gun to-night to shoot prairie-chickens, and why none of the men have been out hunting lately, too."

"That's just it, Fritz," replied Hans, in a trembling voice. "At the rate they are firing, it won't last till midnight."

This was only too true. The settlers, tempted by the abundance of game, had used their ammunition unsparingly in providing themselves with meat during the summer.

Beguiled by the seeming harmlessness of the Sioux, and over-busy with cultivating the soil and with building and preparing for the winter, they had neglected to replenish their stock of powder, and at last it was almost exhausted.

That very day their two carpenters had begun the construction of a large row-boat, which, as soon as it was finished, was to be sent down to Fort Snelling to obtain powder and other necessaries.

Hans saw it would be madness to attempt to reach the block-house through the line of Indians that surrounded it.

He noticed, too, as all three boys lay upon the ground just outside of the grove, that there was no blaze in the direction of their own homes. The cabins of the Zeigler and Tohmer families, standing far back and apart from the rest of the settlement, had as yet escaped destruction.

It was impossible for the boys to lie still. They must do something. As soon as they saw that their own houses were untouched, they all crept stealthily toward the place, in the hope of finding some of the inmates still about the houses.

All was silent within; but the boys were not a little comforted to find both cabins standing, though the flying inmates had left everything inside tumbled about in dire confusion.

Hans's hopes rose, as he reasoned that if the two most remote families had been warned in time, all the rest must have been safely within the stockade before the attack began.

Still, they could not hold ont there if they had no powder. Soon after the guns of the brave defenders had ceased to flash, the savages would storm the palisade, and men, women and children would be massacred.

Hans searched both cabins for a gun; but every rifle and shot-gun had been taken.

As the boys stood crouching by the window, they saw a dark form approaching, from the direction opposite to the village, and not many yards distant. The manner of movement told the boys that it was an Indian.

With beating hearts, they crept up the ladder into the little loft, and lay down flat upon their faces on the floor, expecting presently to be dragged out.

But, through the chinks between the logs in the gable of the little house, they saw the figure halt an instant before the cabin, and then, as if bent upon a more important purpose, press on toward the rest of the tribe.

Evidently it was a belated redskin, intent upon rejoining his fellows. The boys breathed more freely. Hans rose upon his elbow, and glanced around the loft, which was dimly lighted by the flaring light from the burning cabins shining through the chinks.

His eye caught a flash of something bright hanging from a rafter. It was his father's brightly polished brass cornet. He gazed idly at it, as if he were wondering if it could possibly help him to solve the terrible problem that was confronting him. As he gazed at the bright spot gleaming there, a sudden inspiration seized him.

"Ach!" he shouted; "it shall help us!"

He sprang up, snatched down the cornet, handed it to Fritz, who wondered if Hans had suddenly turned crazy, and then rushed back to a corner of the loft for the big bass drum, with brass cymbals attached, which his older brother Chris used to play in the village band back in Germany.

"Boys!" said he to Fritz and Carl, as he clambered down the ladder, "there's just one thing for us to do; we might take to the prairie and hide ourselves in some hollow, but what do we want to save ourselves for, if all the rest of our folks are murdered? For my part I'd rather get killed trying to help them than run away and leave them."

"So should I!" said Fritz.

"And I!" echoed Carl.

"Come on then!" said Hans, leading the way to the other cabin. "You take the cornet, Carl! You can blow that as loud as any one; and you run in and get your father's trombone, Fritz!"

Fritz went in to get the trombone, while the others crouched in the shadow of the house. In a moment he came back with it, and the three ran out upon the prairie, creeping hurriedly along until they reached the river bank, a short distance below the grove.

Hans tightened up the drum, slung the strap over his shoulders, and adjusted the loose cymbal to his left hand.

"Now, boys," said he, as he started up the river toward the settlement, "follow me, and don't make a sound till I give the word. Then blow as hard as ever you can!"

Carefully picking their way, the boys approached the settlement.

The shots came much less frequently from the block-house, and the boys could see from the little hill, at the edge of the grove, that the Indians had closed up until their line was within a few rods of the stockade.

"Keep close to me, boys, and don't be afraid!" whispered Hans, as they started down the hill.

"We're here!" whispered Fritz.

"And all ready!" said Carl.

Then, just as they entered the grove, Hans raised aloft his drumstick and cymbal, and bringing them down with all his might shouted, "Spiel!" in a voice that could be heard plainly by the Indians.

The great drum boomed like a cannon; the cymbals came together with a mighty clang, while the cornet and trombone united in a terrible blast, as the brave lads marched straight for the block-house, their leader taxing his strong lungs to the utmost with hoarse commands, as if giving orders to an army.

If the German settlers had been too busy during the short summer to replenish their stock of powder, they had also been too busy to give any attention to their music; and the Indians had heard such sounds only at the forts, or on the march, as bodies of troops passed from one frontier post to another.

The fearful crash, coming so suddenly out of the darkness in their rear, struck terror to the hearts of the redskins, who were in no wise reassured by the deafening cheer that went up from the block-house.

"Soldiers! Soldiers!" was the one thought in the minds of the Sioux, as without waiting to see who or what their unseen enemy might be, they dashed panic-stricken past the stockade in mad retreat; while the settlers within, catching sight of the boys' faces in the light of the burning buildings, and spurred on to desperate bravery by the heroism of the lads, rushed out of the block-house, threw open the gates of the stockade, and charged upon the Indians.

The Sioux were now in headlong flight toward the river. The boys double-quicked after their fathers and big brothers, making the woods resound with fearful music.

Firing at the retreating forms as fast as they could load their pieces, the settlers drove the Indians out of the grove, and over the neck of open prairie between that and the river. Arriving there, the Sioux sprang into the water and swam with all their might for the opposite bank; but before they could reach the shore and get out of range, the rifles of the settlers had considerably diminished their numbers.

Sending a parting volley accompanied by a defiant cheer at the discomfited Sioux, the men formed in line, and in honor of their young deliverers, marched back to the block-house to the beat of Hans's drum, and the discordant blare of the two brass instruments.

Once within, the boys were almost smothered with the embraces of the rescued people. They soon learned that Hans's father, made anxious by the boys' long absence, had set out just at dusk to look for the boys, and had happened to see a knot of Indians crouching on the summit of a ridge in the distance. He had hastened back and warned the settlement. Thus, instead of taking them by surprise, the Sioux found all the people in their stronghold, prepared for the

Digitized by Google

attack. This fact had caused them to suspect that the whites had in some way got wind of their expedition. They feared a relief party; and for this reason, the sudden onslaught of Hans's band was all that was needed to throw them into a panic.

After listening to the old man's tale of this adventure, I did not wonder that the people of Zeigler's Bend were extravagantly fond of martial music.

MYRON B. GIBSON.

LUCK.

Luck never made a martyr strong
To suffer for the true and right;
Luck never wrote a deathless song,
Or armed a chieftain for the fight.

Selected. —*Thomas F. Porter.*

For the Companion.

SQUIRE MACK'S ESCAPE.

In the town in which I live there is an old frontiersman whom every one calls "Squire Mack." In the early days he went to California, and had many curious adventures there which he delights in recounting.

At the breaking out of the Civil War he was making shingles near some mining town in the Sierra Nevada. The news from home filled him with patriotic fire, and with several comrades, he turned his face eastward, and travelled as rapidly as possible toward the "States."

Arriving at Salt Lake City, he learned that Indians had been raiding the trail ahead, firing upon wagon trains, and burning express and stage stations. This news disheartened his companions, who resolved to stop at Salt Lake City until the trouble was over.

Not so with Mack. He was of the sort of men who are bound to go through when they have begun a thing. He pressed on, taking his chances, on the "Cherokee Trail."

Mack had been a wagon-master along this trail, and knew the ground well. He had heard that the Indians were raiding about Green River, but he knew that at the crossing of the trail over this stream he had a good friend in the person of Bat Lavigne, an old French-Canadian trader who lived here.

Lavigne had a great deal of influence among the surrounding tribes of Utes, Uintahs, Cheyennes and Arapahoes. He was married to an Arapaho woman, and was reckoned a member of that tribe. He must be aware of the movements of the Indians.

So Mack, riding an excellent cayuse and leading a good-sized pack mule, pushed boldly on to Green River Crossing, and brought up at Bat Lavigne's adobe dwelling one evening at sundown. Lavigne made him welcome heartily.

The trader told him that a big war party of Arapahoes had "mixed medicine" at Green River two days before, and had set out from there upon an expedition to the east. He had been with them during the powwow, but did not know whether they had "excepted white blood" in mixing their medicine or not. If they had not, the trail would be extremely dangerous.

But there were no other Indians to be feared at present, he said, if one kept straight upon the old Cherokee Trail, which passed over a line of neutral ground between the mountain tribes. If the Arapahoes were again to go plundering and killing whites, as they had done a few weeks before, they would keep to this trail to avoid other enemies.

Mack's strong desire to get forward upon the way home got the better of his prudence, and he again took the trail eastward.

At about noon on the third day he came upon the smouldering ruins of an old freight or "way" station.

Mack knew very well, from certain signs which he saw in the neighborhood, that the building had been fired by Indians. If people had been living in it, they had probably been killed or taken prisoners.

Whither the Indians had gone Mack could not determine. The ground was hard and baked, and no tracks of any sort could be discovered; but the party could not be far distant.

Mack picketed his animals among some sage bush near at hand, and ate his noon lunch while considering whether it was best to go back or go ahead. He had now no doubt that the building had been burned by the Arapahoes, and that they had not "excepted white blood" in making up their protective medicine.

As he sat in this meditative mood, the traveller, happening to cast his eyes back upon the trail over which he had come, saw two horsemen leading pack animals, and riding toward him at a gallop.

They proved to be young men who were on their way home to Tennessee. They had heard of Mack at Lavigne's three days before, and had been trying to overtake him.

They, too, were on their way eastward, to take part in the great struggle then going forward; but they intended to join the Southern army, while he was going to join the Union forces.

"Partner," said one of the Southerners, "let's stick together and fight together through this here Indian country, and after we get home we'll fight each other."

"All right," said Mack; "it's agreed. Northerners is Northerners, and Southerners is Southerners, but Injins is pizen."

So these deadly enemies of the near future went on together, comrades in danger. Every man of the three was equipped with a stout muzzle-loading rifle and a large Colt's revolver.

They set out together on the trail, and had advanced but a few miles from the burned station when they sighted a squad of mounted Indians, who had just broken camp at a mountain spring beside the trail. They were several hundred yards in advance when they were discovered, and were just riding out of the depression which gave rise to the spring.

On account of his long experience in the country, Mack had been given the leadership by the Tennesseeans. He came to a halt, and told his companions to get off their horses, hoping they might possibly escape notice; but even while they were dismounting the Indians caught sight of them, and wheeling their ponies about, came back at a gallop straight down the trail. They spread out in a sort of fan shape as they came, and Mack counted twenty-six.

"Git ready for business, boys," said he, quietly. "Behind your horses, revolvers handy, and rifles across saddles!"

The Indians came on at a reckless pace until within about a hundred yards, when Mack, stepping out from behind his horse, shouted and motioned them back.

They pulled up suddenly. One of them slipped from his pony, and handing the rein and his gun to a comrade, came forward on foot, gorgeous in a colored blanket, a white slouch hat stuck with ravens' feathers, and a variety of brilliant paints daubed upon his face and breast.

He was a big fellow, and walked with a swinging stride.

"How! how!" said he, as he halted a few paces distant, and grinned hideously through his paints.

"How do you do?" answered Mack. "What do you want?"

The Indian shook his head in token that he did not understand English.

"*Hablan ustedes Español?*" (Do you speak Spanish?) asked the Indian.

Mack, who had picked up a smattering of Spanish, answered that he did. In this tongue, the Indian asked where they were going.

Mack answered that they were going home to the land where the sun rose, and asked in turn what the chief—for such the Indian undoubtedly was—wanted.

The Arapaho told him that if the white men would surrender their horses, mules, guns and ammunition, they might keep their blankets and go on, and he would not let his warriors molest them.

For reply Mack indicated, partly in Spanish and partly by gestures, that the Indians might have the ammunition through the muzzles of the guns, and the weapons and animals after their owners were dead.

At this the Indian grinned, and tried to turn the matter off as a joke. He then asked if Mack and his party were going to camp at Big Medicine Springs that night, and upon being told that they were, said that his camp was there, and that he and his braves would keep the white men company.

But the white men might, he said, travel in advance, since in this way they would escape the dust the Indians' horses would make.

Mack declined this courteous offer, but told the Indian that he and his companions would follow. They did not mind travelling in the dust at all, especially as there was no dust on the sun-baked plain.

The Arapaho laughed again, "mighty onpleasant," as one of the Tennesseeans put it, and wheeling about, strode back to his men.

After a moment's conversation with them, he sprang into his saddle, and with a beckoning motion to the white men, headed his cavalcade back upon the trail.

Mack's companions looked at him inquiringly.

"We've got to follow, boys," he told them. "There's no use bucking agin it. If we turn tail now, we're goners. Our only hope is to go on with 'em fearlessly, and camp not far from 'em to-night, and then trust to darkness to get away from 'em."

Without a moment's hesitation, they mounted and followed the Arapahoes, who jogged along at a dog-trot.

All that afternoon the three whites rode close behind the Indians, talking and laughing with an unconcern which they did not feel, but which undoubtedly did much to render the savages more certain of outwitting and capturing or killing the little party at their leisure.

Big Medicine was reached about sundown. The chief had spoken truly with regard to his camp, for there were twelve or fifteen lodges near the springs on the lower slope of the hill, near the base of which the water came to the surface.

As they rode down to the springs the chief dropped back, and asked Mack where he would camp. Mack told him they would picket their horses among the sage brush on the side of the hill above the spring. This seemed to satisfy the Indian; he turned away, and rode with the others down to their camp.

After watering their animals and bringing a pailful from the springs, the white men moved up the side hill some two hundred yards above, and picketed their animals in a little depression out of sight of the Indian camp. A sentinel, however, whom they could see posted upon a rock upon the opposite bluff, had them in full view.

"Now, boys," said Mack to his companions after they had lighted a fire, "git out your Dutch oven, and I'll git out mine and my self-raisin' flour, and while you take the hatchets and cut a big lot of sage brush for a bonfire, I'll mix and bake bread enough to last us three days.

"Then after that's done we'll eat a big supper, and light a big fire, and behind the blaze of it we'll crawl to our horses and get out of these diggin's. It'll take us three days or three nights to reach Fort Collins, and those fellows 'll follow us clean through unless we can dodge them somewhere on the trail."

In three hours everything was in readiness for departure. No Indians had ventured near them. Evidently the Indians were trying to throw the white men off their guard by a show of indifference.

It had grown quite dark. Mack resolved to trust to a not unfamiliar ruse. He first allowed the fire to sink low, and then gathered a quantity of sage brush, and wrapped it up in three of their extra blankets.

These bundles were then placed near the fire so that they should look, at a distance, like the figures of men squatted before the blaze.

Then Mack and his comrades piled on brush until the flames leaped high; and behind this blaze they crept away to the horses, mounted them, and leading the repacked mules, rode straight up the side hill until out of range of the firelight.

They then turned and rode several miles parallel with the trail, guiding their course by faintly seen stars. By and by they struck into the trail, and urged their animals forward. They had heard no sound of Indians in pursuit.

Before daylight, they turned off and rode about four miles to the left, where they hid their animals in a little pocket which had grass and water, and betook themselves to a quaking-asp thicket near at hand for rest, and by turns, for sleep. Here they proposed to remain all day, and to go on again at night. One of them kept guard at the edge of the thicket, overlooking the route and the surrounding country.

Late in the afternoon a squad of Indians were discerned in the distance, looking for their trail. Crowded behind tufts of buffalo grass, they watched this band closely and anxiously.

At sundown a signal-fire about three miles away announced that their tracks had been discovered. But it would yet be an hour or more before the Indians would overtake the little party.

As soon as it grew dark enough to cover their retreat, Mack and his companions started. They crossed the trail, and rode until midnight on the other side. Then they crossed back again, rode two miles out to the left, and camped until daylight.

Rising again, they took the trail direct, and rode at as rapid a pace as their animals could be expected to sustain.

Mack thought they had gained a lead during the night which would make it impossible for the Indians to come up with them; but at about ten o'clock they discovered a signal-fire upon a hill not more than a mile off at the left, and somewhat in advance of them.

The building of this fire was proof that the party ahead were scouts, and that the main body of the Indians was behind. Mack kept his men to the trail, and they urged their animals forward.

All that day they rode, but the Indians who were signalling kept steadily in advance of them. During the day they counted no less than seventeen fires, all built at no great distance from the trail; but during all this time not an Arapaho was seen.

That night, when their horses and mules were almost exhausted, the white men made out the dim forms of two mountains, a few miles in advance. Mack knew that these marked the passage of the trail out upon the open plains, within a three or four hours' ride of Fort Collins. Hidden in the mouth of a cañon, they escaped observation. They rested and fed their horses, took food, and before daylight were again in the saddle.

"If we have any trouble it will come in the pass between the mountains," Mack told his comrades. "If we don't run against a party of 'em there, we're out of the woods. If we do, it'll take a good bunch of 'em to clean us out, for there's no cover—only open ground."

As they rode into the pass they saw five Indians in the distance, seated upon their horses near the trail. These were undoubtedly the scouts, who, riding the swiftest ponies in their band, had kept ahead, and were now stationed in the pass hoping to hold the white men in check until others of their party came up.

"Nothin' to do but brush 'em one side, boys," said Mack.

Tightening their girths and looking to their weapons, the little party charged forward at a stiff gallop.

The Indians slipped off their horses and made a show of standing their ground; but as the white men pressed straight on and came nearly within rifle-shot, they lost their courage and fled.

Five hours later Mack and the Tennesseeans were in Fort Collins, where a strong detachment of regular troops was stationed.

The Tennesseeans looked queerly at Mack as they rode up to the fort. They seemed to be satisfied with his look, and said nothing. Nor did Mack say anything to the officers at the post concerning his companions' rebellious intentions.

FRANK WELLES CALKINS.

For the Companion.

BÊCHE-DE-MER.

The oldest fishery known is, perhaps, that of bêche-de-mer. Its origin is lost even to Chinese tradition, which takes refuge in saying that it existed always. The demand for the article has always exceeded the supply in every part of the Flowery Land.

New Guinea, North Australia, and the islands in and about Torres Straits were at first the Chinese fishing-grounds, to the neglect of a thousand other haunts of the much sought for delicacy in the Southwestern Pacific, which were afterward developed by the numerous European waifs and strays who had taken up their abode in the lovely islands of the South Seas.

These fellows and their descendants are a very mixed lot. Most of them are deserters from whalers or marooned offenders against discipline, though others bear the record of having honestly arrived at their location.

The first thing these new-comers learn is that, if they wish to live in peace with their native companions, they must not be mean or ungenerous in their dealings. The Polynesian creed is that everything belongs to everybody, and individual good fortune must be shared all round.

Many of the "beach-combers," as the white sojourners are called, have accumulated considerable sums of money by keeping a private account with the traders who buy their fish and native produce, and who, while apparently paying full value to the tribe, in reality withheld a large percentage for their white friends.

These men in time obtain great influence, and taking native wives, are admitted fully to all the privileges of the tribe. As chiefs they claim and use labor according to their rank and station.

In crazy boats they start on adventurous voyages, cruising from one desert island to another, trusting entirely to luck for provisions when the few eatables brought with them from home are consumed.

Arrived at the selected place, and having with them all the necessary apparatus, such as large iron try-pots, knives, forks, etc., the fishing gang immediately proceed to erect huts for their own shelter, and trellised smoke-houses in which to cure the fish. They take great care that the roofs of these houses shall be water-tight, for although salt water does not much harm the drying fish, fresh water is entirely destructive to it.

Inside the huts, two or three sets of open-work stages are erected above the smoke-producing fire-places, and on them the cooked fish is laid for drying.

"Bêche-de-mer," called "trepang" by the Chinese, is a species of echinoderm, or invertebrate marine animal. It is also called the "sea cucumber" from the warty appearance of some of the sorts. It is a hideous slug of uniform thickness its entire length, with no discoverable eyes, and a triangular mouth containing many sharp teeth. These teeth can be of little use, for in the creature's simple, transparent intestines nothing has ever been found but sand and water.

These fishes, when dried, are considered a great delicacy by the Chinese. The four kinds, brown, black, spotted and red, are esteemed as in the order placed.

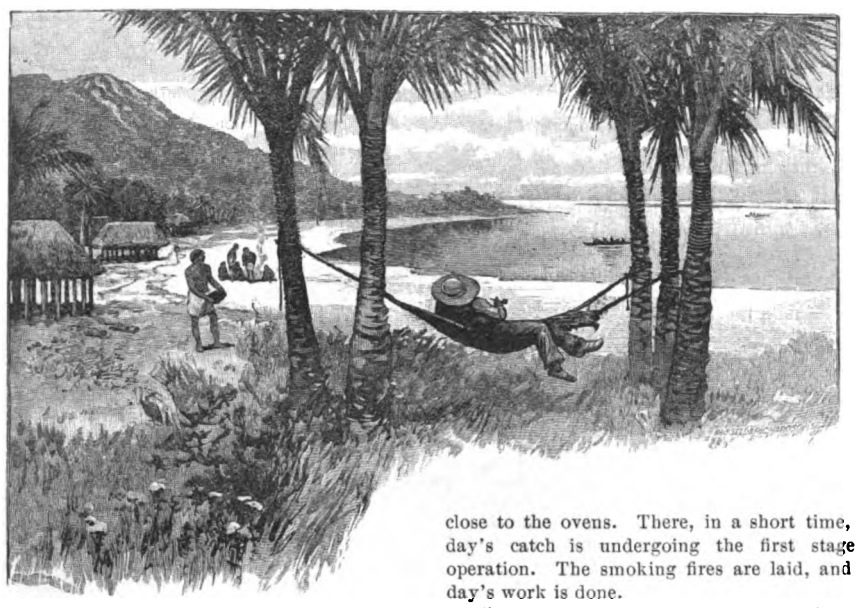
The brown is attached to shore localities. It grows, when matured, about two feet long by fourteen inches in circumference, and frequents only the flat reef bottoms of shallow lagoons.

The black is found in deep water, and is often dived for at a depth of six or eight fathoms. But it is only to be found on a sandy bottom. This species is a shiny jet in color; it is as thick as a man's leg, and sometimes exceeds two feet in length.

The spotted slug is a repulsive-looking monster—a sort of dirty green in color, covered with dull orange-hued blotches. It is even larger than the black, and possesses a vicious quality not found in its fellows. When handled it throws out a quantity of filmy, sticky threads, which burn the flesh.

The red, the smallest and least valuable species, rejoices in the stormy waters of the outside reef on the rough coral rocks, and consequently can only be fished for at low tide.

From the appearance of the ugly, torpid slug, one would think that movement through its own agency was impossible; yet it is a fact that fish taken from one spot, and placed in separate heaps far away, have travelled back to the exact locality from which they were taken.



When a bêche-de-mer fishing party is honestly conducted, nothing can be more joyous and light-hearted than the mob of dusky men and women spread all over the bright blue lagoon, under a cloudless tropic sky, laughing, singing and playing, yet mingling a very fair share of labor with their innocent gambols.

To the white men engaged, there is a sort of fascination about this life that cannot be realized

Digitized by Google

by those who have not actually gone through it —a total oblivion of all the trammels of civilization which for the time is charming.

With a mind relieved of all responsibility, with no debts to bother, or tiresome engagements to keep; with the present so peacefully enjoyable that the future never causes a single troubled

thought, there may well be in the life of a beach-comber a strong and poetic attraction.

To a man who has buffeted about the world in poverty and pain, what can be more restful than to drift into one of those havens of tranquillity, where the winds and waters never rage, and where nature is so bountiful that hunger can be satisfied almost without exertion, and the eye never rests upon anything that is not fair and glad!

The storm may rage outside, but what does the beach-comber care? His lagoon is still placidly slumbering in all its calm beauty; and the wind that dashes the huge swells upon the distant coralline breakwater, and flings their scattered atoms high in air in snowy wreaths of radiant spray, but serves to fan his slumbers beneath the shade of feathery palms.

The haunts of the bêche-de-mer are often miles away from the fisher's camp. So a light canoe generally accompanies the party, which, when full, is paddled quietly back, all unemployed hands occupying themselves in splitting and generally preparing the fish.

These fish must be cooked immediately on arrival, or else they will speedily run together into a glutinous mass.

It is first semi-boiled in a native oven, which, all over the Pacific, is merely a hole in the ground lined with stones, in which a large fire is kindled. When the stones are thoroughly red-hot, the ashes are scraped out, and the fish, enveloped in green leaves or damp coarse mats placed in, and the whole covered over with a mound of stones. Should more heat be thought necessary, another fire is lit on its top.

When the flesh has acquired a sufficient solidity, it is spread on the smoke-house stages, and the fires started with all sorts of pungent woods.

After about eight days of continual care in turning the fish and keeping up a regular supply of smoke, the curing is finished, and nothing remains but to pack the now marketable commodity. On its arrival at its destination it is readily sold at prices ranging from two hundred and fifty to six hundred dollars per ton.

Bêche-de-mer, when properly "saved," is, in appearance, about the most impossible article of food imaginable. It bears a close resemblance to old shoe leather, and looks as hard and unmelting. This notion, however, is pleasantly dispelled when one makes its better acquaintance in soup or stew.

A bêche-de-mer fishing community at work on one of the lovely Pacific Isles, where there is mutual confidence between the white "boss" and his simple dusky assistants, presents one of the pleasantest pictures of life in the South Seas.

Camped, perhaps, on the banks of a busy little stream, springing gladly from the dark bush background, dashing along in pretty pertness to add its puny contribution to the world of water beyond, are the huts of the fishers nestling beneath the protecting arms of the graceful cocoanut palms.

Away to one side of these brown beehive houses blue and silvery wreaths of smoke from the curing sheds entwine their feathery sprays round and through the thick, tangled foliage, till, clear of its shady roof, they are lost in the immensity above.

Squatting round and about the cooking fires are the stay-at-homes for the day, preparing the evening meal for the toilers whose dark forms are visible far off on the reef sharply silhouetted against the sky-line.

Close by, in the shadiest retreat of all, where the cool breeze blows strongest, the "boss" of the expedition reclines in his hammock, puffing lazily at his never absent pipe, and calculating how long it will be before that pretty little craft he sees in the offing, snugly anchored under the reef, will have her cargo and he the dollars for it. As the sun dips toward the western reef, the merry canoeing song is heard, keeping time with the splash of the paddles as the rowers urge their swift course for shore.

With a great shout, willing hands haul the boat with her gristly cargo far up, high and dry, close to the ovens. There, in a short time, the day's catch is undergoing the first stage of operation. The smoking fires are laid, and the day's work is done.

All now go to bathe, never ceasing the song and laugh they started with so early in the morning, and then take their evening meal.

By and by the moon rises from out the surfy ring encircling the happy island. The natives now squat round the fires and repeat their stock of stories, tales of goblins, ghosts and demons, or former deeds of tribal bravery. Far into the still, bright night they talk and sing, and then slip away, one by one, to their huts, and rest till the first glimpse of dawn.

Then the call of the sea-birds, going forth to seek their food, awakens them to one more day of harmless and unregretted toil.

TWO NEW TYPES OF BOATS.

Although the American flag does not, to the same extent, as it once did, float over merchant ships trading in every part of the world, yet this country has reason to be proud of present as well as past achievements on the ocean.

It is a remarkable fact that in spite of the decline of the American merchant marine, some of the most important and useful reforms in naval architecture have their origin now, as formerly, in the United States. The tea clippers, the monitor type of war vessels, the centre-board yacht, are examples of what has been done heretofore, and we have now to record the production of two new types of boats, radically different from those in common use, and each successful in the purpose for which it was designed.

The first and more important is the "whale-back" steamer and barge. It is a circumstance worthy of note that the origin of this new type of vessel, which may yet revolutionize ocean traffic, was a small Wisconsin town. The whale-back was devised with a view to the grain trade of the Lakes only, but the new type of vessel was speedily found to be adapted for general use.

The boat looks like a colossal floating cigar. It is made of steel, with sides rounding above as well as below the water-line. The small deck-house round the smoke-stack near the stern is its only superstructure. This alone presents the resistance ordinary vessels make to breaking waves. Over the rest of the log-shaped craft, without masts or other obstruction, the seas may wash as completely as they will.

The whale-backs have enormous carrying capacity for their draught and the amount of coal required to propel them. They tow barges of similar design without engines. The world's attention was drawn to these vessels by the *Charles W. Wetmore*, which last summer took a huge cargo of grain across the Atlantic.

On the broad ocean her seaworthiness was proved beyond the power of the Lakes to test it. People interested in shipping went to Liverpool from all over Great Britain to see her. In American harbors she has since met with like receptions.

There is little doubt that her type will become more and more familiar in the world's ports. When there is direct communication between the Lakes and the Atlantic for vessels of all draughts, these curious steamers and their barges may confidently be expected to render the transportation of Western grain to Europe a far more simple thing than it now is.

The other new type of boats is seen in the Herreshoff sloop-yacht *Gloriana*. The designer of the *Gloriana* held that the old idea of a bow for speed, namely, that the water should be turned away on either side, was wrong. He therefore drew the forward lines of the yacht so that most of the water displaced by motion should be pushed under the boat. Her bow at the water-line is consequently rather blunt, and to eyes accustomed to former models, heavy.

Above the water-line it reaches far forward, and in shape somewhat suggests the nose of a shark. The stern, too, has a great over-hang, so that the difference between the forty-six feet of water-line, and seventy feet of measurement over all, gives a gain of nearly twenty-five feet in deck-room.

This over-hang, to be sure, is only an extreme example of a general tendency in modern yacht-building. Nor can the careful rigging and sailing, which no doubt helped the *Gloriana* immensely in her races, be called new departures. But her extraordinary speed, her unbroken record of eight victories over the fastest yachts from other builders prove almost beyond a doubt the soundness of the new theory upon which her model is constructed. Its further development may well be watched in all branches of naval architecture where speed is to be considered.

America's business and pleasure on the seas may thus have received an impetus in 1891 which shall make that year always memorable.

For the Companion.

TWILIGHT.

Above the Arno.

It is the hour when Arno turns
Her gold to chrysoprase,—
When each low-hanging star out-burns
Its soft mysterious rays,
As from the prison of faery urns
Which faery hands upraise.

It is the hour when life's constraint
A moment's ease is given,—
When Earth is like a holy saint,
Stilled, sanctified, and shriven;
And the deep-breathing heart grows faint
To be so near to heaven.

GRACE ELLERY CHANNING.

A GLANCE BACKWARD.

The year whose end is now so near that we measure its duration by hours, has been crowded with interest. No great war has devastated a continent, or changed the boundaries between nations. Yet the record of the year past contains events that will be memorable in the history of every continent.

Let us begin at the Antipodes. In Australasia—a century ago almost an unknown world, now a great collection of populous, self-governing British colonies—a movement toward confederation has made great progress. A form of constitution has been proposed. The very obstacles that have been met by those who favor the union only make it more evident that a nation with a mighty future before it already exists on the great southern continent.

South America has been the scene of revolution. In Brazil, after a short contest which threatened to become a serious affair, the President of the Republic resigned. In Chile the victors in a sharp and bloody civil war overturned the government. Argentina has passed through a year of great depression, uncertainty and anxiety.

In far Asia a rebellion has broken out in China, the bursting into flame of long-smouldering embers, and the consequences may be of a most serious character.

"The peace of Europe has been assured" by the six great Powers ranging themselves in two semi-hostile camps: Russia and France on the one side; while Germany, Austria-Hungary and Italy, on the other, have renewed the Triple Alliance, to which Great Britain lends support so long as its purpose is really peaceful.

The continued persecution of the Jews in Russia, the financial stress, and the famine that exists over a part of the country as the year closes, have drawn the attention of the world to the great northern despotism.

Except that Portugal has suffered a great loss of credit, and has seemed to be, during the whole year, on the brink of revolution, the internal state of Europe has been quiet. France, Germany, Austria, even the Balkan States, have been undisturbed; and Italy has witnessed nothing more exciting than a cabinet crisis, when the ministry of Signor Crispi was defeated.

The state of Ireland still occupies much of the attention of British statesmen. The most important political events in the United Kingdom were some elections to fill vacancies in Parliament, in which the Liberals were for the most part successful.

Not much has occurred at home to stir popular passions or to excite political antagonisms. The conclusion of reciprocity agreements with Spain, Brazil and other countries, the new apportionment of Representatives under the census of 1890, and the going into effect of the International Copyright law are the only public matters that need be mentioned here. The crops of the United States were almost universally good; those of the rest of the world were either barely up to the average, or below it. The consequences of this condition of things will be seen far more distinctly in the record of 1892, than in that of the year just closing.

The list of the dead of the year is a long one, and includes many illustrious names. General Sherman, Admiral Porter, General Joseph E. Johnston, Field Marshal von Moltke, George Bancroft, James Russell Lowell, Meissonier, the artist, P. T. Barnum,—these are a few of the names that will come to every mind.

Royalty has lost King Karl of Würtemberg, King Kalakaua of Hawaii, Dom Pedro, late Emperor of Brazil, and the Crown Prince of Belgium.

Of statesmen the United States has lost Mr. Windom, Secretary of the Treasury; Great Britain, Lord Granville and Mr. William Henry Smith; Ireland, Mr. Parnell; Germany, Herr Windhorst; France, Jules Grévy; Canada, its veteran Premier, Sir John MacDonald.

How shall we classify Charles Bradlaugh; and Balmaceda, of Chile; and Prince Napoleon, the Imperialist pretender, of France; and General Boulanger? They were not statesmen, but each of them filled for a time a large space on the page of current history, and all these names are now erased from the roll of the living.

PAID HER WAY.

Every middle-aged Philadelphian can remember a wild, picturesque figure that thirty years ago was as familiar a sight to the inhabitants of the Quaker city as the Liberty Bell or the wooden statue of Franklin over the door of his famous library.

"Irish Sheelah," as the town called her, was a gaunt woman nearly six feet in height whose vacant eyes told her story before she spoke.

Since she was a child, the children with sound brains had hooted at her and stoned her. She was a child still, with white hair and wrinkles. She knew nothing; she did not even know that the learning and thought and pleasure was in the world in which other people found their life.

Her only enjoyment was in the tags of bright ribbons stitched to her old skirt, which the children gave her from their doll-rags. These were all that she would accept from them; she was never known to take money. That was the one sound spot in her poor, crazed brain—a fierce pride of independence.

Her old mother became helpless. Sheelah could not work, but she would take no alms. She donned a man's coat and high hat, and set out "to earn money like a man," only to be followed by larger crowds of children than before. Charitable friends attempted to send the two helpless women to asylums. But Sheelah declared that no one but herself should support her mother. On this point she was resolute and—sane.

It occurred to some one to make of her a street debt-collector. When a creditor despaired of payment of a small bill, he gave it to her. She stationed herself with it silently on the curb-stone in front of the debtor's house. She made no disturbance, and could not be driven away. But every passer-by understood why the well-known grotesque figure was there.

The delinquent seldom was able to bear the mortification for more than one day.

For twenty-five years the poor, flighty creature steadily pursued this strange calling in order, as she persisted, to "pay her way." After her mother's death, she grew rapidly more feeble and wild.

But she had one solid comfort. "I'm no beggar. I pay my way."

The poor demented woman, at whom so many people had laughed, died at last. Under her pillow was left money enough to bury her.

Even into the grave Sheelah proudly paid her own way.

How many of those who laughed at her could make her boast?

PARNELL.

An American who was taken by some friends in Dublin to a mass-meeting held in the outskirts of that city to welcome Parnell, tells the following anecdote of the great Irish leader.

There were more than eight thousand persons present. Mr. Parnell was then under the ban both of the church and of public opinion, and had called on the citizens to hear him in his own defence.

Everything had been done by his political supporters to kindle the enthusiasm of the people. The trees of the great park were draped with green banners; pictures of the Irish harp hung from the platform; bands discoursed all the national music, but the crowd was stolidly indifferent. When he spoke, only the little group of politicians listened or applauded.

"Do you not believe in Parnell?" the American asked of a knot of peasants standing with their backs to the platform.

"No. His day's over," said one, with a shrug. "I knew how it would be when he built his model cottages on the Danish forts."

The American asked his friends for an explanation of the remark.

"On many of the hills in Ireland," was the reply, "there are earthworks supposed to be the fortifications of the Danes. The people believe them to be under the protection of the fairies. In all these thousand years they have never been tilled.

"Mr. Parnell destroyed some of them a year ago to erect the model cottages intended for the peasants, instead of their peat cabins. They have never forgiven him for it.

"The act was characteristic. He is a man without superstition, without passionate emotions of any kind, and he has a contempt for them in others as weakness and folly. These people would be more grateful to him for humoring their fancy about the Danish forts than for all the money invested in model cottages. He has never won the hearts of his supporters."

"Why do they support him, then?"

"Because he is a strong, shrewd, skilful leader, and the Celt likes to be led. Sooner than any other man he falls into line, and submits to his commander. However men may differ as to Mr. Parnell's motives or sincerity, nobody can deny

Digitized by Google

that he is a born commander; but as soon as he drops the sceptre his followers will desert him."

This hint may serve to throw a little fresh light on the mysterious character of the notable man whose life has just passed into history.

POWDERED HAIR.

The poet Arnault tells in his "Souvenirs d'un Sexagenaire" of an amusing experience which he had at Marseilles after the French Revolution. He and his friend Lenoir were cordially received by the circle of aristocrats at Marseilles, among whom were many other exiles from Paris.

But the community of aristocrats regarded the costume of the new-comers with dislike and distrust. They themselves wore long coats, full trousers and low shoes; Arnault and Lenoir wore short coats, tight trousers and boots. They adhered to the old custom of wearing the hair long and parted, brushed over the ears, and tied in a braid at the back and powdered, while the strangers had short hair, without powder.

The old aristocrats associated their own garb with the royal institutions which had been abolished, and looked upon all who dressed differently as infected with revolutionary sentiments.

Arnault and Lenoir were determined not to yield to a prejudice, but when a lady, in sending them an invitation to her reception by a friend, asked that friend to try to persuade them to powder their hair, they decided to act. They appeared at the reception in gigantic wigs—the ugliest, most awkward and ill-fitting they could find—loaded with pomade and powder.

When they appeared, the incongruity of their costume caused the company to break into boisterous but good-natured laughter. The host, after the merriment had subsided, said:

"My friends, you have produced the desired effect. I fear that those wigs are uncomfortable. Would you like to retire and remove them?"

"Remove our wigs? We know too well what we owe to society."

"Well, wear them through luncheon if it amuses you," said the host.

"Through the day and always. Since you judge us by our garb we shall wear wigs and powder as long as we stay in Marseilles."

But their friends protested so earnestly that this was not the fact that at last they allowed their aristocratic locks to be burned in the fireplace, and the company adjourned to the dining-room.

FREE PASSES.

A farmer occupied a seat in a railroad car with a lawyer. The conductor came; the farmer gave him his ticket, which he had purchased at his station. The lawyer took a card out of his pocket, and showed it to the conductor, who glanced at it and went on.

The lawyer saw the farmer eye his card askance. "Don't you find tickets pretty cheap on this road?" asked the lawyer.

"Tolerably cheap, I suppose," answered the farmer, "considering that I have to pay your fare as well as my own!"

The lawyer knew very well what the other meant. He was aware that in his State, as well as in several others, public meetings had been held in which the railroad companies had been denounced as enemies of the public interest, and corrupters of legislation.

It had been found that the charges against the railroad companies of obtaining or preventing legislation had little foundation in the shape of evidence; but it had also been found that nearly every person who possessed any influence had received a free pass.

Among those who were favored in this way were members of the legislature, State officers, judges, county, city and town officers, editors and publishers of newspapers, lawyers, large merchants, and even clergymen.

In a few instances, these free passes were given in return for services which had been rendered. In a much greater number they were given as a sort of "retaining fee," to secure friendly influence or to prevent unfriendly influence.

Though this practice may not actually influence legislative action, it has an appearance of doing so. Public confidence in the fairness and fearlessness of legislators is greatly lessened.

There is, besides, a distinct injustice in it. In the long run, those who travel upon railroads without free passes must pay the expense of the transportation of those who travel with them.

"GETTING EVEN."

The Duke of Edinburgh is the least popular of all the royal family of England, and if half the stories told of him are true, he stands as high in the people's estimation as he deserves to stand.

It is told of him that when a junior officer in the English navy he once fell into disgrace, and the Captain of the ship, who was also Admiral of the Fleet, felt obliged to devise special discipline.

One day the Captain ordered the officer of the deck ashore—they were at a Spanish station, and the Duke was officer of the deck—to dig and bring off to the ship, without assistance, a boat load of sand. This was his Royal Highness's punishment.

Two boats were lowered, a very angry royal sailor took his place in one of them, and towing the other in its wake, pulled ashore and began his labor.

Some time later word was given the Captain of the approach of a craft flying the royal standard. For two minutes he gave orders without stopping for breath, and in less time than it takes to tell it bunting was run up, the men were at the guns, the Marine Corps in line on deck, the yards manned, and all necessary preparation made for the reception of the approaching man-of-war

The Captain, also Admiral, after getting himself into full dress uniform,—cocked hat, gold lace and dangling sword,—took the deck, chest extended and shoulders made up, as if he felt the honor of the entire British navy resting upon them. Behold! alongside the big Britisher a gig, containing the commander of the little fleet, and in its wake a second gig carrying a load of Spanish sand, in the centre of which fluttered the royal standard!

The youthful Duke forced his Captain through regulation evolutions, and when he thought he had gone far enough, he went aboard, apparently well pleased with his morning's work.

Before going ashore he had buttoned the standard under his uniform, for the express purpose of "getting square" with his superior officer! It was a silly joke, but then this Prince was never credited with having either tact or consideration for others.

A New Serial.

In the next issue of *The Companion*, the Double New Year's Number, will be begun a fine new story by the popular author, Homer Greene, entitled

"A Tale of the Tow-Path."

THE ROSE OF GORZE.

The story of the "Red Rose of Gorze," as charming as it is true, is often told by Germans to illustrate the touching loyalty of a subject and the grateful remembrance and appreciation of his sovereign. In August, 1870, a German officer was lying wounded in the house of a French family, near the little town of Gorze in Lorraine. He had received six wounds in the battle of Mars-la-Tour, five of them as he lay on the ground, while the fight surged around him; and he was scarcely expected to recover.

The French family in whose house he was quartered nursed their wounded enemy with much kindness and skill.

One morning the officer found placed in a glass by his bedside a beautiful red rose, just opening, which the daughter of the house had brought in from the garden while he slept. Its scent and beauty were refreshing to the sick man, but instead of keeping it, he sent his soldier-servant at once with it to Gorze, where the King of Prussia's headquarters were, and told him to give that rose to the King, with the message that one of his wounded officers had sent it to him.

The King put the rose in his button-hole, and inquired the name of the officer.

"Captain von Zedwitz, 72d Regiment of the Line," was the reply.

When Captain von Zedwitz was sufficiently recovered to be moved to Berlin, he found that his red rose had become quite famous, for showers of roses—red roses—were sent to him from all sides, so that his rooms were full of them.

In March of the next year, six months after the original rose had faded, Zedwitz had occasion to ask an audience of the Emperor King.

He was received most graciously, and at the Emperor's request told the story of the battle of Mars-la-Tour. Then, to Captain von Zedwitz's surprise, the Emperor spoke of the rose which had been sent to him at Gorze, and again thanked the officer for it. As Zedwitz was leaving the Emperor, he met the Crown Prince, who in his conversation also recalled the rose with a smile.

Even then Captain von Zedwitz had not heard the last of his famous rose, for on the following Christmas he had the pleasure of receiving an autograph letter from the Emperor enclosing an emblematical picture—a stone bearing the date, August 19, 1870, Gorze; partly covered by the tricolor of the Confederation, a Prussian infantry helmet with oak-wreath below, and the Iron Cross with ribbon. A rose in dull silver was introduced in the gold frame.

MUSICAL SIGNALLING.

It is a theory which seems to have been confirmed by practical experiment that a pure tone of voice, such as that used in singing, penetrates to a much greater distance than mere noise. This idea has given rise to a new system of marine signalling, to be used either at night or in foggy weather, and based entirely upon the action of successive musical tones.

A limited number of combinations of notes can be made to carry on all the conversation necessary between approaching vessels to avoid collision, or between light-houses and dangerous points of the coast, in order to prevent wrecks.

Four notes, for example, serve to ask, "Which way are you heading?" and two others mean, "I am steering southeast."

The system can be employed on a large scale by means of machinery consisting of a keyboard, on which the operator would play, and "speaking apparatus." It is expected that by such apparatus communication may be established at a distance of two miles. The invention can be adapted to the Morse code of signals when it becomes necessary to spell out names or words.

EXPENSIVE, AFTER ALL.

It makes little or no difference how low the price of a thing may be, if one has no money with which to buy it. Many a "ne'er-do-weel," searching for a land where he may live in luxury for almost nothing, has discovered that there is sure to be some obstacle to his success in every country to which he goes.

"I can tell you," said a recently returned traveller, who was clad much after the fashion of Mr. Richard Swiveller, "I tell you, Argentina's the place to go! Everything is dirt cheap there! Why, you can get a splendid fat turkey for twenty cents!"

"Whew!" said one of the interested bystanders. "If I'd been in your place, I should have stayed there!"

"Would you now!" remarked the traveller, eying his friend meditatively. "Well, then, since you'd have stayed, probably you can tell me how I was to get the twenty cents, in Argentina?"

BROTHERLY CRITICISM.

It is unwise, as a general thing, to ask other people what they think of our work. The result may be unpleasant both for them and for us.

Two ministers were discussing the process of sermon-writing.

"Now with me," said one of them, "the only really hard things to manage are the introduction and the conclusion. You remember the sermon I preached at the installation of Brother So-and-So not long ago? Well, I flattered myself that the exordium and the peroration of that sermon were pretty well done. Do you remember what you thought of them?"

"Yes," said the other minister. "I remember thinking they were very good, but too far apart."

Burnett's Cocoaine has earned a just reputation for promoting the growth and preserving the beauty of the human hair. Instead of possessing the heating and rancid qualities of all animal preparations, such as bear's grease, etc., it is a cooling vegetable oil, extremely agreeable and cleanly. [Adv.

Factories: Newark and Chicago.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S
Breakfast Cocoa

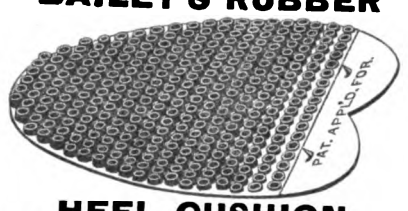
from which the excess of oil has been removed,
Is absolutely pure and it is soluble.
No Chemicals
are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.
Sold by Grocers everywhere.
W. BAKER & CO., Dorchester, Mass.

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., offers both sexes the best advantages for a practical business education at the lowest cost. Open all the year. Business houses supplied with competent assistants. No charge for situations furnished. *Stenography taught.* Address as above for Illus. Catalogue.

PETROLEUM
VASELINE
- JELLY. -

An invaluable family remedy for Burns, Wounds, Sprains, Rheumatism, Skin Diseases, Hemorrhoids, Sun Burns, Chilblains, etc. Taken internally, will cure Croup, Coughs, Colds, Sore Throat, etc.

Pure Vaseline (2-oz. bottle),	10 cts.
Pomade Vaseline (2-oz. bottle),	15 "
Vaseline Cold Cream,	15 "
Vaseline Camphor Ice,	10 "
Vaseline Soap, Unscented,	10 "
Vaseline Soap, Perfumed,	25 "
White Vaseline (2-oz. bottle),	25 "
Camphorated Vaseline (2-oz. bottle),	25 "
Carbolated Vaseline (2-oz. bottle),	25 "



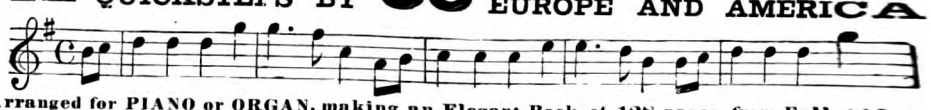
FOR SALE EVERYWHERE AT ABOVE PRICES.

Be careful to accept only the genuine, put up and labeled by us, if you wish to receive value for your money. If any dealer offers you an imitation or substitute, decline it.

DO NOT BE CHEATED.

Chesebrough Manufacturing Co.

BAILEY'S RUBBER

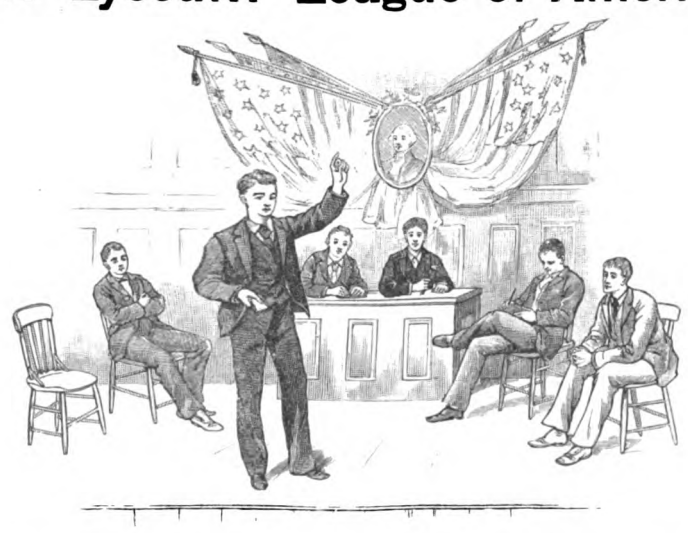


HEEL CUSHION

gives elasticity and ease to every step taken by the wearer. It breaks the shock of jarring of the body when walking, and is particularly adapted to all who are obliged to be on their feet. To those suffering from Spinal, Kidney, Rheumatic and Nervous Affections, it will be found a great relief. The rubber with its annular projections is as soft as velvet, thoroughly vulcanized, always elastic, leather-covered next to the foot, and can be instantly adjusted inside of the boot, directly under the heel. All sizes, 25 cents per pair, mailed upon receipt of price. At all dealers.

What People Say Who Wear Them:
"Send six pairs more; they are a grand success."
"Entirely satisfactory; send four pairs more."
"They give instant relief; send me three pairs more."
Endorsed by physicians for nervous troubles.
C. J. BAILEY & CO., 22 Boylston St., Boston, Mass.
Catalogue mailed Free. Everything in Rubber Goods.

42 MARCHES AND QUICKSTEPS BY 38 BEST COMPOSERS OF EUROPE AND AMERICA.



Arranged for PIANO or ORGAN, making an Elegant Book of 128 pages, from Full-Sized Sheet-Music Plates, and costing $14.80 in sheet form. It contains:

A. & H. A. Co.'s 250th Anniversary.		Harrison and Morton's,	Durkee	Rossi,	Johnson
Bersaglieri (op. 99),	Eilenberg	Hewitt's Decoration Day,	Hewitt	Scipio, Four Hands,	Handel
Birthday March,	Schumann	Kettle Drum (op. 7),	Nebelung	Singer's Joy (op. 14),	Herrman
Blaine's Grand Nomination,	Noles	Lohengrin Bridal,	Wagner	Smith's Grand,	Martin
Boccaccio (Von Suppe),	Konradin	Marksman's,	Faust	Sultan's Band,	Brown
Cleveland's Second Term,	Noles	Napoleon (op. 104),	Parlow	Swedish Wedding,	Södermann
Cross and Crescent Grand,	Noles	News Boys',	Riley	Trifet's Grand (op. 182),	Wedel
Echoing Trumpets,	Noles	Night March of Brigands,	Norris	Triumphale,	Concone
Eglinton Quickstep,	F. W. M.	Nobel Prater (op. 36),	Rab	Turkish Patrol (Michaelis),	Krug
Erminie, Piano & Violin,	Jakobowsky	Old South Grand,	Turner	Vienna, Four Hands,	Gordon
Fatinitza,	Von Suppe	Overland (op. 240),	Faust	Village Parade Quickstep,	Allen
Fearless,	Behr	Pokcaha,	Muhkyca	Warriors,	Burgmüller
Funeral (op. 175),	Smith	Radetzky, Four Hands,	Strauss	Waves of the Ocean,	Blake
Gov. Burleigh's Reception,	Brooks	Returning Home,	Elson	Wedding,	Mendelssohn

This book, containing ALL of above, sent by mail, postage paid, for 30 cts.; 4 books, $1. Send all orders to F. M. TRIFET, 408 Washington Street, BOSTON, MASS.

"The Lyceum League of America."

The Successful Beginning. — Last October THE YOUTH'S COMPANION first announced its offer to organize, equip and maintain the Lyceum League of America. Its object was to train young men for the duties of citizenship.

The plan was greeted at once with the warmest commendation both from eminent educators, statesmen, and the public press. Young men have been quick to appreciate the advantages of such an organization, and have acted promptly and with enthusiasm.

To-day more than 1500 Lyceum League Clubs have either been organized or are in process of organization.

Already every State and Territory is represented in this great chain of Lyceum Clubs, comprising a membership of not less than 20,000 of our most promising young men, all devoted to the cultivation of a higher standard of American citizenship.

There is no reason why the League should not number 200,000. Let young men, all over the nation, in schools, in churches, in manufactories, enter this movement.

Our Free Equipment.—To mark our interest in the fitting of young men for public duties, we make this offer: To every Club of 10 or more young men who organize under this plan, we will furnish a full Equipment *Free.* This consists of a Charter with seal for framing; Cushing's Manual, Condensed Rules and Maxims for Debate; President's Gavel; various blank forms; and a Secretary's Book. The Secretary's Book contains the League constitution, suggestions to officers, hints for by-laws, model of minutes, etc., and blank pages for the record of 80 meetings.

In addition, we shall send out General Messages to the League, written by eminent Americans, and frequent Bulletins, containing subjects for Debate, with suggestions as to reading, etc.; and news of the League.

How to Start.—Interest young men (of the right sort) in the advantages of such a society. If they decide to organize, write that they wish to form a Lyceum Club. We will send you a printed blank form, and Special Instructions about forming a Club.

THE YOUTH'S COMPANION, Boston, Mass.

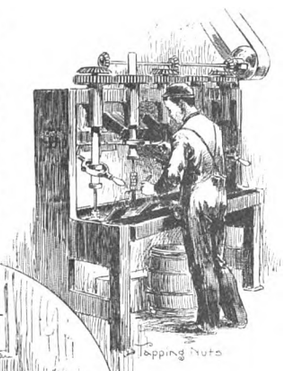
For the Companion.

THE MACHINIST.

What the Trade Offers to Boys.

A thorough machinist is supposed to know how to manufacture all kinds of machinery in accordance with drawings. His field of work is mainly in the machine shop. This is equipped with the tools that enable him to work with precision.



Chief among these are the lathe, the planer and the drill. He should be competent to use each with facility. Taking the castings as they come from the foundry, and the forgings from the blacksmith's shop, he shapes them to the detailed drawings, and is successful in proportion to the skill which he shows in measurement and taste in finishing.

In Boston, machinists of ordinary ability are paid from $12.00 to $18.00 per week, of ten hours per day; Saturday, nine hours. Superior men receive from $19.50 to $21.00 per week. The trade is not crowded with first-rate men.

Assistant foremen are paid about $1.00 to $3.00 per week more than the workman of the highest class. Foremen are paid from $24.00 to $30.00 per week.

The foreman must have the ability to calculate the time taken in completing a job. It is his duty to inspect the work in progress so as to prevent errors of construction. He also lays out all classes of work and is expected to exercise good judgment in having it done economically as well as satisfactorily.

In large machine works to which an iron foundry is attached, the most responsible position is filled by the superintendent.

The first-rate superintendent is a mechanical engineer; in this country a man who can design, draw and estimate the cost of machinery. He is also a practical machinist, and has a general knowledge of foundry operations. He gives orders to the heads of the several departments, and is constant in supervision. The pay of a superintendent varies from $2,000 to $5,000 per year. In very extensive works it goes much higher.

Boys of from sixteen to eighteen years of age are taken to learn the trade of machinist. A preference is given to those of eighteen years for the reason that the limit of service is only three years.

In many of the important shops the boy is indentured, and good faith assured by retaining $1.00 per week out of his wages until the completion of the term. Then the back money is paid in full. The punishment for running away is the loss of back money.

Boys beginning are paid from $3.00 to $5.00 per week. In most cases where a portion of the weekly pay is retained by the employers, the first year rate is $5.00 per week. Some don't give any increase during the period of the indenture, but the majority of employers add to the pay from $1.00 to $1.50 per week per year. At the end of the third year the rate of wages runs from $10.00 to $12.00 per week.

The average boy in a machine shop is not expected to become competent until he has had an experience of at least five years. At the end of three years, if zealous and intelligent, he is advanced by degrees to the full pay of journeymen.

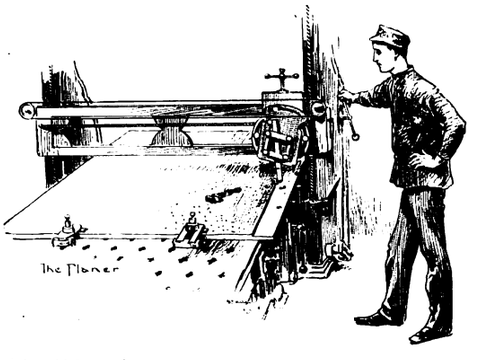
As he is independent at the end of three years, his future rests upon himself. If he has the ambition to qualify for the position of foreman or that of superintendent, the way lies open.

Most of those whose opinions are of value believe that the apprentice system is the best for a boy learning the trade. If he is smart he finds opportunities to attain proficiency in the use of every tool in a shop.

The course of instruction for the complete trade varies according to the ideas of the heads of the different shops. But however arranged, the knowledge acquired is about the same.

The boy learns to dress rough castings, to drill holes in castings or bars, to thread nuts and bolts, to do filing and chipping, which mean the plain shaping of metals having flat surfaces.

With the lathe he learns the art of turning. This gives him the power to shape any circular body that is intended to form a part in the construction of a machine.



With the planer he acquires skill in dressing off large flat surfaces, as a carpenter planes wood. He is also taught how to adapt, in the erection of a complete machine, those parts that he has made.

As he must understand mechanical drawing, he is supposed to learn it at a night school. He is encouraged to take home from the shop the parts of machinery on which he may be working, in order to make drawings of them.

If he intends to qualify for the position of superintendent, he can study mechanical engineering at the Massachusetts Institute of Technology, Boston, or at any kindred school.

The best place for a boy to learn the complete trade of machinist is the large, first-rate job-shop, where work of every sort is done, new work and repairs of machinery.

On entering he is sent at once to help some journeyman at either planing, drilling or fitting, and by passing from one to another, according to the requirements of the job in hand, learns how to use all the tools. When a boy is not bound, unless very bright, the employer, finding that he proves useful with any particular tool, lets him continue to work with it while he remains in the shop. The result is that he eventually becomes a specialist as a planer, lathe-hand or fitter, and goes no further toward the attainment of the complete trade.

There are thousands of shops where special machines only are built and repaired, and there are shops specially for repairing certain machines.

Owners of patents, to save expense, set up shops to manufacture their own machines. In few, if any of such, can a boy learn the complete trade of machinist. The utmost he can do is to become a specialist.

Many of the employers, who are practical machinists, and many of the superintendents, believe that a boy cannot do better than learn the principles of the complete trade in a trades' school. By working at a low rate of wages he will then be able to finish up in a regular machine shop. There are several schools of this kind in existence, and the city of Boston is now getting up one.

GEORGE HENRY BASSETT.

TWO MERRYTHOUGHTS.

In an old English cook-book, a recipe for dressing a hare begins, "First catch your hare!" So in this case we will suppose a pair of nice plump chickens to have been caught, slain, dressed, cooked and eaten, and the "wish-bones"—the tidbit which generally falls to the children's share—nicely polished, every bit of meat and tissue scraped off, and while warm, a string tied tightly around the lower part or legs, to draw them closer together. Drying in that position, they will not look, as one of our children said of the first one we experimented with, "so much like a straddle-bug." Next obtain some sealing-wax, flesh-color, if possible, for the head, feet and hands; small piece of quaker-gray, or any color preferable, flannel for the suits; a tiny piece of white cotton-wadding for the hair; a little fine white nainsook or muslin for the collars and old lady's kerchief; a straight twig an inch and a half long for the old man's cane, and your "outfit" is complete.

Take the larger wish-bone for the old man. Soften your sealing-wax over a lamp, and make a round head on the top of each bone, molding

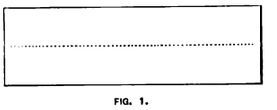

FIG. 1.

the features with your moistened thumb and finger; being sure to keep them wet, else the wax will stick and burn. The wrinkles, eyes, etc., can be made with the heated end of a hairpin.

Hold the back of the head over the light for a second, and immediately apply the cotton hair, while the wax is soft,—just a mite at the back for the bald-headed man, but well covering the old lady's cranium, and twisting the surplus in a pug behind. The heated hairpin will give her a "parting." Apply a piece of wax like shoes at the end of each leg. Cut from the nainsook two tiny strips (Fig. 1), double and sew firmly around the neck of each wish-bone, for a collar. Then from the gray flannel cut the old lady's dress (Fig. 2). Sew up the back, turn and gather at the neck and waist-line.

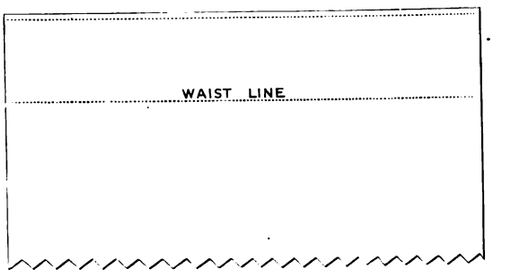

FIG. 2.

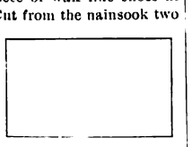

FIG. 3.

Annie, Mamie and Jennie, you who love to dress those tiny china dolls, will know just how to do it. Next cut two pieces of flannel from Fig. 3, roll each tightly, sew up, and after sticking a little piece of sealing-wax at one end of each for hands, sew firmly but neatly to the old lady's shoulder-place. Cut from the nainsook a three-cornered kerchief (Fig. 4), fasten it over her shoulders, and our old lady "Joan" is finished.

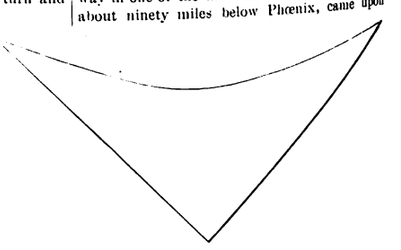

FIG. 4.

Now from the gray stuff cut the old man's trousers (Fig. 5). Cut the line A B. Double E C and D F to A B, and sew up. Turn, and putting them on the old gentleman, sew firmly. Cut the coat and coat-collar according to pattern (Figs. 6 and 7).

After attaching them neatly, make the arms from Fig. 3, in the same manner as the old lady's, fastening the cane to the right hand by softening the wax. The buttons on back and front of coat can be applied with specks of yellow paint.

DARBY. JOAN.

Here you have a happy-looking old couple—"Darby and Joan." Send them as "good wishes" for Christmas, birthdays or valentines, or utilize them as penwipers. Ingenuity will suggest plenty of uses for them. Sent on a birthday with this rhyme, they were greatly appreciated.

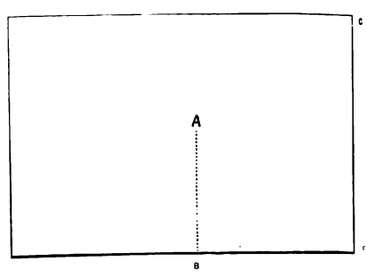

FIG. 5.

Two Merrythoughts I send to thee
On this thy natal day;
Keep them as memories of me,
When far, thou art, away.

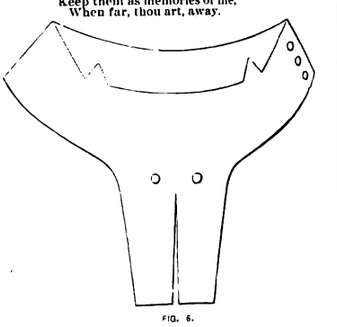

FIG. 6.

Any boy or girl with a spark of "poetry in their souls" will readily originate countless jingles to accompany their Merrythoughts.

Here are a few for those born without the "divine afflatus," and consequently unable to write "doggerel by the yard:"

This jolly old couple, Darby and Joan,
My heartiest greetings convey;
With a sweet, loving wish with each wish-bone,
For "happy returns" of the day.

These Merrythoughts, my Valentine,
With joy to thee I send,
Trusting this love of thine and mine
May never have an end.

Christmas greetings with "Darby and Joan,"
And Christmas wishes with each wish-bone.

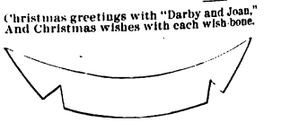

FIG. 7.

HANNAH SEDGWICK.

ON THE DESERT.

Not long ago some miners who had lost their way in one of the most desert parts of Arizona, about ninety miles below Phœnix, came upon the ruins of an "Indian fort" which had hitherto been unknown to white men. It was in the midst of a desert so waterless and uninhabitable, and so nearly impassable on account of the absence of any growing thing, that no white man had ever passed there before. But these ruins, upon examination, turned out to have once been the

Digitized by Google

habitation of a great number of people. They were at least a square mile in extent. In the midst was a lofty structure which was half-dwelling, half-fortification.

It was in a series of walls and terraces, the lowest one of which had evidently been the site of extensive gardens. Upon the top of a smaller terrace within, there were hundreds of boulders brought from the Gila, four miles distant, and evidently intended to roll down upon the heads of enemies below.

In the topmost terrace or inclosure were found many skeletons and human bones. Probably the place had been besieged, and the people had died of starvation.

To this place water had been brought from the Gila in a ditch thirty feet wide, the remains of which were found.

These people understood the art of making the deserts which they occupied "blossom as a rose." By patience and their own efforts they obtained water for their gardens, and lived in plenty until, perhaps, the encroachments of the Spaniards brought upon them the enemies who destroyed them.

For the Companion.

THE OLD STRAGGLER'S STORY.

"There's an old straggler-man out at the door," was the whisper which ran around among the children at a little country schoolhouse, twenty years ago.

It was nearing time for the forenoon recess on a warm day in June. The doors and windows were open. Peeping out, we could catch glimpses of a person of very strange appearance, who seemed to be looking round him in a meditative mood.

"Boys may have their recess," said the teacher.

But instead of the usual rush for the open air, all the boys walked cautiously to the threshold to reconnoiter the very odd-looking straggler-man. Not only were his grizzly hair and beard of phenomenal length and abundance, but his garb was strange; and he leaned upon an old brass-bound rifle. We were all too timid to proceed farther. "It's an Indian," one whispered. "He'll shoot us."

Some of us hurried back to the protection of our seats. Then the schoolmistress came to the door to view our singular caller.

His clothes seemed to be made from worn, yellowed leather; the trousers laced up at the outside of the leg. In one side of his belt hung a powder-horn, on the other what seemed to be the bone handle of a long knife. On his head was a large, pouchy cap of long brown fur.

"You had all better come in and let me shut the door," said the startled schoolmistress, in a low voice. "I believe the poor old man is crazy."

But at this juncture he spoke.

"Don'ty be afeard! Don'ty be afeard of me! My ole gun aint loaded," he said, in a creaking but cheery voice. And he smiled so encouragingly and looked so pleased to see us grouped round the door that some of the boldest of us laughed.

"Pooty good schoolhus you've got here nowadays, miss," he went on. "Better'n bigger'n the old un uster be that I went tu. The old schoolhus got burnt up long 'fore you remember of. It burnt up one night while school was a-keepin'. All the marster's books and his old green-hide and ruler burnt up with it! Haw! haw! They said I sot it afire!" Here the strange old man creaked off a long, hearty laugh.

These declarations seemed to alarm our good schoolmistress anew. She drew us inside, closed the door and locked it. After a time the man went along the road to the next farm-house, the old Bancroft homestead.

At the noon intermission Phil and May Bancroft, who went home with the schoolmistress for lunch, brought back much information about the eccentric stranger. Grandpa Bachelder knew him. His name was "old Billy Dennett."

He and Grandpa Bachelder had been boys together, and went to the same school. One winter they had trouble with the schoolmaster; and a few nights later the schoolhouse burned. Billy Dennett, then a youth of eighteen, was accused of setting it on fire, and for that reason had run away. Now, when nearly seventy years old, he had come wandering back to his childhood's home, all the way from "the Upper Missouri region," where he had been a trapper. Few of his youthful acquaintances survived; some of these had wholly forgotten him, the others had thought of him as fifty years dead. But he was a good-natured old soul, and soon gained a host of admiring friends among the boys, to whom his stories of adventure proved an endless delight.

Grandpa Bachelder gave him an old cooper shop at the edge of the sugar-maple grove to live in, and there I passed some of the pleasantest hours of my boyhood. In that old shop, of a rainy holiday or an evening, we lads would gather to listen to Old Billy's tales of Indians, grizzly bears and panthers.

For forty years the old man had trapped beaver on the tributaries of the Upper Missouri, generally with a partner. He had lost a great many partners. Indeed, a partner seemed to have no long tenure of life in that wild and lawless country. Old Billy's favorite way of beginning a story was, "One time when me and my pardner was a-trappin'."

"Same pardner as before, Uncle Billy?" some lad would interrupt.

"No, not that one; he got killed the spring arter, by the Blackfeet. 'Twas 'nother one as called himself Peter Michel," or some similar voyageur name. I am still inclined to believe that the most of Old Billy's narratives were true in the main. They were chiefly accounts of escapes from or fights with the ever-present Blackfeet. Not the most thrilling of the old trapper's stories, yet the one which now comes first to my mind, was that of a singular accident whereby his life was saved on the Missouri River.

"Me and my pardner had bad luck that season," said the old man. "Somethin', or some disease, got amongst beaver. We wintered on Milk River, and had only a hundud and forty pelts in the spring. My pardner didn't like it, and said he was goin' down on the Yallerstone."

"What partner was he, Uncle Billy? Was it Peter, or Jaques?"

"No, none of them pardners, but a kind of ord'nary little feller who called himself Jean Baptist Gadette. He was no great shakes of a pardner; hadn't no luck with traps. So as it come along April I bought him out and started down river alone with the fur in a bateau that we owned.

"There was a trading post near whar Fort Union was afterwards built; and I meant to make a quick run of it, on high water. Allus when trappin', you must get out to a tradin' post once in a while, boys, fer supplies and things. "I'd picked my time fer a late moon, fer I meant to float along mostly in the night-time when I got out on the ole Missouri, so as to keep clear of the Indians that was allus watchin' about in the spring-time.

A Terrible Fall.

"Now I want ter tell ye about the Missouri, boys. 'Taint like no other livin' river as ever I saw. 'Tis allus riley and a-burrowin' into the mud; allus a-shiftin' its bed and a-rootin' down its banks, like an ole yaller hog; allus a-boilin' and a-turnin' itself over and under.

"When I got out of Milk River onto the Missouri it was rollin' along as full as it could be, an' a-plowin' out the bends and bars of last year, makin' a whole new set. It's the most discontentedest stream with its bed in all the world, allus a-shakin' it up and makin' it over again. It's no use fer a man as has been up and down it ever so many times ter think he knows the way; fer it seems as though the more a man boats it on the ole Missouri, the less he knows whar ter steer.

"But as my long-nosed old bateau was light-loaded and hard ter swamp, I floated along pooty comfortable on the flood water, pullin' up in the diamon' willer and cottonwood coves through the daytimes. I had got down ter within eighty miles of the post, when 'bout four o'clock one mornin', after I'd been on the water all night, I steered into a little cove of willers to take a rest. Thar war a few old stumpy cottonwoods a little back of the willers that looked as if some dry stuff fer a fire might be picked up.

"Fust I hauled the bateau partly out on the mud and bent the willers down over it, so that it couldn't be seen from the stream side. Then I started in through the bushes with my axe and camp things, ter find a good place ter kindle a little fire and get a bite ter eat.

"All of a sudden, just as I'd laid down my things, what should I see but an Injin lodge, not fifty fut off!

"It was jest gittin' daylight a little. I peeked at the lodge like a hen in the dark, and then I spied out another one close by. I'd run head fust 'mongst a whole grist of redskins.

"Thar warn't none of the Indians in sight, but I was sure thar war plenty of 'em asleep inside; fer thar war the smoking brands of their fire. The lodges looked like Mandans, but I couldn't be sure but what they was Ogallah Sioux, fer that tribe war great rangers in them days.

"Boys, I warn't long a-tiptoeing behind one of them cottonwood stubs! My rifle was back at the bateau; fer I'd no thought of runnin' onto Injins thar. 'Twas a thing as wouldn't happen once in a thousand times. Besides, I war never a big Injin fighter. When Injins war plenty I allus laid as low as I poss'bly could.

"Then I picked up my axe and my camp things as gentle like as if they'd ben soft-shelled eggs, and tiptoed back through the willers to my boat. 'Twar too airly in the day ter be makin' a call on strangers. I didn't want ter disturb their mornin' dreams.

"I got back ter the bateau, put in my things and tried ter shove her back into the water. But she'd settled into the mud some. I couldn't move her fer a long spell. I didn't dare ter tug at her fer fear of makin' a noise. So I kept pushin' steady, and keepin' a sharp eye back toward the Injin camp. And as I was a-pushin' and a-pushin', what should come a-trottin' through the willers but one of their poor little peeked-nosed, mangy Injin dogs.

"The little varmint had smelt me, I s'pose, and had come a-trottin' out with his nose down on my track. When he looked up and saw me, he guv a suddint jump 'bout a foot into the air. But he didn't bark; he only growled.

"I tell ye, boys, the sweat kinder started out on me then. I expected every minute the ugly little cur wud bust out a-barkin'. I patted my leg to him and tried hard ter 'tice him up ter me and git his confidence. But he kept brustled and showed his teeth. Then along come another one of 'em, and he brustled and begun ter growl, too.

"I throwed scraps of dried buffalo meat to 'em. They war so starved and hungry that they picked it up. But they knew the smell of a white man, and wouldn't come near me. Pooty quick 'long come another one; that was three! Soon's this last one saw me he up nose and howled.

"With that I sot my shoulder ter the bateau in good airnest, and she started. I hopped in and got out of that cove jest as quick and easy as I could. I didn't see nor hear a lisp of the Injins, 'cept their dogs. But I knowed they'd be pooty sure to find my tracks in the course of an hour or two, so I shoved my paddle into the ole Missouri, and slid away down river as fast as I could.

"By sun-up I was four or five mile below, and kinder hoped I was out of the scrape. Thar war a good many bends, and I couldn't see very far back up stream. Still I 'magined I'd git a couple of hours the start of 'em, and that if they did come on arter me, they'd prob'ly git tired of the chase and give it up.

"So arter a spell I didn't look back quite so often; fer I had ter keep a sharp eye ahead, the river war so full of big, boilin' eddies and drift stuff. When I did look over my shoulder agin, I ketched sight of a canoe with four Injins comin' round a bend, 'bout half a mile behind."

"Warn't you scared then, Uncle Billy?" a boy called.

"Wal, boys, I war some put out. Fact, I donno when I ever seen my chances look slimmer.

"Thar didn't seem but one thing I could do, and that war ter git into the willers at a bend and du what shootin' I could. I warn't long makin' up my mind on that p'int. But I couldn't see no good place to land. All 'long ahead there war gravelly, cavin' bluffs. But I saw a kind of gap whar I 'magined a crick come in.

"'Twar nigh a mile down to the crick. But arter a look both ways, I made fer it. Thar didn't seem no other chance. If I could slip inter that crick-mouth where there war plenty of cottonwoods and willer fringe I'd have a chance of standin' the redskins off. So I headed for it and pawed water, 'thout even lookin' round, though I was expecting every minute the Injins would begin shootin'. I knowed they war gainin' on me two feet every jump.

"The current war swift, and I warn't long openin' up that crick mouth. I headed in towards it, but pooty soon found that 'twarn't all clear sailin'. Thar was a big drift-rick outside, grounded on a shaller. Howsomever, I saw that a side current from the main river war settin' into the crick mouth on the upper side of the big drift-rick, 'tween it and the high, cavin' bank whar a tuft of cottonwoods stood up high.

"This 'ere current swept me in 'twixt the bank and the drift-rick at a great rate, but I'd no sooner turned the p'int than I got caught in a tremenjus eddy whar the current met the crick water. The eddy war full of logs and brush.

"In a minute my ole bateau was a-turnin' round and round. When I tried to head out of it I found that the brush war the tops of green trees which had fell in and sunk.

"The current war a-pressin' me onto it, and I got so tangled up that I couldn't move one way nor 'tother. The yaller water roared and foamed. 'Twas no use paddling. The bateau war jammed into the green tree-tops.

"By that time the Injin canoe came round the p'int. Seein' what a fix I was in, they sot up a yell and pulled in ter the foot of the steep bluff. Thar they held on and looked me over. We warn't more'n a stone's throw apart. At that distance they didn't look a mite purty.

"As soon as I saw their canoe I dropped into the bottom of my ole boat, with my rifle ter shoulder. I wasn't anxious ter begin the fuss, though. Thar war four strappin' bucks. One held the canoe with his paddle. The other three had guns in their hands, and kept callin' out, ter tarnt me, 'Haw-hee! haw-hee!'

"I knew I could fire and prob'ly knock over one of 'em. But the other three would be sure ter riddle me 'fore I could load. I didn't stand no sight at all of gittin' out of it, so far as I could see. But I had 'bout concluded that I might as well begin, fer it war no use ter let them fire fust. 'Twar sure ter come ter that. They didn't even sign ter me ter surrender. Not that I'd a-done it, ef they had. I warn't no sich fool as that.

"'Twar 'ain that they didn't altogether like the looks of my gun. They sot and pecked at me a bit. Then they looked up the bluff, and arter a minute begun to back water 'long the foot on't. At fust I couldn't think what they was up to. But I soon saw.

"They worked their canoe back a hundud foot or so. Then one of 'em jumped out and started ter clamber his way up the steep, fresh gravel bank, whar the current had been gnawin' it away. He meant ter git up ter the cottonwoods on top, and shoot down at me in the bateau.

"Thinks I, 'I must stop you 'fore you get up thar,' and I was gettin' as good aim as I could, fer I expected 'twould be the last shot I'd ever git a chance ter fire. He'd clawed his way up 'bout fifty foot by the time I was just goin' ter pull trigger on him, when all of a sudden the gravel under him begun ter slide down. No sooner war it started sliding below him than it began coming down from above.

"Clean from the top of the bluff—sods, sand and stones—down it come, and swept the Injin 'long with it. Then more started; looked like the bluff was all coming down. I saw them tall cottonwoods up thar on the edge of the bluff sag over. With that the redskins guv a yell, and tried to paddle off from the bluff. But down come them trees and struck the river and the canoe with a tremenjus sudge. I kind of thought I heard the Injins yell just before they was swamped down.

"Then they war all gone. Even the Injin as war climbin' the bank war kerried into the water and swept under.

"I stood up in my bateau and stared at the spot. It give me a strange feelin'; they went out of sight so quick! The bank stopped slidin'. All was quiet again. I watched the stream and the bank, but not one of 'em crawled out.

"Then with my axe I cut away the brush in which I was hung up, and paddlin' round in the lee of the drift-rick, worked up stream and came in near ter the foot of the bank, whar the trees fell. I wanted ter see what had become of them reds, and so I did. One end of their canoe stuck up in sight a little 'mongst the green branches: and down in the roily water I could see the scalp-lock of one of the Injins wavin' in the current. The green brush held 'em down and had drownded 'em.

"Wal, boys, they warn't my Injins, you know. I didn't go into mournin' fer 'em. And I couldn't linger long with them, either, fer the current war powerful strong thar. But I've allus considered them cottonwoods 'bout the best pardners I ever had."

"Did ye see any more Indians, Uncle Billy?"

"Didn't see no more that time; and I got down ter the post with my beaver pelts the next day."

THE GLAD NEW YEAR.

With the whirling and drifting of snows
Comes breathless, the wild New Year,
While bitter the North wind blows
O'er the fields that lie stark and drear.

Yet Hope is alight in her eyes
As she looks from the heart of the storm,
"Earth sleeps in her shroud," she cries,
"But the life in her breast is warm.

"Death is but a dream of the night,
And the hymn of joy is begun,
For slowly seeking the light
The great globe turns to the sun.

"Behold, I will bring delight
In place of the darkness and cold
Safe under the meadows so white
Is hiding the buttercup's gold.

"The blush of the sweet-briar rose,
Where is it treasured to-day?
I will call it from under the snows
To bloom on its delicate spray.

"I will fling all the flowers abroad,
And loose in the echoing sky
The beautiful birds of God,
To carol their rapture on high.

"And the summer's splendour shall reign
In place of the winter's dearth,
Her color and music again
Shall gladden the patient earth.

"Look but with eyes that are pure
On the gifts in my hand that lie,
And your portion of bliss is sure
In the beauty no wealth can buy."

Hark to the New Year's voice
Through the murk of the winter drear;
O children of men, rejoice
At the tidings of hope and cheer!

THIS SIDE THE GATE.

Nowhere perhaps in the Old World does the past face the American with more sudden and startling power than in Westminster Abbey. There lie the rulers and leaders of men through many ages; not only the kings, but the captains, the singers, the thinkers, who have, to a great degree, made English-speaking people what they are.

When the visitor has had time to grow a little familiar with this mass of tombs, he will feel for a moment a grim amusement at the strange bed-fellows here brought together, made to slumber side by side in their last resting-places.

Here "bloody Queen Mary" sleeps quietly a few feet from the Cromwells and Iretons. They cannot burn nor hang each other now.

Here, without a shudder, rests poor Arabella Stuart, very near to James I., who, out of jealous fear of her claims to the throne, kept her a prisoner until she went mad and died.

Here lie Queen Anne and her sister Mary, their bitter squabbles silenced. Here are sovereigns of the houses of York and Lancaster, gathered after all their wars around the feet of old John of Gaunt, yet dumb as to the question of succession. Here the bones of haughty Catholic kings are jostled by the monuments of the Wesleys, and neither king nor preacher utters a single protest.

Perhaps the most dramatic effect in the Abbey is that produced by the tombs of Queen Elizabeth and her victim, Mary Queen of Scots, which stand exactly parallel with each other in the north and south aisles almost side by side. Above each grave is a recumbent marble figure of the Queen who sleeps beneath. Elizabeth wears her regal robes; Mary her close-fitting coif and a mantle. The hands of each Queen are clasped in prayer.

There, through the long centuries they have lain silent close together, the slayer and the slain. Their quarrel has been fought over ten thousand times for generation after generation, but there has been no accusation of murder, no cry of remorse, nor prayer for forgiveness between them.

The force of this dumb historic drama is so overpowering that the visitor is in danger of neglecting its more direct and tremendous meaning.

It is, that some day, some day certain to come, he and his best friends and bitterest enemies will lie down like these two queens, dumb and still, side by side, beneath the heavy, immovable clay.

They cannot hurt each other then. They cannot help each other.

He cannot stretch out his hand then to caress the child he has neglected, or the mother, lying but a foot away, whose heart he may have wrung with sorrow. No matter how great the mistakes he made while living, or how harmful the evil work which he left behind him, he cannot come back for an hour, or speak a single word to set them right.

Death, when he turns the key, never unlocks the gate again, neither for the laborer, nor for the great king lying crowned in the Abbey.

What is it, then, that we are doing now, on this side of the gate?

FORESTS AS FRIENDS OF MAN.

The value of forests in the preservation of water during times of drought, in the prevention of destructive floods and in the regulation of climates is gradually being recognized on all sides. We see the result of this recognition in the various movements for the planting of trees and the setting aside of forest reservations. Just as man's existence upon this planet would have been impossible had not the preëxisting forests furnished a rich vegetable mold to give fertility to the soil, so the entire extinction of the forests now would in time bring mankind to a disastrous end.

In order to understand how important forests are in regulating the water supply let us imagine a scene which has been realized in thousands of places in our country. Picture to yourself a broad hill, with long, sloping sides, surrounded with pleasant meadows, fruitful orchards and rich grain fields.

A majestic forest covers the hill, and clear brooks that never run dry come dancing and sparkling down its flanks, carrying refreshment to the surrounding country. In the forest, with its deep bed of leaves and moist soil, there is a perpetual reservoir that absorbs the rain when it falls plentifully, and that retains some to feed the brooks when long, dry seasons come.

But the scene changes; lumbermen invade the forest, and rob it of its noblest trees. What the lumberman leaves, the farmer, as if he would kill the goose that laid his golden eggs, destroys and feeds to the flames. The great hill is bared, and the plow turns up its soil to the sun. The farmer has gained many acres of cultivable land, and presently he will learn what he has lost.

A dry season comes, and in a little while the brooks are empty, and the neighboring valleys are suffering from an unprecedented drought. Nature's great reservoir on the hill has been destroyed; there is no water to be had to give renewed life to the perishing crops, and for the first time in its history this once fertile country-side falls to give a bountiful return to its cultivators.

Then follows a rainy reason. Floods of water pour down upon the bare back of the great hill, and being no longer retained, as they once were, by the soft, root-matted soil of the forest, they fill the dry brooks and instantly swell them into raging torrents, which plow huge gullies through the land, turn the fertile soil into mud and sweep it away, and spread ruin and destruction on all sides.

When the floods are past, the farmer finds that his hill-top has become a barren waste of rock and gravel, and that his meadows and grain lands have been robbed of their power to bestow wealth and plenty upon him. Neither he nor his children nor his children's children may be able to repair the damage done. It may require two or three centuries to restore the scene as it once was.

It is plain, then, that everybody must be interested in preserving the forests that are left to us, for they help to maintain the prosperity of the whole country.

QUIETING A MOB.

The world will never know how much of the boldness of the press has been inspired by the editorial "we." It is too common an experience in all the relations of life that men begin to "back out" when they are asked to fortify an assertion with a signature, or to "stand up and be counted." Even revolutionists do not always have the courage of heroes. An amusing story of a collapse is told by the author of "Les Mémoires de Paris."

On the evening of August 7, 1884, there was a meeting of disaffected persons to discuss the action of the French legislature, then in session. The meeting became more and more noisy. After some comparatively temperate speeches by the ex-deputies Maret and Laisant, the anarchists took the floor, and one of them proposed that those present should go in a body to Versailles, invade the hall of Parliament, and turn out the *Opportunistes*, who, according to the speaker, were nothing but Orleanists in disguise.

Then Lisbonne, leaning on the stick which he was obliged to use, one of his legs having been nearly paralyzed by a wound received in battle, mounted the platform and cried, "Citizens, you wish to go to Versailles?"

"Yes! yes!" they shouted, fiercely.

"Very well! I am ready to go. You know me, and where I live. I am Lisbonne. You know my record. I am not content to talk, I act also. In May there were in Paris two hundred thousand persons who shouted '*Vive la Commune*;' only ten thousand of these did any fighting. It must not be like that now!"

"No! no!" roared the mob.

"Good!" went on Lisbonne; "here are nine hundred of you who cry, 'We will go to Versailles!' Do you mean it?"

"Yes, to Versailles!" thundered the anarchists.

"We go soon then. But you can understand, since you all know me, that I wish to know you also. I will take down your names and addresses. Will all those who will go with me to-morrow morning to Versailles come to this side of the hall? Come, citizens, right file, right!"

There was a quick movement, and several citizens placed themselves on the side of the hall named by the orator.

Lisbonne counted them. There were nineteen! With an eloquent gesture he said:

"I salute you, heroes! I admire you, and in the name of our great cause I thank you; but you perceive that we twenty are not enough to clear the hall of Parliament."

Then turning to the others, he said:

"Get out, chatterers! I believe you will keep still for a while. Go home to your wives. Since there is nothing to be done, I am going on to the café. You can find me there, if you are not content," and he limped away.

There were murmurs of indignation among the crowd, but no one mentioned Versailles again.

NOT SATISFIED.

Octave Thanet, writing in the *Atlantic Monthly* about "Plantation Life in Arkansas," says that the negro women have a hard life. They work in the fields and in the house, and die when they should be in their prime. This explains why so many men have three, or four, or five wives "without," as one honest fellow said, "never fighting with none of 'em. I kep' 'em all decent," said he, "an' buried 'em all in a store coffin."

They are very fond of their children and kind to them; unwisely kind, perhaps, as we Americans are inclined to be. To all the other hardships of a woman's life here is added her mourning for her little children, for the careless life bears hard on them, especially in overflow seasons.

Sometimes we are reminded of this in a homely yet affecting way, as yesterday, when in buying some chickens and asking for more, I was told by the little merchant:

"They aint no more, only but one old rooster; and we don't aim to sell him, 'cause my little brother that died, he always claimed him, and maw sayed she never *would* sell him!"

A queer expression—which is nevertheless a common one here—used by a poor woman whose little girl had been burned to death, sticks in my memory: "It ben ten years now, but I aint got *satisfied* with it yit."

And a poor man, who clung desperately to a wretched mortgaged little farm in the swamp, excused himself for the unwisdom that even he could see by the plea that his two dead children were buried there, and "My woman, she hated terribly to have them die, and she cayn't git satisfied to leave 'em, nohow!"

For the Companion.

THE NIGHT RIDE.

To-night we rode beneath a moon
That made the moorland pale;
And our horses' feet kept well the tune,
And our pulses did not fail.

The moon shone clear; the hoar-frost fell,
The world slept, as it seemed;
Sleep held the night, but we rode well,
And as we rode we dreamed.

We dreamed of ghostly horse and hound,
And flight at dead of night;—
The more the fearful thoughts we found,
The more was our delight.

And when we heard the white owl fly,
And hoot with mournful tone,
We thought to see dead men go by,
And pressed our horses on.

The merrier then our riding song
Upon the homeward road,—
O, whether the way be short or long
Is all in the rider's mood!

And still our pulses kept the tale,
Our gallop kept the tune,
As round and over hill and vale
We rode beneath the moon.

ERNEST RHYS.

PHILANTHROPY ON CREDIT.

The late Horace Leland, who for many years kept the Leland Hotel at Springfield, Ill., was a generous man and a lover of children. One day, says a writer in the New York *Tribune*, he and John A. C. Andrews, then Speaker of the Illinois House of Representatives, were walking out together, when they met a man with a cluster of toy balloons. School was just out, and hundreds of boys and girls came pouring from a building near at hand.

"Hold on, Ace," said Mr. Leland, "there's a joyous sight;" and the two stopped and watched the children, all gazing with longing eyes at the balloons.

"Fi' cent apiece."

"How much for the lot?" asked the philanthropist.

The man counted them. There were twenty-one.

"One doll' for de lot."

Mr. Leland took them all, and distributed them among the children with as much fairness as possible. Then he put his hand into his pocket and said, "I declare, Ace, I haven't a cent with me. Lend me a dollar."

"Oh no," said Judge Andrews, seriously; "you can't play philanthropist at my expense."

"Well, my man," said Mr. Leland, "I guess you'll have to call at my hotel for your money."

"No, sir," said the man; "you give me my money, or you give me back my balloons."

"But don't you see I can do neither? Come to the Leland House and ask for Mr. Leland, and I will pay you."

"No, sir," persisted the man, "you pay me my money or give me back my balloons. I haf see dat hotel trick before."

"Come, Ace," said Mr. Leland from the depths of his troubled soul, "give me a dollar."

"Not a cent," said the judge, with assumed gravity, "I wouldn't trust you with a dime."

"See," said the man, "your own friend no will trust you. You give me my money, or I will call de policeman."

Just then there happened along an old beggar woman who had lived upon the bounty of the good people of Springfield for many a year. She stopped and heard enough of the conversation to know what it was about.

"Hould on, Misther Layland," said she; "if yer foine friend there won't lave ye the loan av a dollar, Oi'm the friend that will," and as she lectured Judge Andrews for the "stingiest ould thing out o' jail," she unrolled the money from a dirty rag, and gave it to the philanthropist.

Judge Andrews says he never tried to play just that kind of a joke on Horace Leland again.

BENIGHTED IN THE ALPS.

In August, 1880, Mr. J. Baumann, with two guides, attempted the ascent of the Aiguille du Plan, a peak which had then never been scaled from the Chamonix side. The party left Chamonix shortly after midnight, depending at first upon the light of the moon, and later, when the moon had set, upon the light of a lantern. Their expectation was to reach the summit in season to go down upon the other side in the afternoon. After seventeen hours of work they found themselves at the base of impossible crags. Says Mr. Baumann:

The whole position flashed upon me. We must spend the night where we were; but what a prospect! We had attained an elevation of about eleven thousand five hundred feet; shelter there was none; our stock of provisions was low. The weather looked threatening, and if it should become really bad, I shrank from measuring what might follow.

At that very moment a volume of heavy clouds rolled down, and hid Chamonix from our view. The sound of the bells tolling for vespers was very weird, and seemed of evil omen. For a few moments we stood irresolute, then crawled to the brink of the ridge and peered over. Our last hope was gone, for the rocks descended in sheer, smooth precipices.

Fortunately there was a cleft in the rocks on the other side, into which we packed ourselves. We then cut three flat places in the ice on which to stand, fixed the end of our rope to a projecting knob of rock to prevent ourselves from slipping over the ledge of the precipice, and tried to resign ourselves to circumstances.

To be benighted high up on a mountain is not an unusual occurrence; but our situation was aggravated by well-grounded fears, and I must confess that I felt despondent.

If fresh snow fell, which the state of the sky warned us was by no means improbable, our steps would be obliterated, the rocks would be glazed with ice, and our retreat would be cut off. Cloud-like mists were chasing each other with fantastic energy, chilling us to the marrow, and I feared that we should not be able to withstand their benumbing influence through the long watches of the night.

There we stood back to back, our teeth chattering with cold—ceaselessly stamping our feet and clapping our hands until the movement became almost mechanical. We rarely spoke; each was too much occupied by his own thoughts, and when we tried to cheer each other up, our voices had an unnatural tremor, due to our chilled and exhausted condition.

The one feeling that prevailed above all others was an intense desire for warmth. I believe I dozed occasionally, and awoke now and then with a start out of pleasant dreams, perhaps of some cozy fireside, to find myself still on that infernal ledge. But all things must have an end. The dawn came at last, and our spirits rose. After all, were we not still safe and sound?

At five o'clock we nerved ourselves for a start. One never knows what one can accomplish until one is put to it. We were obliged to descend places which the day before we had pronounced impossible to descend, and the impossibility vanished, and about eight hours after leaving our night-quarters we eagerly clutched once more the rocks of the Blaitière.

UNPREJUDICED WITNESS.

In the days when firearms were part of the personal outfit considered necessary in certain very youthful and very active Western towns, one man could scarcely bear testimony against another, in this respect, since all were alike guilty. The author of the military experiences entitled "On the Border with Crook" speaks of an eccentric character named Duffield, a man who was one night persuaded, in a good-humored mood, to produce all the weapons with which he was loaded.

He drew them from the armholes of his waist-coat, from his boot-legs, from his hip pockets and the back of his neck; there they were, eleven weapons, mostly small Derringers, with one knife. Comment was useless, for none of those present thought it wise to criticise.

The next day, however, Judge Titus had Duffield arrested, and brought before him on the charge of carrying concealed deadly weapons. The court-room was packed with a very orderly crowd, listening to a long exordium from the judge on the enormity of the practice of carrying concealed deadly weapons. When this very sensible address was concluded, he said:

"Call the first witness. Call Charles O. Brown."

Mr. Charles O. Brown under oath stated his name, residence and occupation, and was then directed to show the judge and jury how the prisoner had drawn his revolver the day pre viously.

"Well, jedge," said he, "the way he drawed her was jest this," and suiting the action to the word, this main witness for the prosecution drew a six-shooter, fully cocked, from the holster on his hip.

There was a ripple of laughter through the court-room. Every one saw at once the absurdity of holding one man responsible for the misdemeanor of which a whole community was guilty, and the trial proceeded no further.

TRUE PATHOS.

Four long years had Jack the sailor been away, and his ship was reported "lost, with all on board." The news seemed to pile years on his father's bent shoulders; his mother's smile faded out, and wrinkles seamed her cheeks. One summer day, however, as the two came slowly out of church with their pretty daughters,—all three scarcely balancing the loss of the one dear son,—a shabby, bronzed and handsome fellow rushed up to the group, and took his mother in his arms.

"It's my boy! my own boy!" cried she, throwing her arms about him and smothering him with kisses, while the father managed to get possession of one brown, sinewy hand.

"Come, mother, give us a chance!" cried the girls in chorus, and by this time the entire congregation had surrounded the wanderer, and claimed his greeting.

"But you were drowned, Jack!" exclaimed the youngest sister, and Jack laughed as he explained:

"No, only partly. Two of us floated for days, reached an island in the Pacific, fell in with friendly savages, and then—waited for a ship. Got my belt full of money, father, but couldn't wait to buy a rag of decent clothes."

Then the minister said, solemnly, "Let us pray," and there under the trees, with uncovered head, he offered thanks for the wanderer's return. When he had finished every one was softly weeping, and not a soul dreamed that the tragic joy of the occasion could be turned into mirth. Suddenly Jack's mother, wrought up beyond endurance, opened her lips and spoke.

"Jack," said she, sharply, "aint you ashamed to come to meetin' with such a ragged old handkercher as that?"

Jack roared, and so did the neighbors. Tears were wiped away, and laughter reigned.

HIS REAL WORTH.

Among the many advantages possessed by a man who reaches a "good old age" in a small country place, is the respect and admiration of all the right-minded younger members of the community. Unless he is undeniably "feeble-minded," his advice is in great demand.

It was conceded by all who were present at the time, that Abijah Stokes made "th' neatest-turned speech" in regard to Mr. Wilson Fawcett, the ninety-four-year-old pride of Brambleville, that could well have been imagined. It was at the County Fair at Highbury Centre. A former resident of the place inquired of Abijah about the people whom he used to know.

"Let's see," he said, meditatively, "how long ago did Wilson Fawcett die? He was a pretty old man, wasn't he?"

"Wilson Fawcett," said Abijah, deliberately, as if he enjoyed the probable effect of his speech, "is still livin', or *was* when I left home this mornin'. I set aout t' fetch him over here t' th' Fair, along with me, ef 't hedn't been sech a sharp mornin'. He enj'ys a jaunt naow an' then, with th' best on 'em."

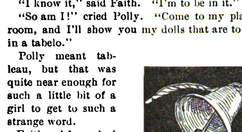
"You don't mean to say he's still alive!" ejaculated the other, in a tone of gratifying amazement.

"Why, how old *is* he?"

"We c'nsider, over t' Brambleville, thet Wilson Fawcett's a reel ornyment t' all on us," said Abijah, with much earnestness. "He's turned ninety-four; he's all his fac'lties, is hale an' chipper, an' liable t' be spared fer some years yet, we're hopin'. In Brambleville," concluded Abijah, with his slow smile, "Wilson Fawcett is reck'ned t' be full 's good es real estate!"

SOME ONE THERE.

On one occasion, when Alexander Dumas was at the height of his prosperity, a friend ventured to say to him:



"Come, come, Dumas, you ought not to go on forever throwing money out of the window."

"Why not?" he asked, with eyes wide open.

"Why, because it is wasted!"

"Wasted?" said Dumas. "Not at all. There's always somebody under the window to pick it up!"

CAUGHT AT LAST.

"Santa C'aus is comin' to our house. His own very self! Here! To-night!"

This was what Polly screamed to her little cousins Faith and Janey, when they came to spend the day before Christmas with her.

"I know it," said Faith. "I'm to be in it."

"So am I!" cried Polly. "Come to my play-room, and I'll show you my dolls that are to be in a tabelo."

Polly meant tableau, but that was quite near enough for such a little bit of a girl to get to such a strange word.

Faith and Janey had brought their dolls to take part, and the little girls were soon very busy seeing that they were in proper order.

"I need a new doll *dreadfully*," said Polly, with a very sober face. "I told Cousin Phil so, and he says I better speak to Santa C'aus about it. But I should be afraid to, wouldn't you?"

"I don't know," said Faith. "He's kind, you know."

"Yes; and when he's comin' right here p'raps I might. Just see. Betsy Bobolink's hair is all comin' out, and Little Miss Muffet's eyes won't shut any more."

"I'd ask him," said Faith, encouragingly.

Early in the evening a number of other little children came with their mothers, and no house ever held a merrier Christmas eve party than that was. As it got a little later some of the papas quietly stole into the front parlor and looked on, which made everybody more anxious than ever that everything should go off well.

It was great fun getting ready for the dolls' tableau!

"My doll won't do," said little Bessie Plummer. She was looking at the fine dresses of the other dolls, and Polly saw that Bessie's doll was very poor-looking, and shabbily dressed.

"Oh yes, dear," said Polly's mamma. "She'll do for a nurse. She'll make a very nice nurse."

"Why didn't you bring some other doll?" asked Polly.

"I haven't got any other," said Bessie.

Polly looked around on her dolls, saying to herself:

"I do believe I'll give one of my old dolls to Bessie. I sha'n't want it if Santa C'aus brings me a new one."

The dolls' tableau was a great success. Not one of the actors in it moved a single limb.

(But I must confess to you, my little Christmas pets, that I do rather prefer a tableau in which little feet and hands will jerk a bit, and little eyes wink with staring so long one way.)

If this page were larger I might take more time to tell about the other tableaux, and of the dance with song and laugh around the Christmas tree, at the end of which Santa Claus himself stood behind it, and in kindly, gruff tones invited each little boy and girl to come and receive a Christmas gift.

Polly tried hard to get a good peep at him, but he kept behind the branches, and only showed a long white beard and a fur cloak which covered him all up.

The last tableau was the very thing to wind up a Christmas eve. It was a picture of a room at midnight. Even the hands of the clock were fixed to show half-past twelve. One or two small white beds were in the room, on the pillows of which could be seen little curly heads and closed eyes, just as yours look at that hour.

But one pair of blue eyes were still watching for Santa Claus. At a half-open door stood a cunning white-robed little figure peeping out as the dear old fellow knelt before the fireplace. Some stockings hung above it, and he was in the very act of filling some he had taken down.

And then—what *do* you think that darling, funny little marplot of a Polly did?

All the evening her head had been full of the doll she had been wishing to ask for. But since she had seen poor little Bessie Plummer's shabby doll, a new idea had come to her.

And now as she peeped through the door, still wondering if she dared, she saw that Santa Claus had laid aside his long cloak. There was something in the curly head above the fur-trimmed jacket which looked very familiar.

Forgetting all about being in a tableau, and all the people looking at it, out bounded the little bare, dimpled feet.

"O Cousin Phil!" she shouted, running up to him, "won't you give the very nicest doll you've got to Bessie Plummer?"

"Oh-h-h-h!" exclaimed Faith to Janey in a shocked whisper. "She's moved! She's spoiled the tabelo."

But the papas and mammas said, as the party broke up with a great deal of laughing, and a great many good-bys and Merry Christmases:

"It was the sweetest, prettiest thing we have seen."

I think they were right. Don't you?

Harry drove over a very hilly road with papa and mamma to see a friend in the country. "How did you enjoy the drive, my boy?" asked the host, at dinner. "Oh," answered Harry, "I liked it; only there were so many big lumps to go over that it took a good while to get here."

For the Companion.

A NEW RELATION.

Now, Dolly, listen! what you s'pose
I've got for you to-day?
It's sumfin that will joint my nose—
That's what I heard 'em say—
I'm sure you'll like it, 'cause it's new,
A little uncle just for you. A. M. P.

For the Companion.

LITTLE HAROLD.

Harold had a bad habit of crying at bedtime, and saying he didn't want to go to bed.

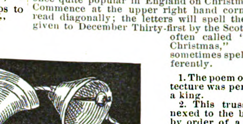
One afternoon, about four weeks before Christmas, his Aunt Lizzie came into the room where Harold was playing, and told him she had just been hearing a letter from Santa Claus read, and in the letter Santa Claus said that every night about six o'clock he heard some little boy crying and making a great disturbance because he didn't want to go to bed, and he was going to try and find out who the little boy was, because he shouldn't bring any presents to such a child as that.

Harold hung down his head a minute and then said, "Aunt Lizzie, you can tell Santa Claus *I* was that boy, but tell him I am not going to cry any more."

He kept his word, and I know that on Christmas morning he found a stockingful of presents by his crib.

For the Companion.

WHAT HE WOULD SAY.



Dick is a sunshiny boy, always good-natured and full of fun, and nearly always ready to do his share of helping; but he doesn't like his nightly task of getting kindling for the next day's fires, and is pretty sure to shirk it when he can. One day, before Christmas, Aunt Nell was lecturing him a little.

"St. Nicholas doesn't like lazy boys," said she. "What would you say if he should put a stick in your stocking?"

Dick's brown eyes twinkled. "I'd say, 'Hello! here's a piece of kindling-wood for Aunt Nell!'" he laughed.

Aunt Nell laughed, too; how could she help it? And Dick didn't get a stick in his stocking; but he found a bright, new hatchet, sharp enough to cut kindlings with, hanging up beside it.

Milly, just recovering from a fever, had that morning breakfasted on a new-laid egg, and hearing the hen cackle a second time, exclaimed, "Mother, mother, that hen's had a *relapse*!"

Enigmas, Charades, Puzzles, etc.

1.

COMBINATION PUZZLE.

In each of the following sentences there is a word of seven letters concealed, the definition of which is given in the same sentence. When these words are found, they are to be written one underneath the other in regular order. Commence at the upper left hand corner and read diagonally; the letters will form the name of an amusement once quite popular in England on Christmas eve. Commence at the upper right hand corner and read diagonally; the letters will spell the name given to December Thirty-first by the Scotch, and often called "Scotch Christmas," though sometimes spelled differently.

1. The poem on architecture was penned by a king.
2. This truss I annexed to the building by order of a gentleman who is a native of Russia.
3. No, madam, age does not lower the value of an article unless it is hurt.
4. Ethel met Simon and Silas, and they wore armor for the head.
5. Philip resides in Boston, and often will act as President.
6. There still remains tan to be removed, and I desire you to remove it this moment.
7. I am using my crayons for the sake of entertaining my scholars.

C. D.

2.

CRAFT AGAINST SCIENCE.

Captain John G. Bourke says that during his stay in Arizona with General Crook a great deal of amusement was had at camp by means of an old electrical machine. A silver dollar was placed in a pail of water, and announcement made to the Indians that any one might become its owner who would take it out, while holding in his hand, at the same time, the innocent-looking cylinder of the battery. Everybody tried, and everybody was "shocked" and failed. Then High Wolf, a great "medicine man," accepted the challenge.

High Wolf took one of the poles, and of course felt no shock. He looked at the glittering dollar in the bucket, and then at the extra prize of five dollars just contributed by the officers, and in a second his brawny arm was plunged up to the elbow in the water.

I am not prepared to say exactly how many hundred thousand volts he received in the back of the neck, but he certainly had as thorough an experience with electricity as ever fell to the lot of any aboriginal; and the worst of it was that he couldn't let go. Suddenly, however, he began kicking, and smashed the poor, rickety battery all to pieces, a proceeding which involved sad loss to us.

He was neither conquered nor humiliated, and boldly announced his readiness to repeat the trial, a proposal which could not in honor be declined. So the battery was patched up, and we allowed him to try again.

This time, as the crafty rascal had expected, the wheezy machine furnished almost no current, and he fished out the money, though the moisture gathered upon his face and neck, and his fingers were doubled upon the wrists.

So High Wolf retained his reputation as a powerful "medicine man," since he alone, of all the Indians in the region, had been able to compete with the white man's mysterious "medicine box."

LIGHTING UP THE CAVE.

Among the lately discovered wonders of Tasmania are some large and beautiful caverns, near the town of Southport. While these caves have been explored for less than a mile, it is believed that they extend several miles underground. They contain large chambers ornamented with splendid stalactites and stalagmites.

One of the most interesting facts about them is reported by a recent visitor, who says that when the lights carried by the explorers were extinguished, the ceilings and sides of the caverns seemed to be studded with diamonds! This was found to be due to the presence of millions of glow-worms.

It is known that the phosphorescent light of the glow-worm is emitted only by the female insects, which are wingless, while the males, being provided with wings, lack the power of making light. Naturalists formerly explained the exercise of this strange power by the female glow-worms as an effort to attract the attention of the males, or literally to shine in their eyes.

Of late, however, the explanation has been advocated by Mr. Wallace and others that glow-worms shine in order to save themselves from capture by animals, such as birds, which feed upon insects. These animals, it is argued, have learned by experience that glow-worms are not good food, and accordingly avoid them when their light enables them to be recognized.

But is it for such a purpose that the glow-worms light their diamond lamps in the caves of Tasmania? If those caves are also inhabited by many insect-feeding animals, the answer may be yes; but in the absence of information as to the existence of such animals, it would seem to be more interesting, at any rate, to adopt in this case the other view, namely, that the glow-worms shine to give light to members of their own race. And if so, what a little wonder-world they have there in the darkness of those underground chambers!

SAFER AT HOME.

Some men are naturally of an adventurous turn. They love the sight of new things, and enjoy a spice of danger. Others seem to be born stay-at-homes. If they venture now and then into the world, they are glad to get back again into their safe little corner. The Chicago *Mail* prints an amusing story of an aged couple of this class, who had gone to Chicago to see the sights.

They stepped upon the southern end of the drawbridge at Dearborn Street, and were admiring a steam-tug which was just then snorting up the dirty Chicago River. They did not notice a schooner coming up behind them, and when the warning bell of the bridge-tender rang, it might have been an old-fashioned summons to dinner, so far as they were concerned.

A moment later the bridge was under full swing. A startled look flashed from the old man's eyes, while his wife scarcely repressed a scream. They clung to the railing, the bridge swung slowly in behind the vessels and came to place, leaving the old couple on the north side of the river.

"Well, I vum!" exclaimed the man.

"Don't that beat everything?" said the woman.

"'Mandy," and the old man's voice was full of suppressed excitement, "'Mandy, we've just fell down seven stories in that elevatin' thing down at the tavern, and now we've been slung right across this here river. 'Pears you can't trust your foot anywhere. The fust thing you know we shall git onto somethin' that'll telegraph us right out of Chicago. We'd better go home."

And they did, by the next train.

NO ALCOHOL.

Scientific knowledge is not half so necessary in practical life as sound principle, even though the latter, unaided, may not be a satisfactory guide.

There is a certain old gentleman in the country who is an ardent believer in the temperance movement, and who, by his earnest counsel, has helped many a man in reforming his mode of life. Yet this good man not long ago offered some guests cake and wine.

"Why, Uncle John," said a niece who was visiting him, "I thought you were temperance!"

"So I be," was the reply, "strict temperance."

"But here you are givin' us wine."

"Currant wine, dear, currant wine. Made in this house out o' my own currants."

"But, uncle, it's wine just the same."

"No, it aint, my dear. There aint a drop of alcohol in it. I see to its makin', an' you'd better believe I didn't have any put in!"

LUCKY FORGETFULNESS.

The doctrine of a "squl of goodness in things evil" has many and various manifestations. Even a treacherous memory has been known to serve its unhappy possessor an excellent turn. A writer in the Chicago *Herald* relates an anecdote of a friend of his who many years ago travelled through Colorado and the adjoining country as salesman for a hardware house. In many of the newer mining towns the hotels were rough-seeming places, and were haunted by swaggering visitors who caroused till midnight.

At one time, when Billings had collected a considerable sum of money, he put up at a hotel, the proprietor of which was a thoroughly dangerous-looking customer. It would be folly, Billings thought, to trust such a man with valuables, and he determined to keep his purse under his pillow.

Many men who looked like desperados were about the place, and the guest was really in fear of his life. Yet there was nothing to do but to make the best of things, and accordingly he retired to his room, after instructing the hotel-keeper to call him at four o'clock.

When he was called in the morning and found that he had not been murdered, he smiled at his fears of the night before, hastily dressed, and was soon on his way to the station. As he was hurrying along through the semi-darkness two men suddenly jumped upon him and threw him to the ground.

He fought with all his might, till a six-shooter was placed at his head. Then he yielded. The robbers went through his pockets quickly, seized his watch, his revolver and his satchel, and made off.

It was useless to follow them, and he kept on to the railway station. He informed the station-master of what had occurred, and at the next town, twenty miles away, sought out the sheriff and put him on the track of the thieves.

The watch and papers were of comparatively little value. What he cared most about was the loss of the money. What a pleasure it would be to see that hotel-keeper, who he felt sure was at the bottom of the affair, safely behind the bars!

But just as the officers of the law were about setting forth in pursuit of the thieves, Billings received a telegram from the station-agent. It read thus:

"I have recovered your grip and many papers found near where the robbery was committed. I have also your pocket-book containing nearly five hundred dollars, which was handed me by the landlord of the hotel. You left it under your pillow. Will send all by next train."

ARE THE RED SUNSETS RETURNING?

There have been reports recently of the appearance of brilliant red sunsets resembling those that ornamented the evening skies for many months after the tremendous eruption of the volcano of Krakatoa, in the East Indies, in 1883. The fine dust thrown into the higher regions of the atmosphere on that occasion was distributed by aërial currents all over the earth, and had the effect of producing strangely beautiful sunrise and sunset effects, the phenomenon assuming, in our latitudes, the appearance of a fiery glare like the reflection of a distant conflagration.

There has certainly been no general return of such skyey spectacles this year, and yet reports from various sources seem to indicate that some increase in the redness of the sunset colors may have taken place. If so, the explanation remains to be found.

When the splendid sunsets that followed the Krakatoa eruption began to make their appearance in this country and Europe, it was at first suggested that they might be the result of an encounter between the earth and a cloud of cosmical dust. There was, perhaps, nothing essentially impossible in that idea, but it was quickly abandoned when the evidence began to accumulate that the strange dust came from Krakatoa.

If now a new series of red sunsets should make their appearance, without being preceded by any extraordinary volcanic explosion, it is probable that the cosmical dust theory and other perhaps equally interesting theories would again be put forth to account for it.

But the first thing to be done is to make certain that the sunsets are really any redder than usual; and anybody who chooses to look can help to settle that question, while at the same time making his eyes familiar with some of the most attractive phenomena in the reach of human vision.

AN IMPORTANT PERSON.

There are not a few men who fancy that, because they are persons of wealth and consequence in a community, they are exempt from the duties and liabilities of the ordinary citizen. A man of this sort was drawn to serve upon a jury, and did not appear when his name was called in court. The court ordered that he be fined twenty-five dollars.

About half an hour afterward the man appeared in the court-room to answer tardily to his name.

"You have been fined twenty-five dollars for non-attendance," said the judge.

"But I had a very important business engagement!" said the man.

"Did you suppose that an engagement would excuse you for not answering the summons of the court?" asked the judge, rather angrily.

The juror, who was a pompous man with an important air, began to grow indignant at being addressed in this way.

"I would have your honor understand," he exclaimed, "that I am one of the most prominent business men in this community!"

"Oh! in that case," said the judge, quietly, "you will be able to stand a larger fine. Mr. Clerk, you will increase this gentleman's fine for non-attendance to fifty dollars!"

NEXT TO IT.

Peter, who goes to the public school, is not by any means a bad boy, but he is heedless about his lessons, and seldom obtains any prizes or rewards.

One day, returning home, he wore a pleased sort of expression which filled his mother with hope.

"You haven't got a prize to-day?" she asked.

"No," said Peter, gleefully, "but I came within one of it!"

"What! Do you mean you were next to the head?"

"Oh no; but the boy who sits in the seat with me, he got the prize, you see!"

In purchasing garments ask for this brand and take no substitute. Sold by all leading Dry Goods Dealers in 36, 41 and 45-inch widths.

DONALD KENNEDY
Of Roxbury, Mass., Says:
Strange cases cured by my **Medical Discovery** come to me every day. Here is one of Paralysis — Blindness — and the Grip. Now how does my **Medical Discovery** cure all these? I don't know, unless it takes hold of the Hidden Poison that makes all Humor.
VIRGINIA CITY, NEVADA, *Sept.* 9, 1891.
Donald Kennedy — Dear Sir: I will state my case to you: About nine years ago I was paralyzed in my left side, and the best doctors gave me no relief for two years, and I was advised to try your **Discovery**, which did its duty, and in a few months I was restored to health. About four years ago I became blind in my left eye by a spotted cataract. Last March I was taken with La Grippe, and was confined to my bed for three months. At the end of that time, as in the start, then it struck me that your **Discovery** was the thing for me; so I got a bottle, and before it was half gone I was able to go to my work in the mines. Now in regard to my eyes, as I lost my left eye, and about six months ago my right eye became affected with black spots over the sight as did the left eye — perhaps some twenty of them — but since I have been using your **Discovery** they all left my right eye but one; and, thank God, the bright light of heaven is once more making its appearance in my *left* eye. I am wonderfully astonished at it, and thank God and your **Medical Discovery.**
Yours truly, HANK WHITE.

SYRUP of FIGS.
ONE ENJOYS both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers, and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects. Prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all, and have made it the most popular remedy known. Syrup of Figs is for sale in 50c. and $1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute. Manufactured only by
THE CALIFORNIA FIG SYRUP CO.,
San Francisco, Louisville, New York.

Digitized by Google

derived from men who are not ornithologists, represents them as building in the branches of cypress-trees—sometimes as many as forty or fifty nests being found in one small tree. As Mr. Hasbrouck remarks, it seems hard to reconcile the two statements, but perhaps the parrakeet, like some owls, nests either in hollows or on branches, as circumstances favor.

However destructive the parrakeet may once have been, it is certainly deplorable that so handsome and interesting a bird, our only representative of so interesting a family, should be persecuted to utter extermination.

HARDENED TO COLD.

How much usage will do in toughening the human body is well shown by some facts about the natives of Siberia, as recorded by the author of "Reindeer, Dogs and Snow-shoes." Cold, he says, seemed to have no effect upon them.

Frequently, when we could not expose our ears for two minutes without having them frozen, the natives would go for an hour at a time with their hoods thrown back from their heads; and when it required constant watchfulness to keep our noses from freezing, they did not appear to notice the temperature at all.

One morning in January I stood in perfect amazement at their disregard of the low temperature. They worked for at least half an hour with bare hands, packing up the tent and utensils, handling the packages and lashing them together with icy seal thongs, without experiencing the least apparent inconvenience, while I partly froze my fingers striking a light for my pipe with a flint and steel, the whole operation taking not more than three minutes.

The night before, happening to go out of the tent after our men had retired, I passed their camp, which was near by. Their fire had burned to a pile of embers, barely affording me light enough to distinguish the sleepers. They were lying coiled up on small deerskins, with their backs to the embers, and their fur coats thrown loosely over their naked bodies.

The coat of one of them had slipped almost entirely off his body, leaving his back and shoulders exposed to a temperature of eighteen degrees below zero, Fahrenheit, and though his hair was frosted, he snored as soundly as if in comfortable quarters.

HEROISM.

The little fishing port of Peel, on the west coast of the Isle of Man, looks out on the Irish Sea. A rocky headland, called Contrary Head, juts out south of the harbor, while in front is a rugged island rock, on which stand the ruins of Peel Castle. It is a perilous place for ships, and a splendid place for the display of the heroism of the Manxmen.

One afternoon in October, 1889, a Norwegian ship, in a fearful tempest, was drifting upon Contrary Head. All Peel was down at the beach watching her. The lifeboat was got out, and there were so many volunteers that the harbor-master had no difficulty in selecting a crew.

The Norwegian had lost her masts, and the spars were floating around, so that she was dangerous to approach; but the lifeboat reached her.

"How many of you?" cried out the coxswain to the Norwegian captain.

"Twenty-two."

The coxswain counted them as they hung on the ship's side, and said:

"I only see twenty-one; not a man shall leave the ship until you bring the odd one on deck."

The odd one, a disabled man, had been left below to his fate. He was brought up, and all were taken aboard the lifeboat and safely landed on the beach. The Norwegian Government struck medals for the lifeboat men, and sent them to the Governor of the island for distribution.

TOO LITTLE.

Children very soon learn the ways of their elders, and catching their methods of thought, use them, in childish fashion, to evolve conclusions of their own. Sometimes these results show a baby wisdom, and again they are only worth a smile.

Freddy is the son of a millionaire, and has from his earliest childhood lived in an atmosphere of pomp and pretence. He hears a great deal about money and what it will buy, and he is under the impression that "poor folks" really have very little business in the world at all.

One day, his long-suffering governess gave him a little sum in percentage, the result of which should show how much capital a man must have to live in a certain income. Freddy worked away with determination, but evidently to no purpose. The answer would not come, and his face contracted an earnest scowl.

"Well, Freddy," said his teacher at the end of fifteen minutes, "how are you getting on?"

"Not at all," was the reply. "I can't make it come out right. I don't know how I can do it any differently, and I keep getting the same answer every time."

"What answer do you get?"

"Fifty thousand dollars."

"Why, that's right! What made you think it wasn't?"

Freddy looked at the figures in some disgust.

"Anybody would *know* it couldn't be right," said he, haughtily. "Nobody would think of having such a small capital as fifty thousand dollars!"

SOMEWHAT PARTICULAR.

A story which is told of the late Charles Jamrach, a naturalist and dealer in wild animals, who died in England last summer, is so well vouched for that it may be accepted as worthy of belief.

Mr. Jamrach was married more than once, and the story is to the effect that when a friend condoled with him on the loss of his second wife, the naturalist answered, with a heavy sigh:

"Yes, yes; as you say, she was a good wife. But," he added, as if he felt compelled to speak the whole truth, "she never took kindly to the animals. Why, even in winter, she wouldn't let the snakes sleep under the bed."

HE KNEW THE DIFFERENCE.

The Boston papers continue to report anecdotes which show that the children of the city are not likely soon to lose their reputation for superior size and intelligence.

A four-year-old girl created a laugh the other night in one of the public parks. The band did not arrive so promptly as she expected, and she began to fear that it would not come at all.

"Never mind," said her father, consolingly, "if it doesn't come I'll sing you a song."

"I don't want you to sing," persisted the discriminating child, "I want some music."—*Boston Transcript.*

Decayed Teeth will cause an offensive breath. To sweeten the breath and cleanse the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" [*Adv.*

Itching Piles.

Burnett's Kalliston is a sure relief. A quarter pint bottle by mail only for 50 cts. Joseph Burnett & Co., 27 Central St., Boston, Mass. Regular size by druggists, $1.

PUTNAM CLOTHING HOUSE, Chicago, Ill.

GRATEFUL—COMFORTING.
EPPS'S COCOA
BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

Made simply with boiling water or milk. Sold only in half-pound tins, by Grocers, labelled thus:

JAMES EPPS & CO., Homœopathic Chemists, London, England.

Edwards' Orange Spoon.

PATTERNS:
Jac Rose,
Minnehaha,
Hiawatha, Warner, Windsor.
Send for Catalogue showing Patterns.

All Experts Use
Royal Baking Powder

Perfect and uniform success in making finest food is more certain with Royal Baking Powder than with any other. Use it in every receipt calling for a baking powder, or cream of tartar and soda, and the best results in pure, wholesome, appetizing food are assured. Experts use it because it adds to their success. Physicians and Health Officers recommend it because it adds to the wholesomeness of the food.

MARION HARLAND: "I regard the Royal Baking Powder as the best in the market. Since its introduction into my kitchen I have used no other."

MISS MARIA PARLOA: "It seems to me that the Royal Baking Powder is as good as any can be. I have used it a great deal and always with satisfaction."

MRS. BAKER, Principal of Washington, D. C., School of Cookery: "I say to you, without hesitation, use the 'Royal.' I have tried all, but the Royal is the most satisfactory."

M. GORJU, late *Chef*, Delmonico's, New-York: "In my use of Royal Baking Powder, I have found it superior to all others."

A. FORTIN, *Chef*, White House, for Presidents Arthur and Cleveland: "I have tested many baking powders, but for finest food can use none but 'Royal.'"
